TO

HER MOST EXCELLENT MAJESTY

The Queen,

THE PRESENT WORK,

ESPECIALLY INTENDED TO FACILITATE

THE PROGRESS OF THE ARTS,

AND WIDEN THE PATH OF USEFUL KNOWLEDGE,

WHICH IT HAS BEEN THE GREAT AIM OF HER GOVERNMENT TO ADVANCE,

Is respectfully Dedicated

BY HER DUTIFUL SUBJECT

AND HUMBLE SERVANT,

CHARLES F. PARTINGTON.

## INTRODUCTION.

---

BACON has truly defined the character of Biography in the quotation we have placed on the title-page to the present Work; and it may hardly be necessary to state that a careful perusal of the lives of celebrated men will not only teach us to aspire to emulate their worldly renown, but will lead us to what is far more important, and universally attainable,—the acquisition of moral excellence.\* Every man has it not in his power to be a statesman or a philosopher; but every man may be honest, benevolent, and humane; and he who cannot fully compete with the deeply learned, may at least imitate the virtuous and good. Indeed, had Biography no other view than merely to illustrate the lives and writings of eminent men, its study would still be both useful and agreeable; but it aims at a far higher and nobler object. It presents us with a variety of events, which, like the experimental data furnished by the natural philosopher, may become the materials from which general truths and principles may be drawn. In short, by enlarging our acquaintance with human nature,—by exciting an honourable emulation,—by correcting our prejudices, and showing the purifying influence of religion on the actions of the truly wise and good, Biography attains the rank of a science admirably fitted to raise man in the scale of creation.

But Biography loses much of its value when it is not borne in mind that its various branches should be both written and studied with reference to their peculiar characteristics. This is particularly the case with reference to the lives of literary men, to which we have peculiarly attended in the present Work, and we need hardly say that whilst some men are of importance to society by their actions, others are so by their sentiments, and their willingness and power to promulgate them. The lives of the former are, chiefly, written records of the events which were brought about or modified by their interposition. Such are the memoirs of statesmen, of warriors, and travellers. Their history is inseparably connected with that of the country in which their deeds, “for good or evil,” have been done. They have given an impulse to the stream of life that is visibly depicted by the land-marks around them. But the actions of men’s lives of a more purely intellectual character, are like the breathing of a gale impressing and agitating the waters of existence,—it is true, silently and invisibly,—but they leave their record through all times.

\* “Biography may be said to approach, and even to touch, follow, observe, and see the individuals in all places and in every instant of their lives, offering examples profitable to all men and in all conditions, and furnishing to the moralist matter for profound meditation.”—BACON.

In the lives therefore of literary men, we are not often to expect events or actions that may startle us with reference to their direct worldly consequences, but such as may show the influence which the changing circumstances of existence have upon superior minds. Regarded in this light, the lives of men of genius are replete with interest and instruction. Their virtues have an ennobling influence on all who come within their influence, whilst their errors are strikingly visible when set off by the bright clear light of their published opinions. We have thus, too, often been enabled to bring before the reader portraiture of the sublimest objects which can engage the attention of a human being, for a human spirit endowed with the light of thought, so strong and intense that it commands others by a sort of natural dominion, is the representative of humanity in its highest degree of present perfection. To be enabled to see its operations in its own high regions of imagination, and guided by reason, elevates us by its example, and does, in an intellectual point of view, what the contemplation of great moral virtue does in refining our mere earthly feelings. Our affections are engaged in the one case, and our sympathies have the force of a new moral obligation. In the other, the mind sees the capabilities of its nature, and, seeing them, learns to admire and endeavours to imitate the best and greatest of its species.

With this view, we have, as far as possible, endeavoured to illustrate the characters of literary men by a reference to their works,—thus providing the reader with data to form his own judgment of the merits of the individual under consideration, and providing a mental and bodily portraiture on the same page.

# THE BRITISH CYCLOPÆDIA.

## DIVISION IV.—BIOGRAPHY.

**JAMES I.**—The history of the Scottish sovereigns who bore this name will be found in a subsequent page, and it may be enough to state that he was the sixth monarch of that name who swayed the sceptre in the northern part of our island, before he was called to the English throne. He was the son of Mary queen of Scotland, by her cousin Henry Lord Darnley, and was born at Edinburgh castle, in June 1566, at the unfortunate period when his mother was at variance with her husband, and had begun to fix her affections on the earl of Bothwell. In the stormy and disgraceful times which followed, the infant prince was committed to the charge of the earl of Mar; and in the following year, Mary being forced to resign the throne, he was solemnly crowned at Stirling, and from that time all public acts ran in his name. His childhood was passed in civil wars under the regencies of Murray, Marr, and Morton, during which time he resided in Stirling castle under the tuition of the celebrated Buchanan. His progress in school-learning was rapid; but as his character opened, an instability and weakness of temper became manifest, which indicated, what in the sequel proved to be the case, that he would become an easy prey to flatterers, and his reign be marked by injudicious favouritism. From the first too, he seems to have imbibed those arbitrary notions of the royal authority and divine right which proved so injurious to his posterity. Some injudicious measures, in the spirit of these opinions, early produced a conspiracy of his nobles against him, who in 1582 took possession of his person at Ruthven castle. A new confederacy, however, effected his liberation, and he again put himself under the direction of his favourite, the earl of Arran.

The policy of Queen Elizabeth, whose apprehensions from the catholic party in favour of Mary led her to employ every art to keep up a dissatisfied party in Scotland, was greatly assisted by the violent and unprincipled measures of Arran against the connexions of the late conspirators, many of whom fled to England. When, however, it became apparent that the life of his mother was in danger from the sentence of an English judicature, James, who had hitherto treated her very irreverently, felt himself called upon to interfere. He accordingly wrote a menacing letter to Elizabeth on the subject, appealed to other courts for assistance, and assembled his nobles, who promised to assist him either to prevent or revenge that queen's injustice. When the news of the catastrophe arrived, he rejected with proper spirit the excuses of Elizabeth, and prepared for hostilities; but he was finally prevented from en-

gaging in actual war by the inadequacy of his resources.

One of the first acts of his majority was to reconcile the feuds of his nobility, whom for that purpose he invited to a grand festival at Holyrood house. On the threatened invasion of England by Philip II., he judiciously resolved to assist Elizabeth against the Spaniards, and was zealously supported by his people for the preservation of protestantism, who entered into a national covenant to maintain it. In 1589 James married Anne, daughter of Frederic, king of Denmark. On his return home, after passing the winter at Copenhagen, he was in some danger from conspiracies against his life; and for several succeeding years of his reign the history of Scotland displays much turbulence and party contest.

In 1600, while the country was in a state of unusual tranquillity, a very extraordinary event took place, the causes of which were never discovered. While the king was upon a hunting excursion, he was invited by the brother of Ruthven, earl of Gowrie, to ride with a small train to the earl's house at Perth. Here he was led to a remote chamber, on pretence of a secret to be communicated to him, where he found a man in complete armour, and a dagger was put to his breast by Ruthven, with threats of immediate death. His attendants, being alarmed, came to his aid. Gowrie and his brother were slain, and the king escaped unhurt.

A

In 1603 James succeeded to the crown of England on the death of Elizabeth, and proceeded, amidst the acclamations of his new subjects, to London. One of his first acts was to bestow a profusion of honours and titles on the inhabitants of both countries, in which, as in many other points, he displayed a contrast to the maxims of the late reign. A conference held at Hampton court between the divines of the established church and the puritans, afforded James an opportunity of exhibiting his skill in theological controversy, and the ill-will he bore to popular schemes of church government. The meeting of parliament also enabled him to assert those principles of absolute power in the crown which he could never practically maintain, but the theoretical claim of which provided the increasing spirit of freedom in the house of commons with constant matter of alarm and contention. Although James had behaved with great lenity to the catholics in Scotland, those in England were so disappointed in their expectations of favour, that the celebrated gunpowder plot was concerted in 1605, the object of which was to blow up the king and parliament. His cares for reducing and improving Ireland do him honour. In 1612 he lost his eldest son Henry, a prince of great promise, then of the age of nineteen; and in the following year, the eventful marriage of his daughter Elizabeth with the elector palatine took place. About this time the object of the weak passion of James for handsome favourites was Robert Carr, a youth from Scotland, who in a short time was raised from a court page to be earl of Somerset, and was loaded with honours and riches. The scandalous murder of Sir Thomas Overbury, by the machinations of this minion and his infamous countess, put an end to the king's partiality, although he disgracefully pardoned the principals in the murder, while he allowed their agents to be executed.

The fate of Somerset paved the way for the rise of George Villiers, duke of Buckingham. No circumstance in the reign of James was more unpopular than his treatment of the celebrated Sir Walter Raleigh. Soon after the king's accession, that statesman, who had been opposed to the Scottish succession, engaged in a plot to set aside James in favour of the Lady Arabella Stuart, for which he was tried and capitally convicted, but, being reprieved, was kept thirteen years in prison. In 1615 he obtained his release by dint of money, and was allowed to set out upon an expedition to the South Seas in search of gold, with the sentence of death hanging over his head. He was unsuccessful in his objects, and James, instigated, as it is supposed, by his desire of an alliance between Prince Charles and the infanta of Spain, listened to the suggestions of the latter power, and, to the great scandal of the whole nation, Sir Walter was executed upon his former sentence. The match with the infanta, notwithstanding, failed, and Charles married Henrietta Maria, daughter of Henry IV. of France, with the disgraceful stipulation, that the children should be brought up by their mother until thirteen years of age; to which arrangement the future religious opinions of Charles II. and James II. may perhaps be attributed.

The close of the life of James was marked by violent contests with his parliament, which prepared dreadful consequences for his successor. He was also much disquieted by the misfortune of his son-in-law, the elector palatine, who having been induced

to accept the crown of Bohemia, and to head the protestant interest in Germany, was stripped of all his dominions by the emperor. Urged by the national feelings for the protestant cause, he was at length in 1624 induced to declare war against Spain and the emperor; and troops were sent over to Holland to act in conjunction with Prince Maurice. The defeat of this enterprise, through sickness and mismanagement, it is thought, produced the king so much uneasiness as to cause the intermittent fever by which he was soon after attacked, and of which he died in March 1625, in the fifty-ninth year of his age.

James was not destitute of abilities nor of good intentions, but the former were not those of a ruler, and the latter were defeated by pliability and unmanly attachments. His reign, although not unprosperous to his subjects, was inglorious in character and loss of influence, and he was neither beloved at home nor esteemed abroad. Upon the whole the good qualities of James were unstatesmanlike, and his bad ones unmanly and puerile. It would be difficult, says Hume, to find a reign less illustrious, yet more unspotted and unblemished, than that of James in both kingdoms. James possessed many virtues, but scarcely any of them pure or free from the contagion of neighbouring vices. His learning degenerating into pedantry and prejudice, his generosity into profusion, his good nature into pliability and unmanly fondness, his love of peace into pusillanimity, and his wisdom into cunning. His intentions were just, but more adapted to the conduct of private life than to the government of kingdoms. He was an encourager of learning, and was himself an author of no mean genius, considering the times in which he lived. His chief works were, "*Basilicon Doron*," and "*The True Law of Free Monarchies*," but he is more known for his adherence to witchcraft and demoniacal possessions in his "*Demonology*," and for his "*Counterblast to Tobacco*." He was also a poet, and specimens of his talent, such as it was, are to be found in many of our miscellanies. He also wrote some rules and cautions for the use of professors of the art, which, says Mr. Ellis, have been long, and perhaps deservedly disregarded. The best specimen of his poetical powers is his "*Basilicon Doron*," which Bishop Percy has reprinted in his "*Reliques*," and declares that it would not dishonour any writer of that time. We subjoin a fac-simile of his autograph shortly after he came to the English throne.

JAMES II., king of England, second son of Charles I. and of Henrietta of France, was born in October 1633 and immediately declared duke of York. After the capture of Oxford by the parliamentary army, he escaped in 1648 at the age of fifteen, and was conducted to his sister, the princess of Orange. He soon after joined his mother at Paris, and, when he had reached his twentieth year, served in the French army under Turenne, and subsequently entered the Spanish army in Flanders, under Don John of Austria and the prince of Condé. In these campaigns he

obtained reputation and experience although with the display of no very great or shining qualities. At the restoration he took the command of the fleet as lord high admiral. He had previously married Anne, daughter of Chancellor Hyde, afterwards Lord Clarendon, and ungenerously attempted to free himself from the union; but the marriage being satisfactorily established, he could not succeed. In 1664 he took a leading part in promoting a Dutch war, for the alleged interests of trade, and June 3, 1665, with a powerful fleet under his command, engaged that of the Dutch under Opdam, who, with his ship, was blown up in the action, and nineteen of his squadron were sunk or taken, with the loss of only one on the part of the English.

In 1671 the duchess of York died, leaving her husband two daughters, who became successively queens of England. Before her death she declared herself a convert to the Roman catholic faith, which had been secretly that of the duke for many years, and was now openly avowed by him. This declaration produced a great impression on the people, and laid the foundation of the opposition which finally drove him from the throne. In the Dutch war of 1672 he was again placed at the head of the fleet, and being attacked by De Ruyter, a furious engagement ensued. The Dutch fleet at length retired. A test act being soon after passed to prevent Roman catholics from holding public employments, the duke was obliged to resign his command—a result which induced him to join in the plot of the king and certain of his counsellors, to restore the Roman catholic religion. In 1671 he married Mary Beatrice of Este, daughter of the duke of Modena, and in 1677 his eldest daughter, Mary, was united to William prince of Orange.

During the violent proceedings on account of the supposed popish plot in 1679, by the advice of the king he retired to Brussels, and a bill passed the commons for his exclusion from the throne, which was, however, rejected by the lords. When the royal party again prevailed, the duke in 1681 was sent into Scotland, where he acted with great rigour, not to say cruelty, to the remnant of the covenanters. It is even said that he sometimes personally assisted at the torture of criminals, and altogether exhibited himself as a man of a severe and unrelenting temper. During the whole of the remaining reign of Charles II. indeed, during which he possessed great influence in the government, he was forward in promoting all the severe measures that disgraced it. On the death of Charles II., in February 1685, the duke succeeded under the title of James II., and from the time of his ascending the throne, seems to have acted with a steady determination to render himself absolute, and to restore the Roman catholic religion. This part of the king's designs is so admirably portrayed by Sir James Macintosh, that we gladly avail ourselves of his view of James' intentions:—"While these hopes and fears [the expected birth of the prince] agitated the multitude of both parties, the ultimate objects of the king became gradually more definite, while he at the same time deliberated, or perhaps, rather decided about the choice of his means. His open policy assumed a more decisive tone; Castlemaine, who in his embassy had acted with the most ostentatious defiance of the laws, and Petre, the most obnoxious clergyman of the church of Rome, were sworn of the privy council. The latter was even pro-

moted to an ecclesiastical office in the household of a prince, who still exercised all the power of the supreme head of a protestant church. Corker, an English Benedictine, the superior of a monastery of that order in London, had an audience of the king in his ecclesiastical habit, as envoy from the elector of Cologne, doubtless by a secret understanding between James and that prince; an act which Louis XIV. himself condemned as unexampled in catholic countries, and likely to provoke heretics, whose prejudices ought not to be wantonly irritated. As the animosity of the people towards the catholic religion increased, the designs of James for its re-establishment became bolder and more open. The monastic orders, clad in garments long strange, and now alarming to the people, filled the streets of London, and the king prematurely exulted that his capital had the appearance of a catholic city, little aware of the indignation with which that obnoxious appearance inspired the body of his protestant subjects. He must now have felt that his contests with the church of England had reached that point in which neither party would submit without a total defeat. The language used or acquiesced in by him in the most confidential intercourse does not leave his intention to be gathered by inference, for though the words 'to establish the catholic religion' may denote no more than to secure its free exercise, another expression is employed on this subject for a long time, and by different persons in correspondence with him, which has no equivocal sense and allows no such limitation. On the 12th of May, 1687, Barillon assured him that the most Christian King 'had nothing so much at heart as to see the success of his exertions to re-establish the catholic religion.' Far from limiting this important term, James adopted it in its full extent, answering, 'You see that I omit nothing in my power.' Not content with thus accepting the congratulation in its utmost latitude, James continued, 'I hope the king your master will aid me, and that we shall, in concert, do great things for religion;' proclaiming his reliance for aid in his designs on a monarch who at that moment supported the religious establishment by persecution. In a few months afterwards, when imitating another part of the policy of Louis XIV. he had established a fund for rewarding converts to his religion, he solicited pecuniary aid from the pope for that very ambiguous purpose. The nuncio in answer declared the sorrow of his holiness at being disabled by the impoverished state of his treasury to contribute money, notwithstanding 'his paternal zeal for the promoting in every way the re-establishment of the catholic religion in these kingdoms;' as he had shortly before expressed his hope that the queen's pregnancy would ensure 'the re-establishment of the true religion in these kingdoms:' another term was in familiar use at court for the final object of the royal pursuit; it was called 'the great work,' a phrase borrowed from the supposed transmutation of metals by the alchemists, which naturally signified a total change, and which never could have been applied to mere toleration by those who were in system, if not in practice, the most intolerant men of an intolerant age. The king told the nuncio that Holland was the main obstacle to the establishment of the catholic religion in these kingdoms; and D'Albyville, minister at the Hague, declared that without humbling the pride of that republic there could be no hope of the success 'of the great work.' Two years afterwards,

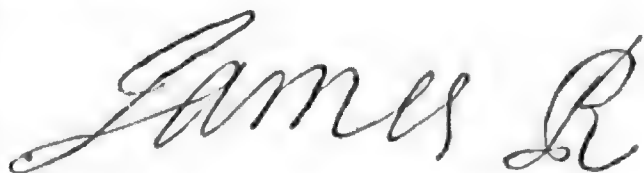

James, after reviewing his whole policy and its consequences, deliberately and decisively avows the extent of his own designs. 'Our subjects opposed our government from the fear that we should introduce the orthodox faith, which we were indeed labouring to accomplish when the storm began, and which we have done in our kingdom of Ireland.' Mary of Este, during the absence of her husband in Ireland, exhorts the papal minister 'to earn the glorious title of restorer of the faith in the British kingdoms, and declares that she 'hopes much from his administration for the re-establishment both of religion and the royal family.' Finally, the term 're-establish,' which can refer to no time subsequent to the accession of Elizabeth, had so much become the appropriate term, that Louis XIV. assured the pope of his determination to aid 'the king of England, and to re-establish the catholic religion in that island.' None of the most discerning friends or opponents of the king seem at this time to have doubted that he meditated no less than to transfer to his own religion the privileges of an established church. Gourville, one of the most sagacious men of his age, being asked by the duchess of Tyrconnel, when about to make a journey to London, what she should say to the king if he enquired about the opinion of his old friend Gourville, of his measures for the 're-establishment' of the catholic religion in England, begged her to answer, 'If I were pope I should have excommunicated him for exposing all the English catholics to the risk of being hanged. I have do doubt that what he sees done in France is his model, but the circumstances are very different. In my opinion he ought to be content with favouring the catholics on every occasion, in order to augment their number; and he should leave to his successors the care of gradually subjecting England altogether to the authority of the pope.' Bossuet, the most learned, vigorous, and eloquent of controversialists in the great work on the variations of the protestant churches, which he published at this critical time, ventured to foretel that the pious efforts of James would speedily be rewarded by the reconciliation of the British islands with the universal church, and their filial submission to the apostolic see."

After disgusting the great majority of his subjects, by attending mass with all the ensigns of his dignity, he proceeded to levy the customs and excise without the authority of parliament. He even sent an agent to Rome, to pave the way for a solemn re-admission of England into the bosom of that church, and received advice, on the score of moderation, from the pope himself. This conduct encouraged the rebellion of the duke of Monmouth. The unrelenting temper of James was again exhibited in the executions on this account. The legal proceedings under Jeffreys were brutal in the extreme; and it is estimated that no fewer than 251 persons suffered death in the west of England by the cruel proceedings of that infamous judge, which it was the custom of the king to gibe upon, under the name of "Jeffreys' Campaign." The temporary awe, produced by this severity, even in parliament, was so great, that James was encouraged to throw off almost all disguise, both in regard to religion and government. By virtue of his assumed dispensing power, he rendered tests of no avail, and filled his army and council with Roman catholics. He put Ireland entirely into their hands, and governed Scotland by a few noblemen who had become converts to the same faith. He gradually

proceeded to a direct attack on the established church by the formation of an ecclesiastical commission, which cited before it all clergymen who had done any thing to displease the court. A declaration of indulgence in matters of religion was ordered to be read by the clergy in all the churches of the kingdom. Seven bishops met, and drew up a loyal and humble petition against this ordinance, which step being considered as an act of disloyalty, they were sent to the Tower.

These innovations, in regard both to the religion and government, gradually united opposing interests, and a large body of nobility and gentry concurred in an application to the prince of Orange, who had been secretly preparing a fleet and an army for the invasion of the country. James, who was long kept in ignorance of these transactions, when informed of them by his minister at the Hague, was struck with terror equal to his former infatuation; and, immediately repealing all his obnoxious acts, he practised every method to gain popularity. All confidence was, however, destroyed between the king and the people.

William arrived with his fleet in Torbay, November 4, 1688, and landed his forces; but the remembrance of Monmouth's rebellion for some time prevented the people in the west from joining him, until, at length, several men of rank went over, and the royal army began to desert by entire regiments. Incapable of any vigorous resolution, and finding his overtures of accommodations disregarded, he resolved to quit the country. He repaired to St. Germain, where he was received with great kindness and hospitality by Louis XIV. In the meantime the throne of Great Britain was declared abdicated, and was filled, with the national and parliamentary consent, by his eldest daughter, Mary, and her husband William, conjointly; Anne, who had, equally with her sister, been educated a strict protestant, being declared next in succession to the exclusion of the infant prince. Assisted by Louis XIV. James was enabled, in March, 1689, to make an attempt for the recovery of Ireland. The battle of Boyne, fought June 1690, compelled him to return to France. All succeeding projects for his restoration proved equally abortive, and he spent the last years of his life in acts of ascetic devotion.

JAMES I., of Scotland.—This distinguished monarch was one of the most learned as well as the most unfortunate of sovereigns. He stood forth a bright and shining light in the turbulent times in which he was placed, and ultimately fell a sacrifice to the powerful brigands who then formed the Scottish aristocracy. He was born in 1394, and became a prisoner to the English monarch when but a child. He was for some time closely confined in London, and in 1407 he was removed to the castle of Nottingham, from whence he was brought back to the Tower in March 1414, and there confined till August in the same year, when he was conveyed to the castle of Windsor, where he was detained till the summer of

1417, when Henry V., for political reasons, carried him with him into France in his second expedition. In all these fortresses, his confinement, from his own account of it, was so severe and strict that he was not so much as permitted to take the air. In this melancholy situation, so unsuitable to his age and rank, books were his chief companions, and study his greatest pleasure. He rose early in the morning, immediately applied to reading, and continued his studies, with little interruption, till late at night. James having received a good education in his early youth under the direction of Walter Wardlaw, bishop of St. Andrew's, by this close application to study became a universal scholar and an excellent poet and musician. That he wrote as well as read much, we have his own testimony, and that of all our historians who lived near his time. Bowmaker, the continuator of Fordun, who was his contemporary, and personally acquainted with him, spends ten chapters in his praises and in lamentations on his death; and, amongst other things, says, that his knowledge of the scriptures, of law, and philosophy, was incredible. Hector Boece states that Henry IV. and V. furnished their royal prisoner with the best teachers in all the arts and sciences; and that, by their assistance he made great proficiency in every part of learning and the fine arts; that he became a perfect master in grammar, rhetoric, poetry, music, and natural philosophy, and was inferior to none in divinity and law. He observes further, that the poems he composed in his native tongue were so beautiful that you might easily perceive he was born a poet; but that his Latin poems were not so faultless, for though they abounded in the most sublime sentiments, their language was not so pure, owing to the rudeness of the times in which he lived. This prince's skill in music was remarkable. Walter Bower, abbot of Inchcolm, who was intimately acquainted with the prince, assures us that he excelled all mankind in that art both vocal and instrumental, and that he played on eight different instruments (which he names), and especially on the harp, with such exquisite skill that he seemed to be inspired. King James was not only an excellent performer, but also a good composer, both of sacred and secular music; and his fame on that account was extensive and of long duration. Above a century after his death, he was celebrated in Italy as the inventor of a new and pleasing kind of melody, which had been admired and imitated in that country. This appears from the following testimony of Alessandro Tassoni.—“We may reckon among us moderns, James, king of Scotland, who not only composed many sacred pieces of vocal music, but also of himself invented a new kind of music, plaintive and melancholy, different from all other, in which he hath been imitated by Carlo Gesualdo, prince of Venosa, who in our age hath improved music with new and admirable inventions.”

After the death of Robert III. James was immediately proclaimed king of Scotland, but during the reign of Henry IV., and the whole of Henry V., he was kept in confinement, to prevent the strength of Scotland from being united to that of France against the English arms. At length, under the regency of the duke of Bedford, James was restored to his kingdom, having been eighteen years a prisoner in this country. James soon after his restoration married Joanna Beaufort, daughter of the duchess of Clarence, a lady of distinguished beauty, descended from the

royal family of England; and on his return to Scotland, finding that the duke of Albany and his son had alienated many of the most valuable possessions of the crown, instantly caused the whole of that family and their adherents to be arrested. The latter were nearly all discharged; but the late regent, his two sons, and his father-in-law, were executed, and their estates confiscated to the crown. James afterwards procured the enactment of many wise laws in his parliaments, which tended to improve the state of society; but at the same time his desire of increasing the revenues of the crown caused him to commit many unjust acts, which gave great offence to his nobles.

In 1436 he gave his daughter Margaret in marriage to the dauphin of France, and sent with her a splendid train and a vast body of troops. The English, who had in vain attempted to prevent this union by negotiation, now endeavoured to intercept the Scotch fleet in its passage, but they missed their object, and the princess arrived in safety at Rochelle. James, exasperated at this act of hostility, declared war against England, and summoned the whole array of his kingdom to assist in the siege of Roxburgh, which, however, he abandoned upon an intimation of a conspiracy being formed against himself by his own people. He now retired to the Carthusian monastery of Perth, which he had himself founded, where he lived in privacy, but this, instead of preventing, facilitated the success of the plot formed against his life. The chief actors in this tragedy were Robert Graham, and Walter earl of Athol, the king's uncle. The former was actuated by revenge for the sufferings of some of his family, the latter by the hope of obtaining the crown for himself. The assassins obtained by bribery admission into the king's apartments; the alarm was raised, and the ladies attempted to secure the chamber-door; one of them, Catharine Douglas, thrust her arm through a staple, which was dreadfully broken by the force of the assailants. The instant they got admission, they dragged the king from his concealment, and put him to death on the 20th of February, 1437, in the forty-fourth year of his age. The assassins were immediately pursued and taken prisoners, and being condemned, died by the most refined tortures. Mr. Galt has given a powerful picture of the whole conspiracy and its results in one of his most popular novels.

JAMES II., king of Scotland, in 1437 succeeded his father, being then not seven years of age, and was killed at the siege of Roxburgh in 1460.

JAMES III., king of Scotland, succeeded his father in 1460, in the seventh year of his age. The most striking feature in the character of this prince, unjustly represented as tyrannical by several historians, was his fondness for the fine arts, and for those who excelled in them, on whom he bestowed more of his confidence than became a king in his circumstances. This excited in his fierce and haughty nobles a dislike and contempt of their sovereign, and indignation against the objects of his favour; which produced the most pernicious consequences, and ended in a rebellion that proved fatal to James, who was slain in 1488.

JAMES IV., king of Scotland, succeeded his father in 1488. He was a remarkably brave prince, but taking part with Louis XII. against Henry VIII. of England, he was slain in the battle of Flodden Field in 1513. This king is acknowledged to have

had great accomplishments both of mind and body. His Latin epistles are classical compared with the barbarous style of the foreign princes with whom he corresponded. Like his father, he had a taste for the fine arts, particularly sculpture; and the attention he paid to the civilization of his people, and his distribution of justice, merit the highest praise. But yet the virtues of James appear to have been more shining than solid, and his character was that of a gallant gentleman and a brave knight rather than a wise or a great monarch. At the time of his death he was only in his forty-first year. Like all the princes of his family, with the exception at least of his great grandson, James I. of England, his person was handsome, vigorous, and active. From their coins it does not appear that either he, or any of his predecessors of the Stuart race, wore their beards, as did all his successors to the reign of Charles II.

JAMES V., king of Scotland in 1513, was but eighteen months old when his father lost his life. When of age, he assisted Francis I., king of France, against the emperor Charles le Quint, for which service Francis gave him his eldest daughter in marriage, in 1535. This princess died in two years, and James married Mary of Lorraine, daughter of Claude, duke of Guise, and widow of Louis d'Orleans, by whom he had only one child, the unfortunate Mary queen of Scots, born only eight days before his death, which took place on the 13th of December, 1542, when only in his thirty-fifth year. The remarkable expedition of James V., in the year 1529, into the southern highlands of Scotland, to inflict judicial punishment on the marauders of these border districts, furnishes various amusing anecdotes illustrative of the state of society in the sixteenth century. Having very sagaciously, as a first step, secured in safe custody the principal chieftains by whom the disorders were privately encouraged, namely, the earl of Bothwell, the Lord Home, Lord Maxwell, Scott of Buccleugh, and Ker of Fernyherst, James assembled an army, and set out under the pretence of enjoying the pastime of hunting. The track which the king and his retinue pursued, led him first through the western part of Peebles-shire, from whence he made a detour to the left, through Ettrick and Ewesdale. It is ascertained by tradition, that in penetrating the wilds in the upper part of Tweeddale, he felt himself very much at a loss to discover the proper path into the vale of Drummelzier. It is supposed that the main body of his attendants were sent up the strath of Manor Water, while he and a few retainers made a stretch westward, through the demesnes of Sir James Tweedie, a thane of considerable power in this quarter at the time, who resided in a strong peel-house, called the Thane's castle, near Drummelzier, and the ruins of which are still extant, on the point of a steep conical rock. Here the chief of the Tweedies used to reside and domineer over the adjacent region. He was likewise in the habit of exacting a species of court by persons passing his fastness, in much the same way that the petty princes of Africa oblige travellers to wait upon them, either to gratify their love of power or plunder. The king having required a guide through the district of the Tweedies, a poor labouring man of the name of Bartram offered himself, and was accepted. This person assiduously escorted him from near the Rachan to Glenwhappen, through the vale commanded by Tweedie's castle and so well was James pleased with his attention,

that he granted him a freehold property, called Duck-pool, in the parish of Glenholm.

It is a remarkable fact that this was the first prince of his family who died a natural death since its elevation to the throne. He died, however, of a broken heart, occasioned by constant quarrels with his barons. He was formed by nature to be the ornament of a throne and a blessing to his people; but his excellent endowments were rendered in a great measure ineffectual by an improper education. Like most of his predecessors, he was born with a vigorous, graceful person, which, in the early part of his reign, was improved by all the manly exercises then in use. This prince was the author of a humorous poetical composition called the "Gaberlunzie Man."

JAMES, JOHN THOMAS, was born in 1786, and received his education in the Charter House school. His inclination would have induced him to enter the navy, but, in compliance with the wishes of his friends, he devoted himself to the clerical profession, and in 1804 he entered at Christ Church, Oxford, where he obtained a studentship. Shortly after, he visited the north of Europe in company with Sir James Riddell, and on his return published an account of his travels under the title of "A Tour through Germany, Sweden, Russia, and Poland in 1813-1814." He afterwards visited Italy, of which he also published an account. Soon after his return from the latter country, he took holy orders, and obtained the vicarage of Flitton-cum-Selsoe in Bedfordshire. On the death of Bishop Heber he was raised to the see of Calcutta, and having received the degree of D. D., he embarked for India in July 1827. He, however, soon fell a victim to the unhealthy character of the climate, and the necessary fatigues of the episcopal duty of his extensive diocese. He died in August 1829.

JAMES, THOMAS, a learned English critic and divine, born about the year 1571. He recommended himself to the office of keeper of the public library at Oxford by the arduous undertaking of publishing a catalogue of the MSS. in each college library at both universities. He was elected to this office in 1602, and held it eighteen years, when he resigned it to prosecute his studies with more freedom. In the convocation held with the parliament at Oxford in 1625, of which he was a member, he moved to have proper commissioners appointed to collate the MSS. of the fathers in all the libraries in England, with the catholic editions, in order to detect the forgeries in the latter; but this proposal not meeting with the desired encouragement, he engaged in the laborious task himself, which he continued until his death in 1629. He left behind him a great number of learned works.

JAMES, RICHARD, nephew of the former, entered into holy orders in 1615, but being a very eccentric man, of three sermons preached before the university, "one concerning the observation of Lent, was without a text, according to the most ancient manner; another against the text, and the third beside it." About the year 1619 he travelled through Wales, Scotland, Shetland, into Greenland and Russia, of which he wrote observations. He assisted Seldon in composing his "Marmora Arundeliana," and was very serviceable to Sir Robert Cotton, and his son Sir Thomas, in disposing and settling their noble library. He died in 1638, and has an extraordinary character given him by Wood for learning and abilities.

**JAMES, DR. ROBERT**, an English physician of great eminence, and particularly distinguished by the preparation of a most excellent fever-powder, was born at Kinverston in Staffordshire, in 1703; his father being a major in the army, and his mother a sister of Sir Robert Clarke. He was of St. John's college in Oxford, where he took the degree of A. B., and afterwards practised physic at Sheffield, Lichfield, and Birmingham, successively; then he removed to London, and became a licentiate in the college of physicians. In the metropolis he applied himself to writing as well as practising physic, and in 1743 published a "Medicinal Dictionary." Soon after he published an English translation, with a supplement by himself, of "Ramazzini de Morbis Artificum." In 1746 appeared "The Practice of Physic." In June 25, 1755, when the king was at Cambridge, James was admitted by mandamus to the doctorship of physic. In 1778 were published, a "Dissertation upon Fevers," and a "Vindication of the Fever Powder," with a short "Treatise on the Disorders of Children," and a very good print of Dr. James. This was the eighth edition of the dissertation, of which the first was printed in 1751, and the purpose of it was to set forth the success of this powder, as well as to describe more particularly the manner of administering it. The Vindication was posthumous and unfinished, for he died March 23, 1776, while he was employed upon it. Dr. James was married, and left several sons and daughters.

**JAMES, WILLIAM**.—This writer is best known as the author of a valuable work entitled "The Naval History of Great Britain from the Declaration of War by France in February 1793 to the Accession of George IV. in January 1820;" a new edition was afterwards published with considerable improvements, including diagrams of all the principal actions. This work was published in six volumes octavo, and contains much useful and valuable information. It however involved its author in an action at law and much unpleasant controversy, and he died in very embarrassed circumstances on the 28th of May, 1827.

**JAMES, DU VORAGINE**, a celebrated Dominican, who was born in 1260. He was provincial and counsellor of his order, and afterwards appointed archbishop of Genoa by Pope Nicholas IV., in 1292. He ruled his church with great wisdom and prudence, held a provincial council in 1293, and died in July 1298. He left a "Chronicle of Genoa," published in the collection of Italian authors by Muratori; a great number of Sermons, and other works; among the most celebrated is a collection of legends of the saints, known by the name of "The Golden Legend."

**JAMES DE VITRI**, a learned member of the catholic church, who was born early in the thirteenth century near Paris. He first became canon of Ognies, then pastor of Argenteuil, attended the crusades, and was made bishop of Acre. Gregory IX. created him cardinal in 1230, and gave him the bishopric of Frescati. He was afterwards legate in France, Brabant, and the Holy Land; in all which offices his talents were remarkable. He left many works, the most curious and most sought after among which is an "Eastern and Western History," in Latin.

**JAMESONE, GEORGE**, an excellent painter, justly termed the Vandyck of Scotland, he was the son of Andrew Jamesone, an architect, and born at Aberdeen in 1586. He studied under Rubens, at Antwerp; and, after his return, applied with inde-

fatigable industry to portraits in oil, though he sometimes practised in miniature, and also in history and landscapes. His largest portraits were somewhat less than life. His earliest works are chiefly on board, afterwards on a fine linen cloth smoothly prepared with a proper tone to help the harmony of his shadows. His excellence is said to consist in delicacy and softness, with a clear and beautiful colouring; his shades not charged, but helped by varnish, with little appearance of the pencil. When King Charles I. visited Scotland in 1633, the magistrates of Edinburgh, knowing his majesty's taste, employed this artist to make paintings of the Scottish monarchs, with which the king was so pleased that, inquiring for the painter, he sat to him and rewarded him with a diamond ring from his own finger. It is observable that Jamesone always drew himself with his hat on, either in imitation of his master, Rubens, or from his having been indulged in that liberty by the king when he sat to him. Many of Jamesone's works are in both the colleges of Aberdeen, and the Sybils there he is said to have drawn from living beauties in that city. His best works are from the year 1630 to his death, which took place at Edinburgh in 1644.

**JAMYN, AMADIS**, a celebrated French poet in the sixteenth century. He is esteemed the rival of Ronsard, who was his contemporary and friend, and died about 1585. He wrote, in addition to his poetical works, "Philosophical Discourses to Pasicharis and Rodanthe," with seven academical discourses, and a "Translation of the Iliad of Homer, begun by Hugh Sabel, and finished by Jamyn; with a translation into French verse of the three first books of the Odyssey."

**JANE OF FLANDERS**, a remarkable lady, who seems to have possessed in her own person all the excellent qualities of both sexes. She was the wife of John de Mountfort, a competitor for the dukedom of Brittany upon the death of John III. This duke, dying without issue, left his dominions to his niece Jane, married to Charles de Blois nephew to the king of France; but John de Mountfort, brother to the late duke though by a second marriage, claimed the duchy, and was received as successor by the people of Nantes. The greatest part of the nobility swore fealty to Charles de Blois, thinking him best supported. This dispute occasioned a civil war; in the course of which John was taken prisoner, and sent to Paris. This misfortune would have entirely ruined his party had not his interest been supported by the extraordinary abilities of his wife, Jane of Flanders. Bold, daring, and intrepid, she fought like a warrior in the field; shrewd, sensible, and sagacious, she spoke like a politician in the council; and, endowed with the most amiable manners and winning address, she was able to move the minds of her subjects by the force of her eloquence, and mould them exactly according to her pleasure. She was at Rennes when she received the news of her husband's captivity; but that disaster, instead of depressing her spirits, served only to rouse her native courage and fortitude. She forthwith assembled the citizens; and, holding in her arms her infant son, recommended him to their care and protection in the most pathetic terms, as the male heir of their ancient dukes, who had always governed them with gentleness and indulgence, and to whom they had ever professed the most zealous attachment.

She declared herself willing to run all hazards with them in so just a cause, pointed out the resources that still remained in the alliance of England, earnestly beseeching them to make one vigorous effort against an usurper, who, being forced upon them by the intrigues of France, would, as a mark of his gratitude, sacrifice the liberties of Brittany to his protector. The people, moved by the affecting appeal and animated by the noble conduct of the princess, vowed to live and die with her in defending the rights of her family, and their example was followed by almost all the Britons. The countess went from place to place, encouraging the garrisons of the several fortresses, and providing them with every thing necessary for their support; after which she shut herself up with her son in Hennebon, where she resolved to wait for the succours which Edward III. had promised to send to her assistance. Charles de Blois, accompanied by the dukes of Burgundy and Bourbon, and many other noblemen, took the field with a numerous army, and having reduced Rennes, laid siege to Hennebon, which was defended by the countess in person. This heroine repulsed the assailants in all their attacks with the most undaunted courage, and observing one day that their whole army had left the camp to join in a general storm, she led a detachment from a postern-gate of three hundred horse, set fire to their tents and baggage, killed their sutlers and servants, and raised so much alarm that the enemy gave over their assault, and getting betwixt her and the city walls cut off her retreat. Thus intercepted, she put the spurs to her horse, and, without halting, galloped directly to Brest, which lay at the distance of two-and-twenty miles from the scene of action. There, being supplied with a body of five hundred horse, she immediately returned, and fighting her way through one part of the French camp, was received into Hennebon, amidst the acclamations of the people. Soon after this the English succours appeared, and obliged the enemy to raise the siege.

JANEWAY, JAMES, a nonconformist divine of considerable talent, who was born in 1636 in Hertfordshire. He took his degree of M. A. at Oxford, but was ejected from the established church soon after the restoration for nonconformity. He became very celebrated as a preacher and writer, but his application was too great for his health, and he died in March 1674. His most popular work is entitled "A Token for Children," which has often been reprinted.

JANSEN, CORNELIUS, bishop of Ypres, one of the most learned divines of the seventeenth century, and principal of the sect called from his name Jansenists. He was born in Holland of catholic parents and studied at Louvain. Being sent, to transact some business of consequence relating to the university, into Spain, the catholic king, viewing with a jealous eye the intriguing policy of France, prevailed on him to write a book to prove to the pope that the French were not good catholics since they made no scruple of forming alliances with protestant states. Jansen performed this task in his "Mars Gallicus," and was rewarded with a mitre, being promoted to the see of Ypres in 1635. He had, among other writings, before this, maintained a controversy against the Protestants upon the points of grace and predestination; but his "Augustinus" was the principal labour of his life, on which he spent above twenty years.

In the year 1640 the two universities of Louvain and Douay thought fit to condemn the opinions of the Jesuits on grace and free-will. This having set the controversy on foot, Jansenius opposed to the doctrine of the Jesuits the sentiments of St. Augustine, and wrote a treatise on grace, which he entitled "Augustinus." This treatise was attacked by the Jesuits, who accused Jansenius of maintaining dangerous and heretical opinions, and afterwards, in 1642, obtained of Pope Urban VIII. a formal condemnation of the treatise wrote by Jansenius, when the partisans of Jansenius gave out that this bull was spurious, and composed by a person entirely devoted to the Jesuits. After the death of Urban VIII., the affair of Jansenism began to be more warmly controverted, and gave birth to an infinite number of polemical writings respecting grace. And what occasioned some mirth, was the titles which each party gave to their writings; one writer published "The Torch of St. Augustine," another found "Snuffers for St. Augustine's Torch," and Father Veron formed "A Gag for the Jansenists," &c. In the year 1650 sixty-eight bishops of France subscribed a letter to Pope Innocent X. to obtain an inquiry into, and condemnation of, the five following propositions extracted from Jansenius's "Augustinus:" 1. "Some of God's commandments are impossible to be observed by the righteous, even though they endeavour with all their power to accomplish them. 2. In the state of corrupted nature, we are incapable of resisting inward grace. 3. Merit and demerit, in a state of corrupted nature does not depend on a liberty which excludes necessity, but on a liberty which excludes constraint. 4. The Semipelagians admitted the necessity of an inward preventing grace for the performance of each particular act, even for the beginning of faith, but they were heretics in maintaining that this grace was of such a nature that the will of man was able either to resist or obey it. It is Semipelagianism to say that Jesus Christ died or shed his blood for all mankind in general."

JANSSENS, the names of three painters so highly distinguished in their various branches of art, that it will be necessary to notice them in detail.

Janssens, Abraham, was born at Antwerp in 1569. He was contemporary with Rubens, and also his competitor, and in many of the finest parts of the art was accounted not inferior to that celebrated master. Sandrart, who had seen several of his works, assures us that he not only gave a fine roundness and relief to his figures, but also such a warmth and clearness to the carnations that they had all the look of real flesh; and his colouring was as durable as it was beautiful, retaining its original lustre for a number of years. His best performance is said to be a Resurrection of Lazarus.

Janssens, Victor Honorius, was born at Brussels in 1664, and was a disciple of Volders, under whose direction he continued for seven years; in which time he gave many proofs of a genius far superior to those who were instructed in the same school. He afterwards went to Rome, where he attended particularly to the works of Raphael; he designed after the antique, and sketched the beautiful scenes around that city. He associated with Tempesta, the celebrated landscape-painter, for several years, and painted the figures in the works of that great master as long as they resided together.

Janssens composed historical subjects both of a

small and a large size; but he found the demand for his small pictures so considerable that he was induced to paint most frequently in that size. During eleven years he continued at Rome, which barely sufficed for his finishing those pictures for which he was engaged; nor would he have been even then at liberty had he not limited himself to a certain number, and determined not to undertake more. Returning to Brussels, his performances were as much admired there as they had before been in Italy; but having married and become a father, he was compelled to change his mode of painting in small, and to undertake only those of the large kind, as being more lucrative, more expeditious, and also more agreeable to his genius and inclination. He adorned most of the churches and palaces of his own country with his compositions. The invention of this artist was fruitful; he designed correctly, his colouring is natural and pleasing, his pencil free, and the style of his heads possess great beauty and elegance.

Janssens, Cornelius, an eminent portrait-painter, who was born at Amsterdam, and resided in England for several years, where he was engaged in the service of King James I., and painted several excellent portraits of that monarch, as also of his children and of the principal nobility of his court. He had not the freedom of hand nor the grace of Vandyck; but in other respects he was accounted his equal, and in the finishing of his pictures superior. His paintings are easily distinguished by their smooth, clear, and delicate tints, and by that character of truth and nature with which they are strongly marked. He generally painted on board; and, for the most part his draperies are black, probably because the opposition of that tint made his flesh colours appear more beautifully bright, especially in his female figures. It is said that he used a quantity of ultramarine in the black colours, as well as in his carnations, which may be one great cause of their preserving their original lustre even to this day. Frequently he painted in a small size in oil, and often copied his own works in that style. His fame began to be somewhat obscured on the arrival of Vandyck in England; and the civil war breaking out some time after, induced him to return to his own country, where his paintings were in the highest esteem. He died in 1685.

JARDINE, GEORGE.—Of the many eminent men who have adorned the universities of Scotland few have enjoyed so large a share of public respect as this eminent professor. Endowed with a vigorous and active mind, with great soundness of judgment, possessing a deep sense of the importance of his office, and an ardent desire to promote the improvement of his students, he devoted himself to his public duties with a zeal, and a faithfulness, which have never been surpassed, and but rarely equalled. Directed by that discernment of what was most useful and best suited to the circumstances of his pupils, for which through life he was distinguished, he, soon after his appointment in 1774, introduced those changes in the mode of public teaching which rendered his class so long a model of academical instruction. Retaining what was most important in ancient logic, and communicating a due knowledge of its peculiarities, he dismissed from his course of lectures all its unprofitable subtleties, directing the attention of the students to such views of the human mind, its powers and operations, as might lead to their proper exercise, and furnish the best means of

their improvement. But, aware that truths might be heard without attention, or without awakening the powers of the understanding, and that the formation of intellectual and moral habits is the first object of education, he devised a practical system of examinations and exercises, which he gradually improved to an extent that has seldom been witnessed. By a discriminating selection of topics, he directed his students to the subjects most deserving their consideration, while he awakened their curiosity, sustained their attention, and exercised in due proportion every faculty of their minds. The youths were thus kept continually alive to objects of study, and subjects naturally dry and uninteresting were, from the manner in which they were illustrated, rendered attractive, and prosecuted with avidity and enthusiasm. Hence the logic class of the university, though a class of labour, was always looked forward to with a feeling of elevated expectation, and the period of its attendance was generally recollected by the student as among the busiest but the happiest years of his academical course.

Few classes have ever displayed such order and such attention to business, with so little exercise of severity. Strict in discipline, but perfectly impartial, wise and affectionate in all that he required, the students submitted with cheerfulness to his directions, and loved, while they revered, their instructor. Their welfare habitually occupied his thoughts; and to improve the means of education was the ruling passion of his life. Warmly attached to the interests of those entrusted to his charge, he embraced every opportunity of imparting to them the admonitions of a father, of cherishing religious principle by reminding them of their higher duties, and guarding them against the dangers to which they were exposed. In the same spirit he attended with them on the public services of religion, directed them to exercises suited to the evenings of the Sabbath, and enforced the sacred instructions which on that day they had received. The private life of this venerable man was distinguished by active and well-directed benevolence, with great judgment, prudence, and perseverance, in all his undertakings. Affectionately tender in his family, susceptible of the strongest attachment, compassionate to the unfortunate, and ever exerting himself to promote the welfare of those around him, few men have possessed more warmly or more extensively the affections of his friends. Even to the last his mind retained a great portion of its usual elasticity and vigour. The academical society, which he had so long adorned, preserved to the end a firm hold of his regard; and, ever zealous for the welfare and honour of the university of Glasgow, it occupied a great portion of his thought even in the latest days of his life. Within its walls his character will ever be remembered with grateful reverence, and his name will descend to posterity as the name of one who, by his labours, has raised its reputation and acquired a lasting title to the gratitude of his country. Professor Jardine died in January 1827, aged eighty-five.

JARDYN, KAREL DU, an eminent landscape-painter, who was born at Amsterdam in 1640, and became a disciple of Nicholas Berchem. He travelled to Italy, and arriving at Rome he gave himself up alternately to study and dissipation. Yet amidst this irregularity of conduct his proficiency in painting was surprising, and his works fetched a very high price. With an intention to visit his native city he

at last left Rome; but passing through Lyons and meeting some companions, they prevailed on him to stay there for some time, and he found as much employment in that city as he could execute. But the profits which arose from his paintings were not proportionable to his profusion; and in order to extricate himself from the encumbrances in which his extravagance had involved him, he was induced to marry his hostess, who was old and disagreeable, but very rich. Mortified and ashamed of that adventure he returned as expeditiously as possible to Amsterdam, accompanied by his wife, and there for some time followed his profession with full as much success as he had met with in Italy or Lyons. He returned to Rome the second time, and after a year or two spent there in his usual extravagant manner, he settled at Venice. In that city his merit was well known before his arrival, which procured him a very honourable reception, and he remained there till his death. He was sumptuously interred out of respect to his talents, and, although a protestant, permitted to be laid in consecrated ground. This painter, in his colouring and touch, resembled his master Berchem, but he added to that manner a force which distinguishes the great masters of Italy.

JARVIS, JOHN, an artist of considerable talent, who was born in Dublin in 1749. He was principally distinguished for his paintings on glass, and one of his best works is the west window of New College chapel, Oxford, from a design by Sir Joshua Reynolds. He died in 1804.

JAY, JOHN, an eminent American jurist and statesman, who was born in the city of New York in 1745. After receiving the elements of his education at a boarding-school, and under private tuition, he was placed when fourteen years of age at King's (now Columbia) college, in his native place. Here he devoted himself principally to those branches of learning which he deemed most important in reference to the profession of the law, upon the study of which he entered after receiving his bachelor's degree. In 1768 he was admitted to the bar, and in 1774 was chosen a delegate to the first American congress, which met at Philadelphia, and was placed on a committee with Mr. Lee and Mr. Livingston, to prepare an address to the people of Great Britain. It was prepared by Mr. Jay, and is one of the most eloquent productions of the time. In the two following years he was re-elected, and served on various important committees.

In 1777 he was a member of the convention which framed the constitution of New York, and the first draft of that instrument proceeded from his pen. The following year, when the government of New York was organized, he was appointed chief-justice of that state. In 1779 we find him again a member of congress, and in the chair of that body. From this, however, he was removed in the same year by his appointment as minister plenipotentiary to Spain. The objects of Mr. Jay's mission were to obtain from Spain an acknowledgment of the independence of America, to form a treaty of alliance, and to procure pecuniary aid. With regard to the first two points no satisfactory conclusion was obtained, and in the summer of 1782 Mr. Jay was appointed one of the commissioners to negotiate a peace with England, at the same time that he was authorized to continue the negotiation with Spain. In conjunction with Mr. Adams and Dr. Franklin, he resolved to disobey the instructions of congress to follow in all things

the advice of the French minister, Count de Vergennes, who was embarrassing the negotiation with England in order to benefit France at the expense of the United States, and accordingly they signed a treaty with the British minister without his knowledge. The definitive treaty having been signed in September 1783, he soon afterwards resigned his commission as minister to Spain, and in May 1784 embarked for the United States. He was then placed at the head of the department for foreign affairs, in which office he continued until the adoption of the present constitution, when he was appointed chief-justice, soon after which he died.

JAY, ANTOINE, a French author, who was born in 1770 at Guitres, in the department of Gironde, and studied at Niort, where Fouché was his instructor; after which he applied himself to law at Toulouse. After having devoted himself to the cause of freedom in the revolution, and been imprisoned and released, he travelled in the United States, where he remained seven years. After his return in 1802, Fouché engaged him in the education of his children. His prize essays rendered him known, and in 1812 he became principal editor of the "*Journal de Paris*," and published the "*Glaneur; or Essays de Nicolas Freeman*." In 1813 the professorship of history at the Athenæum was conferred on him, and his inaugural discourse exposed the errors of the romantic school, and of the fashionable prejudice in favour of the middle ages, which France has received from Germany. During the hundred days he was a member of the chamber of deputies, and employed his influence with leading men in favour of many royalists and proscribed persons; he always voted in the chamber on the liberal side, and therefore demanded a revision of the Additional Act, so called, and of the *senatus-consults*, which were more favourable to despotism than to the constitutional system. After the battle of Waterloo he proposed, in the chamber, to Prince Lucien, to persuade Napoleon to abdicate. The address of the French government to the French army before the gates of Paris was drawn up by him, and carried by him, with Arnault, Garat, &c., on the 29th of June, to Davoust's head-quarters at La Villette. After the second restoration, Jay published his "*Histoire du Ministère du Cardinal Richelieu*," and was afterwards, with Etienne, the editor of the "*Constitutionnel*" and of the "*Minerve*." In 1822 he was summoned with Jouy, to answer for some imprudent expressions in the "*Biographie des Contemporains*," of which they were associate editors; he was acquitted at the first trial, but Jouy was sentenced to be imprisoned and fined. Both appealed, and the court of appeals condemned both to imprisonment in 1823. He and Jouy spent the period of their imprisonment at St. Pélagie, where they wrote the popular work "*Les Hermites en Prison, ou Consolations de St. Pélagie*, par E. Jouy et A. Jay." After their deliverance they published also, in conjunction, "*Les Hermites en Liberté*."

JEBB, SIR RICHARD.—This distinguished medical practitioner was born in 1729 at Stratford in Essex, where his father, Dr. Samuel Jebb, practised as a physician. He received an excellent education at Cambridge, but being a nonjuror by principle, he could not take any degree in that university. He afterwards studied in London and Leyden, and from the university in the latter city he obtained the degree of doctor of medicine. Upon settling in London he

entered as licentiate of the college of physicians, and in 1768 he was elected a fellow of that body. As a practitioner he became so eminent, that when the duke of Gloucester was dangerously ill in Italy, he was requested to go abroad to attend the health of that prince; and he was called abroad a second time to visit the same prince, on a future illness, in 1777. About the same period he was made physician-extraordinary to the king, and in 1780 was appointed physician in ordinary to the prince of Wales; and on the death of Sir Edward Wilmot, in 1786, he was appointed one of the physicians in ordinary to his majesty; but this office he did not enjoy many months; for, being in attendance on two of the princesses, who were affected with the measles, he was suddenly attacked with a fever in their apartments at Windsor, and fell a victim to the disease, after a few days' illness, on the 4th of July, 1787.

JEBB, JOHN.—This distinguished ecclesiastic was born at Drogheda in 1775. In his early years he enjoyed the advantages of an excellent domestic education, and when at the age of eleven he was sent to a public school, he carried with him a mind trained to habits of study and reflection, and prepared to receive and appreciate classical literature. Having passed through the ordinary routine of studies at Celbridge and Londonderry, he entered the Dublin university in 1791, and almost immediately became distinguished as a sound and elegant scholar. This was the "golden age" of the Dublin university; never was there a period in its history when science and polite literature were so ardently cultivated and so closely united. Among Jebb's contemporaries were Lloyd the provost, Davenport the unflinching advocate of liberal principles "when evil days came," M'Mabon, Wallace, Torrens, Perrin, Blacker, and other ornaments of the Irish bar; with George Croly and Charles Maturin. In this galaxy of talent Jebb shone not the least conspicuous; he won the honours of the university nobly, and he wore them unenvied, for his amiable temper, his kind heart, and his utter disregard of self, had endeared him to all. His success at the scholarship examination seemed to be a personal triumph to every member of the university but himself.

These were the days of the historical society, of which society Mr. Jebb was a distinguished member; and the charms of his eloquence are still among the pleasant reminiscences of contemporaries. One only of his addresses has been preserved; it was delivered from the chair of the society on the occasion of the death of two young men, Reid and Sargent, youths of high promise, cut off prematurely at the moment that the hopes and proud anticipations of their friends seemed about to be realized. Similarity of disposition and pursuits had united them to Jebb in the strictest bonds of affection, and he who had to pronounce their funeral eulogy was the person who felt their loss most bitterly. No stranger can read this simple and pathetic address without being affected, but those alone who heard it can picture the effect that its delivery produced.

In 1799 Mr. Jebb left the university, and was admitted to holy orders by Bishop Young, the predecessor of Dr. Lloyd, in reforming the science course in Dublin. But to his college life Jebb looked back with fondness and regret; his eloquent assertion of its merits in the house of lords in 1824 is manifestly an out-pouring of treasured affection. "The

university," he said, "which, in its earliest days, produced Usher, the most profoundly learned offspring and ornament of the reformation; and Loftus in oriental letters rivalled only by his great coeval Pococke; which afterwards sent forth to shine among the foremost of our Augustan age, Parnell, the chastest of our poets; Swift, the purest of our prose-writers; and Berkeley, the first of our metaphysicians; which formed nearly in our own time, perhaps within the recollection of some noble lords who hear me, Goldsmith, our most natural depicor of life and manners; Burke, the greatest philosophic statesman of his own or any other age and country;—and why should I not add Grattan, the eloquent assertor of his country's rights, the parent of Irish independence?—the university which sent forth such men is not now degenerating, nor likely to degenerate from her ancient rank and name, and needs not blush to be compared with any university of England."

For about five years Mr. Jebb continued curate of Swanlinbar, and, like Heber at Hodnett, was universally beloved; by the catholics he was revered as highly as by the protestants; in works of charity he knew no religious difference. His spirit was too mild and gentle for acrimonious controversy; he felt that sincere belief, though erroneous, was entitled to respect, and that violence, even in support of truth, injures the cause it professes to defend. In a letter to a theologian of a very different spirit he says, "I do not think the controversial the best mode of bringing up children in the deep, serious, practical, heart-felt love of our true reformed Christianity. And I question whether the early disputant on debated points may not in riper years be the most likely to waver or apostatize." Those who have witnessed the animosities, the heart-burnings, and even the deeds of actual violence, engendered and perpetuated by the fanatic zeal of controversial preachers in Ireland, can best understand what a blessing such a man as Jebb was in an Irish parish.

In January 1823 Dr. Jebb was consecrated bishop of Limerick. This diocese, one of the most extensive in Ireland, contained in it some of the most miserable and disturbed districts. It had also its full share of neglected curates, and a slight sprinkling of negligent rectors. The gentle mind of Jebb seemed ill calculated to encounter such a complication of difficulties, but he soon showed that mildness is not inconsistent with firmness, and that the meek, when principle is concerned, manifest a strength of resolution which cannot be shaken. The new bishop declared that he would disregard aristocratic influence, and he kept his word; in bestowing patronage his choice was guided by merit alone; the unostentatious claims of the working clergy were with him more powerful than the pressing solicitations of the great, and the curate who despaired of reward because he had no patron, found that his labours were his best introduction, and his most powerful advocate in the heart of his diocesan.

In 1824 Dr. Jebb, for the first and, we believe, the last time, addressed the house of lords; the professed object of his speech was the defence of the Irish church, but he added to it a terrible exposure of the inhumanity of Irish landlords, resident and absentee. His name became at once popular in England; enquiries were made respecting his literary productions, their value for the first time was made known, and, at the same moment, he came into possession of the

fame of an accomplished orator and a sound theologian.

His original works are not numerous, but they are all of sterling merit; his sermons have the character attributed to the discourses of St. Chrysostom,—they meddle not with controversy, they abstain from mystery, but they inculcate “peace on earth, good-will towards men.” His “*Essay on Sacred Literature*” is his most finished and valued performance; it is one of the finest specimens of sacred criticism in our language. The discovery of a metrical structure in the hymns and discourses preserved by the evangelists at once affords a key to the interpretation of many difficult passages, and establishes their genuineness beyond all question. The learning displayed in the work will remind the reader of our Ushers, our Hookers, and our Taylors; nor does the resemblance stop there: in the rare union of rich fancy with simplicity of language Jebb attained as high an eminence as those ancient worthies. “*Practical Theology*” was his last original work; it contains sermons, occasional tracts, his address to the historical society, and his speech in the house of lords. The great charm of these is the spirit of love breathing in every line; he remonstrates as a father with an erring child; he advises as a brother to a brother; he reasons as a friend with a friend.

In 1827 Dr. Jebb was attacked by paralysis, from which he never perfectly recovered, but, notwithstanding his illness, he exerted himself to serve his brethren by editing those works which he deemed most likely to serve the church of Ireland, and the whole Christian community. With this design he published the “*Protestant Kempis*,” “*Townson’s Sermons*,” “*Phelan’s Remains*,” and “*Burnett’s Lives*.” On the second edition of the last-mentioned work he was occupied during his last illness, so that, like Bishop Ravenscroft, he may be said “to have died with his armour on.” His death took place December the 7th, 1833.

**JEFFERSON, THOMAS.**—This distinguished republican leader early devoted himself to the liberty of America. In 1776 we find him holding a seat in congress, and in the month of October in that year he took his place in the legislature of Virginia, of which he had been elected a member from his county. In this situation he was indefatigable in his labours to improve the imperfect constitution of the state which had been recently and hastily adopted, before a draught of one which he had formed on the purest principles of republicanism had reached the convention which was deliberating at Richmond. The chief service which he performed was as a member of a commission for revising the laws, consisting, besides himself, of Edmund Pendleton, George Wythe, George Mason, and Thomas Ludwell Lee, by whom no less than 126 bills were prepared, from which are derived all the most liberal features of the existing laws of the commonwealth. The share of Mr. Jefferson in this great task was prominent and laborious. On the 1st of June, 1779, he was chosen the successor of Mr. Henry in the office of governor of the state, and continued in it for two years, at the end of which period he resigned, “from a belief,” as he says, “that, under the pressure of the invasion under which we were then labouring, the public would have more confidence in a military chief; and that the military commander being invested with the civil power also, both might be wielded with more energy, prompti-

tude and effect, for the defence of the state.” General Nelson was appointed in his stead. Two days after his retirement from the government he narrowly escaped capture by the British, a troop of horse having been despatched to Monticello, where he was residing, for the purpose of making him prisoner. He was breakfasting when a neighbour rode up at full speed with the intelligence that the troop was ascending a neighbouring hill. He first sent off his family in a carriage, and after a short delay for some indispensable arrangements, mounted his horse, and, taking a course through the woods, joined them at the house of a friend—a flight in which it would be difficult to discern any thing dishonourable, although it has been made the subject of sarcasm and reproach without end by the spirit of party.

In June 1781 Mr. Jefferson was appointed minister plenipotentiary, in conjunction with others, to negotiate a peace then expected to be effected through the mediation of the empress of Russia; but he declined for the same reason that had induced him in 1776 to decline also the appointment of a commissioner with Dr. Franklin, to go to France in order to negotiate treaties of alliance and commerce with that government. On both occasions the state of his family was such that he could not leave it, and he “could not expose it to the dangers of the sea, and of capture by the British ships then covering the ocean.” He saw too, that “the labouring oar was really at home,” especially at the time of his first appointment; but in November 1782, congress having received assurances that a general peace would be concluded in the winter and spring, renewed the offer which they had made the previous year, and this time it was accepted; but the preliminary articles being agreed upon before he left the country, he returned to Monticello, and was chosen, in June 1783, a member of congress. It was during the session at Annapolis, that, in consequence of Mr. Jefferson’s proposal, an executive committee was formed, called the committee of the states, consisting of a member from each state. Previously, executive and legislative functions were both imposed upon congress, and it was to obviate the bad effects of this junction that Mr. Jefferson’s proposition was adopted. Success however did not attend the plan; the members composing the committee quarrelled, and finding it impossible on account of their altercations to fulfil their duties, they abandoned their post after a short period, and thus left the government without any visible head during the adjournment of congress.

In May 1784, congress having resolved to appoint another minister, in addition to Mr. Adams and Dr. Franklin, for negotiating treaties of commerce with foreign nations, selected Mr. Jefferson, who accordingly sailed from Boston to Paris.

Dr. Franklin was already there, and Mr. Adams having soon after joined them, they entered upon the duties of their mission. They were not very successful, however, in forming the desired commercial treaties; and, after some reflection and experience, it was thought better not to urge them too strongly, but to leave such regulations to flow voluntarily from the amicable dispositions and the evident interests of the several nations. In June 1785 Mr. Adams repaired to London, on being appointed minister plenipotentiary at the court of St. James’s; and in July Dr. Franklin returned to America, and Mr. Jefferson was named his successor at Paris. In the Fe-

bruary of 1786 he received a pressing letter from Mr. Adams, requesting him to proceed to London immediately, as symptoms of a better disposition towards America were beginning to appear in the British cabinet, than had been manifested since the treaty of peace. On this account he left Paris in the following March, and on his arrival in London agreed with Mr. Adams on a form of treaty. At the usual presentation, however, to the king and queen, both Mr. Adams and himself were received in the most ungracious manner; and after a few vague and ineffectual conferences, he returned to Paris. Here he remained, with the exception of a visit to Holland, to Piedmont, and the south of France, until the autumn of 1789, zealously pursuing whatever was beneficial to his country. In September of that year he left Paris for Havre, and crossing over to Cowes, embarked for the United States; and whilst on his way home, received a letter from President Washington, enclosing the appointment of secretary of state under the new constitution, which was just commencing its operation. He soon afterwards received a letter from the same quarter, giving him the option of returning to France in his ministerial capacity or of accepting the secretaryship, but conveying a strong intimation of a desire that he would choose the latter office. This communication was produced by a letter from Mr. Jefferson to the president, in reply to the one first written, in which he had expressed a decided inclination to go back to the French metropolis. He then, however, consented to forego his preference, and proceeded to New York, where congress was in session, and immediately entered upon the duties of his post. Mr. Jefferson continued to fill the secretaryship of state until the 31st of December, 1793, when he resigned. From that period until February 1797 he lived in retirement. In this year he was elected vice-president of the United States, and in 1801 was chosen president by a majority of one vote over his competitor Mr. Adams.

At the expiration of eight years he again retired to private life, from which he never afterwards emerged. The rest of his life was passed at Monticello, which was a continued scene of the most liberal hospitality. Such indeed was the extent to which calls upon it were made by foreigners as well as Americans, that the closing years of his life were embittered by distressing pecuniary embarrassments. He was forced to ask permission of the Virginia legislature to sell his estate by lottery, which was granted. Shortly after Mr. Jefferson's return to Monticello, it having been proposed to form a college in his neighbourhood, he addressed a letter to the trustees, in which he sketched a plan for the establishment of a general system of education in Virginia. This appears to have led the way to an act of the legislature in the year 1818, by which commissioners were appointed with authority to select a site and form a plan for a university on a large scale. Of these commissioners Mr. Jefferson was unanimously chosen the chairman, and he framed a report, embracing the principles on which it was proposed the institution should be formed. The situation selected for it was at Charlottesville, a town at the foot of the mountain on which Mr. Jefferson resided. He lived to see the university—the child of his old age—in prosperous operation, and giving promise of extensive usefulness. He fulfilled the duties of its rector until a short period before his death, which occurred on the

4th of July, 1826, the fiftieth anniversary of the declaration of independence, and within the hour in which he had signed it. In the four volumes of his posthumous works, edited by his grandson Thomas Jefferson Randolph, there are abundant materials to guide the literary or historical critic in forming an estimate of his powers, acquirements, feelings, and opinions.

JEFFRIES, JOHN, M. D., a learned American, who was born at Boston, February 1744, and, after graduating at the university of Cambridge, commenced the study of medicine. After completing his preparatory studies, and being admitted to practise, he came to London, and sedulously attended the instructions of the most distinguished lecturers. In June 1769 the university of Aberdeen conferred on him the degree of doctor of physic, he being, as it is believed, the first native of the American provinces who obtained that honour. In the same year he returned to Boston, where he recommenced his labours, and continued to practise with great success until the evacuation of that city by the British garrison. He then accompanied General Howe to Halifax. That commander made him surgeon-general to the forces in Nova Scotia in 1776. In March 1779 he went again to England, where he was made surgeon-major to the forces in America. In the spring of 1779 he entered upon the duties of this office in Savannah, then in the possession of the British. He did not however retain it very long, for in December 1780 he was again in London, having resigned and proceeded thither in consequence of a severe domestic affliction. In London he practised with considerable success, and occupied himself much with scientific research, having declined the offer of the lucrative post of surgeon-general to the forces in India. To ascertain the correctness of certain preconceived hypotheses relative to atmospheric temperature, and the practicability of some ærostatic improvements which had suggested themselves to his mind, he undertook two aerial voyages. The second one was made in January 1785, from the cliffs of Dover across the British channel, into the forest of Guinnes, in the province of Artois, in France. The reputation accruing from these expeditions gained him the notice and civilities of some of the most distinguished personages of the day, procured for him an introduction to all the learned and scientific societies of Paris, and facilitated his access to the medical and anatomical schools of that metropolis. He drew up a paper detailing the result of his various experiments, which was read before the royal society of London with much approbation. In the summer of 1789 he repaired to Boston, where he soon acquired eminence. It is said that he delivered the first public lecture in Boston on anatomy, a branch of which he was very fond. He delivered, however, but one; for, on the second evening, a mob having collected, entered his anatomical room, and carried off in triumph his subject, which was the body of a convict, given him by the governor after execution. After an uninterrupted and successful practice of fifty-three years he was seized with an inflammation of the bowels, originating in a hernia occasioned by great exertion in his first aerial voyage, which carried him off on the 16th of September, 1819.

JEFFREY, FRANCIS.—This talented lawyer was born in Edinburgh on the 23rd of October, 1773.

He received the rudiments of his education at the high school of Edinburgh, and in 1787 was entered at the university of Glasgow. After having remained at Glasgow four years he removed to Oxford, and was admitted of Queen's college in 1791. In 1795 he was called to the bar. In very early life Mr. Jeffrey displayed the promise of splendid talents, and his father spared no pains in his education. While Mr. Jeffrey resided at Edinburgh, he engaged actively in the literary societies of that city, and was one of the most conspicuous members of the speculative society. At the bar his success was, however, long doubtful, and it was not for many years that he acquired extensive practice; yet his abilities as an advocate were of the first order. In acuteness, promptness, and clearness; in the art of illustrating, stating, and arranging; in extent of legal knowledge, in sparkling wit, keen satire, and strong and flowing eloquence, he had few equals. But though Mr. Jeffrey was known at home as the head of the Scottish bar, it was to his literary character that he owed his general reputation. As the editor and one of the leading writers of the "Edinburgh Review" for a period of thirty years, he became a sort of literary despot, rendered terrible by his merciless sarcasm and acute criticism. His duel, or rather meeting with Moore, and the effect of the review of Lord Byron's "Hours of Idleness" on the noble bard, are well known. The articles of Mr. Jeffrey are numerous, and relate principally to belles-lettres. His essay on beauty, in the supplement to the "Encyclopædia Britannica," is a fine specimen of philosophical criticism. The political tone of the "Edinburgh Review" has ever been decidedly of a Whig character, which, at the time of its appearance, was by no means popular in Scotland, where the Whigs were then few.

**JEFFREYS, GEORGE, LORD BARON WEM,** commonly known by the name of Judge Jeffreys, was born towards the beginning of the seventeenth century. He was entered at the Middle Temple, and by attending an assize during the plague, when few barristers could be met with, he was allowed to plead, although not formally admitted, and continued to practise unrestrained until he attained the highest employments in the law. Soon after commencing his professional career, he was chosen recorder of

London; and to this advancement, and the influence it procured him, may be attributed his introduction at court and appointment of solicitor to the duke of York. A willing instrument of all sorts of measures, his farther promotion at such a period was rapid, and he was appointed successively a Welsh judge and chief-justice of Chester, and created a baronet.

When parliament began to prosecute the abhorers (or church and court party, so called from their address to the king, Charles II., expressing their abhorrence of those who endeavoured to encroach on the royal prerogative), he resigned the recordership, and was appointed chief-justice of the king's bench. On the accession of James II. he was one of the advisers and promoters of all the oppressive and arbitrary measures of his reign; and, for his sanguinary and inhuman proceedings against the adherents of Monmouth, was rewarded with the post of lord high chancellor in 1685. His deportment on the bench was in the highest degree discreditable at all times, and he indulged in scurrility and abuse of the most degrading description. On the arrival of the prince of Orange, the chancellor, who had disguised himself as a seaman, in order to get on board a ship unknown, was detected in a low public-house in Wapping by an attorney whom he had insulted in open court. The latter making his discovery known, Jeffreys was immediately seized by the populace and carried before the lord mayor, who sent him to the lords in council, by whom he was committed to the Tower, where he died in 1689.

The character of the man whose life we have thus briefly traced, is admirably illustrated in the following letter addressed to James II. It is dated from Taunton, September 19th, 1685, and relates to the disposal of eight hundred prisoners whom this merciless tyrant had expatriated.

"I most humbly beseech yo' Maj<sup>ty</sup> to give mee leave to lay hould of this opportunite by my lord Churchill, to give your Maj<sup>ty</sup> an account that I have this day finished what was necessary for yo' Maj<sup>ty</sup> service in this place; and begge leave that yo' Maj<sup>ty</sup> will be graciously pleased to lett mee referre to my lord Churchill for the particulars; for I have not as yet perfected my papers soe as to be able to doe it soe exactly as my duty to yo' Maj<sup>ty</sup> service requires. I received y' Maj<sup>ty</sup> comands by my lord Sunderland, about the rebells yo' Maj<sup>ty</sup> designs for transportation; but I beseech y' Maj<sup>ty</sup> that I may inform you that each prisoner will be worth 10*l.*, if not 15*l.* a piece; and, Sir, if yo' Maj<sup>ty</sup> orders them as y<sup>e</sup> have already designed, persons that have not suffered in the service will run away with the booty, and I am sure, Sir, yo' Maj<sup>ty</sup> will be continually perplexed with petitions for recompences for sufferers, as well as for rewards for servants. Sir, I hope yo' Maj<sup>ty</sup> will pardon this presumption. I know it is my duty to obey. I have only respited doing any thing till I know your royal pleasure is, they should have the men; for uppon allegiance to y<sup>e</sup>, Sir, I shall never trimme in my obedience to y<sup>e</sup> comands in all things. Sir, had not yo' Maj<sup>ty</sup> beene pleased to declare y<sup>e</sup> grations intentions to them that served y<sup>e</sup> in the soldiery, and also to the many distressed families ruined by this late rebellion, I durst not have presumed to have given yo' Maj<sup>ty</sup> this trouble. Sir, I will, when I have the hon<sup>r</sup> to kisse yo' Maj<sup>ty</sup> hands, humbly acquaint you with all matters yo' Maj<sup>ty</sup> hath been graciously pleased to entrust mee w<sup>th</sup>, and dout not, Sir,

but to be able to propose a way how to gratifie all such as yo' Maj<sup>m</sup> shall be pleased to think deserving of it, w<sup>th</sup>out touching yo' Excheq'. I most humbly thro my selfe at y' royall feete, for y' pardon for this presumption, w<sup>th</sup> I was emboldened to by yo' Maj<sup>m</sup> most gracious acceptance of my meane services. Sir, I begge leave to inclose some papers of the confessions and behaviour of those that were executed since my last. I purpose for Bristow on Monday, and thence to Wells; and shall not dare to trouble yo' Maj<sup>m</sup> any further, except it be to beseech y' royall pardon for all the mistakes, and crave leave heartily and humbly to assure y' Maj<sup>m</sup> I had rather die than omitt any opportunity wherein I might approve my selfe,

"Royal Sir,

"Yo' Maj<sup>m</sup> most dutifull

"And obedient Subject and Serv<sup>t</sup>,

"JEFFREYS."

JEMSHID, or GIAMSCHID, a Persian sovereign, celebrated in oriental history, the period of whose existence is somewhat uncertain. He is said to have ascended the throne of Persia about 800 B. C., and to have founded the celebrated city of Istakhar, called by the Greeks Persepolis. To this prince is ascribed the first establishment of public baths, the invention of tents and pavilions, and the use of lime for mortar in buildings. He instructed his subjects in astronomy, and also probably in the mysteries of Sabeism, or the worship of the heavenly bodies; but though he is represented as a wise and powerful monarch, he was unfortunate in war, and having been dethroned by Zohak, an Arabian king, he spent the latter part of his life in indigence and obscurity. His son Pheridoun was preserved by the care of the queen from the pursuit of the usurper, and ultimately recovered his father's throne.

JENKIN, ROBERT, a learned English divine, who was born in 1656. He was educated at Cambridge, and became master of St. John's college. He was the author of several works, the principal of which are, "An Historical Examination of the Authority of General Councils," "The Reasonableness and Certainty of the Christian Religion," "Defensio S. Augustini," and a translation from the French of the "Life of Apollonius Tyaneus." Mr. Jenkin died in 1727.

JENKINS, SIR LEOLINE, an able statesman, who was born in Glamorganshire about the year 1623. Becoming obnoxious to the parliament during the civil war by adhering to the king's cause, he consulted his safety by flight; but returning on the restoration he was admitted an advocate in the court of arches, and succeeded Dr. Exton as judge. When the queen-mother Henrietta died in 1669 at Paris, her whole estate, real and personal, was claimed by her nephew Louis XIV.; upon which Dr. Jenkins's opinion being called for and approved, he went to Paris, with three others joined with him in a commission, and recovered her effects; for which he received the honour of knighthood. He officiated as one of the mediators at the treaty of Nimeguen, in which tedious negotiation he was engaged about four years and a half, and was afterwards made a privy counsellor and secretary of state. He died in 1685, and, as he never married, bequeathed his whole estate to charitable uses.

JENKINSON, ANTHONY, a celebrated English traveller, who was born early in the sixteenth century. In 1557 he went to Moscow, and travelled

through Bochara into Tartary. He afterwards visited the shores of the Caspian Sea, and on his return published an account of his adventures. He died in 1570.

JENKINSON.—See LIVERPOOL, EARL OF.

JENNER, EDWARD.—This distinguished benefactor of his species was born in 1749. He lost his father at a very early age, and received his medical education near Bristol; and on removing afterwards to the metropolis, he became a pupil of the celebrated John Hunter. Such was the estimation in which Dr. Jenner's talents were at that time held by Mr. Hunter, that he offered him a partnership in his profession, which was very valuable. Mr. Hunter was desirous of extending his lectures on anatomy and surgery to subjects of natural history; and justly appreciating the abilities of his pupil Jenner, and the ardour and perseverance of his inquiries into those subjects, he was desirous of obtaining his co-operation. So attached, however, was Dr. Jenner to a country life, to his native place, and, above all, to the excellent brother whom, from difference of years and the decease of his father, he regarded rather filially than fraternally, that he declined the flattering proposal. He afterwards resided at Berkeley, and obtained considerable practice.

We may now pass at once to the most important period in Jenner's life. In 1775 Dr. Jenner begun to investigate the nature of the cowpox. His attention to this singular disease was first excited by observing, that among those whom in the country he was frequently called upon to inoculate, many resisted every effort to give them the smallpox. These patients he found had undergone a disorder contracted by milking cows affected with a peculiar eruption on their teats. On enquiry it appeared, that this disease had been known among the dairies from time immemorial, and that a vague opinion prevailed of its being a preventive of the smallpox. This opinion, however, was comparatively new, for all the old farmers declared they had no such idea in their early days, which was easily accounted for, as the common people were rarely inoculated for the smallpox till the practice became extended by the improved method of the Suttons; so that the people in the dairies were seldom put to the test of the preventive powers of the cowpox. In the course of his investigating this subject, Dr. Jenner found that some of those who seemed to have undergone the cowpox, on inoculation with variolous matter, felt its influence just the same as if no disease had been communicated from the cow. On making enquiries on the subject among the medical practitioners in his neighbourhood, they all agreed that the cowpox was not to be relied upon as a preventive of the smallpox. This for a while damped, but did not extinguish his ardour; for as he proceeded he had the satisfaction of learning that the cow was subject to some varieties of spontaneous eruptions upon her teats, that they were all capable of communicating sores to the hands of the milkers, and that whatever sore was derived from the animal, obtained the general name of the cowpox. Thus a great obstacle was surmounted, and in consequence a distinction was discovered between the true and the spurious cowpox.

But the first impediment to this enquiry had not been long removed before another of greater magnitude started up. There were not wanting instances to prove, that when the true cowpox broke out among

the cattle, a person who had milked the infected animal, and had thereby apparently gone through the disease in common with others, was yet liable to receive the smallpox. This gave a painful check to the hopes of Jenner, till, reflecting that the operations of nature are generally uniform, and that it was not probable the human constitution, after undergoing the cowpox, should in some instances be perfectly shielded from the smallpox, and in others remain unprotected, he determined to renew his laborious investigation of the subject. The result was fortunate, for he now discerned that the virus of cowpox was liable to undergo progressive changes from the same causes precisely as that of smallpox; and that when applied to the human skin in a degenerated state, it would produce the ulcerative effects in as great a degree as when it was not decomposed, and even sometimes greater; but that when its specific properties were lost, it was incapable of producing that change upon the human frame which is requisite to render it unsusceptible of the variolous contagion; so that it became evident a person might milk a cow one day, and having caught the distemper, be for ever secure; while on another person milking the same cow the next day, the virus might act in such a way as to produce sores, and yet leave the constitution unchanged and therefore unprotected.

During this investigation of the casual cowpox, as received by contact with the animal, our enquirer was struck with the idea that it might be practicable to propagate the disease by inoculation, after the manner of the smallpox, first from the cow and finally from one human being to another. He waited anxiously some time for an opportunity of putting this theory to the test. At length the period of trial arrived; and on the 14th of May, 1796, the first experiment was made upon a lad of the name of Phipps, in whose arm a little vaccine virus was inserted, taken from the hand of a young woman of the name of Sarah Nelmes, who had been accidentally infected by a cow. Notwithstanding the resemblance which the pustule thus excited in the boy's arm bore to variolous inoculation, yet as the indisposition attending it was barely perceptible, the operator could scarcely persuade himself that his patient was secure from the smallpox. However, on the same boy being inoculated on the 1st of July following with smallpox matter, it proved that he was perfectly safe. This case inspired confidence, and as soon as a supply of proper virus could be obtained from the cow, arrangements were made for a series of inoculations. A number of children were inoculated in succession, one from the other; and after several months had elapsed they were exposed to the infection of the smallpox; some by inoculation, others by variolous effluvia, and some in both ways; but they all resisted it. The result of these trials gradually led to a wider field of experiment, and when at length it was satisfactorily proved that the inoculated cowpox afforded as complete a security against the smallpox as the variolous inoculation, the author of the discovery made it known to the public without either disguise or ostentation. This treatise, entitled "An Inquiry into the Causes and Effects of the Variolæ Vaccinæ, a disease discovered in some of the Western Counties of England, particularly Gloucestershire, and known by the name of the Cow Pox," appeared in 1798, in a small quarto of seventy-five pages.

The author sets out with observing that the de-

viation of man from the state in which he was originally placed by nature, seems to have proved to him a prolific source of diseases. From a variety of causes he has familiarized himself with a great number of animals, which may not primarily have been intended for his associates. These domesticated animals do not always affect the human race directly as rabid ones often do; but sometimes they affect one another in such a manner that the modified disease becomes capable of producing a specific action on man in a secondary way, which the original could not have done. This is exemplified in what farriers call the grease in the heels of horses, the matter of which applied to the cow produces the vaccine pustule, which is capable of generating a disease in the human body, bearing so strong a resemblance to the smallpox as to create a strong suspicion of its being the source of that disease also. The matter of grease is applied to cows by men who have the care of horses, and are occasionally employed in assisting the maid-servants in milking. The disease is thus communicated to the animals, and from them to the dairymaids, which spreads throughout the whole farm until most of the cattle and domestics feel the unpleasant consequences. In thus accounting for the origin of the cowpox, Dr. Jenner evinced the acuteness of his judgment and the diligent spirit which actuated him in all his enquiries. But his theory was not generally received, nor is it now so established as to be free from objections. This, however, is of little consequence, and in no degree affects the value of the discovery itself.

The announcement of a discovery which promised to strike one out of the catalogue of human evils by annihilating a disease which had ever been considered as the most dreadful scourge of mankind, naturally created a very powerful and extensive sensation. The honour of commencing the practice of vaccination in London is due to Mr. Cline. In the month of July, 1798, Mr. Cline inoculated a child at St. Thomas's hospital with vaccine virus received from Dr. Jenner. He afterwards put the child to the test of inoculation with smallpox matter in three places, which it resisted. On that occasion Mr. Cline informed Dr. Jenner that Dr. Lister, formerly physician to the Smallpox Hospital, and himself, were convinced of the efficacy of the cowpox, and that the substitution of that mild disease for the smallpox promised to be one of the greatest improvements ever made in medicine. He added, "The more I think on the subject the more I am impressed with its importance."

Considerable opposition, however, was manifested to the new practice by several eminent medical men. Dr. Pearson, in particular, published a very unfavourable report of a number of experiments which he and Dr. Woodville had made on the subject. Dr. Jenner, therefore, felt it incumbent on him to defend the accuracy of his own statements; and accordingly, in 1799, he published "Further Observations on the Variolæ Vaccinæ;" and subsequently, in answer to further attacks by Dr. Pearson and Dr. Woodville, "A Continuation of Facts and Observations relative to the Vaccinæ Variolæ." In these treatises Dr. Jenner replied to his opponents with great dignity, moderation, and temper; vindicating the practice of vaccine inoculation from the various charges brought against it, and proving that what was ascribed to the cowpox was in reality occasioned by the smallpox propagated in disguise. To the effect of these an-

swers, the favourable reports of other practitioners, and a testimonial recommending the practice, signed by a considerable number of the most eminent physicians and surgeons in the metropolis, and published in the medical journals and other respectable channels of information, greatly contributed. Mr. Ring especially distinguished himself in the defence of Dr. Jenner.

Vaccination in the year 1799 acquired the powerful support of the commander-in-chief. The smallpox was a disease which had continually infested the army; when it appeared in a regiment it usually spread, and, owing to the irregular lives of soldiers, often with peculiar malignity. This being well known to the duke of York, ever solicitous for the safety and comfort of the troops, his royal highness took the proper steps to ascertain if the vaccine was in truth a preventive of the smallpox. As soon as the army medical board and other competent judges had given full assurance and complete proofs that this was the case, a general order was issued to all regimental surgeons to vaccinate every soldier who had not had the smallpox. By this means the malady was at once extinguished in the army, and many a soldier was preserved from death.

After a short time the lords of the admiralty imitated this excellent example; but owing to the ships of war being so much at sea, and to the characteristic thoughtlessness and comparative intractability of sailors, vaccination advanced much more slowly in the navy than in the army. The naval surgeons, however, employed it when in their power, and were as much struck as those in the military service with the advantages of the discovery. The physicians and surgeons of the fleet presented a gold medal to Dr. Jenner, accompanied with a suitable address, in which they declared that they could not remain passive spectators of an event so singular as the discovery of a substitute for the smallpox; an event which the philosopher contemplated with wonder and the friend of the human species with exultation.

The practice of vaccination, although still warmly opposed by a few professional men, the most eminent of whom were Dr. Moseley, Dr. Rowley, and Mr. Birch, was now taken up with great animation in the metropolis, and spread rapidly over every quarter of the globe. In France it was welcomed as the angel of health; in Germany it was supported by a host of able operators, at the head of whom was Dr. De Carro of Vienna; in Italy it met with an advocate and promulgator of equal ability, Dr. Sacco, of Milan; and, what was more remarkable, the king of Spain sent his physician, Dr. Balmis, on a voyage to South America, expressly for the purpose of diffusing this blessing. The medical men in the United States were almost unanimous in promoting vaccination, and even in the East it overcame the prejudices of the Hindoos and Chinese. In Russia it was equally successful, and the mother of the late emperor Alexander was so delighted with the discovery that she sent Dr. Jenner a very valuable diamond ring, accompanied by a letter, of which the following is a translation:—

"SIR,—The practice of vaccine inoculation in England having been attended with the happiest success, which is well attested, I have eagerly imitated the example by introducing it into the charitable establishments under my direction. My endeavours having perfectly answered my expectations, I feel a

pleasure in reporting my success, and in testifying my acknowledgments to him who has rendered this signal service to mankind. This motive induces me to offer to you, Sir, this ring, sent herewith, as a testimony of the sentiments of esteem and regard with which I am

"Yours, affectionately,  
"MARY."

"Paulowsky, August 10th, 1802."

His Prussian majesty was the first crowned head who submitted his own offspring to vaccine inoculation. The emperor of Germany, who had offered rewards for the cultivation of the practice, followed his example. In proportion as the benefits of vaccination were extended, gratitude to the benefactor arose in the public mind, and the feeling that he merited a most honourable remuneration gradually prevailed. This became a topic of conversation, not only with the medical profession, but likewise with those who take an interest in scientific researches. It was perceived that if concealment had been practised an immense fortune might have been accumulated; but although such a line of conduct could never have been pursued by a man like Jenner, still it was remarked that the consumption of time and the pecuniary sacrifices in attaining the ultimate object had been great, and that Dr. Jenner ought at least not to be allowed to suffer by his disinterestedness. These considerations having suggested themselves to some political characters not wholly engrossed by party contests, they resolved to lay the subject before parliament.

It is in the house of commons that grants of public money must originate. Dr. Jenner was proudly circumstanced. He had bestowed on his country and on the world so inestimable a good, that nothing approaching its value could be returned. Yet, to obtain even a compensation for the expenses which he had incurred, it was indispensable that he should present to the house of commons a petition, couched in certain prescribed terms of solicitation. On the 17th of March, 1802, Dr. Jenner's petition was presented. Mr. Addington, afterwards Viscount Sidmouth, was at that time prime minister, and favoured the application with every requisite official aid. He communicated to the house that he had taken the king's pleasure upon the contents of the petition, and that his majesty recommended it strongly to the consideration of parliament. The business was then referred to a committee, of which Admiral Berkeley was appointed chairman. The committee acted with scrupulous impartiality, summoning before them both the persons who had the greatest experience in vaccination, and were most favourable to it, and those who by their writings and declarations were known to be inimical to Dr. Jenner and to his discovery.

After a very patient investigation and deliberation the committee drew up a report, expressed in as favourable terms towards Dr. Jenner as the caution and formality of parliamentary language would permit, which was presented to the house on the 6th of May, 1802. On the 2nd of June, the house having formed itself into a committee of supply, the subject was taken into consideration.

Admiral Berkeley, in addressing the committee, dwelt on the clearness of the proofs which had been adduced of the great importance of vaccination; and while he allowed that the sum was insufficient, and that he would support any proposition that might be

made for substituting one of larger amount, moved that 10,000*l.* should be granted by parliament to Dr. Jenner, and the motion was ultimately carried.

In 1806, when Lord Henry Petty, afterwards marquis of Lansdown, became chancellor of the exchequer, he determined to bring the subject of vaccination again before the house of commons. On the 2nd of July in that year, after an able speech, in which he expatiated on the incontrovertible proofs of the utility of the practice which had been submitted to parliament, the noble lord moved that an humble address be presented to his majesty, praying that he would be graciously pleased to direct his royal college of physicians to enquire into the state of vaccine inoculation in the United Kingdom, and to report their opinion as to the progress it had made, and the causes which had retarded its general adoption. The noble lord observed that should that report from the highest medical authority corroborate the favourable opinion which foreign nations entertained of vaccination, it must greatly tend to subdue the prejudices which had been fomented in Great Britain. In that case the house might afterwards consider whether the ingenious discoverer had been remunerated conformably to the liberal spirit and character of this country. After a short conversation, in which Dr. Mathews, Mr. Wilberforce, Mr. Windham, Mr. Barker, Mr. W. Smith, and Mr. Paull, participated, and which turned principally on the best mode of accomplishing the object in view, Lord Henry Petty's motion was agreed to without one dissenting voice.

The royal college of physicians soon received his majesty's commands to enquire into the state of vaccination, and to report their opinion. They entered on the business with great alacrity. In aid of the knowledge of their own body they applied to each of the licentiates of the college; they corresponded with the colleges of physicians of Edinburgh and Dublin, and with the colleges of surgeons of London, Edinburgh, and Dublin. They also wrote to the societies established for vaccination for the result of their practice, and invited, by public notice, every individual who had any information to give to send it to them. The numerous documents which the college of physicians received in consequence of these applications were carefully collected, and from the whole was framed one comprehensive report, dated the 19th of April, 1807, which was laid before the house of commons. The substance of this report was, that during the eight years which had elapsed since Dr. Jenner made his discovery public, the progress of vaccination had been rapid, not only in all parts of the United Kingdom, but in every quarter of the civilized world. In the British islands some hundred thousands had been vaccinated, in our possessions in the East Indies upwards of 800,000, and amongst the nations of Europe the practice had become general. Vaccination appeared to the college of physicians to be in general perfectly safe, the instances to the contrary being extremely rare. The security derived from vaccination against the smallpox, if not absolutely perfect, was as nearly so as could perhaps be expected from any human invention; for amongst several hundred thousand cases with the results of which the college had been made acquainted, the number of alleged failures had been surprisingly small; so much so as certainly to form no reasonable objection to the general adoption of vaccination. Indeed it appeared that there were not nearly so many

failures in a given number of vaccinated persons as there were deaths in an equal number of persons inoculated for the smallpox; and it was a most important fact, that in almost every case where smallpox had succeeded vaccination, it had not been the same either in violence or in duration; but had, with very few exceptions, been remarkably mild, as if the smallpox had been deprived by the vaccine of all its usual malignity. The college was also very decided in declaring that vaccination did less mischief to the constitution, and less frequently gave rise to other diseases, than the smallpox, either natural or inoculated. It was from a consideration of the pernicious effects of the smallpox that the real value of vaccination was to be estimated. The natural smallpox had been supposed to destroy a sixth part of all whom it attacked, and about one in three hundred perished even of those who were inoculated. It was not sufficiently known that about one-tenth of the whole mortality in London was occasioned by the smallpox; and inoculation appeared to have kept up a constant source of contagion, which had been the means of increasing the number of deaths. Until vaccination became general it would be impossible to prevent the constant recurrence of smallpox by means of those who were inoculated, except it should appear proper to the legislature to adopt in its wisdom some measure to prevent those infected with smallpox from doing mischief to their neighbours. From the whole the college of physicians felt it their duty strongly to recommend vaccination; and they conceived that the public might reasonably look forward with some degree of hope to the time when all opposition would cease, and when the general concurrence of mankind would at length be able to put an end at least to the ravages, if not to the existence, of the smallpox. Before the above report, however, was laid before the house of commons, a total change had taken place in the cabinet, and the administration of Mr. Perceval had commenced.

On the 29th of July, 1807, the house of commons being in a committee of supply, the Right Hon. Spencer Perceval, chancellor of the exchequer, called the attention of the committee to the report of the college of physicians, and to the immense advantages of vaccination which that report developed. Were they to proportion the reward to the value of the discovery, he knew not where they ought to stop; but convinced as he was that the committee would regard his proposal as an act of justice rather than of liberality, he would move that there should be granted to Dr. Jenner, as a reward for his matchless discovery, an additional sum of 10,000*l.* The motion was opposed by Mr. Shaw Lefevre, and supported by Lord Henry Petty, General Tarleton, Mr. Sturges Bourne, and Mr. Hawkins Browne. Mr. Edward Morris moved as an amendment, to grant Dr. Jenner 20,000*l.* instead of 10,000*l.*, to mark the sense which parliament entertained of his merits, and to place him in a state of independence. The amendment was supported by Sir John Sebright, Mr. Herbert, Mr. Wilberforce, and Mr. Windham. The chancellor of the exchequer in vain opposed the torrent of liberality. It was silly though perhaps justly hinted by Mr. W. Smith, who was for the larger sum, that although the right honourable gentleman, in consequence of his official situation, was bound to appear sparing of the public purse, he would not be displeased to find himself overborne by the general sentiments of the house, the

country, and the world. Mr. Whitbread, Mr. Fuller, Mr. Baring, Admiral Pole, and Mr. George Rose, jun., all spoke in favour of the amendment. At length the house divided upon the question that 20,000*l.* should be granted to Dr. Jenner; sixty votes were in favour of that sum and forty-seven against it. Thus the amendment was carried by a majority of thirteen.

During these parliamentary discussions the practice of vaccination continued to gain ground, and Dr. Jenner continued to receive the most flattering marks of distinction from public bodies at home and abroad. He was chosen mayor of his native town; the corporation of Dublin voted him the freedom of their city; the imperial university of Wilna sent him a diploma, and even the Roman catholic academy of Madrid elected him a member of that learned society; the royal college of physicians of Edinburgh did him the same honour; and, lastly, the university of Oxford conferred upon him the degree of doctor of physic, by a decree of the convocation. Jennerian institutions were founded in many places, in all of which his birth-day was regularly observed as a festival. At length, after a long and laborious life devoted to scientific enquiries, and the most honourable application of their results, this eminent and excellent man was found lying on his floor in a fit of apoplexy on the 25th of January, 1823. His death shortly followed.

Dr. Jenner was little known as a writer, his literary labours being mainly confined to the one great business of his life—the spread of vaccination. We subjoin a fac-simile of his autograph.

**JENNINGS, DAVID**, a distinguished dissenting divine, born in 1691. He received a good education, and early in life entered on the ministry. In 1744 he was appointed theological tutor in a large dissenting academy, which office he retained till the time of his death in 1762. He published several works of a very miscellaneous character, including a "Treatise on the Use of the Globes," another, "The Jewish Antiquities," &c. His brother, John Jennings, was also a dissenting minister, and the author of some small works.

**JENYNS, SOAME**, an elegant writer, who was born in London in 1704, and received a domestic education until the age of seventeen, when he was entered a fellow commoner of St. John's college, Cambridge. He remained three years at the university, and then married early a lady with a large fortune, to whom his father was guardian; but the marriage proved unhappy, and in consequence of an elopement, a separation took place. In his youth, Mr. Jenyns, with a small and delicate person, sustained the character of a beau, and his first performance was a poem on the art of dancing, published in 1728. In 1741 he was left, by the death of his father, master of a large fortune, on which he entered into public life as representative of the county of Cambridge. He began his career by supporting Sir Robert Walpole, and ever after remained a faithful adherent to the minister for the time being. In 1757 he published his "Free Inquiry into the Nature and Origin of Evil," the fundamental principle of which is, that the production of good without evil

is impossible; that evils spring from necessity, and could not be done away without the sacrifice of some superior good, or the admission of greater disorder. In respect to moral evil, his theory is, that it is permitted in order to provide objects for the just infliction of physical evils.

In 1776 appeared his "View of the Internal Evidences of the Christian Religion." The foundation of his reasoning is, that the Christian religion is a system of ethics so superior to and unlike any thing which had previously entered into the mind of man, that it must necessarily be divine. In 1782 appeared his "Disquisitions on Various Subjects," which are marked with his usual characteristics of sprightly wit and shrewd observation, but are vague and declamatory. He was also the author of several other works of considerable merit. Mr. Jenyns died in 1786.

**JERNINGHAM, EDWARD**, a miscellaneous English writer, who was born in 1727. He was educated in Flanders, and employed himself in literary pursuits till the time of his death, which occurred in 1812. Mr. Jerningham's works were published collectively in 1806.

**JEROME, ST.**, one of the most learned and prolific authors of the early Latin church. He was born about 331 in Dalmatia, of wealthy parents, educated with care in literary studies, and made familiar with the Roman and Greek classics under the grammarian Donatus at Rome; but he did not escape uncontaminated by the licentiousness of the capital, and he himself confesses the excesses of his youth. He soon, however, became inclined to the Christian faith. The catacombs and tombs of the martyrs first excited his devotion. His travels on the Rhine and in Gaul made him acquainted with several Christian preachers, and before his fortieth year he was baptized in Rome. After a long residence at Aquileia, he went in 373 to Antioch in Syria, where his inclination to an ascetic life became more decided, and in 374 he retired to the deserts of Chalcis, and there passed four years as a hermit in the severest mortifications and laborious studies. He left his solitude again to be ordained presbyter at Antioch. He did not, however, confine himself to the discharge of the duties of this office, but soon after went to Constantinople to enjoy the instruction of Gregory of Nazianzen. In Rome, whither he accompanied his friend, the bishop of Damascus, he made his appearance as a teacher. His exposition of the Holy Scriptures found favour with the Roman ladies; and although no one reprehended more than he the manners of the fashionable world, several matrons of distinction with their daughters complied with his exhortations and became nuns. St. Marcella and St. Paula are celebrated for the learned and ingenious theological epistles he wrote them and for their rare monastic piety. Paula accompanied him to Palestine in 386, where he founded a convent at Bethlehem with her funds and in her society: in this he remained till his death in 420.

His writings show his active participation in the controversies respecting the doctrines of Origen, Meletus, and Pelagius; he always defended, with zeal and ability, the orthodox doctrines of the church, though his own writings are not free from vestiges of the views and opinions of these different parties. His profound knowledge of the Bible, which he read in the original languages, frequently led him to results on which he subsequently had controversies with the church; and his method of interpreting the

Scriptures borders closely on the allegorical interpretations of Origen, whom he respected, studied, and attacked. His biblical labours are highly valuable; his Latin version of the Old Testament, from the original language, is the foundation of the Vulgate, and his commentary gave a new impulse to the study of the holy scriptures. In the controversy with Jovinian and Vigilantius, the opponents of the ascetic bigotry, his immoderate zeal for the monastic life, which contributed much towards the promotion of this new institution, led him to expressions which manifest more strength and fire of feeling than maturity of judgment. On the whole, with a glowing imagination, which made his style lively and attractive, and with an extensive knowledge of languages, he possessed a less philosophical genius than his more celebrated contemporary, Augustine.

JEROME OF PRAGUE, of the family of Faulfisch, was educated at the universities of Prague, Paris, Cologne, and Heidelberg; in faith and sufferings, the companion of the celebrated John Huss, whom he excelled in learning and eloquence, and to whom, in the bold attempt at reformation of the fifteenth century, he was inferior only in moderation and prudence. His reputation for learning was so great that he was employed by Ladislaus II. of Poland to organize the university of Cracow, and Sigismund of Hungary caused Jerome to preach before him in Buda. The doctrines of Wickliff, which he introduced into his preaching, subjected him to a short imprisonment by the university of Vienna, but he was released by the people of Prague. He now took a zealous part at Prague in the contest of his friend Huss against the abuses of the hierarchy and the dissoluteness of the clergy, and not unfrequently proceeded to violence. He attacked the worship of relics with ardour, trampled them under foot, and caused the monks who opposed him to be arrested, and even had one thrown into the Moldau. He publicly burned in 1411 the bull of the crusade against Ladislaus of Naples, and the papal indulgences. When Huss was imprisoned in Constance he could not remain inactive, and hastened to his defence. But a public letter in which he requested a safe conduct from the council of Uberlingen, was not satisfactorily answered, and on his attempting to return to Prague, the duke of Sulzbach caused him to be arrested in Hirschau and carried in chains to Constance. He here received in prison information of the terrible fate of his friend, and after several hearings, in which no one was able to oppose him, an imprisonment of half a year had so worn him down, that he finally yielded to violence, and on the 11th of September, 1415, consented to recant the heresies with which he and Huss were charged.

But this apostasy did not deliver him, and after languishing a year without being able to see or read, in the darkness of the dungeon, he displayed his former courage on an audience on the 26th May, 1416. He solemnly retracted his recantation, avowed that none of his sins tormented him more than his apostasy, and vindicated the principles of Huss and Wickliff, with a boldness, energy, and eloquence, that extorted the admiration of his adversaries, but, nevertheless, precipitated his destruction, for he was burned at the command of the council. He proceeded to the pile, consoled by singing the apostles' creed and spiritual hymns and gave up his spirit in prayer. His ashes were thrown into the

Rhine in order to annihilate his memory; but posterity has done him justice, and reveres him as the martyr of truth, who, unwearied in life and noble in death, has acquired an immortal renown for his share in the reformation.

JEROME, BONAPARTE, the youngest brother of Napoleon. He was born at Ajaccio in 1784. Having gone to France with the rest of the family in 1793, he was placed at the college of Juilly. Immediately after the revolution of November 1799 he entered the naval service, and in 1801 was lieutenant in the expedition against St. Domingo, commanded by his brother-in-law General Leclerc, but he soon returned to France to carry despatches to the government, and not long after sailed again for Martinique, in the frigate *L'Épervier*, of which Napoleon had given him the command. In the following year, the war between England and France being renewed, Jerome cruised several months between St. Pierre and Tobago, but he finally was obliged to leave the station, and went to New York. While there he married Miss Elizabeth Patterson, eldest daughter of a rich merchant of Baltimore, but when Napoleon assumed the imperial diadem this connexion was made to yield to views of state policy, and Jerome's marriage was declared invalid after the birth of a son. Jerome returned to France in May 1805, having escaped our cruisers who were watching for him off New York, and Napoleon sent him to Algiers to obtain the delivery of the Genoese there held in slavery. This mission was successfully accomplished, and 250 persons were restored to liberty. The emperor now created his brother captain, and gave him the command of a seventy-four, and soon after of a squadron of eight ships of the line, which sailed for Martinique in 1806. In the same year, on his return to France, he was created rear-admiral. In 1807 he was transferred from the sea service, and received the command of a corps of Bavarians and Wurtembergians, which attacked the Prussians, and occupied Silesia. In this campaign he became general of division. After the peace of Tilsit in 1807, Jerome married Frederica Catharine, princess of Wurtemberg, and in the same month, the kingdom of Westphalia having been formed by Napoleon, the crown was bestowed on him. The intentions of the king were good, but his dependence on Napoleon was such as to render him rather a French viceroy than a sovereign.

Jerome had not passed through the different stages of the revolution, nor become sobered by experience, but was dazzled by the rapidity of his elevation. His civil list was fixed, and he received a million of francs as a French prince, and though Westphalia suffered severely, as did all other parts of Germany, in consequence of protracted wars, many improvements were introduced into the government, particularly the equal distribution of the taxes, and a uniform administration of justice. An anecdote is told of Jerome, which, if true, illustrates his views. Soon after his arrival in Cassel, which he fixed on for the capital of his kingdom, deputations of the different classes were presented to him; that of the peasants was presented as the third estate, upon which he quickly replied, "There are no estates in the kingdom, I know only citizens." His prodigality was not unnoticed by Napoleon, and in other respects the emperor was dissatisfied with him, as he showed when Jerome appeared to offer his congratulations on the birth of the king of Rome, in March 1811.

In the campaign against Russia in 1812, Jerome commanded a division of Germans, at the head of which he distinguished himself in the battles of Ostrowa and of Mohilow, but by his neglect, Bagration having effected a junction with Barclay de Tolly, he was severely reprimanded by Napoleon, who was thus prevented from accomplishing an important manoeuvre, and was sent back to Cassel. In the ensuing year the French were obliged to evacuate Germany, and Jerome retired to France with the queen, whose affections kept pace with the misfortunes of her husband. Jerome, on leaving his kingdom, declared to a deputation of citizens at Marburg that he did not regret the kingdom of Westphalia, that to be a French prince was his whole pride. Towards the end of 1814 Jerome and his wife were obliged to leave France. The ex-queen, when setting out for the kingdom of her father, was arrested near Paris, on the route to Fontainebleau, by a band of armed men under the command of the marquis Maubreuil, who had been her own equerry at Cassel. This man, who had been formerly a Chouan, robbed her of her jewels, which, however, she recovered by a legal process. Jerome, who had gone to Blois to join the empress Marie Louise, went, after Napoleon's abdication, with his wife to Switzerland, lived in Gratz and Trieste, and, on Napoleon's return from Elba in 1815, embarked secretly, from fear of the Austrians, in a vessel which his brother-in-law Murat had sent him. He arrived in April in Paris, with Cardinal Fesch, his uncle, and was present at the celebration of the Champ-de-Mai. The following day he was made a peer, and then departed with Napoleon for the army. He fought at Ligny and Waterloo, and displayed much courage, exclaiming, "We ought to die here," or "We can die no where better than here." He was wounded in this battle, and we may add here, that Napoleon once said of him, he would become a great general. He returned to Paris with his brother. After Napoleon's second abdication he travelled about for some time in Switzerland, lived in Wurtemberg, and finally took up his residence in Austria.

**JERVAS, CHARLES**, a portrait-painter, who is better known for his translation of *Don Quixote*, than for his artistical skill. He was a good Spanish scholar, and much respected by the literati of his day. Mr. Jervas died in 1739.

**JERVIS**.—See **ST. VINCENT, EARL OF**.

**JEWEL, JOHN**.—This eminent divine was born in 1522. He was educated at Oxford, and in 1546 made a public declaration of the reformed religion; but he was expelled from his college when Mary came to the throne. On this occasion his enemies had nothing to object against him but his following of Peter Martyr and his taking orders according to the laws then in force. At his departure he took leave of the college in a Latin speech full of pathetic eloquence. Unwilling, however, to leave the university, he took chambers in Broadgate hall, now Pembroke college, where many of his pupils followed him, besides other gentlemen, who were induced by the fame of his learning to attend his lectures. But the strongest testimony to his literary merit was given by the university, who had previously made him their orator, and employed him to write their first congratulatory address to her majesty. Wood indeed observes, that this task was evidently imposed upon him by those who meant him no kindness; it being taken for granted that he must either provoke the

Roman Catholics or lose the good opinion of his party. If this be true, which is probable enough, he had the dexterity to escape the snare; for the address, being both respectful and guarded, passed the approbation of Tresham, the commissary, and some other doctors, and was well received by the queen. Burnet informs us, that her majesty declared at her accession that she would force no man's conscience, nor make any change in religion. These specious promises, joined to Jewel's fondness for the university, seem to have been the motives which disposed him to entertain a more favourable opinion of popery than before. In this state of his mind he went to Clive, to consult his old tutor, Dr. Parkhurst, who was rector of that parish; but Parkhurst, upon the re-establishment of popery, having fled to London, Jewel returned to Oxford, where he lingered and waited, till, being called upon in St. Mary's church to subscribe some of the popish doctrines under the several penalties, he took his pen and subscribed with great reluctance. Yet this compliance, of which his conscience severely accused him, was of no avail; for the dean of Christchurch, Dr. Martial, alleging his subscription to be insincere, laid a plot to deliver him into the hands of Bishop Bonner, which failed, as Dr. Jewel escaped to Zurich, where he remained till the accession of Queen Elizabeth, by whom he was appointed to the see of Salisbury. He died at Monkton Farley in 1571. Bishop Jewel wrote many works, but they are chiefly of a controversial nature. They were nearly all published together in a folio volume in 1609, with a life of the author.

**JOAN OF ARC**, the Maid of Orleans. The belief, prevalent in the middle ages, that particular individuals were gifted with supernatural powers, as instruments of a higher will, explains the extraordinary character and conduct of the maid of Orleans. After the death of Charles VI., king of France, in 1422, Henry VI. of England, then a child of nine months old, was proclaimed king of France, according to the treaty of Troyes, which was signed in 1420; his uncle, the duke of Bedford, acted as regent. France had been distracted for more than forty years by civil dissensions. On one side were Queen Isabella, the duke of Burgundy, and England; on the other, the dauphin Charles, who had been abandoned by his own mother, but was supported by the Orleans party. This division, and the talents of the English generals, the earls of Somerset, Warwick, Salisbury, Suffolk, Arundel, Talbot, and Fastolf, had reduced nearly all France to the dominion of England. The dauphin, a youth of nineteen, was crowned at Poitiers as King Charles VII. He possessed many qualities proper for interesting his countrymen in his favour, and was wanting only in firmness and resolution. Still he maintained himself in France for the space of seven years. At length, Bourges, and the territory belonging to it, were nearly all that remained to him, while Paris and the north of France, as far as the Loire, were in possession of the English. In the valleys of the Vosges, on the old frontiers of Lorraine, in the village of Domremy la Pucelle, on the banks of the Meuse, lived a peasant girl, Jeanne d'Arc, whose parents were common country people of reputable character, and in good circumstances for their station. In the midst of timid and superstitious persons, who were in continual trouble and alarm at the misfortunes of their country, Joan was quietly occupied in domestic employments, and some-

times in driving the cattle to pasture. Her history has been very minutely traced. The third volume of the Notices and Extracts from the Manuscripts in the library of the king, by De l'Averdy, published at Paris in 1790, contains whatever is important respecting her. She was of a delicate frame, and uncommon sensibility of temperament. This, perhaps, was heightened by the circumstance of her being exempt from the common law of her sex; and Dufresnoy has remarked how this circumstance and her spirit of devotion may account for her visions. Her enthusiasm, and her habits of solitary meditation, explain the angelic voices and visions of the maid. While her companions were sporting beneath the Fairies' tree, the beautiful May (*le beau Mai* ou *l'arbre des fées*), not far from the fountain of Domremy—a tree which was once sacred to the Druids, and famous in many a ghostly tale—Joan was singing and dancing by herself, in pious enthusiasm, and binding garlands for the holy virgin, in the little chapel of "our Lady of Bellemont," which she usually visited on Saturday.

The beautiful Joan was but eighteen when she went to the dauphin at Chinon in Touraine. Commanded, as she asserted, by a vision of our lady of Bellemont to raise the siege of Orleans, and to conduct Charles to Rheims to be crowned, she presented herself in February, 1429, to the governor of Vaucouleur, Robert of Baudricourt, who at first thought her possessed, and twice dismissed her; but upon her returning a third time, he sent her to Chinon with letters of recommendation. Here the dauphin ordered her to be examined by the bishop of Meux and John Morin. She is also said to have immediately pointed out the king, whom she had never seen, and who had purposely mixed among his courtiers, and to have repeated to him a prayer which she had made to the virgin Mary. It is certain that she was examined for three weeks by many intelligent men, counsellors of parliament, and divines. At length, being satisfied of the truth of her claims, D'Aulon was appointed to be her constant attendant and brother in arms, and she received permission to hasten with Dunois to the deliverance of Orleans. From this period she appears the finest character in the history of the middle ages of France. In a male dress, armed cap à pié, she bore the sword and the sacred banner, as the signal of victory, at the head of the army. Still no unfeminine cruelty ever stained her conduct. She was wounded several times herself, but never killed any one, or shed any blood with her own hand. There appears, as Schlegel says in his "History of the Maid of Orleans, from old French documents," to have been no other earthly passion in her heart than devotion to her country, to the descendant of St. Louis, and the sacred lilies. It is shown also, by the documents of her trial, and of the revision of it in 1453, that she had not killed any of the enemy with her own hand, from a tenderness of conscience, and was even more anxious about the souls than the bodies of the English who were slain. Nevertheless, it would seem from some passages of Lenglet Dufresnoy's "*Histoire de Jeanne d'Arc, Vierge Héroïne*," that she did not always carry the banner, and actually made use of the consecrated sword in case of necessity. This sword was taken by her directions from the church of St. Catharine at Fierbois, where nobody had before known of its existence. The general belief of her elevated mission, of which she herself was piously

persuaded, produced the most extraordinary effects. Resolute, chivalrous, pious and brave, looking to one single aim, she was skilfully employed by the generals to animate the army, while they did not implicitly follow her counsels. The first enterprise was successful. With 10,000 men, under the command of St. Severre, Dunois, and La Hire, she marched from Blois, and, on the 29th April, 1429, entered Orleans with supplies. By bold sallies, to which she animated the besieged, the English were forced from their intrenchments, and Suffolk abandoned the siege in May 1429. The march of Charles to Rheims followed, and such was the impression produced on the population that every place opened its gates to him, and the ceremony of his inauguration took place as predicted. She was, however, subsequently captured by the English and condemned to death as a sorceress, a sentence she endured with great courage in 1431, and in the twenty-first year of her age.

JODELLE, ETIENNE, was born at Paris in 1532, and wrote the first regular tragedies and comedies for the French stage. Among the former are "*Cléopâtre Captive*" and "*Didon*." His comedy of "*Eugène*" was praised by Ronsard. Though Jodelle enjoyed the favour of Charles IX. and Henry II., he died in great poverty in 1573.

JODRELL, RICHARD PAUL, a dramatic writer and critic, who was born in 1745, and was educated at Oxford. He is principally known as the author of "*Illustrations of Euripides*," and a comedy entitled "*The Disguise*." Mr. Jodrell died in January 1831.

JOECHER, CHRISTIAN THEOPHILUS, a celebrated German scholar, who was born in 1694 at Leipsic, where he studied medicine and theology. In 1714 he delivered lectures, in which he showed himself an adherent to the philosophy of Leibnitz and Wolf. In 1732 he was made professor of history, in 1735 doctor of philosophy, and in 1742 librarian of the university. He died in 1758. His "*Allgemeines Gelehrten Lexikon*" is still valuable.

JOHANNES, SECUNDUS, the bibliographical name of John Everard, a celebrated Latin poet, who was born at the Hague in 1511. His father was a distinguished lawyer, and president of the supreme council of Holland at Mechlin during the reign of the emperor Charles V. At Bourges, where John studied law under Alciatus, he received a doctorate; but literature had more attractions for him than jurisprudence. He became acquainted with some poets of the age, and his intercourse with them tended to strengthen his predilection for works of imagination. He also distinguished himself by his skill in painting, sculpture, and engraving; but he was most indebted for his fame to his poetical works. For the improvement of his talents he travelled to Italy, and thence to Spain, where he became secretary of Cardinal Tavera, archbishop of Toledo, by whose advice he attended Charles V. on his journey to Tunis. The weak state of his health, however, did not permit him to endure the hardships of war, and he returned to the Netherlands, where he died, at Utrecht, in 1536, of a malignant fever. Few modern Latin poets have left us such pleasing amatory poems as his. The "*Kisses of Johannes Secundus*" are best known. His works, consisting of elegies, odes, epigrams, and miscellaneous poems, were published by his brothers, who were likewise distinguished as poets, and have gone through many editions. The

Kisses have been repeatedly translated into English, German, and French.

**JOHN THE BAPTIST** was born six months before Jesus (their mothers were relations), of a Levitical family in Judea, and his birth was attended with circumstances which marked him out as one chosen by God to accomplish the divine purposes. He chose the austere course of life suited to a person dedicated to God, and by his early simplicity in food and dress, by his solitary meditations on, and deep knowledge of, the spirit of the Holy Scriptures, obtained that independence and strength of mind which made him the object of universal admiration when he appeared in the character of a prophet. His teachings were earnest exhortations to repentance and preparation for the kingdom of heaven, which he announced to be at hand. His preaching, as recorded in the Gospels, was severe and powerful. He proclaimed himself the harbinger of a greater who should come after him, and fulfilled his mission to prepare for him the way with a zeal equalled only by his self-denial and humility. He baptized many converts to his doctrine, and obtained respect among all classes by the contrast of his severe virtue with the corruption of the times. When the higher mission of Jesus was made known, at the time of his baptism in the Jordan, John pointed his disciples to this new master, and saw, without envy, his own words fulfilled—"He must increase, but I must decrease." He coveted no fame, and wished no further success. He desired only to maintain the right of speaking the truth, and fell a victim to his boldness. To gratify a vindictive woman, Herod Antipas, tetrarch of Galilee, caused him to be beheaded in prison. A number of his disciples continued faithful to him till death, and are said to have established the still existing sect of Sabians, or St. John-Christians, in Persia, distinguished for their veneration of John the Baptist.

**JOHN THE EVANGELIST** is one of the most pure and lovely characters of Christian antiquity. In his youth he left his nets at the call of Jesus, and from that time followed his divine teacher with unchanging fidelity. Not only on his journeys was he always with him, and in all conditions his most confidential friend, but, even when the other disciples fled, he accompanied him to the judgment seat; and under the cross his expiring Lord pointed him out to Mary as one who was to stand in the place of a son and protector to her. Hence he was called emphatically "the disciple whom Jesus loved." The gentleness and tenderness which breathe through the writings of John, adapted him peculiarly to understand all the feelings of his Lord. He shared the labours and sufferings of the apostles, lived in Ephesus, was for a time an exile in Patmos, perhaps resided in Rome, and finally died, at an advanced age, in the bosom of the Ephesian church, which was dearest of all to his heart. St. Jerome gives a very affecting account of the last years of his life. As the infirmities of age made him unable to address the church in a systematic discourse, he always desired to be conveyed to the assembly, and, as often as he came, addressed them thus: "Children, love one another." Being asked, at length, why he always repeated this exhortation, with nothing new, he answered, "Because it is the precept of the Lord; and if this is fulfilled, it is enough." John was the author of one of the Gospels, of the book of Revelations, and of the three Epistles which bear his name.

**JOHN.**—The name of many saints and martyrs of antiquity:—

St. John, a warrior in the fourth century, who encouraged Athanasia, with her three daughters, to brave martyrdom. He was himself beheaded.

St. John of Nicodemia, who was skinned and tortured with salt and vinegar, by order of Diocletian, because he tore down the imperial edict which ordered the imprisonment of all priests, and required them to embrace paganism.

St. John, the Alms-giver, was born in the island of Cyprus, in the sixth century. He was made patriarch of Alexandria, and spent every thing he had for the poor.

St. John of Damascus, or Johannes Damascenus, in the dispute concerning the worship of images, defended the practice against Leo Isauricus and Constantinus Copronymus. He died in 760, in a convent. The most complete edition of his works was published by Le Quien, at Paris, in 1512. Several of his works have never been printed.

St. John of God was born at Monte Mayor el Novo, in the province of Alentejo, in Portugal, in 1495, of poor parents. While keeping a shop in Grenada, being affected by a sermon of John of Avila, he gave all his property to the poor and became his pupil. He displayed so much fanaticism that he was thought to be mad, and carried to an hospital; but, being soon released, he established an hospital himself, which he maintained by alms. He founded a convent, from which originated the Hospitalers or Brothers of Charity. He practised the greatest severity towards himself. The bishop of Tuy, who came to Grenada, gave him the name of John of God, which he retained. He died in 1550, and in 1680 Pope Urban canonized him.

**JOHN.**—The name of a great number of Roman pontiffs, the last of whom died in 1419. That no subsequent pope has called himself John is probably owing to the polluted character of several of the name, and particularly the public condemnation of the last for atrocious crimes. Our limits, however, will only allow us to notice the most celebrated.

John I. succeeded Hormisdas in 523, and was a friend of Boëthius, who dedicated to him several of his works. Theodoric sent him to Constantinople to induce the emperor Justin to adopt milder measures towards the Arians. Though John was received with uncommon pomp, his mission was fruitless, and on his return Theodoric threw him and his companions into prison, where he died in 526.

John XI. ascended the papal chair in 931, though very young, by the influence of his mother, Marozia, who governed Rome, and, after the death of her husband Guido, married Hugh, king of Lombardy, who insulted Alberic, son of Marozia and Guido. Alberic revolted, and imprisoned Marozia and the pope, who died in prison in 936.

John XII., son of Alberic, and grandson of Marozia, though an ecclesiastic, succeeded to the dignity of his father, a patrician of Rome, and in 956, after the death of Agapetus II., possessed himself of the tiara, though only eighteen years of age. He was the first pope who changed his name on his accession to the papal dignity. He applied to the emperor Otho I. for assistance against Berengarius II., crowned the emperor in 962, and swore allegiance to him, but soon after revolted against Otho, who caused him to be deposed by a council in 963, and Leo VIII. to be

elected. On Otho's death, in 964, John returned, and died in the same year. He polluted the papal see by the most revolting licentiousness.

John XIII. was made pope in 965 by the influence of the emperor, for which the nobles of Rome hated and expelled him. Otho II. restored him to Rome, and was crowned by him. He died in 972. According to Baronius, he introduced the custom of consecrating bells.

John XV., a Roman, elected in 985. He was the first who solemnized a formal canonization (of Ulric, or Udalric, bishop of Augsburg) in 993. He settled the disputes between King Ethelred of England and Richard of Normandy, and induced Otho III. to assist him against Crescentius, but died whilst the former was besieging the castle of St. Angelo in 996.

John XVIII. was elevated to the throne in 1004. We mention him merely because a union is said to have been effected between the eastern and western churches under his pontificate; and in the mass, besides the name of the pope, that of the patriarch of Constantinople is said to have been mentioned.

John XXI. was a native of Cahors, and was elected pope at Lyons in 1316, after the death of Clement V. He resided at Avignon, but had many adherents in Italy. He is important in German history on account of the active part which he took in the disputes of the emperors Louis of Bavaria and Frederic of Austria. He was entirely in the interests of France. He died in 1334, after having been once deposed by Louis, who caused Nicolas V. to be elected in his stead. The Clementines and the Extravagantes prove his learning. As a theologian, he held a heretical opinion respecting the beatific vision of God, maintaining that Mary and all the blest could not enjoy it until after the final judgment, and was on the point of being deposed by a general council on this account. He established several bishoprics and archbishoprics in France, which increased his revenues, so that he was enabled to leave immense treasures, which were not all well acquired.

John XXII. was born in Naples, and was a pirate in his youth, afterwards became an ecclesiastic, studied at Bologna, was made a *doctor juris*, and was elected pope in 1410 by the council of Pisa, after the death of Alexander V., on condition that, if Gregory XII. and Benedict XIII. would resign, he would also retire, to end the schism. He summoned the council of Constance demanded by the emperor Sigismund in 1415, where he appeared in person, and confirmed his resignation; but he fled secretly from Constance to Schaffhausen, and revoked his resignation. He was cited before the council, but, not appearing, was suspended, and finally deposed for seventy crimes, namely, malice, tyranny, incest, licentiousness of all kinds, intercourse with his brother's wife and with three hundred nuns, simony, murder, &c., attested by thirty-seven witnesses. He was confined in the castle of Gottleben, near Constance. The elector of the Palatinate was then charged with his safe keeping, and he remained at Manheim and Heidelberg under custody. Four years after he was released, on the payment of 30,000 gold guilders, went to Italy, and threw himself at the feet of Pope Martin V. in Florence, who pardoned him, and made him cardinal, bishop of Tuscoli, and dean of the college of cardinals. He died soon after, in November 1419.

JOHN, king of England, born in 1166, was the youngest son of Henry II. by Eleanor of Guienne.

Ireland being intended for his appanage, he was sent over in 1185 to complete the conquest, but such was the imprudence of himself and his courtiers that it was found necessary to recall him. Although his father's favourite, he joined his brother Richard in his last unnatural rebellion, and partook with him the curse pronounced by the heart-stricken king and parent on his death-bed. He was left without any particular provision, which procured for him the name of *Sans Terre*, or Lackland; but Richard, on his accession, conferred on him the earldom of Mortaigne in Normandy, and various large possessions in England, and married him to the rich heiress of the earl of Gloucester. This kindness did not prevent him from forming intrigues against his brother, in conjunction with Philip of France, during his absence in Palestine; but Richard magnanimously pardoned him on his return and left him his kingdom in preference to Arthur of Brittany, the son of his elder brother, Geoffry. So imperfectly was the rule of primogeniture then established in England, that no disturbance ensued in this country, although the French provinces of Anjou, Touraine, and Maine, declared for Arthur, who was taken under the protection of the king of France. A war ensued, in which John recovered his revolted provinces, and received homage from Arthur for the duchy of Brittany, inherited from his mother.

In 1200 he married Isabella of Angouleme, after divorcing himself, on some pretence, from his first wife. In 1201 some disturbances again broke out in France, whither he led another expedition; and the young Arthur, having joined the malcontents, was captured, and confined in the castle of Falaise, whence he was subsequently removed to Rouen, and never heard of more. The manner of his death is not certainly known; but it was generally believed that John stabbed him with his own hand, and he now became the object of universal detestation. The states of Brittany summoned him to answer the charge of murder before his liege lord, King Philip; and upon his refusal to appear, the latter assumed the execution of the sentence of forfeiture against him, and in this manner the whole of Normandy was recovered by the French crown, after its alienation for three centuries. John laid the fault of his disgrace upon his English nobles, whom he harassed by fines and confiscations; but, after some ineffectual attempts, he was obliged to acquiesce in a truce in 1206. The pope at this time was the haughty and able Innocent III., who, in consequence of a contested election for the see of Canterbury, nominated a creature of his own, Cardinal Stephen Langton. John, highly enraged, acted with his usual haste and folly, and displayed so much contempt for the papal authority that Innocent laid the whole kingdom under an interdict. This quarrel lasted some years, and the king, by his tyranny depriving himself of the support of his nobles, was perplexed on every side.

In order to give some lustre to his degraded administration, he undertook expeditions into Scotland, Wales, and Ireland, in which he was successful, and, in particular, quelled all opposition to his authority in the last country. In the mean time the court of Rome excommunicated the king personally, and formally absolved his subjects from their allegiance. Philip of France was again ready to put the sentence against John into execution, and prepared an expedition in the ports of Picardy, which, however, the

latter was enabled to oppose. So much disaffection nevertheless prevailed, that Pandulph, the pope's legate, induced him not only to receive Langton as archbishop of Canterbury, but abjectly to resign his kingdoms of England and Ireland to the holy see, in order to receive them again as its vassal with absolution. This ignominious compact was executed at Dover in May 1213; and the pope, now regarding England as his own, and jealous of the aggrandizement of Philip, required the latter to desist from hostilities against a country under the protection of the see of Rome. Philip received this mandate with great indignation, but, in consequence of a victory over his fleet, was gradually brought to reason. Flushed with this success, John resolved to endeavour to recover his continental dominions, but the English barons declined the service. In the next year, however, he carried over an army to Poitou, but after some partial successes was obliged to return in disgrace. John had by this time rendered himself the object of such universal contempt and hatred, that his nobles, who had long felt aggrieved by the usurpation of their sovereigns, and of the reigning one in particular, determined to seize upon so favourable an opportunity to controul his power and establish their privileges. Langton produced to them a copy of the charter of rights granted by Henry I., and at a general meeting in London in January, 1215, they laid their demands before the king, which he attempted to elude by delay. In the mean time he sought to ingratiate himself with the clergy and the pope, with whom he lodged an appeal against the compulsory proceedings of the barons. The politic pontiff, who found it his interest to support a sovereign who had so far humbled himself, declared his disapprobation of their conduct; but, little moved by the declaration, the latter assembled in arms at Oxford, where the court was

agreement as they thought fit to dictate. A facsimile of the royal seal, as prefixed to this document, is given in the preceding column. It is copied from the original in the British Museum.

Such were the steps which produced the Magna Charta, which was signed by John at Runnymede, on the banks of the Thames, in June 1215. By this charter (the basis of English constitutional freedom), not only were the nobles protected against the crown, but important privileges were granted to every order of freemen. The passive manner in which John yielded to these restrictions of his power, indicated a secret intention of freeing himself from his obligations. In order to lull the barons into security, he dismissed his foreign forces, but in the mean time was secretly employed in raising fresh mercenaries, and in seeking the concurrence of the pope, who issued a bull annihilating the charter as extorted from his vassal, contrary to the interests of the holy see. He even forbade John to pay any regard to its conditions, and pronounced a sentence of excommunication on all who should attempt to enforce it. Thus furnished with spiritual and temporal arms, the king left his retreat, and carried war and devastation through the kingdom. His barons, taken by surprise, could make no effectual resistance, and despairing of mercy from John, sent a deputation to France, in which they offered the crown of England to the dauphin Louis. Philip gladly accepted the proposal, and Louis, with a fleet of six hundred vessels, landed at Sandwich, and proceeded to London, where he was received as lawful sovereign. John was immediately deserted by all his foreign troops, and most of his English adherents; but the report of a scheme of Louis for the extermination of the English nobility arrested his progress, and induced many to return to their allegiance. While the king's affairs were beginning to assume a better aspect, he had the misfortune, in a march from Lynn across the sands into Lincolnshire, to lose, by the sudden flow of the tide, all his carriages and baggage. Being already in a bad state of health, this event so aggravated his disorder that he died at Newark in October, 1216, in the forty-ninth year of his age and seventeenth of his reign. No prince in English history has been handed down to posterity in blacker colours than John, to whom in-

then held, and, choosing a general, immediately proceeded to warlike operations. They were received without opposition in London, which so intimidated the king that he consented to sign such articles of

gratitude, perfidy, and cruelty were habitual. Apparent gleams of vigour and energy were indeed occasionally manifest, but they always proved mere explosions of rage, and soon subsided into meanness and pusillanimity. His private life was stained with

extreme licentiousness, and the best part of his conduct as a ruler was the attention he paid to commerce and maritime affairs. More charters of boroughs and incorporations for mercantile pursuits date from him than from any other of the early kings, and the popular constitution of the city of London was his gift. He left by his second wife a family of two sons and three daughters. Eltham Palace, once the favourite residence of this monarch, is depicted in the previous page.

**JOHN THE PARRICIDE**, or **JOHN OF SUABIA**, was the murderer of his uncle, the emperor Albert I. Himself of a mild peaceful disposition, he would, perhaps, have endured the injustice of his uncle, who withheld from him his hereditary dominions and fief, had not his anger been fanned into a flame by the enemies of the emperor. After the perpetration of the bloody deed in the neighbourhood of Hapsburg, in May, 1308, the murderers took to flight; among them was John, who wandered in the monastic habit through Italy, and finally sunk into such obscurity that nothing was known with certainty of him. Rodolph of Wartzburg was apprehended and punished by the rack on the spot where the deed was committed; the other murderers escaped, with the exception of three boys who confessed nothing, though threatened with a cruel death, which they actually suffered. But a sanguinary revenge was taken on the relations of the murderers by Leopold, the second son of the emperor, and by Agnes, his sister, the widowed queen of Hungary. They were executed with the most terrible torments, their castles demolished, and the inhabitants slain by hundreds. More than a thousand innocent men, women, and children perished. The history of John of Suabia has given rise to the tragedy of that name, which for more than twenty years has been performed on the German stage.

**JOHN SOBIESKI**, or **JOHN III.**, king of Poland, one of the greatest warriors of the seventeenth century. His father, James Sobieski, equally distinguished for his virtues in peace and his courage in war, took great care to cultivate the same qualities in his sons, Mark and John. The Poles had just been defeated at Pilawiecz when these youths returned from their travels. This misfortune only served to excite their courage. Mark fell in a second engagement with the Cossacks on the banks of the Bog; but John, more fortunate than his brother, became successively grand marshal and general of the kingdom. Full of courage, he exposed himself like the meanest soldier to the greatest dangers, and, when urged to take care of his person, replied, "If I follow your advice you will despise me." He became the terror of the Tartars and Cossacks, over whom he was perpetually gaining new victories. In 1673 he won the celebrated battle at Choczim against the Turks, who lost there 28,000 men. The following year he was elected king of Poland. When the Turks laid siege to Vienna in 1683, he hastened thither with a Polish army and rescued the imperial city. His cavalry was splendid, but his infantry poorly equipped. To conceal the condition of the latter he was advised to send one of the worst clothed regiments of infantry over the river by night, to save them from the gaze of spectators. Sobieski was of a different opinion. When the regiment was on the bridge he said to those who surrounded him, "Behold them—they are invincible; they have sworn never to wear any

dress but that of enemies: in the last war they were all clothed in the garb of Turks." On his arrival he chose the most advantageous position, ascended an elevation to observe the grand vizier, and remarked, "He has selected a bad position. I understand him; he is ignorant and persuaded of his own genius. We shall gain no honour from this victory." Sobieski was not deceived. The next day the Turks were driven from their camp in terror, leaving behind the holy standard of Mohammed, which the conqueror sent to the pope with the following letter: "I came, I saw, and God has conquered." On his entrance into Vienna at the head of his victorious Poles, the inhabitants received him with indescribable enthusiasm. They pressed around to embrace his feet, to touch his garments or his horse, and proclaimed him their saviour and deliverer. He was moved even to tears, and, under the strong impulse of his feelings, called this the happiest day of his life.

In 1693 he was attacked by a dangerous sickness, and was doomed to witness that dissension which usually attends the election of a king in Poland. Foreign enemies united with domestic factions. Sobieski was no longer in a condition to quiet the disturbances, and the moment was fast approaching which was to deprive him at once of his life and his throne. The queen wished him to make a will, and communicated her wishes through one of the bishops. He refused, asserting, that in a nation like his party rage would prevail over all his influence. He died in 1696, in the twenty-third year of his reign. Scarcely had he closed his eyes when jealousy and envy united to stain his memory. Some reproached him with having purchased lands contrary to the laws, which forbade the king to hold any private property. Others maintained that the Christian league which he had joined against the Turks had cost his country more than 200,000 men. Others still asserted that he was too fond of money and expensive journeys. Certainly no court was ever less stationary than his. He performed the tour of Poland every year with his queen, and visited all his estates like a nobleman. This fault, however, if it may be called a fault, should not cast a veil over the virtues of Sobieski. He was fond of the sciences, spoke several languages, and deserved to be loved for his gentleness and affability. His three sons died without leaving any male descendants.

**JOHN VI.**, emperor and king of Portugal, Brazil, and Algarve, was born in May 1767. On account of the mental derangement of the queen Francisca, his mother, he was proclaimed director of the government in Portugal, February, 1792. In 1807 he embarked for Brazil with his family, and landed at Rio de Janeiro in 1808. In 1815 he raised Brazil to the rank of a kingdom, and united all his states into one monarchy. After the death of his mother, in March 1816, he became king. On account of the old commercial relations between Portugal and England, John was not in a condition to maintain a strict neutrality towards France. In 1793 he had sent the Spanish government a small body of soldiers to aid in the defence of the Pyrenees; but after Spain had made peace, and concluded an alliance with France, Portugal was looked upon as an enemy by both. John looked to England, therefore, for protection. Bonaparte at length induced the Spanish court to make an attack in earnest upon Portugal, which ended in the peace of Badajoz, in which Olivenza was ceded

to Spain, and a part of Guiana to France. After the peace of Tilsit, Napoleon, not content with the vast sum of money by which John had purchased his neutrality, required him also to close his ports against the English, to arrest all of that nation in Portugal, and to confiscate their estates. As the regent complied with the first only of these requisitions, the "Moniteur" declared that the house of Braganza had ceased to reign, and an army composed of French and Spanish soldiers marched into Portugal. The prince regent now resolved to transfer his court to Brazil, as he had been advised to do in 1800. The English ambassador, Viscount Strangford, and the British admiral, Sir Sidney Smith, facilitated the accomplishment of his design. On the anniversary of the elevation of the house of Braganza, the ensigns of Braganza were succeeded by the French eagle. An earthquake and a storm which the Portuguese fleet encountered in the view of the city and the enemy, completed the submission of the Portuguese.

From Rio de Janeiro, in May, 1808, the prince-regent declared all treaties with France and Spain null, and formed a closer union with England, which powerfully supporting the bravery of the Portuguese army and the ardour of the people, recovered for him the possession of his European kingdom. Marshal Beresford continued to exercise an important influence on the affairs of Portugal till August, 1820, when by the convocation of the cortes a new political system was established. In America the Portuguese also recovered the portion of Guiana which they had lost, and occupied French Guiana; the latter, however, was restored to France in 1817. Meantime the ministry of the prince-regent carefully attended to the improvement of Brazil. The inquisition was abolished, religious freedom introduced, the evils of slavery diminished, and European artists, manufacturers, merchants, and agriculturists, encouraged to settle in the country. The revolution of the Spanish colonies in South America (perhaps the refusal of Spain to restore Olivenza) led the court of Rio de Janeiro to occupy Monte-Video and the left bank of La Plata. Spain had recourse to the intercession of Austria, Russia, Prussia, and Great Britain, whose declaration, directed to the marquis of Aguiar, Portuguese secretary of state for foreign affairs, induced the court of Brazil to evacuate Monte-Video on condition that Olivenza should be restored.

A conspiracy against the existing government was discovered at Lisbon in 1817, and suppressed by the execution of those engaged in it. After this the freemasons were persecuted more severely than ever. In consequence of the Portuguese revolution and the convocation of the cortes, 1820, which the monarch recognised as lawful, he returned in 1821 to Portugal. The crown-prince remained in Brazil, and that vast country separated itself entirely from the mother-country, where an absolute government was in the mean time established. John was incompetent to unite the constitutionalists and royalists. He was himself in danger of falling a victim to the intrigues of the latter, when he was rescued by an English vessel in the Tagus. Portugal and Brazil also assumed a hostile attitude; but in August, 1825, by the mediation of England, John VI. concluded a treaty with his son the emperor Pedro I. of Brazil, in which he acknowledged that country as an independent kingdom, wholly separate from Portugal, and his son as emperor, reserving for himself, personally, the title of

emperor of Brazil. This good-natured monarch, who was incompetent to struggle with the troubles of his age and the political degeneracy of his nation, died on the 10th of March, 1826, having previously appointed his daughter Isabella, regent of Portugal.

JOHNES, THOMAS.—This eminent antiquary and historian was born at Ludlow in 1748. He was educated at Eton, and afterwards proceeded to Edinburgh where he attended several courses of lectures. Mr. Johnes left that city in the latter end of the year 1768, and immediately commenced his tour on the continent. In the choice of a travelling companion for his son, the elder Mr. Johnes was truly fortunate. He committed him to the conduct of Robert Liston, Esq., who has since so honourably distinguished himself by the able manner in which he has fulfilled many diplomatic missions; and was latterly, at an advanced age, actively employed in executing the arduous duties of British minister at the Ottoman Porte. Under the direction of this able and honourable guide, Mr. Johnes proceeded through great part of France, Spain, and Italy. Thence he proceeded to Switzerland, and following the course of the Rhine as far as Strasbourg, turned off through Alsace and Lorraine to the French capital, where he fixed his residence for several months. The society of Paris was at that time extremely brilliant. Its tone, its manners, and sentiments, have of late been well and faithfully portrayed in the memoir of Marmontel, the letters of Madame du Deffand, and, above all, in the voluminous and entertaining correspondence of Baron Grimm. By these arbiters of taste and of public opinion Mr. Johnes, on his arrival at the French metropolis, was received on a footing of intimacy.

Returning from the continent in the year 1771, furnished with those accomplishments usually acquired by gentlemen of rank and fortune in the course of foreign travel, Mr. Johnes spent nearly three years in the society of the first circles of the English metropolis. In the year 1774, however, tired of a desultory life of pleasure, he determined to devote himself to more important objects; and aspiring to the honour of a seat in parliament, on the occasion of a vacancy he offered himself as candidate for the borough of Cardigan. On this occasion he was strongly opposed by Sir Robert Smith, who at the conclusion of the poll was returned by the officer who presided at the election; but the latter was ousted by petition, and his more fortunate rival seated in his place.

In 1780 he lost his father, and in deference to the advice of his friends, though contrary to his own wishes, he vacated his seat for the borough of Cardigan, and offered himself a candidate for the county of Radnor, which the former had represented during several parliaments. This step involved him in a second electioneering contest. He was opposed by Walter Williams, Esq., of Maesclough, but after an arduous struggle was returned knight of the shire. The parliamentary politics of Mr. Johnes were at this time decidedly ministerial. To Lord North, who was then prime minister, he was attached by the ties of personal friendship as well as by their agreement in political views. Like the celebrated Gibbon, he gave many a silent but sincere vote in favour of the American war. Like Gibbon too, he had his reward. In the year 1781 he was appointed his majesty's auditor for the principality of Wales.

This office, which was in fact a well paid sinecure, was a few years afterwards proscribed by a bill of reform, but by a kind consideration, usual in such cases, and in this instance enforced by the powerful interference of Mr. Johnes's intimate friend, Lord Chancellor Thurlow, its abolition was deferred till the demise of the existing incumbent.

On the death of his father Mr. Johnes had visited his estates at Hafod, and had been greatly struck by the beauties of that enchanting spot. Through a vale, at its entrance narrow and craggy, but gradually widening in extent, until the prospect is closed by distant hills, the Istwith rolls its waters, now urging their way in foam through fragments of broken rocks, now precipitated down cascades, and now gently flowing in an expanded channel. The adjacent heights rise in every form of varied beauty, and enclose spots of fertile ground, well calculated to form amidst "a desert wild" a terrestrial paradise. On one of these the taste of the former proprietors had fixed a mansion. This was, however, mean in its appearance, and inconvenient in its structure; Mr. Johnes therefore determined to substitute for it an edifice more worthy of the grandeur of its situation. He accordingly erected, at an immense expense, a large and handsome chateau in the modern Gothic style, the interior of which he decorated with splendid furniture and costly specimens of ancient and modern art. His library, a spacious octagonal building, he filled with rare and curious volumes, including a noble collection of books on natural history, and manuscripts in the Welsh, French, and Latin languages. Adjoining to the library he erected a conservatory 160 feet in length, which he furnished with a rich variety of plants. But, elegant and gorgeous as was the interior arrangements of the mansion, the principal charm of Hafod consisted in the natural beauties of its site: and in availing himself of these, in the laying out of his grounds, Mr. Johnes evinced the most consummate taste. He strictly followed nature. No incongruous ornaments, no studied surprises, no frivolity of decoration, broke in upon the harmony of the scene. The bleakness of the hills, indeed, he obviated by means of trees, of which, in the course of sixteen years, he planted no less than 2,065,000. As these grew up, they added to the beauty of the varying prospect, which was rendered the more rich and interesting by the contrast which it presented to the lengthened sterility with which it was surrounded.

Pecuniary circumstances now induced Mr. Johnes to alter the character of his establishment at Hafod. He dismissed a long train of his domestics, and reduced his household to the lowest point consistent with simple comfort. A most agreeable consequence proceeding from his new plan of life was, the fixing of his residence almost exclusively at Hafod. In this retired spot, where all the articles of the first necessity were furnished from his own domain, he was enabled to live, even in elegant hospitality, at a rate almost incredibly moderate. Nor did he here want scope for his mental and bodily activity. The improvement of his grounds, and the superintendence of his farm, occupied a considerable portion of his morning hours. He watched with kind concern over the welfare of his tenantry, and of the peasantry in his neighbourhood. For the benefit of the farmer he compiled and printed a book of useful

instruction in the various processes of agriculture, entitled "A Cardiganshire Landlord's Advice to his Tenants." He provided for the education of the young and the support of the aged. He instituted among his labourers a benefit society, which he had the happiness to see flourish under his auspices. In these acts of beneficence he was heartily and ably seconded by Mrs. Johnes who soon became the "Lady Bountiful" of the neighbourhood, administering medicine to the sick, comfort to the afflicted, and good advice to all. It will easily be believed, that conduct such as this obtained for the family the respect and love of the whole vicinage. In his attention to religious duties, Mr. Johnes was punctual and strict. When the weather permitted, he regularly attended at the service of the parish church, where it was truly gratifying to observe the cheerful looks and respectful familiarity with which he was received by the yeomanry and working people, principally labourers in husbandry, of which the congregation was almost entirely composed. When the inclemency of the season precluded his attendance, he read the Liturgy, and a sermon selected from the works of the best English divines, to his family and domestics.

In addition to the avocations which have been already mentioned, Mr. Johnes daily devoted a portion of his time to the superintendence of the education of his daughter, who, as her health became confirmed, gave indications of mental powers of no common order, and whose rapid improvement in knowledge, and in the acquirement of the accomplishments suited to her sex, amply repaid all the anxiety which he experienced on her behalf. His library also afforded him ample means of amusement, of which his relish for the fine arts and his knowledge of various languages enabled him to avail himself to the utmost. These pursuits, the society of a few friends, and of the occasional visitors who, among the crowd of tourists attracted by the beauties of Hafod, were either personally known to Mr. Johnes, or were fortunate enough to procure letters of introduction to him, caused the summer and autumnal months to pass rapidly away. But the dreary evenings of winter were sometimes tedious by their uniformity. This circumstance did not, however, tempt Mr. Johnes to deviate from his plan of prudent seclusion. He acted much more wisely in seeking within his own resources for some plan of active and stated exertion which might occupy his thoughts, and profitably fill up his time. With this view he determined to devote many of his leisure hours to literary labour. The first fruits of his lucubrations consisted in a translation of the memoirs of the life of Sir John Froissart, from the French of Mons. de la St. Palaye, which he published in the year 1801. He next undertook a new version of the voluminous Chronicles of Froissart. So far was he from shrinking from the toil of literary exertion, that when his manuscripts had accumulated to a sufficient bulk, he established a printing-office in a cottage situated in his pleasure grounds; and, in addition to his other occupations, sedulously devoted himself to the correction of the press. Under his own inspection, his work proceeded rapidly, and in the year 1803 the first volume was published in the form of a magnificent quarto. As a memorial of their long-continued friendship, he dedicated it to Lord Thurlow, the late

chancellor of England. In the ensuing year he published two other volumes, and in 1805 the series was closed by a fourth.

In 1807 Mr. Johnes, who was in London attending to his parliamentary duties, received intelligence that his favourite mansion of Hafod was reduced to ashes. At three o'clock in the morning of Friday the 13th of March, Mrs. Johnes was awakened by an unusual noise, and soon suspected that the house was on fire. Hastily rising, she found her suspicions were too well founded. Her first care was to arouse her daughter, who had scarcely quitted her apartment before the ceiling fell in, and it was enveloped in flames. Next calling up her brother-in-law, Mr. Hanbury Williams, who was then on a visit at Hafod, and alarming the domestics, she proceeded to the library, and, aided by the few hands which could be hastily collected, she saved several of the most valuable manuscripts and books. Her exertions had nearly cost her her life. In the gallery of the library she became senseless under the pressure of suffocation, and immediately after her removal the roof gave way, and covered the area of this magnificent edifice with smoking ruins. The fire had now free course. It totally destroyed the interior of the dwelling, and its inhabitants, who had retired to rest in the midst of elegance and splendour, were happy and thankful to take refuge in a neighbouring cottage, whence they beheld the complete destruction of the scene of those domestic joys which constitute the purest pleasures of human life.

In the hour of affliction Mr. Johnes never gave way to despondency. He bore this heavy loss with fortitude and equanimity. Grateful to that Providence which had spared to him the objects of his chief solicitude, he diverted his mind from unavailing regrets as to the past by laying plans for the future.

Mr. Johnes lost no time in commencing the rebuilding of Hafod. The massy outside walls which were still standing underwent the necessary repairs, and the interior of the mansion was renewed upon a plan much more commodious than the original one. The sale of Mr. Beckford's effects at Fonthill, which took place about this time, supplied Mr. Johnes with a variety of splendid decorations. The requisite furniture was provided by contract. The extensive and valuable library of the marquis of Pesaro, lately purchased by Mr. Johnes, had fortunately, on its passage to Cardiganshire, been delayed in London; so that, having escaped the late fire, it arrived opportunely to fill up a large proportion of the vacancies which had been created by that destructive accident. Every exertion was made to expedite the work, and at the end of little more than three years Mr. Johnes and his family were once more settled in their re-edified dwelling.

Before the fire took place, he had made considerable advances in printing, at his own press, a translation of the "Travels to Palestine of Bertrandon de la Brocquiere," counsellor and first esquire-carver to Philip le Bon, duke of Burgundy, and of "Joinville's Life of St. Louis." Both these works he published in the year 1807. Two years afterwards the publication of a version of "Monstrelet's Chronicles," in four quarto volumes, evinced Mr. Johnes's unremitted assiduity, and the excellence of its execution his increasing ability in the apparently easy but really difficult task of translation.

In 1814 Mr. Johnes was attacked by a serious malady, and it was considered advisable for him to remove to the coast of Devonshire. Here he lingered till April 1816, still continuing his literary pursuits, and he died much lamented on the 24th of that month.

JOHNSON, CHARLES, an ingenious Irish writer, who was born in the early part of the last century, was called to the bar, and came over to England to practise; but, being afflicted with deafness, confined himself to the employment of a chamber counsel. His success not being great in this way, he turned his attention to literature, and his first literary attempt was the celebrated "Chrysal, or the Adventures of a Guinea," a work which attracted much attention. The secret springs of some political intrigues on the continent were unfolded in this production, which, together with smart and piquant sketches of many distinguished characters of the day, including statesmen, noblemen, women of quality, citizens, and persons of every description, who had claimed any share of public notice, rendered it exceedingly popular. As usual in such works, however, some truth is blended with much fiction; and although, in regard to known personages, little is absolutely without foundation, much exaggeration prevails. His exposure of the orgies of a club of fashionable profligates, held at the seat of a dissipated nobleman in Buckinghamshire, produced no small sensation at the time. He wrote other works of a similar class, in which much knowledge of life and manners is united to a considerable talent for spirited caricature. In 1782 he went to India, and became concerned in editing a Bengal newspaper. He died in Calcutta about 1800.

JOHNSON, JOHN, a non-juring divine, who was born in 1662. He was educated at Cambridge, and in 1687 appointed vicar of Boughton. He afterwards removed to Appledore, where he wrote several works. His "Paraphrase with Notes on the Book of Psalms" is a well-written work. Mr. Johnson died in 1725.

JOHNSON, SAMUEL.—There is no name in the literary annals of the last century that ranks so high

as that of the great man whose progress we are now about to trace. He was the eldest son of Michael

Johnson, a bookseller at Lichfield, and was born in that city September 7, 1709. Having received the elements of a classical education, he was sent at the age of nineteen to Pembroke college, Oxford, by a gentleman who engaged to maintain him there, as a companion to his son. After some time, however, this person withdrew his pecuniary aid; and Johnson having made an ineffectual attempt to subsist on his own resources, found himself obliged to leave Oxford before he obtained a degree. He had already, however, during the period he spent at the university, obtained a high reputation for scholarship and literary attainments.

For many succeeding years the life of this extraordinary man was one of those hard struggles with poverty which learning and genius have so often been called on to sustain. In 1731 his father died, leaving scarcely 20*l.* behind him. Thus situated, Johnson was compelled to accept the office of usher at the grammar-school of Market Bosworth; but the harsh treatment to which he was subjected soon forced him to give up this appointment. He now attempted in succession various projects of a literary nature, and in 1735 married Mrs. Porter, the widow of a mercer. "It was," he said, "a love match on both sides," and, judging from a description of their persons, we must suppose that the passion was not inspired by the beauties of form or graces of manner, but by a mutual admiration of each other's mind. Johnson's appearance at this period is thus described by his biographer and companion:—"He was then lean and lank, so that his immense structure of bones was hideously striking to the eye, and the scars of the scrofula were deeply visible. He also wore his hair which was straight and stiff, and separated behind, and he had seemingly convulsive starts and odd gesticulations, which tended at once to excite surprise and ridicule." Mrs. Porter was double the age of Johnson, and her person and manner, as described by Garrick, were by no means pleasing to others. "She was," he says, "very fat, with a bosom of more than ordinary protuberance. Her swelled cheeks were of a florid red, produced by thick painting, and increased by the liberal use of cordials; she was flaring and fantastic in her dress, and affected both in her speech and her general behaviour." It was beyond a doubt, however, that whatever her real charms might have been, in the eye of her husband she was extremely beautiful, for in her epitaph he has recorded her as such, and given many instances in his writings of a sincere and permanent affection.

With the property he acquired with his wife, which is supposed to have amounted to about 800*l.*, he attempted to establish a boarding-school at Edial, near Lichfield, but the plan proved abortive: the only pupils put under his care were Garrick, the celebrated English Roscius, his brother George, and a Mr. Osaily, a young gentleman of good fortune, who died early. Disappointed in his expectation of deriving a subsistence from the establishment of a boarding-school, he set out on the 2nd of March, 1737, being then in the twenty-eighth year of his age, for London, and it is a memorable circumstance that his pupil Garrick went there at the same time, with an intention to complete his education, and follow the profession of the law. They were recommended to Mr. Colson, master of the mathematical school at Rochester, by a letter from a friend, who mentions the joint expedition of these two eminent men to the metro-

polis in the following manner. "This young gentleman and another neighbour of mine, one Mr. Samuel Johnson, set out this morning together for London. Davy Garrick is to be with you early next week, and Mr. Johnson to try his fate with a tragedy, and endeavour to get himself employed in some translation, either from the Latin or the French. Johnson is a very good scholar, and I have great hopes he will turn out a fine tragedy writer." In London he found it necessary to practise the most rigid economy, and his *Osellus* in the "Art of Living in London," is the real character of an Irish painter, who initiated him in the mode of living cheaply in the metropolis.

In three months after Johnson came to London, his tragedy being as he thought completely finished and fit for the stage, he solicited Mr. Fleetwood, the manager of Drury Lane theatre, to bring it out at his house; but Mr. Fleetwood declined receiving it. Soon after he was employed by Mr. Cave as a coadjutor in his magazine, which for some years was his principal resource for support. His first performance in the "Gentleman's Magazine" was a Latin Ode, published in March 1737, a translation of which, by an unknown correspondent, appeared in the magazine for May following. At this period the misconduct and misfortunes of Savage the poet had reduced him to the lowest state of wretchedness as a writer for bread, and his visits at St. John's Gate, where the "Gentleman's Magazine" was originally printed, naturally brought Johnson and him together; and as they both possessed great abilities, and were equally under the pressure of want, they had naturally a fellow feeling; so that in a short time the strictest intimacy subsisted between them. Johnson mentioned to Sir Joshua Reynolds some of their whimsical adventures in early life, and in his writings describes Savage as having a "graceful and manly deportment, a solemn dignity of mien, but which, upon a nearer acquaintance, softened into an engaging easiness of manners." How much he admired his friend Savage for that knowledge of letters which he himself so much cultivated, and what kindness he entertained for him, is evident from some verses he wrote for the "Gentleman's Magazine," in 1738. About the same time he became acquainted with Miss Elizabeth Carter, the learned translator of Epictetus, to whom he showed particular tokens of respect, and in the same magazine complimented her in an enigma to Eliza, both in Greek and Latin.

In May 1738 he published his "London, a Poem," written in imitation of the third satire of Juvenal. It has been generally said that he offered it to several booksellers, none of whom would purchase it. Mr. Cave at length communicated it to Dodsley, who had judgment enough to discern its intrinsic merit, and thought it creditable to be concerned in it. Dodsley gave him 10*l.* for the copyright. It is remarkable that it came out on the same morning with Pope's satire, entitled "One Thousand Seven Hundred and Thirty-Eight." Pope was so struck with its merit that he sought to discover the author, and prophesied his future fame, and from his note to Lord Gower it seems that he was successful in his enquiries. From a short extract in the "Gentleman's Magazine" for May, it appears that the poem got to the second edition in the space of a week. Indeed this admirable production laid the foundation of Johnson's fame.

In the course of his engagement with Cave, he composed the "Debates in the Senate of Magna Lib-

liputia," the first number of which appeared in the "Gentleman's Magazine" for June 1738, sometimes with feigned names of the several speakers, with denominations formed of the letters of their real names, so that they might be easily decyphered. Parliament then kept the press in a kind of mysterious awe, which rendered it necessary to have recourse to such devices. The debates for some time were taken and digested by Guthrie, and afterwards sent by Mr. Cave to Johnson for revision. When Guthrie afterwards was engaged in a diversity of employments, and the speeches were more enriched by the accession of Johnson's genius, it was resolved that he should do the whole himself from notes furnished by persons employed to attend in both houses of parliament.

In 1738 Johnson took part in the opposition to the administration of Sir Robert Walpole, and published a pamphlet entitled "Marmor Norfolciense, by Probus Britannicus," in which he inveighed against the Brunswick succession and the measures of government consequent upon it, with the most intemperate zeal and pointed sarcasm. Sir John Hawkins says that the jacobite principles inculcated in this pamphlet aroused the vigilance of the ministry, and that a warrant was issued and messengers employed to apprehend the author, who it seems was known, but that he eluded their search by retiring to an obscure lodging in Lambeth Marsh. Mr. Boswell denies the authenticity of this story, alleging that Mr. Steele, one of the secretaries of the treasury, had directed every possible search to be made in the records of the treasury and secretary of state's office, but could find no trace of any warrant having been issued to apprehend the author of this pamphlet.

This jacobitical production obtained the sanction of the Tory party in general, and of Pope in particular, as appears from the following note concerning Johnson, copied with minute exactness by Mr. Boswell from the original, in the possession of Dr. Percy.

"This [London] is imitated by one Johnson, who put up for a public school in Shropshire, but was disappointed. He has an infirmity of the convulsive kind, that attacks him sometimes so as to make him a sad spectacle. Mr. P. from the merit of this work, which was all the knowledge he had of him, endeavoured to serve him without his own application, and wrote to my lord Gower, but did not succeed." Mr. Johnson published afterwards another poem in Latin, with notes, the whole very humorous, called the "Norfolk Prophecy."

At the close of the year 1739 the friends of Savage, commiserating his case, raised a subscription to enable that unfortunate genius to retire to Swansea; by which means Johnson was parted from his companion, and exempted from many temptations to dissipation and licentiousness, in which he indulged from his attachment to his friend, though contrary to the gravity of his own temper and disposition.

In the years 1740-41-42, and 43, he furnished for the "Gentleman's Magazine," a variety of publications, besides the parliamentary debates. Among these were the lives of several eminent men; an essay on the conduct of the duke of Marlborough, then the popular topic of conversation; and an advertisement for Osborne, concerning the "Bibliotheca Harleiana, or a Catalogue of the Library of the Earl of Oxford." This was afterwards prefixed to the first volume of the catalogue, in which

the Latin account of books was written by him. Mr. Osborne purchased the library for 13,000*l.*, a sum which Mr. Oldys says in one of his manuscripts was not more than the binding of the books had cost, yet the slowness of the sale was such that there was not much gained by it. It has been confidently related, with many embellishments, that Johnson knocked Osborne down in his shop with a folio, and put his foot upon his neck. Johnson himself related it differently to Mr. Boswell. "Sir, he was impertinent to me, and I beat him; but it was not in his shop, it was in my own chamber." This anecdote has been told to prove Johnson's ferocity; but the matter has been palliated by the friends of Johnson, who imputed it to the arrogant behaviour of the bookseller. In 1744 he produced the life of Savage, which he had announced his intention of writing in the "Gentleman's Magazine" for August 1743. This work did him infinite honour, being no sooner published than a liberal commendation was given of it by Fielding in the "Champion," which was copied into the "Gentleman's Magazine" for April, and confirmed by the approbation of the public.

Johnson, great as his abilities confessedly were, had now lived half his days to very little purpose; he had toiled and laboured, yet, as he himself expresses it, it was "to provide for the day that was passing over him." Sir John Hawkins has preserved a list of literary projects of no less than thirty-nine articles, which he had formed in the course of his studies; but such was his want of encouragement, or the versatility of his temper, that not one of all those projects was ever executed. He now formed a plan for a new edition of Shakspeare; but in this he was anticipated by Warburton, of whose competency for the undertaking the public had then a very high opinion. The preparatory pamphlet however, which Johnson had published upon the occasion, was highly commended by that supercilious churchman, who spoke of it as the work of a man of great parts and genius. Johnson ever acknowledged the obligation with gratitude. "He praised me," said he, "at a time when praise was of value to me."

In 1746 he formed and digested the plan of his great philological work, which might then be well esteemed one of the desiderata of English literature. It was announced to the public in 1747, in a pamphlet entitled "The Plan of a Dictionary of the English Language, addressed to the Right Honourable Philip Dormer, earl of Chesterfield, one of his Majesty's principal secretaries of state." The cause of its being inscribed to Lord Chesterfield is thus related: "I had neglected," said Johnson, "to write it by the time appointed. Dodsley suggested a desire to have it addressed to Lord Chesterfield. I laid hold of this as a pretext for the delay, that it might be better done, and let Dodsley have his desire." To enable him to complete this vast undertaking, he hired a house, fitted up one of the upper rooms, and employed six amanuenses there in transcribing. The words, partly taken from other dictionaries and partly supplied by himself, having been first written down with spaces left between them, he delivered in writing their etymologies, definitions, and various significations. The authorities were copied from the books themselves, in which he had marked the several passages with a black-lead pencil, the traces of which could easily be effaced.

His fortunate pupil Garrick, having in the course of this year become joint patentee and manager of Drury Lane theatre, Johnson furnished him with a prologue at the opening of it, which for just and manly criticism, as well as poetical excellence, is unrivalled in that species of composition. In 1748 he formed a club that met at a chop-house in Ivy Lane every Tuesday evening, with a view to enjoy literary discussion and the pleasure of animated relaxation. They used to dispute about the moral sense, and the fitness of things; but Johnson was not uniform in his opinions, contending as often for victory as for truth. This inclination prevailed with him throughout life.

The year following, Johnson published "The Vanity of Human Wishes, being the tenth Satire of Juvenal imitated," with his name. This poem is characterized by profound reflection more than pointed spirit. It has however been always held in high esteem. The instances of the variety of disappointments are chosen so judiciously, and painted so strongly, that the moment they are read they bring conviction to every thinking mind. The same year his tragedy of "Irene," which had long been kept back for want of encouragement, appeared upon the stage at Drury Lane, through the kindness of his friend Garrick. Previous to the representation, a violent altercation took place between the author and the manager. Johnson, like too many authors, little acquainted with stage effect, pertinaciously rejected the advice of Garrick, and would by no means submit his lines to the critical amputation of the manager, till at length, through the interference of a friend to both parties, he gave way to the proposed alterations, at least in part, and the tragedy was produced.

On the 20th of March, 1750, he published the first paper of "The Rambler," and continued it without interruption every Tuesday and Friday till the 17th of March, 1752, when it closed. In carrying on this periodical publication, he seems neither to have courted nor to have met with much assistance, the papers contributed by others amounting only to five in number. These admirable essays, we are told by Mr. Boswell, were written in haste, just as they were wanted for the press, without ever being read over by him before they were printed. "The Rambler" was not successful as a periodical work, not more than five hundred copies of any one number having been ever sold. Soon after the first folio edition was concluded, it was published in four octavo volumes, and the author lived to see a just tribute of approbation paid to its merit in the extensiveness of its sale, ten numerous editions of it having been printed in London before his death, besides those in Ireland and Scotland.

In 1752 Johnson lost his wife, and in this melancholy event felt the most poignant distress. In the interval between her death and burial he composed a funeral sermon for her, which was never preached; but, being given to a friend, it has been published since his death. He seems to have sought a remedy for the deprivation of domestic society in the loss of his wife, in the company of a literary circle of acquaintance, who conceived for him the most sincere veneration and esteem.

Soon after "The Rambler" ceased, Dr. Hawkesworth projected "The Adventurer," in conjunction with Bonnel Thornton, Dr. Bathurst, and others.

The first number was published November 7th, 1752, and the paper continued twice a week till March 9th, 1754. Thornton's assistance was soon withdrawn and he set up a new paper, in conjunction with Colman, called "The Connoisseur." Johnson was zealous for the success of "The Adventurer," which was at first rather more popular than "The Rambler." He engaged the assistance of Dr. Warton, whose admirable essays were well known. Johnson began to write in "The Adventurer," April 10th, 1753, marking his papers with the signature T. His price was two guineas for each paper. Of all the papers he wrote he gave both the fame and the profit to Dr. Bathurst. Indeed the latter wrote them, while Johnson dictated, though he considered it as a point of honour not to own them. He even used to say he did not write them, on the pretext that he dictated them only; allowing himself by this casuistry to be accessory to the propagation of falsehood, though his conscience had been hurt by even the appearance of imposition in writing the parliamentary debates. This year he wrote for Mrs. Lennox the dedication to the earl of Orrery, of her "Shakspeare Illustrated."

As the arduous work of the dictionary drew towards a conclusion, Lord Chesterfield, who had in the first instance treated Johnson with great contempt, now meanly condescended to court a reconciliation with him, in hopes of being immortalized in a dedication. With this view he wrote two essays in "The World," in praise of the dictionary, and, according to Sir John Hawkins, sent Sir Thomas Robinson to him for the same purpose. But Johnson rejected the advances of the noble lord, and spurned his proffered patronage in the following letter, which is worthy of being preserved, as it affords the noblest lesson to both patrons and authors that stands upon record in the annals of literary history:—

"I have been lately informed by the proprietor of 'The World,' that two papers, in which my dictionary is recommended to the public, were written by your lordship. To be distinguished is an honour, which, being very little accustomed to favours from the great, I know not well how to receive, or in what terms to acknowledge.

"When upon some slight encouragement I first visited your lordship, I was overpowered like the rest of mankind by your address, and could not forbear to wish that I might boast myself *Le vainqueur du vainqueur de la terre*, that I might obtain that regard for which I saw the world contending; but I found my attendance so little encouraged that neither pride nor modesty would suffer me to continue it. When I had once addressed your lordship in public, I had exhausted all the art of pleasing which a retired and uncourtly scholar can possess. I had done all that I could, and no man is well pleased to have his all neglected, be it ever so little.

"Seven years, my lord, have now passed since I waited in your outward rooms, or was repulsed from your door; during which time I have been pushing on my work through difficulties of which it is useless to complain, and have brought it at last to the verge of publication without one act of assistance, one word of encouragement, or one smile of favour. Such a treatment I did not expect, for I never had a patron before. The shepherd in Virgil grew at last acquainted with love, and found him a native of the rocks. Is not a patron, my lord, one who looks with unconcern on a man struggling for life in the water,

and when he has reached ground encumbers him with help? The notice which you have been pleased to take of my labours, had it been early, had been kind; but it has been delayed till I am indifferent and cannot enjoy it, till I am solitary and cannot impart it, till I am known and do not want it. I hope it is no very cynical asperity not to confess obligations where no benefit has been received, or to be unwilling that the public should consider me as owing that to a patron which Providence has enabled me to do for myself.

"Having carried on my work thus far with so little obligation to any favourer of learning, I shall not be disappointed though I should conclude it, if less be possible, with less; for I have been long awakened from that dream of hope in which I once boasted myself with so much exultation,

"My Lord, yours,

*Sam: Johnson*

Johnson, however, acknowledged to a friend that he once received 10*l.* from Lord Chesterfield; but as that was so inconsiderable a sum, he thought the mention of it could not properly find a place in a letter of the kind that this was. Lord Chesterfield read the letter to Dodsley with an air of indifference, smiled at the several passages, and observed how well they were expressed. He excused his neglect of Johnson by saying that he had heard he had changed his lodgings, and did not know where he lived, and declared he would have turned off the best servant he ever had if he knew that he had denied him to a man who would have been always more than welcome. Of Lord Chesterfield's general affability and easiness of address, especially to literary men, the evidence is unquestionable; but from the character which he gave of Johnson in his letters to his son, and the difference in their manners, little union or friendship could be looked for between them. Certain it is, however, that Johnson remained under an obligation to his lordship to the value of 10*l.*

Though he failed in an attempt at an early period of life to obtain the degree of master of arts, the university of Oxford, a short time before the publication of his dictionary, in anticipation of the excellency of the work, and at the solicitation of his friend Mr. Warton, unanimously presented it to him; and it was considered as an honour of considerable importance in the introduction of the work to the notice of the public. At length, in the month of May 1754, appeared his "Dictionary of the English Language, with a History of the Language, and an English Grammar," in two volumes folio. It was received by the learned world, who had long wished for its appearance, with a degree of applause proportionable to the impatience which the promise of it had excited. Though we may believe him in the declaration at the end of his preface, that he dismissed it with frigid tranquillity, having little to fear or hope from censure or from praise, there cannot be a doubt but that he was highly gratified by the reputation it acquired both at home and abroad. The earl of Cork and Orrery being at Florence, presented it to the academia della Crusca. The academy sent Johnson their "Vo-

cabulario," and the French academy sent him their "Dictionnaire," by Mr. Langton.

Johnson, as though he had foreseen some of the circumstances which would attend the publication of this arduous work, observes, "A few wild blunders and risible absurdities, from which no work of such multiplicity was ever free, may for a time furnish folly with laughter, and harden ignorance into contempt; but useful diligence will at last prevail, and there can never be wanting some who distinguish desert." Among those who amused themselves and the public on this occasion, Mr. Wilkes, in an essay printed in the "Public Advertiser," ridiculed the following passage in the Grammar:—"H seldom, perhaps never, begins any but the first syllable." The remark is certainly too definite, but the author never altered the passage. Dr. Kenrick threatened an attack several years after, in his review of Johnson's Shakspeare, but it was never carried into execution.

Johnson having spent, during the progress of his laborious work, the money for which he had contracted to execute it, was still under the necessity of exerting his talents, as he himself expresses it, in making provision for the day that was passing over him. The subscriptions taken in for his edition of Shakspeare, and the profits of his miscellaneous essays, were now his principal resource for subsistence; and it appears from the following letter to Mr. Richardson, dated Gough Square, March 16, 1756, that they were not sufficient to ward off the distress of an arrest on a particular emergency. "I am obliged to entreat your assistance; I am now under an arrest for 5*l.* 18*s.* Mr. Strahan, from whom I should have received the necessary help in this case, is not at home, and I am afraid of not finding Mr. Millar. If you could be so good as to send me this sum, I will very gratefully repay you and add it to all former obligations." In the margin of this letter there is a memorandum in these words:—"March 16, 1756. Sent six guineas, witness William Richardson."

The same year he engaged to superintend and contribute largely to another monthly publication, entitled "The Literary Magazine, or Universal Review." For this periodical work he wrote original essays and critical reviews. His essays evince extensive reading and sound judgment; some of his reviews are short accounts of the productions noticed, but many of them are examples of elaborate criticism in the most masterly style. About this period he was offered by a particular friend a church living of considerable value in Lincolnshire, if he would take orders and accept it; but he chose to decline the clerical function.

In April 1758 he began "The Idler," which appeared statedly in a weekly newspaper, called "The Universal Chronicle," and was continued till April 1760. "The Idler" evidently appeared to be the production of the same genius as "The Rambler," but it has more of real life as well as ease of language.

Soon after the death of his mother, which happened in the beginning of 1759, he wrote his "Rasselas, Prince of Abyssinia," that with the profits he might defray the expense of her funeral, and pay some little debts which he had contracted. He told Sir Joshua Reynolds that he composed it in the evenings of one week, sent it to the press in portions as it was written, and had never since read it over. He originally received 100*l.* for the copy-right, and 25*l.* more when it came to a second edition. The applause with which

this work was received bore ample testimony to its merit; indeed its reception was such that it has been translated into various modern languages, and admitted into the best libraries of Europe.

In 1760 Mr. Murphy, conceiving himself illiberally treated by Dr. Franklin, a contemporary writer, in his "Dissertation on Tragedy," published an animated vindication of himself in "A Poetical Epistle to Samuel Johnson, A. M.," in which he complimented Johnson in a just and elegant manner. An acquaintance first commenced between Johnson and Mr. Murphy in the following manner. Mr. Murphy, during the publication of his "Gray's Inn Journal," happened to be in the country with Foote, the modern Aristophanes; and having mentioned that he was obliged to go to London to get ready for the press one of the numbers, Foote said to him, "You need not go on that account: here is a French magazine in which you will find a very pretty oriental tale; translate that and send it to your printer." Mr. Murphy, having read the tale, was highly pleased with it, and followed Foote's advice. When he arrived in town this tale was pointed out to him in "The Rambler," from whence it had been translated into the French magazine. Mr. Murphy then waited upon Johnson to explain this curious incident, and a friendship was formed between them that continued without interruption till the death of Johnson.

In 1762 fortune, which had hitherto left our author to struggle with the inconveniences of a precarious subsistence, arising entirely from his own labours, gave him that independence which his literary talents certainly deserved. His majesty George III., in the month of July, granted him a pension of 300*l.* per annum. Johnson from this circumstance was censured by some as an apostate, and ridiculed by others for becoming a pensioner. "The North Briton" was furnished with arguments against the minister for rewarding a Tory and Jacobite; and Churchill satirized his political versatility with the most poignant severity in the four following lines:

"How to all principles untrue,  
Not fixed to old friends nor to new,  
He damns the pension which he takes,  
And loves the Stuart he forsakes."

His acceptance of the royal bounty undoubtedly subjected him to the appellation of pensioner, to which he had annexed an ignominious definition in his dictionary. It is with great propriety remarked upon this occasion, that, "having received a favour from two Scotchmen, against whose country he joined in the rabble cry of indiscriminate invective, it was thus that even-handed justice commended the poisoned chalice to his own lips, and compelled him to an awkward though not unpleasant penance for indulging in a splenetic prejudice equally unworthy of his head and heart."

In 1763 Mr. Boswell was introduced to Dr. Johnson, and continued to live in great intimacy with him from that time till his death. Churchill, in his "Ghost," availed himself of the common opinion of Johnson's credulity, and drew a caricature of him under the name of Pomposo, representing him as one of the believers of the story of a ghost in Cock Lane, which in 1762 had gained very great credit in London. Johnson made no reply, for it seems that with other wise folks he sat up with the ghost. Contrary, however, to the common opinion of Johnson's credulity, Mr. Boswell asserts that he was a principal agent in

detecting the imposture, and undeceived the world by publishing an account of it in "The Gentleman's Magazine" for January 1762.

In February 1764, to enlarge the circle of his literary acquaintance, and afford opportunities for conversation, he founded a society which afterwards became distinguished by the title of the literary club, and Sir Joshua Reynolds was the first proposed, to which Johnson acceded, and the original members were, besides himself, Sir Joshua Reynolds, Mr. Burke, Dr. Nugent, Mr. Beauclerk, Mr. Langton, Sir John Hawkins, and Goldsmith. They met at the Turk's Head, in Gerrard Street, Soho, on every Monday throughout the year. The succeeding year, 1765, was remarkable for the commencement of his acquaintance with Mr. Thrale, an eminent brewer, and member of parliament for Southwark. Mr. Murphy, who was intimate with Mr. Thrale, having spoken very highly of Johnson's conversation, he was requested to make them acquainted. This being mentioned to Johnson, he accepted of an invitation to dinner at Mr. Thrale's, and was so much pleased with his reception both by Mr. and Mrs. Thrale, and they were so much pleased with him, that his invitations to their house became more and more frequent, till in the course of time he ranked as one of the family, and an apartment was appropriated to him both in their house at Southwark, and at their villa at Streatham, his favourite retreat. The latter place is delineated in the subjoined cut.

Nothing could be more fortunate for Johnson than this connexion. He had at the house of his friend all the comforts and even luxuries of life, his melancholy was diverted, and his irregular habits lessened, by association with an agreeable and well-ordered family, by whom he was treated with the utmost respect and even affection; and it is recorded, to the honour of his worthy friend, that the patron of literature and talents of which Johnson sought in vain for the traces in Chesterfield, he found realized in Thrale.

In the course of this year he was complimented by the university of Dublin with the degree of doctor of laws. Soon after he published his edition of "The Plays of William Shakspeare, with the Corrections and Illustrations of Various Commentators, to which are added Notes by Samuel Johnson." Sir John Hawkins thinks it a meagre work; he complains of the paucity of the notes and Johnson's unfitness for the

office of a scholiast. It was treated with great illiberality by Dr. Kenrick in the first part of a review of it, which was never completed. But it must be acknowledged that what he did as a commentator has no small share of merit. He has enriched his edition with a concise account of each play, and of its characteristic excellence. In the sagacity of his emendatory criticisms, and the happiness of his interpretation of obscure passages, he surpasses every other editor of this poet. Mr. Malone confesses that Johnson's vigorous and comprehensive understanding threw more light on this author than all his predecessors had done. His preface has been pronounced by Mr. Malone to be the finest composition in our language; and it must be admitted, whether we consider the beauty and vigour of its composition, the abundance and classical selection of its allusions, the justness of the general precepts of criticism, and its accurate estimates of the excellence or defects of its author, it is equally admirable.

In February 1767 Johnson was honoured by a private conversation with the king in the library at Buckingham House, which, as is pointedly expressed by one of his biographers, gratified his monarchic enthusiasm. The interview was sought by the king without the knowledge of Johnson. His majesty among other things asked the author of so many valuable works if he intended to publish any more. Johnson modestly answered that he thought he had written enough. "And so should I too," replied the king, "if you had not written so well." Johnson was highly pleased with his majesty's courteousness, and afterwards observed to a friend, "Sir, his manners are those of as fine a gentleman as we may suppose Louis XIV. or Charles II."

In 1770 he published a political pamphlet entitled "The False Alarm," intended to justify the conduct of ministry and the majority of the house of commons, for having virtually assumed it as an axiom, that the expulsion of a member of parliament was equivalent to an exclusion; and their having declared Colonel Luttrell to be duly elected for the county of Middlesex, notwithstanding Mr. Wilkes had a great majority of votes. This being considered as a gross violation of the right of election, an alarm for the constitution extended itself all over the kingdom. To prove this alarm to be false was the purpose of Johnson's pamphlet; but his arguments failed of effect, and the house of commons afterwards erased the offensive resolution from the journals.

In 1773 he published a new edition of his dictionary, with additions and corrections, and in the autumn of the same year he gratified a desire which he had long entertained of visiting the Hebrides or western isles of Scotland. He was accompanied by Mr. Boswell, whose acuteness he afterwards observed would help his enquiry, and whose gaiety of conversation and civility of manners were sufficient to counteract the inconveniences of travel in countries less hospitable than those they were to pass. In the course of the years 1773 and 1774 he published a number of pamphlets in vindication of the conduct of ministry, to whom as a pensioner he had become wholly devoted. These he collected into a volume and published under the title of "Political Tracts, by the Author of 'The Rambler,'" octavo. In March he was gratified by the title of doctor of laws, conferred on him by the university of Oxford, at the solicitation of Lord North. In September he visited France for the

first time with Mr. and Mrs. Thrale, and Mr. Baretti, and returned to England in about two months after he quitted it. Foote, who happened to be in Paris at the same time, said that the French were perfectly astonished at his figure and manner, and at his dress, which was exactly the same with what he was accustomed to in London—his brown clothes, black stockings, and plain shirt. Of the occurrences of this tour he kept a journal, in all probability with a design of writing an account of it, but for want of leisure and inclination he never carried it into execution.

This year he published an account of his tour to the Hebrides, under the title of "A Journey to the Western Isles of Scotland," octavo. The narrative it must be admitted, is written with an undue prejudice against both the country and the people of Scotland, which is highly reprehensible, though it abounds in extensive philosophical views of society, ingenious sentiments, and lively descriptions. Among many other disquisitions he expresses his disbelief of the authenticity of the poems of Ossian presented to the public as a translation from the Erse. This excited the resentment of Mr. Macpherson, who sent a threatening letter to the author, and Johnson answered him with the following stern defiance:—

"I received your foolish and impudent letter. Any violence offered me I shall do my best to repel, and what I cannot do for myself the law shall do for me. I hope I shall never be deterred from detecting what I think a cheat by the menaces of a ruffian! What would you have me retract? I thought your book an imposture, I think it an imposture still. For this opinion I have given my reasons to the public, which I here dare you to refute; your rage I defy; your abilities, since your Homer, are not so formidable; and what I hear of your morals inclines me to pay regard not to what you shall say, but to what you shall prove. You may print this if you will."

The threats alluded to in this letter were never attempted to be put into execution. But Johnson, as a provision of defence, furnished himself with a large oaken plant six feet in height, of the diameter of an inch at the lower end, increasing to three inches at the top and terminating in a head (once the root) of the size of a large orange. This he kept in his bedchamber, so near his chair as to be within his reach.

In 1777 the fate of Dr. Dodd excited Johnson's compassion, and called forth the strenuous exertion of his comprehensive mind. He thought his sentence just, yet, perhaps fearing that religion might suffer from the errors of one of its ministers, he endeavoured to prevent the last ignominious spectacle by writing several petitions as well as observations in the newspapers in his favour. He likewise wrote a prologue to Kelly's comedy of "A Word to the Wise," which was acted at Covent Garden theatre for the benefit of the author's widow and children.

This year he engaged to write a concise account of the lives of the English poets; as a recompence for an undertaking as he thought not very tedious or difficult, he bargained for two hundred guineas, and was afterwards presented by the proprietors with 100*l*. In the selection of the poets he had no responsible concern; but Blackmore, Watts, Pomfret, and Yalden, were inserted by his recommendation. This was the last of Johnson's literary labours, and, though completed when he was in his seventy-first year, shows that his faculties were in as vigorous a state as ever. His judgment and his taste, his quickness in the dis-

crimination of motives, and facility of moral reflections, shine as strongly in these narratives as in any of his more early performances; and his style, if not so energetic, is at least more smoothed down to the taste of the generality of readers. The "Lives of the English Poets" formed a memorable era in Johnson's life. It is a work which has contributed to immortalize his name, and has secured that rational esteem which party or partiality could not procure, and which even the injudicious zeal of his friends has not been able to lessen.

From the close of this work the malady that persecuted him through life came upon him with redoubled force. His constitution rapidly declined, and the fabric of his mind seemed to be tottering. The contemplation of his approaching end dwelt constantly upon his mind, and the prospect of death he declared was terrible. In 1781 he lost his valuable friend Thrale, who appointed him executor with a legacy of 200*l*. "I felt," he said, "almost the last flutter of his pulse, and looked for the last time upon that face that for fifteen years had never been turned upon me but with respect and benignity." Of his departed friend he has given a true character in a Latin epitaph to be seen in the church-yard of Streat-ham.

After the death of Mr. Thrale his visits to Streat-ham, where he no longer looked upon himself as a welcome guest, became less and less frequent; and on the 5th of April, 1783, he took his final leave of Mrs. Thrale, to whom for near twenty years he had been under the highest obligations. A friendly correspondence continued, however, between Johnson and Mrs. Thrale without interruption till the summer following, when she retired to Bath, and informed him that she was going to dispose of herself in marriage to Signior Piozzi, an Italian music-master. Johnson endeavoured to dissuade her from the match, but without effect; for her answer to his letter on the subject contained a vindication of her conduct and her fame, an inhibition of Johnson from following her to Bath, and a farewell, concluding, "till you have changed your opinion of ——— let us converse no more!" From this time the narrative of his life is little more than a recital of the pressures of melancholy and disease, and of numberless excursions taken to calm his anxiety and soothe his apprehensions of the terrors of death, by flying as it were from himself. In the beginning of 1784 he was seized with a spasmodic asthma, which was soon accompanied with some degree of dropsy. From the latter of these complaints, however, he was greatly relieved by a course of medicine. Having expressed a desire of going to Italy for the recovery of his health, and his friends not deeming his pension adequate to the support of the expenses incidental to the journey, application was made to the minister by Mr. Boswell and Sir Joshua Reynolds unknown to Johnson, through Lord Chancellor Thurlow, for an augmentation of it by 200*l*. The application was unsuccessful, but the lord chancellor offered to let him have 500*l*. out of his own purse, under the appellation of a loan, but with the intention of conferring it as a present. It is also recorded to the honour of Dr. Brocklesby, that he offered to contribute 100*l*. per annum during his residence abroad; but Johnson declined the offer with becoming gratitude; indeed he was now approaching fast to a state in which money could be of no avail.

During his illness Johnson experienced the steady

and kind attachment of his numerous friends. Dr. Heberden, Dr. Brocklesby, Dr. Warren, and Mr. Cruikshank, generously attended him without accepting any fees; but his constitution was decayed beyond the restorative powers of the medical art. Previous to his dissolution he burned indiscriminately large masses of paper, and amongst the rest two volumes containing a full and most particular account of his own life. He expired on the 13th of December, 1785, in the seventy-fifth year of his age, and was buried in Westminster abbey, near the foot of Shakspeare's monument and close to the coffin of his friend Garrick. Agreeable to his own request a large blue flagstone was placed over his grave, with this inscription:

SAMUEL JOHNSON, L. L. D.  
OBIIIT XIII. DIE DECEMBRIS,  
ANNO DOMINI  
M,DCC,LXXXV.  
ÆTATIS SUE LXXV.

A monument for Johnson in the cathedral church of St. Paul, in conjunction with one to the benevolent Howard, was resolved upon with the approbation of the dean and chapter, and supported by a most respectable contribution. It was completed in 1795.

Having no near relations, he left the bulk of his property, amounting to 1500*l*., to his faithful servant Francis Barber, whom he looked upon as particularly under his protection, and whom he had long treated as an humble friend. He appointed Sir Joshua Reynolds, Sir John Hawkins, and Sir William Scott, his executors. His death attracted the public attention in an uncommon degree, and was followed by an unprecedented accumulation of literary honours, in the various forms of sermons, elegies, memoirs, lives, essays, and anecdotes.

The religious, moral, political, and literary character of Johnson will be better understood by the account of his life than by any laboured and critical comments. Yet it may not be superfluous here to attempt to collect from his several biographers into one view his most prominent excellencies and distinguishing peculiarities.

As a literary character, Johnson has eminently distinguished himself as a philologist, a biographer, a critic, a moralist, a novelist, a political writer, and a poet. As a philologist we need only to refer to his dictionary of the English language, as its utility is universally acknowledged, and its popularity its best eulogium. The etymologies, however, though they exhibit learning and judgment, are not in every instance entitled to unqualified praise. The definitions exhibit astonishing proofs of acuteness of intellect and precision of language. His introducing his own opinions and even prejudices under general definitions of words, as Tory, Whig, Pension, Excise, &c., must be placed to the account of capricious and humorous indulgence. Mr. Murphy, who has given a fair and candid estimate of the literary character of Johnson, remarks that "the dictionary, though in some instances abuse has been loud, and in others malice has endeavoured to undermine its fame, still remains the Mount Atlas of English literature."

As a biographer, his merit is certainly great. His narrative is in general vigorous, connected, and perspicuous, and his reflections numerous, apposite, and moral. But it must be owned that he neither dwells with pleasure nor success upon those minuter anec-

dotes of life which oftener show the genuine man than actions of greater importance. Sometimes also his colouring receives a tinge from prejudice, and his judgment is insensibly warped by the particularity of his private opinion.

As a critic, he is entitled to the praise of being the greatest that our nation has produced. This praise he has merited by his preface to Shakspeare, and the detached pieces of criticism which appear among his works; but his critical powers shine with more concentrated radiance in the lives of the poets. Of many passages in these compositions it is not hyperbolic to affirm that they are executed with all the skill and penetration of Aristotle, and animated and embellished with all the fire of Longinus. The "Paradise Lost" is a poem which the mind of Milton only could have produced; the criticism upon it is such as perhaps the pen of Johnson only could have written. His estimate of Dryden and Pope challenges Quintilian's remarks upon Demosthenes and Cicero, and rivals the finest specimens of elegant composition and critical acuteness in the English language. But though Johnson is entitled to this high eulogium, yet in many instances it is evident that an affectation of singularity, or some other principle, not immediately visible, frequently betrays him into a dogmatical spirit of contradiction to received opinion. Of this there needs no further proof than his almost uniform attempt to depreciate the writers of blank verse, and his degrading estimate of the admirable compositions of Prior, Hammond, Collins, Gray, Shenstone, and Akenside. In his judgment of these poets he may be justly accused of being warped by prejudice, and resolutely blind to merit.

As a moralist, his periodical papers are distinguished from those of other writers who derived celebrity from similar publications. He has neither the wit nor the graceful ease of Addison, nor has he the humour and classic suavity of Goldsmith. His powers are of a more grave, energetic, and dignified kind than any of his competitors, and if he entertains us less, he instructs us more. He shows himself master of all the recesses of the human mind, able to detect vice when disguised in its most specious form, and equally possessed of a corrosive to eradicate, or a lenitive to assuage, the follies and sorrows of the heart. But his genius was only formed to chastise graver faults, which require to be touched with a heavier hand. His "Rambler" furnishes such an assemblage of discourses on practical religion and moral duty, of critical investigation and allegorical and oriental tales, that no mind can be thought very deficient that has by constant study and meditation assimilated to itself all that may be found there. Every page of "The Rambler" shows a mind teeming with classical allusion and poetical imagery; illustrations from other writers are upon all occasions so ready, and mingle so easily in his periods, that the whole appears of one uniform vivid texture.

Mr. Murphy observes that "The Rambler" may be considered as Johnson's great work. It was the basis of that high reputation which went on increasing to the end of his days. In this collection Johnson is the great moral teacher of his countrymen; his essays form a body of ethics; the observations on life and manners are acute and instructive; and the papers, professedly critical, serve to promote the cause of literature. It must however be acknowledged that a settled gloom hangs over the author's mind, and all

the essays, except eight or ten, coming from the same fountain-head, no wonder that they have the raciness of the soil from which they sprung. Of this uniformity Johnson was sensible; he used to say, that if he had joined a friend or two who would have been able to intermix papers of a sprightly turn, the collection would have been more miscellaneous, and by consequence more agreeable to the generality of readers.

As a novelist, he displays in the oriental tales in "The Rambler," an unbounded knowledge of men and manners; but his great work in this department of literature is his "Rasselas." None of his writings have been so extensively diffused over Europe. The language enchants us with harmony, the arguments are acute and ingenious, and the reflections novel yet just. It astonishes by the sublimity of its sentiments and the fertility of its illustrations, and delights by the abundance and propriety of its images. The fund of thinking which it contains is such that almost every sentence of it may furnish a subject of long meditation; but it is not without its faults, being barren of interesting incidents, and destitute of originality or distinction of characters. There is little difference in the manner of thinking and reasoning of the philosopher and the female, of the prince and the waiting woman.

As a political writer, his productions are more distinguished by subtlety of disquisition, poignancy of satire, and energy of style, than by truth, equity, or candour. In perusing his representations of those who differed from him in political subjects, we are sometimes inclined to assent to a proposition of his own, that "there is no credit due to a rhetorician's account either of good or evil." Many positions are laid down in admirable language, and in highly polished periods, which are inconsistent with the principles of the British constitution, and repugnant to the common rights of mankind. In apology for him, it may be admitted that he was attached to Tory principles, and that most of what he wrote on political subjects was conformable to his real sentiments. Mr. Murphy observes that "Johnson's political pamphlets, whatever was his motive for writing them, whether gratitude for his pension or the solicitation of men in power, did not support the cause for which they were undertaken. They are written in a style truly harmonious, and with his usual dignity of language. When it is said that he advanced positions repugnant to the common rights of mankind, the virulence of party may be suspected. It is perhaps true that in the clamour raised throughout the kingdom Johnson overheated his mind; but he was a friend to the rights of man, and he was greatly superior to the littleness of spirit that might induce him to advance what he did not think and firmly believe."

The style of Johnson's prosaic writings has been censured, applauded, and imitated to extremes equally dangerous to the purity of the English language. He has no doubt innovated upon our language by his adoption of Latin derivatives; but the danger from his innovation would be trifling if those alone would copy him who can think with equal precision; for few passages can be pointed out from his works in which his meaning could be accurately expressed by such words as are in more familiar use. His comprehension of mind was the mould for his language. Had his comprehension been narrower, his expres-

sion would have been easier. And it is to be remembered that while he has added harmony and dignity to our language, he has neither violated it by the insertion of foreign idioms, nor the affectation of anomaly in the construction of his sentences; upon the whole it is certain that his example has given a general elevation to the language of his country, for some of our best writers have approached very near to him.

As a poet, the merit of Johnson, though considerable, yet falls short of that which he has displayed in those provinces of literature in which we have already surveyed him. Ratiocination prevailed in Johnson more than sensibility. He has no daring sublimities nor gentle graces, he never glows with the fire of enthusiasm or kindles a sympathetic emotion in the bosoms of his readers. His poems are the plain and sensible effusions of a mind never hurried beyond itself, to which the use of rhyme adds no beauty, and from which the use of prose would detract no force. His versification is smooth, flowing, and unrestrained, but his pauses are not sufficiently varied to rescue him from the imputation of monotony. He seems never at a loss for rhyme, or destitute of a proper expression; and the manner of his verse appears admirably adapted to didactic or satiric poetry, for which his powers were equally and perhaps alone qualified.

Mr. Murphy, in his estimate of the literary character of Johnson, observes that his English poetry is such as leaves room to think, if he devoted himself to the Muses, that he would have been the rival of Pope. His first production of this kind was "London," a poem in imitation of the third satire of Juvenal. The vices of the metropolis are placed in the room of ancient manners. The author has heated his mind with the ardour of Juvenal, and, having the skill to polish his numbers, he became a sharp accuser of the times. The "Vanity of Human Wishes" is an imitation of the tenth satire of the same author. Though it is translated by Dryden, Johnson's imitation approaches nearest to the original.

It is generally admitted that of Johnson's poetical compositions the imitations of Juvenal are the best; they are perhaps the noblest imitations to be found in any language. It has been remarked with nice discrimination, that if Johnson's imitations of Juvenal are not so close as those done by Pope from Horace, they are infinitely more spirited and energetic. In Pope the most peculiar images of Roman life are adapted with singular address to our own times. In Johnson the similitude is only in general passages, suitable to every age in which refinement has degenerated into depravity. We have space but for a single illustration. It is from his imitation of the tenth satire of Juvenal, and will serve to exhibit his peculiar style of versification, which is much less known than his prose compositions.

"Let observation, with extensive view,  
Survey mankind, from China to Peru;  
Remark each anxious toil, each eager strife,  
And watch the busy scenes of crowded life;  
Then say how hope and fear, desire and hate,  
Overspread with snares the clouded maze of fate.  
Where wav'ring man, betray'd by vent'rous pride  
To tread the dreary paths without a guide,  
As treach'rous phantoms in the mist delude,  
Shuns fancied ills, or chases airy good.  
How rarely reason guides the stubborn choice,  
Rules the bold hand, or prompts the suppliant voice.  
How nations sink, by darling schemes oppress'd,  
When vengeance listens to the fool's request.  
Fate wings with ev'ry wish the afflictive dart,

Each gift of nature, and each grace of art,  
With fatal heat impetuous courage glows,  
With fatal sweetness elocution flows,  
Impeachment stops the speaker's pow'ful breath.  
And restless fire precipitates on death.  
But scarce observed, the knowing and the bold,  
Fall in the general massacre of gold;  
Wide-wasting pest! that rages unconfined,  
And crowds with crimes the records of mankind;  
For gold his sword the hireling ruffian draws,  
For gold the hireling judge distorts the laws;  
Wealth heap'd on wealth nor truth nor safety buys.  
The dangers gather as the treasures rise.  
Let history tell where rival kings command,  
And dubious title shakes the maddened land,  
When statutes glean the refuse of the sword,  
How much more safe the vassal than the lord:  
Low skulks the hind beneath the reach of pow'r,  
And leaves the wealthy traitor in the Tower,  
Untouch'd his cottage, and his slumbers sound,  
Though confiscation's vultures hover round."

From the numerous, as well as copious biographical tributes to the memory of Dr. Johnson, and especially that of Boswell, few persons have been made so well known to the public as our great lexicographer.

As a man, Dr. Johnson was in mind, as in person, powerful and rugged, but he was capable of acts of benevolence and of substantial generosity, which do honour to human nature. His strong prejudices have been already mentioned, and it is to be regretted that his admirable conversational and argumentative powers were sullied by dictatorial arrogance and the most offensive impatience of contradiction—qualities that were unhappily heightened by the extreme deference and lavish admiration with which he was treated on arriving at the summit of his reputation. The effect was more injurious to himself than his hearers, as it evidently fostered the seeds of bigotry and intolerance with which he set out in life. Upon the whole, however, both the moral and intellectual character of Dr. Johnson stands very high, and he may be regarded, without hesitation, as one of the most eminent of the distinguished writers of the eighteenth century. His works were published collectively in eleven volumes, with a life of the author, by Sir John Hawkins, in 1787, and in twelve volumes, by Murphy, in 1792. The last edition of "Boswell's Life of Johnson" was edited by Mr. Croker, and the value of the work may be best shown by the feelings of the editor as exhibited in the preface:—"With respect to the spirit towards Dr. Johnson himself by which the editor is actuated, he begs leave to say, that he feels, and has always felt a great, but he hopes not a blind admiration of Dr. Johnson. For his writings he feels that admiration undivided and uninterrupted." In his personal conduct and conversation there may be occasionally something to regret and (though rarely) something to disapprove, but less, perhaps, than there would be in those of any other man, whose words, actions, and even thoughts, should be exposed to public observation so nakedly as, by a strange concurrence of circumstances, Dr. Johnson's have been. Having no domestic ties or duties, the latter portion of his life was, as Mrs. Piozzi observes, nothing but conversation, and that conversation was watched and recorded from night to night, and from hour to hour, with zealous attention and unceasing diligence. No man, the most staid or the most guarded, is always the same in health, in spirits, and opinions. Human life is a series of inconsistencies; and when Johnson's early misfortunes, his protracted poverty, his strong passions, his violent prejudices, and, above all, his mental infirmities, are considered, it is only wonderful

that a portrait so laboriously minute, and so painfully faithful, does not exhibit more of blemish, incongruity, and error."

**JOHNSON, SAMUEL**, an English divine, remarkable for his learning and steadiness in suffering for the principles of the revolution in 1688. He was born in 1649; and entering into orders obtained in 1670 the rectory of Corringham in the county of Essex, which was the only church-preferment he ever had. The air of this place not agreeing with him, he placed a curate on the spot, while he settled at London. The times were turbulent; the duke of York declaring himself a catholic, his succession to the crown began to be warmly opposed; and Mr. Johnson, who was naturally not of a submissive temper, being made chaplain to Lord William Russel, engaged the ecclesiastical champion for passive obedience, Dr. Hicks, in a treatise entitled "Julian the Apostate." He was answered by Dr. Hicks in a work intitled "Jovian." To which he published a reply, under the title of "Julian's Arts to undermine and extirpate Christianity." For this work he was committed to prison; but not being able to procure a copy, the court prosecuted him for writing the first tract, condemned him to a fine of 500 marks, and to lie in prison until it was paid. By uniting with Mr. Hambden, who was his fellow-prisoner, he got into farther troubles; for on the encampment of the army on Hounslow heath in 1686, he printed and dispersed "An Humble and Hearty Address to all the Protestants in the Present Army;" for this he was sentenced to a second fine of 500 marks, to be degraded from the priesthood, to stand twice in the pillory, and to be whipped from Newgate to Tyburn. It happened, luckily, that in the degradation they omitted to strip him of his cassock; which circumstance, slight as it may appear, rendered his degradation imperfect, and afterwards preserved his living to him. Intercession was made to get the whipping omitted; but James replied, "that since Mr. Johnson had the spirit of martyrdom, it was fit he should suffer;" and he bore it with firmness and even with alacrity. On the revolution the parliament resolved the proceedings against him to be null and illegal, and recommended him to the king, who offered him the rich deanery of Durham; but this he refused, as inadequate to his services and sufferings, which he thought merited a bishopric. The truth was, he was passionate, self-opiniated, and turbulent; and though through Dr. Tillotson's means he obtained a pension of 300*l.* a-year with other gratifications, he remained discontented, pouring forth all his uneasiness against a standing army and the great favours shown to the Dutch. He died in 1703, and his works were afterwards collected in one volume folio.

**JOHNSON, SAMUEL**.—This learned American was born at Guildford, Connecticut. He entered the college at Saybrook at about fourteen years of age, and was graduated in 1714. In 1716 a college was established by the general court of the colony at New Haven, and Mr. Johnson was appointed tutor. In 1720 he became a preacher at West Haven. A short time afterwards he became an episcopalian, and in 1722 came to England to obtain ordination. Here he received the degree of master of arts at Oxford and Cambridge. In 1723 he returned and settled at Stratford, where he preached to about thirty episcopal families in the place, and about forty in the neighbouring towns. He was treated, by the peo-

ple at large, as a schismatic and apostate and continually thwarted, the object being to drive him from the country. This treatment he endured with patience and firmness. In 1743 the university of Oxford made him a doctor of divinity. In 1754 he was chosen president of the college just established at New York, and filled the office with much credit until 1763, when he resigned and returned to Stratford, where he resumed his pastoral functions, and continued them till his death, January 1772, in the seventy-sixth year of his age. He was a man of great learning, quickness of perception, soundness of judgment, and benevolence. While Bishop Berkeley was residing in Rhode Island, which he did two years and a half from the time of his arrival in 1729, Dr. Johnson became acquainted with him and embraced his theory of idealism. Dr. Johnson's publications were chiefly controversial.

**JOHNSON, THOMAS**, an eminent classical scholar, who was born in the middle of the seventeenth century. He was educated at Cambridge, and became in succession usher at several large schools. He is best known as the editor of "Sophocles," and as the author of a "Letter to Mr. Chandler in Vindication of a Passage in the Bishop of London's Second Pastoral Letter."

**JOHNSON, THOMAS**, an English botanist, who was born at Selby in Yorkshire, and became first known to the public as the author of a small work entitled "Iter in Agrum Cantianum," which was followed by a new edition of "Gerard's Herbal." He was also the author of the "Mercurius Botanicus." His death took place in 1644.

**JOHNSTON, ARTHUR**.—This learned classical scholar was born near Aberdeen in 1587, and educated in the university of that city. He early studied medicine, and to improve himself in his favourite science we find that he visited the principal foreign universities, of several of which he was a member. He at last settled in France, where he met with great applause as a Latin poet. He lived there twenty years, and by two wives had thirteen children. At last, after twenty-four years' absence, he returned into Scotland, as some say in 1632, but probably much sooner, as there is an edition of his "Epigrammata" printed at Aberdeen in 1632, in which he is styled the king's physician.

It appears by the council books at Edinburgh that Dr. Johnston had a suit at law before that court in 1633. In the year following, Charles I. went into Scotland, and made bishop Laud, then with him, a member of the council; and by this accident it is probable the acquaintance began between the doctor and that prelate, which produced his "Psalmorum Davidis Paraphrasis Poëtica." We find that in the same year the doctor printed a specimen of his psalms at London, and dedicated them to his lordship, which is considered as a proof that the bishop prevailed upon Johnston to remove to London from Scotland, and then set him upon this work; neither can it be doubted but after he had seen this sample he also engaged him to perfect the whole, which took him up four years; for the first edition of all the psalms was published at Aberdeen in 1637, and at London in the same year. In 1641 Dr. Johnston being at Oxford on a visit to one of his daughters, who was married to a divine of the church of England in that place, was seized with a violent diarrhoea, of which he died in a few days.

In 1632, as already remarked, was published at Aberdeen "*Epigrammata Arturi Johnstoni*;" and in 1633 he translated Solomon's Song into Latin elegiac verse, and dedicated it to his majesty; in 1637 he edited the "*Deliciæ Poetarum Scotticorum*," to which he was himself a large contributor, and which, says Dr. Johnson, would have done honour to any country. His psalms were reprinted at Middleburg in 1642, at London in 1657, at Amsterdam in 1706, at Edinburgh by William Lauder in 1739, and at last on the plan of the Delphin classics at London in 1741, at the expense of auditor Benson, who dedicated them to the king, and prefixed to this edition memoirs of Dr. Johnston, with the testimonies of various learned persons. A laboured but partial and injudicious comparison between the two translations of Buchanan and Johnston was printed the same year by Benson in English, entitled "*A Prefatory Discourse to Dr. Johnston's Psalms*," &c., and "*A Conclusion to it*." This was ably answered by the learned Ruddiman in "*A Vindication of Mr. George Buchanan's Paraphrase of the Book of Psalms*," 1745. Johnston's translations of the *Te Deum*, *Creed*, *Decalogue*, &c., were subjoined to the psalms. His other poetical works are his "*Parerga*," and his "*Musæ Aulicæ*," or commendatory verses upon persons of rank in church and state at that time. Johnston is evidently entitled to very high praise as a Latin poet. Benson's comparison between Buchanan and Johnston was absurd enough, but it is not fair that Johnston should suffer by his editor's want of taste. Lord Woodhouselee does not think Johnston's attempt to emulate Buchanan as a translator of the psalms greatly beyond his powers; for although, taken as a whole, his version is certainly inferior, yet there are a few of his psalms which on comparison will be found to excel the corresponding paraphrase of his rival.

JOHNSTON, JOHN, an eminent naturalist, who was born at Sambter in Great Poland in 1603, and received the greater part of his education in his own country; but in 1622 he came to England, and from thence he went to Scotland, where he studied with great diligence in the university of St. Andrew's till 1625. He afterwards studied at Leyden and Cambridge. He undertook the education of the two sons of the count de Kurtzbach and accompanied them to Holland. While he resided with his pupils at Leyden he took his degree as doctor of physic; and when he came a third time to England the same honour was conferred on him by the university of Cambridge. He died in June 1675, in the seventy-second year of his age. He is known in the literary world by a number of works in the different departments of natural history, particularly "*Thaumatographia Naturalis in Classes Decem Divisa*," "*Historia Naturalis de Piscibus et Cetis*," "*Historia Naturalis de Quadrupedibus*," "*Historia Naturalis de Insectibus*," "*Historia Naturalis de Avibus*," "*Syntagma Dendrologicum*," and "*Dendrographia*." He published also some historical works of considerable value.

JOHNSTONE, BRYCE, a learned Scottish divine, who was born at Annan in Dumfriesshire in 1747. He is best known as the author of a theological work entitled "*A Commentary on the Revelation of St. John the Divine*," and also of "*A General View of the Agriculture of the County of Dumfries, with Observations on the Means of its Improvement*." He died in 1805.

JOHNSTONE, JAMES, a clever physician and physiological writer, who was born at Annan in Scotland in 1730. In 1750 he took the degree of doctor of medicine, publishing a thesis "*De Aëris Factitii Imperio in Corpore Humano*," which gained him much credit and some valuable friends. The following year he went to reside at Kidderminster in Worcestershire, which at that time and some years afterwards was subject to a putrid fever of such peculiar malignity as to be called the Kidderminster fever. His name first became known by the successful treatment he adopted for the cure of this dreadful disorder. Instead of bleeding and purging, means then in common use, he then recommended bark, wine, mineral acids, free ventilation of air, and the affusion of water and vinegar; and so prominent was his success that he was immediately introduced into considerable practice. Of this fever, as it appeared in 1756, he published an account in 1758, which proves him to be the discoverer of the power of mineral acid vapours to correct or destroy putrid febrile contagion: he orders for this purpose vitriolic acid to be poured upon common salt in a convenient vessel over a proper heat.

The first sketches of Dr. Johnstone's physiological inquiry into the uses of the ganglions of the nerves were published in the "*Philosophical Transactions*." They were afterwards enlarged and printed separately. In this inquiry he considers ganglions as "little brains, subordinate springs and reservoirs of nervous power, the immediate sources of the nerves sent to organs moved involuntarily, and the check or cause which hinders our volitions from extending to them. In a word, ganglions limit the exercise of the soul's authority in the animal œconomy, and put it out of our power, by a single volition, to stop the motions of the heart, and in one capricious moment irrecoverably to end our lives." But his physiological researches did not stop here. In a treatise on the Walton water, which in quality strongly resembles the Cheltenham, he has pointed out the probable functions of the lymphatic glands, supposing them to be organs destined to purify, digest, and animalize the matters selected and absorbed by the lacteals and other lymphatics; thus fitting them for their union with the blood and the nutrition of the body.

At Kidderminster Dr. Johnstone continued to act in a wide sphere of country practice till the death of his eldest son, a physician fast rising into eminence, who fell a martyr to humanity in attending the prisoners at Worcester infected with jail-fever; and the coincidence of the death of his dearest friend, the Rev. Job Orton, induced him to remove to Worcester, where he continued to practise till a few days previous to his death. He had been subject to pulmonary complaints in his youth, which had been averted by temperance and caution. In his later years they recurred, and during the spring of 1801 he had bled himself rather too profusely. In his last attack, which was aggravated by excessive fatigue and exertion, his weakness was such as to forbid the repetition of more than one bleeding, and his strength gradually decayed leaving his intellect clear and unimpaired, and he expired on the 28th of April, 1802, after a short and in no wise painful struggle, having sat up and conversed with his family, till within a few hours of the awful change, cheerful, patient, and resigned.

**JOHNSTONE, JOHN**, a talented comic actor, who was born at Kilkenny in 1749. He made his first appearance on the stage at Dublin in the opera of "Lionel and Clarissa." He afterwards removed to London and played for several seasons at Covent Garden theatre. There he devoted himself to the study of Irish characters, in the representation of which he succeeded beyond most if not all his contemporaries. He closed a theatrical career of half a century by the performance of the part of Dennis Brulgruddery at Covent Garden theatre in 1820, and his death took place on the 27th of December, 1828.

**JOMELLI, NICOLO**, a celebrated composer and musician, who was born in 1714 at Aversa in the Neapolitan dominions. At the age of twenty-two he produced his first opera entitled "L'Errore Amorofo," which was performed with very great applause at the Florentine theatre in Naples. He afterwards went to Bologna, where he remained till 1746, when he returned to Rome and composed "Didone," which had great success. The Italians declared that they had never heard more beautiful airs, accompaniments better adapted to the words, richer or purer harmony, or a more correct and elegant style, which was majestic without inflation, grand without inequality, and always full of sentiment and melody. These praises, which were repeated by all the journalists of the day, reached Naples, and the countrymen of Jomelli expressed a desire that he should return and allow them in their turn the pleasure of applauding his works. He instantly acceded to their request, and composed his opera of "Eumene," which had great success.

Venice had not yet seen the new composer whose fame was spread throughout Italy, and Jomelli felt that the suffrage of the Venetians was necessary to fill the measure of his reputation. He therefore in compliance with their wishes proceeded to Venice, where his opera of "Merope" caused such delight that the government appointed him master of the conservatory for girls. Here he composed a "Laudate" for two choirs of eight voices, which excited the greatest admiration. In 1748 Jomelli returned to Naples and gave "Ezio." Recalled to Rome in the following year, he composed "Artaserse," some "Intermezzi," and the oratorio of "La Passione," at the request of his patron, Cardinal York. Jomelli had by this time obtained in Italy all the laurels she could bestow; in 1749 therefore he repaired to Vienna, to display his genius in a court where Metastasio was the poet. Jomelli imagined that if he had pleased at Naples, whose school abounds with great masters, at Rome where taste is so refined, and at Venice where had existed the greatest abilities which can honour harmony, he should succeed in obtaining the same advantage at Vienna, and above all in meriting the friendship of Metastasio and becoming his composer. He was not deceived. On his arriving in that capital he produced "Achille in Sciro," which was equally well received by the court and the city. From this moment the most sincere and lasting friendship was concluded between the greatest lyric poet and the greatest musician of Italy. Metastasio felt at once that Jomelli was the composer best adapted to set his verses. After remaining nearly two years at the court of Vienna, which was rendered particularly brilliant by the presence of Maria Theresa, equally celebrated as a sovereign and for her love of the arts, and who presented Jomelli with a diamond ring, he

returned to Rome, where, on the vacancy of the place of chapel-master of the church of St. Peter, he was elected to that office, and from the year 1750 until 1753 composed much sacred music for his choir.

The reputation of this composer extended on every side; his abilities had never appeared so brilliant as on his third stay at Rome. He was now again engaged in Germany, and that country and Italy appear to have emulously disputed his compositions. The duke of Wurtemberg, one of the greatest musical connoisseurs of his day, being anxious to possess as chapel-master him who had during two years enchanted Austria, made very liberal offers to Jomelli, who accepted them, and during the fifteen years that he resided at that court he composed his finest operas. We have yet to speak of his sacred music. He was naturally excited to attempt this style at Rome, where it is especially cultivated and rewarded, and where his public situation called for sacred composition. On his third residence in that city he composed about thirty works, and amongst others a "Hymn for the Feast of the Apostles," which is still sung every year on the festivals of St. Peter and St. Paul.

In 1768 Jomelli returned to his beloved native country after a long absence, not foreseeing a disgrace which was destined to embitter the rest of his hitherto happy life, and which he had never before undergone. On his arrival at Naples he composed "Armida" for the theatre of San Carlos, which was enthusiastically applauded. In 1770 he wrote "Demofonte;" this unfortunately gave less pleasure, and hoping to be more successful he gave in 1773 "Ifigenia," which was ill sung and failed. Jomelli was so affected by this misfortune that he had a paralytic stroke. Immediately on his recovery he composed a beautiful cantata on the birth-day of a prince of Naples. This was soon followed by his last and greatest work, the sublime "Miserere" for two voices; for which his friend, the poet Mattei, wrote Italian words, and which is sung wherever good music is known and cultivated.

Jomelli died at Naples in the year 1774. His obsequies were publicly celebrated by all the musicians of that city. A mass for two choirs was performed, expressly composed for the occasion by Sabbatini.

**JONAS, ARNGRIM**, a learned islandic writer, historian, and antiquary. His works relate principally to Iceland, among them we may particularly mention his "Brevis Commentarius de Islandia, quo scriptorum variorum errores deteguntur ac quorundam convitiis in Islandos occurruntur." He died in 1640, in the ninetieth year of his age.

**JONAS, CARL**, a celebrated composer and pianist, who was born at Berlin in 1770, and was so fortunate as to be patronised in his youth by the princess Amelia of Prussia, who procured him instructions on the piano and in composition from the celebrated Fasch. After the death of his patroness, the king of Prussia interested himself for young Jonas and sent him to the university of Halle, from which town in 1793 he published his work entitled "Ariette pour le Piano Forte avec quinze Variationes," which composition was highly spoken of by the German critics.

**JONAS, GRIFFITH**, a miscellaneous writer, who was born in 1721. He was the author of a great number of works, in addition to which he edited the "London Chronicle," and was coadjutor with Dr. Johnson in the "Literary Magazine," and with

Smollet and Goldsmith in the "British Magazine." He was also the author of a considerable number of small books for children. He died in 1786.

JONES, EDWARD, a Welsh poet, who enjoyed the honour of being bard to George the Fourth while prince of Wales. He was principally distinguished for his performance on the harp, which was excellent, and as being the author of "Musical and Poetical Relics of the Welsh Bards," besides other works of considerable merit. He died in 1821.

JONES, HENRY, a dramatic writer of some eminence, who was a native of Drogheda in Ireland. He was warmly patronised by many of his countrymen, but his want of economy and good principle finally involved him in ruin, and he died in great distress in April 1770. His principal work was his tragedy of the "Earl of Essex."

JONES, INIGO.—This celebrated architect was born in the year 1572, in the neighbourhood of St. Paul's, London, of which city his father was a citizen. At an early age he put his son apprentice to a joiner, a business that requires some skill in drawing, and in that respect suited well with his inclination, which naturally led him to the art of designing. He distinguished himself early by his skill in landscape painting, which recommended him to the favour of William earl of Pembroke, at whose expense he travelled over Italy and various parts of Europe.

The improvements he made abroad gave such an éclat to his reputation, that Christian IV., king of Denmark, sent for him from Venice, which was the chief place of his residence, and made him his architect-general. He had been some time possessed of this post when that prince, whose sister Anne had married King James I., made a visit to England. This was in 1606, and Inigo Jones being desirous to return to his native country, took that opportunity of coming home in the train of his Danish majesty. The magnificence of King James's reign, in dress, buildings, &c., is frequently spoken of by English historians. This last furnished him with an opportunity of exercising his talents; the queen appointed him architect, and not long after he was taken in the same character into the service of Prince Henry, and shortly after the king gave him the reversion of the place of surveyor-general of his majesty's works.

In the interim, his master Prince Henry dying in 1612, he made a second visit to Italy, and continued some years there improving himself in his favourite art. On his return he found that the office of his majesty's works having in the time of his predecessor contracted a debt of several thousand pounds, the privy-council sent for Inigo Jones to give his opinion what course might be taken to ease his majesty of it, the exchequer being empty. Mr. Jones considering well the exigency, not only voluntarily offered to serve without receiving one penny of the profits of his office until the debt was fully discharged, but also persuaded his fellow-officers, the comptroller and paymaster, to do the same, by which means the whole arrears were absolutely cleared.

In 1620 he was appointed one of the commissioners for repairing St. Paul's cathedral in London. Upon the death of King James he was continued in his post by King Charles I. He had furnished the designs for the palace of Whitehall in his former master's time, and that part of it, the banqueting-house, was now carried into execution. It was designed for the reception of foreign ambassadors, and the ceiling

was painted some years after by Rubens; and in June 1633 an order was issued requiring him to repair St. Paul's, and the work was begun soon after at the east end, the first stone being laid by Dr. Laud, then bishop of London, and the south by Inigo Jones.

While he was raising these noble monuments of his fame as an architect, he gave no less proofs of his genius in the machinery employed in masques and interludes, which entertainments were much practised in his time. Several of these representations are still extant in the works of Chapman, Davenante, Daniel, and particularly Ben Jonson. The subject was chosen by the poet, and the speeches and songs were also of his own composing; but the invention of the scenes, ornaments, and dresses of the figures, was the contrivance of Inigo Jones; he acted in concert with Ben Jonson for a while, but about the year 1614 a quarrel took place between them, which provoked Jonson to ridicule his associate under the character of Lantern Leatherhead a hobby-horse-seller, in his comedy of "Bartholomew-fair." And the rupture seems not to have ended but with Jonson's death; a few years before which in 1635, he wrote a most virulent satire, which he called "An Expostulation with Inigo Jones," and afterwards, "An Epigram to a Friend," and also a third, inscribed to "Inigo, Marquis Would-be."

His rough treatment of Jones was not approved of at court, which we learn from the following passage in a letter from James Howell to Jonson:—"I heard you censured lately at court (says he), that you have lighted too foul upon Sir Inigo, and that you write with a porcupine's quill dipped in too much gall. Excuse me that I am so free with you; it is because I am yours in no common way of friendship." But Jonson not attending properly to his friend's hint, Howell wrote him the following letter upon the same subject:—

"Father Ben,

"The fangs of a bear and the tusks of a wild boar do not bite worse and make a deeper gash than a goose-quill sometimes; no, not the badger himself, who is said to be so tenacious of his bite that he will not give over his hold till he feels his teeth meet and his bones crack. Your quill hath proved so to Mr. Inigo Jones; but the pen wherewith you have so gashed him, it seems, was made rather of a porcupine than a goose-quill, it is so keen and firm.

"*Anser, apes, vitulus, populos et regna gubernant.*

"The goose, the bee, and the calf, (meaning wax, parchment, and pen), rule the world;" but of the three, the pen is most predominant. I know you have a commanding one, but you must not let it tyrannize in the manner you have done lately. Some give out there was hair in it, or that your ink was too thick with gall, else it would not have so bespattered and shaken the reputation of a royal architect; for reputation, you know, is like a fair structure, long a-rearing, but quickly ruined. If your spirit will not let you retract, yet you should do well to repress any more copies of the satire: for to deal plainly with you, you have lost some ground at court by it; and, as I hear from a good hand, the king, who hath so great a judgment in poetry (as in all other things else), is not pleased therewith. Dispense with this freedom of

"Your respectful son and servitor,  
"J. H."

Westminster, 3 July, 1635.

Jonson at length paid so much attention to his friend Howell's advice, that he entirely suppressed the satire against Inigo above referred to. However it has been since printed from the manuscript of the late Mr. Vertue the engraver, and is inserted in the edition of Ben Jonson's works published in 1756.

In the mean time Mr. Jones received great encouragement from the court, so that he acquired a handsome fortune. But it was much impaired by the losses which he suffered in consequence of his loyalty; for as he had a share in his royal master's prosperity, so had he also in his misfortunes. Upon the meeting of the long parliament in November 1640 he was called before the house of peers, on a complaint exhibited against him by the parishioners of St. Gregory's in London for damages done to that church in repairing St. Paul's cathedral. The church being old, and standing very near the cathedral, was thought to be a blemish to it, and therefore was taken down, pursuant to the king's direction and orders of the council in 1639, in the execution of which the surveyor was chiefly concerned. But, in answer to the complaint, he pleaded the general issue; and when the repairing of the cathedral ceased in 1642, some part of the materials remaining, were by order of the house of lords delivered to the parishioners of St. Gregory's towards the rebuilding of their church. This prosecution put Inigo to a considerable expense, and as he was both a royalist and a catholic, in 1646 he paid 545*l.* for his delinquency and sequestration. And Mr. Walpole informs us, that he, and Stone the statuary and architect, buried their joint stock of ready money in Scotland Yard; but an order being published to encourage the informers of such concealments, and persons being privy to the spot where the money was hid, it was taken up and re-buried in Lambeth Marsh.

Upon the restoration of Charles II. he was continued in his post by that monarch. But it was only an empty title at that time, nor did Jones live long enough to make it any better. Grief, misfortunes, and age, put an end to his life at Somerset House on the 21st of July, 1651, and on the 26th of the same month he was buried in the church of St. Bennet's, Paul's wharf, where a monument was erected to his memory, which was destroyed in the fire of London. Inigo Jones was not only the greatest architect in England, but the most eminent in his profession at that time in Europe. Among the works of this great master are the following;—the banqueting house, Whitehall, already mentioned; the new buildings fronting the gardens at Somerset House; and the church and piazza of Covent Garden. These have been much admired by the connoisseurs in architecture; and in particular it has been said of the church, that it is one of the most simple and at the same time most perfect pieces of architecture that art can produce. Horace Walpole was, however, of a different opinion. He says, "The arcade of Covent Garden and the church are two structures of which I want taste to see the beauties. In the arcade there is nothing remarkable; the pilasters are as errant and homely stripes as any plasterer would make; and the barn-roof over the portico of the church strikes my eyes with as little idea of dignity or beauties as it could do if it covered nothing but a barn."

Lincoln's Inn Fields was originally laid out by the masterly hand of Inigo Jones, and it is said that

the sides of it are the exact measure of the great pyramid of Egypt. It was intended to have been built all in the same style, but there were not at the time a sufficient number of people of taste to accomplish so great a work.

The garden front of Wilton House, the seat of the earl of Pembroke, and also some other parts of that noble edifice; the queen's house at Greenwich; the Grange in Hampshire, the seat of the earl of Northampton; Cashiobury, in Hertfordshire, and Gunnersbury, near Brentford, were also designed by him.

JONES, JOHN, an American physician, was born at Long Island in 1729. After receiving his education at a private school in the city of New York, he commenced the study of medicine, and afterwards visited Europe, to improve his professional knowledge. He obtained the degree of doctor of medicine from the university of Rheims, and, having subsequently spent some time at Leyden, concluded his medical tour by a visit to Edinburgh. Returning to America, Dr. Jones settled in New York, where he was speedily introduced to an extensive practice, and acquired particular reputation as an operator. When medical schools were instituted in the college of New York, Dr. Jones was appointed professor of surgery, upon which branch he delivered several courses of lectures, diffusing a taste for it among the students, and explaining improvements as practised in Europe, of which the American faculty were hitherto ignorant. Having for a considerable time been afflicted with the asthma, he embarked for London, where he experienced some alleviation of his complaint.

In the year 1775 Dr. Jones published his "Plain Remarks upon Wounds and Fractures," a work particularly useful to the country at that period. Many persons had been of necessity chosen to act as surgeons in the continental army, who were ignorant of the recent improvements in the profession, and found in this work a valuable assistant. When the British troops took possession of New York, Dr. Jones, notwithstanding the assurances of protection from the royal commander, retired into the country, relinquishing his lucrative practice in the city. He was soon after chosen to a seat in the senate of New York, and subsequently entered the medical department of the army. The hardships of a military life injured his delicate health, and obliged him to abandon the service for his private practice. Having fixed his permanent residence at Philadelphia, he was elected in 1780, one of the physicians of the Pennsylvania hospital. Upon the institution of the college of physicians of Philadelphia in 1787, Dr. Jones was elected vice-president, and contributed to the first volume of its Transactions an interesting paper on Anthrax. He was the intimate friend and physician of Dr. Franklin, whom he attended in his last illness, and published a brief account of his death. In 1790 he attended General Washington, then president of the United States of America, when very ill at New York. When the seat of the federal government was removed to Philadelphia, the president appointed Dr. Jones physician to his family. In June 1791 he contracted a fever, which, added to his previous disorder, put a period to his life on the 23rd of that month, in the sixty-third year of his age.

JONES, JOHN, LL. D., a learned unitarian divine, who was born in Caermarthenshire, but educated

at the dissenting college, Hackney. He afterwards removed to Plymouth Dock, and subsequently held a similar situation as pastor of a unitarian congregation at Halifax in Yorkshire. He however finally took up his residence in London, where he employed himself in writing and private tuition. He died in January 1827. Among his numerous publications are his "Ecclesiastical Researches," his "Illustrations of the Four Gospels, founded on Circumstances peculiar to our Lord and his Evangelists;" and a Greek and Latin grammar, besides several other valuable works on theology, and several on education.

**JONES, JOHN PAUL.**—Few naval commanders have acquired a greater degree of celebrity than this renegade, who was born at Arbingland, in Scotland, on the 6th of July, 1747. His father was a gardener, whose name was Paul, but the son assumed that of Jones in subsequent life, for what reason is not known. Young Paul early evinced a decided predilection for the sea, and at the age of twelve was bound apprentice to a respectable merchant of Whitehaven, in the American trade. His first voyage was to America, where his elder brother was established as a planter. He was then engaged for some time in the slave-trade, but quitted it in disgust, and returned to Scotland in 1768, as passenger in a vessel, the captain and mate of which died on the passage. Jones assumed the command at the request of those on board, and brought the vessel safe into port. For this service he was appointed by the owners master and supercargo. While in command of this vessel, he punished a sailor who afterwards died of a fever at the island of Tobago, a circumstance which gave rise to an accusation against Jones of having caused his death by the severity of the punishment upon him, but this has been completely refuted. Jones was afterwards in command of the *Betsy* of London, and remained some time in the West Indies, engaged in commercial pursuits and speculations, by which it is said he realized a handsome fortune. In 1773 he was residing in Virginia, arranging the affairs of his brother, who died intestate and childless, and about this time took the name of Jones. In Virginia he continued to live until the commencement of the struggle between the colonies and mother country. He offered his services to the former, and was appointed first of the first lieutenants, and designated to the *Alfred*, on board of which ship, to use his own language in one of his letters, "he had the honour to hoist with his own hands the flag of freedom the first time it was displayed on the Delaware." Soon after this we find Jones in command of the *Providence*, cruising from the Bermudas to the Gut of Canso, and making sixteen prizes in little more than six weeks.

In May 1777 he was ordered to proceed to France, where the American commissioners, Franklin, Deane, and Lee, were directed to invest him with the command of a fine ship as a reward of his signal services. On his arrival in France he was immediately summoned to Paris by the commissioners. The object of this summons was to concert a plan of operations for the force preparing to act against the British in the West Indies and on the coast of America. This plan, though untoward delays and accidents prevented its immediate success, was afterwards openly claimed by Jones as his own, without acknowledging the assistance or participation of the

American commissioners or the French ministry. The *Ranger* was then placed under his orders, with discretion to cruise where he pleased, with this restriction, however, that he was not to return to France immediately after making attempts upon the coast of England, as the French government had not yet declared itself openly as the ally of the United States. In April 1778 he sailed on a cruise, during which he laid open the weakness of the British coast. With a single ship he kept the whole coast of Scotland, and part of that of England, for some time in a state of alarm, and made a descent at Whitehaven, where he surprised and took two forts, with thirty pieces of cannon, and set fire to the shipping. In this attack upon Whitehaven, the house of the earl of Selkirk, in whose service the father of Jones had been gardener, was plundered, and the family plate carried off; but the act was committed without his knowledge, and he afterwards made the best atonement in his power. After his return to Brest with two hundred prisoners of war, he became involved in a variety of troubles, for want of means to support them, pay his crew, and refit his ship. After many delays and vexations, Jones sailed from the road of St. Croix, in August 1779, with a squadron of seven sail, designing to annoy the coasts of England and Scotland. The principal occurrence of this cruise was the capture of the British ship of war, *Serapis*, after a bloody and desperate engagement off Flamborough Head, on the 23rd of September, 1779.

This action is so interesting in its character, and creditable to Captain Pearson, as to deserve a particular notice. It commenced about half-past seven, when the largest ship brought to on the *Serapis's* larboard bow, within musket-shot. Captain Pearson hailed to ask what ship it was, he was answered the *Prince Royal*; upon replying evasively to other questions, an action soon commenced, and, after discharging two or three broadsides, the enemy backed his topsails, and dropped within pistol-shot on the *Serapis's* quarter, then filled again and attempted to board her; but being repulsed, she sheered off. Captain Pearson, in order to get square with the enemy again, backed his topsails, which was no sooner observed by the enemy than he filled, put his helm a-weather, and laid the *Serapis* athwart hawse, where she continued some little time, till the jib-boom giving way, they dropped alongside of each other head and stern, and so close that the muzzles of the guns touched each other. In this position the action continued with great fury from half-past eight till half-past ten, during which time the *Serapis* was set on fire ten or twelve times by combustibles thrown in upon the decks and other parts of the ship, and several times it was not without the greatest difficulty and exertion that the flames were extinguished. About half-past nine, either from a hand grenade being thrown into one of the lower-deck ports, or some other accident, a cartridge of powder was set on fire, the flames of which communicated from cartridge to cartridge all the way aft, and blew up the whole of the officers and people that were quartered abaft the mainmast; this dreadful misfortune rendered all those guns useless the remainder of the action. At the same time the largest of the two frigates kept constantly sailing round, and raking the *Serapis* with so much effect, that almost every man on the quarter and main decks was killed or wounded. At ten the enemy called for quarter,

but on Captain Pearson hailing to enquire if they had struck, and no answer being given, he ordered the boarders to board her; but the moment they were on board, a superior number of the enemy were discovered concealed with pikes in their hands, ready to receive them. Upon this the *Serapis's* crew retreated to their ship and instantly flew to their guns; but the frigate again pouring a broadside into her stern with great effect, and the mainmast falling at the same time, without being able to get a single gun to bear upon her, Captain Pearson was under the painful necessity of ordering the colours to be struck. He was immediately escorted, with his first lieutenant, on board the ship alongside, which proved to be the *Bon Homme Richard*, of forty guns, and three hundred and seventy-five men, commanded by Captain Paul Jones. The frigate which also engaged the *Serapis* was the *Alliance*, of forty guns and three hundred men. Upon Captain Pearson going on board the *Bon Homme Richard*, he found her in the greatest distress; her quarters and counter were entirely drove in, the whole of her lower deck guns dismounted; she was also on fire in two places, with six or seven feet water in the hold, which kept increasing upon them so much that the next day they were obliged to quit her, and she sunk with a great number of her wounded men on board.

The enemy carried their prizes into the Texel. This squadron was fitted out and sailed from L'Orient in July, under the command of Paul Jones; they had on board three hundred English prisoners, whom they had taken in different vessels during their cruise.

The service which Captain Pearson rendered his country in this remarkable engagement, a service in which he had the good fortune to save a convoy, estimated to be worth upwards of 600,000*l.*, from falling into the hands of the enemy, was universally acknowledged. On his return to England he was honoured and rewarded by knighthood, and by the situation of lieutenant-governor of Greenwich hospital; and the towns of Hull, Scarborough, Appleby, Dover, &c., the Russia company, and the royal exchange assurance company, amply testified their gratitude, by presenting him with the freedom of their respective corporations, and donations of plate.

The sensation produced by this battle was unexampled, and raised the fame of Jones to its acme. In a letter to him, Franklin says, "For some days after the arrival of your express, scarce any thing was talked of at Paris and Versailles but your cool conduct and persevering bravery during that terrible conflict. You may believe that the impression on my mind was not less strong than on that of the others, but I do not choose to say, in a letter to yourself, all I think on such an occasion." His reception at Paris, whither he went on the invitation of Franklin, was of the most flattering kind. He was every where caressed; the king presented him with a gold sword, bearing the inscription, "*Vindicta maris Ludovicus XVI. remuneratur strenuo vindici*," and requested permission of congress to invest him with the military order of merit, an honour never conferred on any one before who had not borne arms under the commission of France. In 1781 Jones sailed for the United States, and arrived in Philadelphia on the 18th February of that year, after a variety of escapes and rencounters, where he underwent a sort of examination before the board of admiralty, which resulted greatly to his honour. The

board gave it as their opinion, "that the conduct of Paul Jones merits particular attention, and some distinguished mark of approbation from congress." Congress passed a resolution, highly complimentary to his "zeal, prudence, and intrepidity." General Washington wrote him a letter of congratulation, and he was afterwards voted a gold medal by congress. From Philadelphia he went to Portsmouth, New Hampshire, to superintend the building of a ship of war; and, while there, drew up some admirable observations on the subject of the American navy. By permission of congress he subsequently went on board the French fleet, where he remained until the conclusion of peace, which put a period to his naval career in the service of the United States of America.

He then went to Paris as agent for prize-money, and, while there, joined in a plan to establish a fur trade between the north-west coast of America and China, in conjunction with a kindred spirit, the celebrated John Ledyard. In Paris he continued to be treated with the greatest distinction. He afterwards was invited into the Russian service, with the rank of rear-admiral, where he was disappointed in not receiving the command of the fleet acting against the Turks in the Black Sea. He found fault with the prince of Nassau, the admiral, became restless and impatient, was intrigued against at court, and calumniated by his enemies, and had permission from the empress Catharine to retire from the service with a pension, which was never paid. He returned to Paris, where he gradually sunk into poverty, neglect, and ill health, until his death, which was occasioned by jaundice and dropsy, on the 16th of July, 1792. His last public act was heading a deputation of Americans, who appeared before the national assembly to offer their congratulations on the glorious and salutary reform of their government. This was before the flight of the king.

Jones was a man of signal talent and courage; he conducted all his operations with the most daring boldness, combined with the keenest sagacity in calculating the chances of success and the consequences of defeat. He was, however, of an irritable, impetuous disposition, which rendered him impatient of the authority of his superiors, while he was, at the same time, harsh in the exercise of his own; and he was deficient in that modesty which adorns great qualities and distinguished actions, while it disarms envy and conciliates jealousy.

JONES, STEPHEN, a clever writer and editor of literary works, who was born in London in 1763 and was educated at St. Paul's school. His principal occupation through life was writing for the press. In 1791 he published an abridgment of "*Burke's Reflections on the French Revolution*," and in 1797 became editor of the "*Whitehall Evening Post*," and afterwards of the "*General Evening Post*;" but his principal undertaking was a new edition of the "*Biographia Dramatica*," and a small "*Biographical Dictionary*," which has passed through several editions. He died in December 1827.

JONES, SIR WILLIAM.—This eminent English scholar was born in 1748 and was educated at Harrow school, from whence he proceeded to Oxford. At the age of nineteen young Jones became the tutor of Lord Althorpe. In the course of the following year he visited Germany, and on his return determined to devote himself to the study of the law.

From a careful study of the great legal authorities of our own land he became fully conscious of the pre-eminence of our civil institutions; and in proportion as he was disgusted with the modern innovations supposed to proceed from patronage, influence, and corruption, he became a zealous advocate for the purity of election, the independence of parliament, and the necessity of recurring to original principles for the purpose of renovation. He had also taken a critical survey of English history, and had prepared his mind decisively to pronounce relative to those transactions that gave birth to the civil war in the middle of the seventeenth century. Such by this time was his celebrity as an adept in the oriental languages that he was applied to on the part of government to gratify the king of Denmark in translating a manuscript life of Nadir Shah into the French language. The only reward he obtained for his labours on this occasion was the empty compliment of being nominated F. R. S. of Copenhagen, and presented with a barren and unproductive recommendation to his own sovereign.

In 1769 he accompanied Lord Althorpe to Harrow, and about this time he appears to have demonstrated to his own satisfaction the completion of the prophecies respecting our Saviour in four distinct propositions; with objections, answers, and corollaries, in the style of a mathematician. Towards the end of 1769 he accompanied part of the Spencer family to the continent, and resided for some time at Nice. Yet he was soon tired, even with objects "rarely if ever seen in his native country; olives, myrtles, pomegranates, palms, vineyards, aromatic plants, and every variety of sweet flowers, blooming in the midst of winter. But the attraction of novelty has ceased," adds he while writing to a friend, "I am now satiated and begin to feel somewhat of disgust. The windows of our inn are scarcely thirty paces from the sea, and, as Ovid beautifully says,

'Tired, on the uniform expanse I gaze.'

I have therefore no other resource than with Cicero to count the waves, or with Archimedes and Archytas to measure the sands. I cannot describe to you how weary I am of this place, nor my anxiety to be again at Oxford, where I might jest with you or philosophize with Poore." On his return to England some time after he employed himself in composing a tragedy entitled "Soliman;" and on the 19th of September of the same year he was admitted a student of the Inner Temple, having previously resigned his employment in the family of Earl Spencer. But on this occasion he did not immediately imitate Sir William Blackstone, who from the moment he became a member of one of the inns of court abandoned poetry in a formal address entitled "The Lawyer's Farewell to his Muse." On the contrary, he wrote verses as usual; and in 1774 published his "Commentaries on Asiatic Poetry," in which however he seems to indicate an intention to "renounce the pursuits of polite literature," on entering upon a career which will supply ampler and better opportunities of relieving the oppressed, of assisting the miserable, and of checking the despotic and tyrannical. He also now for the first time expressed a determination in verse to renounce versification; and on being called to the bar in 1774 he discovered that the law was "a jealous science, which would admit of no partnership with the Muses."

In 1773 an idea seems to have been formed by his friends of obtaining the Turkish embassy for him, but he rejected the scheme, adding, "I will live in my own country which cannot easily spare good subjects." It was not until 1775 that he appears to have devoted himself to the practical part of his profession. In the early part of that year he went to Oxford for the purpose of attending the spring circuit and sessions, and in 1776 he went to Westminster hall daily during the respective terms, and regularly arrayed in his gown and wig occupied the place of an outer barrister in the court of king's bench, where Lord Mansfield at that period presided with no small share of dignity. In 1776 he was nominated by Lord Chancellor Bathurst one of the commissioners of bankrupts, an office at that period of but little emolument, and consequently was frequently called by his professional duties to Guildhall. In 1777 he went to pass his Christmas at Bath for the purpose of paying his respects "to the Naiads of the Hot Springs." While there he lived in the house of his "old Master Evans," whose "harp he preferred to the Theban lyre as much as he preferred Wales to ancient or modern Egypt." Wilkes was a resident at this gay place at the same time, and Mr. Jones appears, while he frequented his company, to have detested his morals as much as he approved of his patriotism.

Soon after this short relaxation he published a translation of the ten remaining orations of the preceptor of Demosthenes. On this occasion he presented a copy to Mr. Burke, whose friendship he cultivated, and whose politics at this eventful period of the American war were entirely congenial to his own. He also appears to have lived in some degree of intimacy with Dr. Gilbert Stuart, who had entered the lists against his countryman Dr. Robertson as the champion of Mary queen of Scots, and who about this period introduced Dr. Gillies to his acquaintance as the translator of Lysias. It was in the autumn of the year 1778 that Mr. Jones, in a letter addressed to Lord Althorpe, at that period a captain in the Northamptonshire militia then stationed at Warley camp, hints at his wish to obtain a legal appointment in India. "The disappointment to which you allude," observes he, "and concerning which you say so many friendly things to me, is not yet certain. My competitor is not yet nominated; many doubt whether he will be; I think he will not unless the chancellor should press it strongly. It is still the opinion and wish of the bar that I should be the man. I believe the minister hardly knows his own mind. I cannot legally be appointed till January, because I am not a barrister of five years' standing till that time; now many believe that they keep the place open for me till I am qualified."

"I certainly wish to have it, because I wish to have 20,000*l.* in my pocket before I am eight-and-thirty years old; and then I might contribute in some little degree towards the service of my country in parliament as well as at the bar, without selling my liberty to a patron, as too many of my profession are not ashamed of doing; and I might be a speaker in the house of commons in the full vigour and maturity of my age; whereas in the slow career of Westminster hall I should not perhaps, even with the best success, acquire the same independent station till the age at which Cicero was killed. But be assured, my dear lord, that if the minister be offended at the

style in which I have spoken and will speak of public affairs, and on that account should refuse to give me a judgeship, I shall not be at all mortified, having already a very decent competence without a debt or a care of any kind."

In the mean time he rapidly advanced in professional reputation, although his opinion of the contest with America stood in the way of his progress to legal honours. The tumults of 1780 induced him to write a pamphlet "On the Legal Mode of Suppressing Riots," and in the following winter he completed a translation from the Arabic of seven poems of the highest repute.

Even at this early period Mr. Jones expressed his just abhorrence of the slave-trade, and he says in one of his communications on the subject, "I pass with haste by the coast of Africa, whence my mind turns with indignation at the abominable traffic in the human species from which a part of our countrymen dare to derive their most inauspicious wealth. Sugar, it has been said, would be dear if it were not worked by blacks in the western islands; as if the most laborious, the most dangerous works, were not carried on in every country, but chiefly in England, by freemen; in fact, they are so carried on with infinitely more advantage, for there is an alacrity in the consciousness of freedom, and a gloomy sullen indolence in a consciousness of slavery; but let sugar be as dear as it may, it is better to eat none, to eat honey, if sweetness only be palatable,—better to eat aloes or coloquintida than violate a primary law of nature, impressed on every heart not imbruted by avarice, than rob one human creature of those eternal rights of which no law upon earth can justly deprive him."

About this period he was a leading member of the Turk's Head club, a society which originated with Burke, Johnson, and Reynolds, and being at length extended to forty members, the precise number of the French academy, included men of the first genius and talents in the country.

About this period he wrote his celebrated ode in imitation of Alcæus, of which we give the following extract as a specimen of his poetical style of writing:—

"What constitutes a state?  
Not high-raised battlement or labour'd mound,  
Thick wall or moated gate;  
Not cities proud with spires and turrets crown'd,  
Not bays and broad-arm'd ports  
Where laughing at the storm rich navies ride,  
Not starr'd and spangled courts  
Where low-browed baseness wafts perfume to pride."

After stating that it consists in "Men who their duties know, but know their rights, and knowing dare maintain," he concludes with a stanza expressive of his political opinions at that moment:—

"Such was this heaven-lov'd isle,  
Than Lesbos fairer and the Cretan shore!  
No more shall freedom smile!  
Shall Britons languish and be men no more!"

On the accession of the Shelburne administration he obtained what had long been the object of his ambition, the office of judge of the supreme court at Fort William in Bengal, on which occasion he was knighted.

Sir William Jones now feeling himself independent, solicited and obtained the hand of Miss Anna Maria Shipley, the eldest daughter of the venerable bishop of St. Asaph, whom he had first seen at Wimbledon.

This lady, the daughter and wife of two patriotic and learned men, embarked with her husband for India in the Crocodile frigate in the spring of 1783.

During his voyage a political association in Flintshire published a tract written some time before by the new judge, entitled "A Dialogue between a Farmer and a Country Gentleman," while the constitutional society republished and circulated another edition in town. In consequence of the dean of St. Asaph being implicated in the former, a bill of indictment had been found by the grand jury of Denbighshire against him. On this occasion Sir William transmitted a letter to Sir Lloyd Kenyon, chief justice of Chester, in which he avowed himself the author of the dialogue, and at the same time maintained "that every position in it was strictly conformable to the laws and constitution of England."

He observes, on another occasion, "that as an indictment for a theoretical essay on government was, as he believes, never before known, he has no apprehension for the consequences. As to the doctrines in the tract," adds he, "though I shall certainly not preach them to the Indians, who must and will be governed by absolute power, yet I shall go through life with a persuasion that they are just and rational; that substantial freedom is both the daughter and parent of virtue, and that virtue is the only source of public felicity."

Notwithstanding this the cause came on at Shrewsbury, and Lord Erskine was sent down at the sole expense of the society for constitutional information to defend what, in the present day, would not be considered as a libel by any liberal and enlightened lawyer in England. On this occasion a special verdict was delivered by the jury clearing the right reverend defendant from all criminal intention and finding him "guilty only of the fact of publishing." Sir Francis Buller, who presided on this occasion, desired the jury "to reconsider their verdict, as it could not be recorded;" but Mr. Erskine boldly insisted it should be recorded precisely in the terms in which it was found; and after some altercation, during which the judge used some threatening language, finally prevailed. In this celebrated argument, when a new trial was moved for, the latter boldly insisted that juries were judges of the law as well as of the fact; a position which produced, and was tacitly recognised by, Mr. Fox's bill for the security of the English press. Thus the doctrines laid down in the dialogue not only were proved to be consonant to the principles of law, but actually gave birth to a celebrated act for the protection of public liberty.

Meanwhile Sir William proceeded on his voyage to the east, and landed at Calcutta in the month of September 1783. Soon after being installed in his new office he became the founder, president, and brightest ornament of the Asiatic society, formed on the model of the royal society of London. The other members consisted of Mr. Hastings, then governor-general, Mr. Gladwyn, Captain Charles Hamilton, and Mr. William Chambers, all of whom had distinguished themselves by a taste for oriental learning; and to these were afterwards added the names of Sir John Shore, afterwards Lord Teignmouth, and Sir John Macpherson.

Sir William at the same time paid the most scrupulous and unremitting attention to the duties of his profession; in addition to which a large portion of his time was dedicated to Hindoo law, Indian geo-

graphy, botany, and the Sanscrit language. In the evenings he was accustomed to unbend his mind from care by the pleasing and cheerful conversation of Lady Jones, with whom he was accustomed to divert himself at chess. It was soon evident however that either his studies were too intense, or the climate wholly unfavourable to his valuable life; perhaps his frequent and dangerous illnesses proceeded from a fatal union of both. During the intervals when he was in a convalescent state he composed poems, penned learned dissertations, conversed with his friends, and carried on an extensive correspondence on a variety of different subjects.

Meanwhile, in February 1785, Sir John Macpherson had succeeded Mr. Hastings as governor-general, and to his lot fell the odious but salutary task of making a variety of reductions and economical reforms which had now become absolutely necessary in consequence of the deranged state of the company's affairs. To effect this, in addition to mildness and urbanity, it became absolutely necessary to withhold money-payments to all but subalterns and the working class; and even to issue deferred paper bearing eight per cent. interest. The consequence of this was that the judges murmured, and Sir William in particular was obliged to sell company's bonds at thirty per cent. discount. This circumstance at first raised his indignation; but he no sooner learned that the governor-general himself, who he said "united the character of the statesman and the scholar," was paid exactly in the same manner, than he made a spontaneous offer of one half of his salary towards relieving the present exigencies of the company.

In 1788 Sir William made a proposal to Lord Cornwallis for an English digest of Hindoo and Mohammedan law, after the model of Justinian's Pandects, for the use of the natives. As the principles which regulated the decisions of the courts in respect to Asiatic subjects had been hitherto locked up in the Sanscrit and Arabic, two difficult languages, accessible to a few of the English only, the judges were obliged to refer to the responses of the native lawyers, and this obvious inconveniency could be removed only by the means now pointed out to government. The proposal was accordingly accepted, and Sir William most gladly undertook the task of superintending the execution.

About the same period it appears to have been the intention of the company to apply to the legislature for an act to regulate the municipal government of Calcutta. For this purpose it was proposed to obtain a power of summary conviction and punishment. On Sir William being consulted on this occasion he stoutly denied the supposed necessity of deviating from the spirit and form of the judicature in criminal cases "which has been approved by the wisdom of a thousand years, and has been found effectual in the great cities of England, for the good order and government of the most high-minded, active, and restless people that exists upon earth." He justly observes that "a superintendent of the police is an officer unknown to our system, borrowed from a foreign system, or at least suggesting the idea of a foreign constitution; and his powers being dark and undefined, are those which our law most abhors." He therefore very properly recommended the nomination of justices of the peace, the six sessions in the year, and the trial by appointment of jury, as practised in England.

In 1792 it became necessary for Lady Jones to return to Great Britain, in consequence of a constitution naturally delicate having so severely suffered from repeated attacks of indisposition that a change to her native climate had become indispensably necessary. Sir William endeavoured to solace his mind during the absence of a beloved wife by returning with reiterated zest to his studies, and in 1794 appeared a translation by him of the "Ordinances of Menu." He was also indefatigable in completing the "Digest of Hindoo and Mohammedan Law."

On the 20th of April, 1794, after a long and late walk in an unwholesome situation, he was seized with symptoms that seemed to denote an approaching ague. The disorder however soon proved to be an inflammation in the liver, a complaint common in the east, and supposed to arise from an accelerated circulation of the blood. The progress of this disease was so rapid that it terminated fatally on the 27th of April, 1794, and Sir John Shore, who witnessed his last moments, mentions that he died without uttering a single groan.

Next day the funeral ceremony was performed with all the honours due to his public station. A stately monument has since been erected to his memory at Oxford by a subscription of the gentlemen resident in Bengal, who had been educated at either of the English universities; while a similar tribute of respect, at the expense of Lady Jones and from the chisel of Flaxman, is now to be seen in the ante-chamber of the chapel of University college. Another monument has also been erected in St. Paul's cathedral, of which we furnish a sketch.

JONES, WILLIAM, a learned episcopal divine. He was born in 1726 at Lowick in Northamptonshire, and was educated at Oxford. On leaving the university he wrote a "Full Answer" to Bishop Clayton's "Essay on Spirit," which was published in 1753. Shortly after which he wrote "The Catholic Doctrine of the Trinity," and in 1763 he published "An Essay on the First Principles of Natural Philosophy." Mr. Jones's work on the Trinity having procured him much reputation, Archbishop Secker presented him, first to the vicarage of Bethersden in Kent in 1764, and soon after to the more valuable

rectory of Pluckley in the same county, as some reward for his able defence of that important doctrine. The income he derived from his vicarage not being equal to what he expected, it was thought expedient by his friends that he should take a few pupils; and having undertaken the tuition of two young gentlemen, he continued the practice for many years after he removed to Pluckley. In 1766 he preached the visitation sermon before Archbishop Secker at Ashford, greatly to the satisfaction of his grace and the whole audience. On the publication of "The Confessional," the archbishop considered Mr. Jones as a proper person to write an answer to it; and accordingly he drew up some remarks, but had then neither health nor leisure to fit them for the press. But a new edition being called for of the "Answer to an Essay on Spirit," Mr. Jones thought it advisable to add, by way of sequel, the remarks he had originally drawn up on the principles and spirit of "The Confessional," which were published in 1770.

In 1773 Mr. Jones collected together into a volume, "Disquisitions on Some Select Subjects of Scripture," which had been before printed in separate tracts; and in 1776, in the character of a presbyter of the church of England, he published, in a letter to a friend at Oxford, "Reflections on the Growth of Heathenism among Modern Christians." When he was induced to remove from Pluckley, and accept the perpetual curacy of Nayland in Suffolk, he went thither to reside with his family. Soon after he effected an exchange of Pluckley for Paston in Northamptonshire, which he visited annually, but he determined to settle at Nayland for the remainder of his days, nor was he (as his biographer notices with some regret for neglected merit) ever tempted to quit that post by any offer of higher preferment. The "Physiological Disquisitions" before alluded to, having received their last revise, were published in 1771, and the impression was soon sold off. A notion, says his biographer, is entertained by some persons, that the elementary philosophy naturally leads to atheism, and Sir Isaac Newton himself is charged with giving countenance to materialism by his æther; but nothing can be farther from the truth. "It is," adds Mr. Stevens, "the aim and study of the elementary, called the Hutchinsonian philosophy, not to confound God and nature, but to distinguish between the Creator and the creature; not with the heathens to set up the heavens for God, but to believe and confess with all true worshippers "that it is Jehovah who made the heavens."

The figurative language of the holy scripture having been always his favourite study, after revolving the subject in his mind for many years, Mr. Jones drew up a course of lectures, which were delivered in the parish church of Nayland in Suffolk, in the year 1786. Music was a favourite relaxation with him, and he understood both theory and practice. His treatise on the "Art of Music" is reckoned to display a profound knowledge of the subject, and his compositions (a morning and evening cathedral service, ten church pieces for the organ, with four anthems in score for the use of the church of Nayland) are greatly admired, as of the old school in the true classical style.

In 1792 he published a valuable collection of dissertations, extracts, &c., in defence of the church of England, under the title of "The Scholar armed against the Errors of the Time," and on the death of

Bishop Horne in 1792, Mr. Jones, out of affectionate regard to the memory of the venerable prelate, undertook the task of recording his life, which was published in 1795, and the second edition in 1799.

In the autumn of 1798 he was presented by the archbishop of Canterbury to the sinecure rectory of Hollingbourn in Kent, benevolently intended as a convenient addition to his income, after the discontinuance of pupils; but in the following year he lost his wife, which was soon followed by another affliction, probably occasioned by the shock her death gave him, a paralytic attack, which deprived him of the use of one side. In this infirm state of body, but with the full exercise of his faculties, he lived several months. At length he suddenly quitted his study, and retired to his chamber, from whence he came out no more, breaking off in the middle of a letter to a friend, which, after an abrupt transition from the original subject, he left unfinished, with these remarkable words, the last of which are written particularly strong and steady:—"I began to feel as well as understand, that there was no possible way of taking my poor broken heart from the fatal subject of the grief that was daily preying upon it to its destruction, but that which Providence hath been pleased to take, of turning my thoughts from my mind to most alarming symptoms of approaching death." Like many other good and pious men before him, he had long very much dreaded the pains of death; but to his own great comfort, this dread he completely overcame. The sacrament had been frequently administered to him during his confinement, and he received it for the last time about a week prior to his death. A little while previous to his dissolution, as his curate was standing by his bed-side, he requested him to read the seventy-first psalm, which was no sooner done than he took him by the hand, and said with great mildness and composure, "If this be dying, Mr. Sims, I had no idea what dying was before;" and then added, in a somewhat stronger tone of voice, "thank God, thank God, that it is no worse." He continued sensible after this just long enough to take leave of his children (a son and daughter), who, being both settled at no great distance, had been very much with him, and had done every thing in their power to alleviate his sorrows; and on the morning of February 6, 1800, he expired without a groan or a sigh. Mr. Jones was the author of many other works besides those we have enumerated, but many of them were only of a temporary interest.

JONES, WILLIAM, an eminent mathematician, who was born in 1680. He is principally known as the author of a work entitled "Synopsis Palmariorum Matheseos." Mr. Jones was no less esteemed and respected on account of his private character and pleasing manners than for his natural talents and scientific attainments. Lord Hardwicke selected him as a companion on the circuit when he was chief justice; and when he afterwards held the great seal, conferred upon him the office of clerk of the peace, as a testimony of his friendship and regard. He was also in habits of intimate acquaintance with Lord Parker, president of the royal society, Sir Isaac Newton, Halley, Mead, and Samuel Johnson. Upon the retirement of Lord Macclesfield to Sherborne castle, Mr. Jones resided in his family, and instructed his lordship in the sciences. Whilst he occupied this situation he had the misfortune, by the failure

of a banker, to lose the principal part of that property which he had accumulated by industry and economy; but the loss was in a great measure repaired to him by the kind attention of his lordship, who procured for him a place of considerable emolument. He was afterwards offered by the same nobleman a more lucrative situation; which, however, he declined, that he might be more at leisure to devote himself to his favourite scientific pursuits. In this retreat he formed an acquaintance with Miss Nix, which terminated in marriage. By this lady Mr. Jones had three children, two sons and a daughter. The death of Mr. Jones was occasioned by a polypus in the heart, which proved incurable. He died in July 1749.

**JONSON, BENJAMIN.**—This celebrated English poet and writer was the posthumous son of a clergyman who had suffered considerable privations for his religious opinions, and was born on the 11th of June, 1574, at Westminster, at the grammar school of which city he was placed under the tuition of the great Camden, whom he commemorates in one of his epigrams as the person to whom he owed all he knew. As his father was a clergyman, it is supposed that this step was taken with a view to his entering the church; but his mother having been left a widow in narrow circumstances, she accepted an offer of marriage made to her by a bricklayer, to which trade young Jonson was forced to apply himself, after having made great proficiency in classical learning at Westminster, and was said to have been employed in building some additions to Lincoln's Inn. Being, however, dissatisfied with this humble situation, he enlisted as a soldier, and fought against the Spaniards in the Netherlands. On his return, he is said to have resumed his studies, and to have entered at St. John's college, Cambridge; where, however, the scantiness of his resources prevented his keeping all his terms. On leaving Cambridge, he began his theatrical career by engaging himself in various parties of strolling players, and at length became more permanently engaged at an obscure theatre called the Green Curtain, near Shoreditch. While thus engaged, he began to write his plays, and his first having the good fortune to fall into the hands of Shakspeare, was by him brought forward and acted. After this he produced his celebrated comedy of "Every Man in his Humour," and thenceforth continued, at short intervals, to write the dramatic pieces which have made his name so celebrated. From 1625 to 1629 his health gradually declined, and his resources had become exceedingly limited, but were considerably increased by a present of a hundred pounds from King Charles, which he acknowledged in a facetious epigram. But his majesty's munificence did not stop here. He gave him an annual salary of a hundred pounds, with the addition of a tierce of Canary wine from his own cellars. After the year 1634 he entirely discontinued writing, and in August 1637 ended his days in the sixty-third year of his age. He was interred in the north-west end of Westminster abbey, under a small stone which bears a laconic inscription, the history of which shall be given in the quaint words of one of his ancient biographers:—"He lyes buried in the north aisle, the path square of stones, the rest lozenge, opposite to the scutcheon of Robert de Ros, with this inscription only on him, in a pavement square of blue marble, fourteen inches square, 'O RARE BEN JONSON!' which was done at the charge of Jack Young,

afterwards knighted, who, walking there when the grave was covering, gave the fellow eighteen pence to cut it."

Perhaps the most accurate and creditable character of Ben Jonson was written by Lord Clarendon. It is comprised in the following sentences:—"His name can never be forgotten, having, by his very good learning and the severity of his nature and manners, very much reformed the stage, and indeed the English poetry itself. His natural advantages were judgment to order and govern fancy, rather than excess of fancy; his productions being slow and upon deliberation, yet then abounding with great wit and fancy, and will live accordingly; and surely as he did exceedingly exalt the English language in eloquence, propriety, and masculine expression, so he was the best judge of, and fittest to prescribe rules to, poetry and poets, of any man who had lived with or before him; or since, if Mr. Cowley had not made a flight beyond all men, with that modesty yet as to ascribe much of this to the example and learning of Ben Jonson. His conversation was very good, and with the men of most note, and he had for many years an extraordinary kindness for Mr. Hyde (Lord Clarendon), till he found he betook himself to business, which he believed ought never to be preferred before his company. He lived to be very old, and till the palsy made a deep impression on his body and mind."

We cannot close this brief sketch without presenting the reader with two short specimens of his epigrammatic talent. The first is his epitaph upon the countess of Pembroke, sister to Sir Philip Sidney:—

"Underneath this marble herse  
Lies the subject of all verse—  
Sidney's sister, Pembroke's mother.  
Death! ere thou hast slain another  
Learn'd, and fair, and good as she,  
Time shall throw a dart at thee."

The other is much better known, and is equally happy:—

"Underneath this stone doth lie  
As much beauty as could die;  
Which, in life, did harbour give  
To more virtue than doth live."

**JORDAN, DOROTHEA.**—This eminent English

actress, who excelled in almost every department of the drama, was the daughter of an officer named Bland, who eloped with her mother, by whom he had a numerous offspring. The subject of this article adopted the theatrical profession for the support of herself and her mother, and made her first appearance at Dublin, in the character of Phœbe, in "As you Like It," but her talents first attracted particular attention in tragedy. At the theatre of York she assumed the name of Mrs. Jordan, by which, though never married, she was subsequently known. In this situation she continued three years. She made her first appearance before a London audience as Peggy in the "Country Girl," and in the character of Nell, in the "Devil to Pay," and others of a similar cast, she displayed unrivalled excellence. She appeared to almost equal advantage as a tragic actress, where tender rather than violent and lofty feelings were to be pourtrayed. Her long theatrical career was terminated by her retirement to France, where she resided in obscurity, and died in 1816.

Sir Jonah Barrington has published some interesting particulars relative to this talented but unfortunate female. He says, "It was not by a cursory acquaintance that Mrs. Jordan could be known; unreserved confidence alone could develop her qualities, and none of them escaped my observation. I have known her when in the busy, bustling exercise of her profession—I have known her when in the tranquil lap of ease, of luxury, and of magnificence. I have seen her in a theatre, surrounded by a crowd of adulating dramatists—I have seen her in a palace, surrounded by a numerous, interesting, and beloved offspring. I have seen her happy—I have seen her, alas! miserable: and I could not help participating in all her feelings. At the point of time when I first saw Mrs. Jordan, she could not be much more, I think, than sixteen years of age, and was making her *debut*, as Miss Francis, at the Dublin theatre. It is worthy of observation, that her early appearances in Dublin were not in any of those characters (save one) wherein she afterwards so eminently excelled; but such as being more girlish were better suited to her spirits and her age. I was then, of course, less competent than now to exercise the critical art, yet could not but observe, that in these parts she was perfect, even on her first appearance: she had no art, in fact, to study; nature was her sole instructress. Youthful, joyous, animated, and droll, her laugh bubbled up from her heart and her tears welled out ingenuously from the deep spring of feeling. Her countenance was all expression, without being all beauty: her form, then light and elastic—her flexible limbs—the juvenile, but indescribable graces of her every movement,—impressed themselves, as I perceived, indelibly upon all who attended even her earliest performances. Her expressive features and eloquent action at all periods harmonized blandly with each other, not by artifice, however skilful, but by intellectual sympathy; and when her figure was adapted to the part she assumed, she had only to speak the words of an author to become the very person he delineated. Her voice was clear and distinct, modulating itself with natural and winning ease; and when exerted in song, its gentle flute-like melody formed the most captivating contrast to the convulsed and thundering bravura. She was, throughout, the untutored child of nature; she sang without effort, and generally

without the accompaniment of instruments; and whoever heard her 'Dead of the Night,' and her 'Sweet Bird,' either in public or private, if they had any soul, must have surrendered at discretion."

Her last days are a sad contrast:—"On the continent, estranged from those she loved, as also from that profession, the resort to which had never failed to restore her animation and amuse her fancy; mental malady soon communicated its contagion to the physical organization, and sickness began to make visible inroads on the heretofore healthy person of that lamented lady. She established herself, in the first place, at Boulogne-sur-Mer. A cottage was selected by her at Marquetry, about a quarter of a mile from the gate of the fortress. Often have I since, as if on classic ground, strolled down the little garden which had been there her greatest solace. The cottage is very small, but neat, commodious, and of a cheerful aspect. A flower and fruit garden of corresponding dimensions, and a little paddock comprising less than half an acre, formed her demesne.

"After Mrs. Jordan had left Boulogne, it appears that she repaired to Versailles, and subsequently, in still greater seclusion, to St. Cloud, where, totally secluded, and under the name of Johnson, she continued to await in a state of extreme depression, and with agitated impatience, the answer to some letters by which was to be determined her future conduct as to the distressing business that had led her to the continent. Her solicitude arose not so much from the real importance of this affair as from her indignation and disgust at the ingratitude which had been displayed towards her, and which, by drawing aside the curtain from before her unwilling eyes, had exposed a novel and painful view of human nature. I at that period occupied a large hotel adjoining the Bois de Boulogne. Not a mile intervened between us; yet, until long after Mrs. Jordan's decease, I never heard she was in my neighbourhood. There was no occasion whatever for such entire seclusion, but the anguish of her mind had by this time so enfeebled her, that a bilious complaint was generated, and gradually increased. Its growth, indeed, did not appear to give her much uneasiness, so dejected and lost had she become. Day after day her misery augmented, and at length she seemed, we are told, actually to regard the approach of dissolution with a kind of placid welcome! The apartments she occupied at St. Cloud were in a house in the square adjoining the palace. This house was large, gloomy, cold, and inconvenient; just the sort of place which would tell in description in a romance. The hotel had obviously once belonged to some nobleman, and a long, lofty, flagged gallery stretched from one wing of it to the other. Mrs. Jordan's chambers were shabby; no English comforts solaced her in her latter moments! In her little drawing-room, a small old sofa was the best looking piece of furniture; on this she constantly reclined, and on it she expired. The account given to us of her last moments by the master of the house, was very affecting: he likewise thought she was poor, and offered her the use of money, which offer was of course declined. Nevertheless, he said, he always considered her in apparent poverty, and a magnificent diamond ring which she constantly wore, as quite incompatible, and to him inexplicable. I have happened to learn since, that she gave four hundred guineas for that superb ring. She had also with her, as I heard, many other valuable trinkets, and, on her death, seals were

put upon all her effects, which I understand still remain unclaimed by any legal heir.

"From the time of her arrival at St. Cloud, it appears, Mrs. Jordan had exhibited the most restless anxiety for intelligence from England. Latterly she appeared more anxious and miserable than usual, her uneasiness increased almost momentarily, and her skin became wholly discoloured. From morning till night she lay sighing upon the sofa. At length an interval of some posts occurred, during which she received no answers to her letters; and her consequent anxiety, my informant said, seemed too great for mortal strength to bear up against. On the morning of her death, this impatient feeling reached its crisis. The agitation was almost fearful; her eyes were now restless, now fixed; her motion rapid and unmeaning, and her whole manner seemed to bespeak the attack of some convulsive paroxysm. She eagerly requested Mr. C——, before the usual hour of delivery, to go for her letters to the post. On his return, she started up and held out her hand as if impatient to receive them. He told her there were none. She stood a moment motionless; looked towards him with a vacant stare; held out her hand again, as if by an involuntary action; instantly withdrew it, and sunk back upon the sofa from which she had arisen. He left the room to send up her attendant, who, however, had gone out, and Mr. C—— returned himself to Mrs. Jordan. On his return, he observed some change in her looks that alarmed him; she spoke not a word, but gazed at him stedfastly. She wept not—no tear flowed; her face was one moment flushed, and another livid; she sighed deeply, and her heart seemed bursting. Mr. C—— stood uncertain what to do; but in a minute he heard her breath drawn more hardly, and, as it were, sobbingly. He was now thoroughly terrified: he hastily approached the sofa, and leaning over the unfortunate lady, discovered that those deep-drawn sobs had immediately preceded the moment of Mrs. Jordan's dissolution. She was already no more! Thus terminated the worldly career of a woman at the very head of her profession, and one of the best-hearted of her sex! thus did she expire, after a life of celebrity and magnificence, in exile and solitude, and literally of a broken heart."

After the accession of the king, he ordered Chantry to prepare a statue to be placed over Mrs. Jordan's remains in the cemetery of St. Cloud. We subjoin her autograph.

*Dorothea Jordan*

JORTIN, JOHN.—This learned divine was born in London on the 23rd of October, 1698. His father, Renatus Jortin, was a native of Bretagne in France; he came over to England about the year 1687, when the protestants were obliged to quit France in consequence of the revocation of the edict of Nantes, and was made a gentleman of the privy chamber in 1691, became afterwards secretary to Lord Orford, Sir George Rooke, and Sir Cloudesly Shovel.

Young Jortin was first educated at the Charter House, and afterwards admitted of Jesus College, Cambridge. About two years after he was recommended by his tutor, Dr. Thirlby, to make extracts from "Eustathius" for the use of Pope's Homer.

In an account of this transaction written by Jortin himself are the following passages:—"I cannot recollect what Mr. Pope allowed for each book of Homer; I have a notion that it was three or four guineas." I was in some hopes in those days (for I was young) that Mr. Pope would make inquiry about his coadjutor and take some civil notice of him; but he did not, and I had no notion of obtruding myself upon him—I never saw his face."

Mr. Jortin took a bachelor of arts degree in January 1718, and a master's in 1722; he had been chosen fellow of his college soon after the taking of his first degree. This year he distinguished himself by the publication of a few Latin poems entitled "*Lusus Poetici*," which were well received. In January 1726 he was presented by his college to the living of Swavesey near Cambridge; but marrying a daughter of Mr. Chibnall of Newport-Pagnell, Bucks, in 1728, he resigned that living, and soon after settled in London. In this town he spent the following two-and-thirty years of his life; for though the earl of Winchelsea gave him the living of Eastwell in Kent, where he resided a short time, yet he soon quitted it and returned to London. Here for many years he was employed as a preacher in several chapels, with the emoluments of which and a small competency of his own he supported himself and his family.

In 1730 he published "*Four Sermons on the Truth of the Christian Religion*," the substance of which was afterwards incorporated in a work of his entitled "*Discourses concerning the Truth of the Christian Religion*," printed in 1746 in octavo. This is a very valuable work. In 1731 he published "*Miscellaneous Observations upon Authors Ancient and Modern*," in two volumes octavo. This is a collection of critical remarks, of which, however, he was not the sole though principal author; Pearce, Mason, and others, were contributors to it. In 1751 Archbishop Herring gave him, unasked, the living of St. Dunstan in the East; and afterwards, in 1755, conferred upon him the degree of doctor of divinity. In 1751 came out his first volume of "*Remarks upon Ecclesiastical History*," octavo. This work was inscribed to the earl of Burlington, by whom, as trustee for the Boylean lecture, he had, through the application of Archbishop Herring and Bishop Sherlock, been appointed in 1749 to preach that lecture. These "*Remarks upon Ecclesiastical History*" were continued in four succeeding volumes down to the year 1517, when Luther began the work of reformation; two published by himself in 1752 and 1754, and two after his death in 1773.

In 1755 he published "*Six Dissertations upon Different Subjects*" in octavo. The sixth dissertation is on the state of the dead as described by Homer and Virgil; and the remarks in this, tending to establish the great antiquity of the doctrine of a future state, interfered with Dr. Warburton in his "*Divine Legation of Moses*." This gave rise to a work which was published against him under the title of "*A Dissertation on the Delicacy of Friendship*." This was a very illiberal attack on Dr. Jortin, because he had too much independence to compliment Warburton in the indiscriminate manner that was then become fashionable among his admirers. Jortin made no reply; but in his "*Adversaria*" the following memorandum is found,—"*I have examined*," he says, "*the state of the dead as described by Ho-*

mer and Virgil, and upon that dissertation I am willing to stake all the little credit that I have as a critic and philologist. I have there observed that Homer was not the inventor of the fabulous histories of the gods; he had those stories and also the doctrine of a future state from old traditions. Many notions of the Pagans which came from tradition are considered by Barrow, *Serm. viii. vol. ii.*, in which sermon the existence of God is proved from universal consent.

In 1758 came out his "Life of Erasmus" in one volume quarto; and in 1760 another volume quarto, containing "Remarks upon the Works of Erasmus," and an "Appendix of Extracts from Erasmus and other Writers." In the preface to the former volume he says, "Le Clerc, while he published the works of Erasmus at Leyden, drew up his life in French, collected principally from his letters, and inserted it into the 'Bibliothèque Choisee;' and as this life was favourably received by the public he had taken it as a ground work to build upon, and had translated it, not superstitiously and closely, but with much freedom and with more attention to things than to words; but that he had made continual additions not only with relation to the history of those days but to the life of Erasmus; especially where Le Clerc grew more remiss, either wearied with the task or called off from these to other labours." After mentioning a few other matters to his readers he turns his discourse to his friends, "recommending himself to their favour whilst he is with them, and his name when he is gone hence; and entreating them in a wish that he may pass the evening of a studious and unambitious life in an humble but not a slothful obscurity, and never forfeit the kind continuance of their accustomed approbation."

In 1764 Dr. Jortin was appointed archdeacon of London, and might have had the rectory of St. James, Westminster, but preferred continuing at Kensington, that situation being better adapted to his then advanced age. Here he lived, occupied, when his pastoral functions permitted, amongst his books and enjoying himself with his usual serenity till the 27th of August, 1770, when he was seized with a disorder of the lungs, of which he died on the 5th of September, 1770. He was buried in the new church-yard at Kensington, as he had directed, and had a flat stone laid over him with this inscription dictated by himself:—

#### JOANNES JORTIN

Mortalis esse desiit  
Anno Salutis 1770,  
Ætatis 72.

Besides his principal works, which have already been mentioned, and his sermons and charges, he wrote "Remarks upon Spencer's Poems;" "Remarks on L. Annæus Seneca," printed in "The Present State of the Republic of Letters for August 1734;" "A Few Remarks on Tillotson's Sermons," given to his friend Dr. Birch, and printed in the Appendix to Birch's life of that prelate in 1752; "Letter to Avison concerning the Music of the Ancients," subjoined to a second edition of "Avison's Essay on Musical Expression" in 1753; and "A Few Remarks on Philips's Life of Cardinal Pole," printed in an Appendix to Neve's animadversions upon that history, 1766.

The following extract is from his most celebrated work, and is a good specimen of his style of writing:—"Where," says he in his "Adversaria," "where is happiness to be found? where is her dwelling-place? Not where we seek her and where we expect to find her. Happiness is a modest recluse who seldom shows her lovely face in the polite or in the busy world. She is the sister and companion of religious wisdom. Among the vanities and the evils which Solomon beheld under the sun, one is an access of temporal fortunes to the detriment of the possessor; whence it appears that such prosperity is a dangerous thing, and that few persons have a head strong enough and a heart good enough to bear it. A sudden rise from a low station, as it sometimes shows to advantage the virtuous and amiable qualities which could not exert themselves before, so it more frequently calls forth and exposes to view those spots of the soul which lay lurking in secret, cramped by penury, and veiled with dissimulation. An honest and sensible man is placed in a middle station, in circumstances rather scanty than abounding. He hath all the necessaries but none of the superfluities of life, and these necessaries he acquires by his prudence, his studies, and his industry. If he seeks to better his income it is by such methods as hurt neither his conscience nor his constitution. He hath friends and acquaintances of his own rank; he receives good offices from them and he returns the same; as he hath his occupations he hath his diversions also, and partakes of the simple, frugal, obvious, innocent, and cheerful amusements of life. By a sudden turn of things he grows great in the church or in the state. Now his fortune is made; and he says to himself the days of scarcity are past, the days of plenty are come, and happiness is come along with them. Mistaken man! it is no such thing; he never more enjoys one happy day compared with those which once shone upon him. He discards his old companions or treats them with cold, distant and proud civility. Friendship, free and open conversation, rational inquiry, sincerity, contentment, and the plain unadulterated pleasures of life, are no more; they departed from him along with his poverty. New connections, new prospects, new desires, and new cares, take place and engross so much of his time and of his thoughts that he neither improves his heart nor his understanding. He lives ambitious and restless, and he dies—rich."

The following estimate of the life and writings of this celebrated dignitary of the church is from the pen of his contemporary, Mr. Knox:—

"A review of the life of the late Dr. Jortin cannot but suggest the most pleasing reflections. As a poet, a divine, a philosopher, and a man, he served the cause of religion, learning, and morality. There are indeed many writers whose reputation is more diffused among the vulgar and illiterate, but few will be found whose names stand higher than Dr. Jortin's in the esteem of the judicious. His Latin poetry is classically elegant; his discourses and dissertations, sensible, ingenious, and argumentative; his 'Remarks on Ecclesiastical History' interesting and impartial; his sermons replete with sound sense and rational morality, expressed in a style, simple, pure, and Attic.

"Simplicity of style is a grace which, though it may not captivate at first sight, is sure in the end to give permanent satisfaction. It does not excite ad-

miration, but it raises esteem. It does not warm to rapture, but it soothes to complacency. Unskilful writers seldom aim at this excellence. They imagine that what is natural and common cannot be beautiful. Every thing in their compositions must be strained, every thing affected; but Dr. Jortin had studied the ancients and perhaps formed himself on the model of Xenophon. He wrote on subjects of morality, and morality is founded on reason, and reason is always cool and dispassionate. A florid declamation, embellished with rhetorical figures and animated with pathetic description, may indeed amuse the fancy and raise a transient emotion in the heart, but rational discourse alone can convince the understanding and reform the conduct.

"The first efforts of genius have commonly been in poetry. Unrestrained by the frigidity of argument and the confinement of rules, the young mind gladly indulges the flights of imagination. Cicero, as well as many other ancient philosophers, orators, and historians, are known to have sacrificed to the muses in their earlier productions. Dr. Jortin adds to the number of those who confirm the observation. In his '*Lusus Poetici*,' one of the first of his works, are united classical language, beautiful sentiment, and harmonious verse. Among the modern Latin poets there are few who do not yield to Dr. Jortin. His '*Sapphics*' on the story of '*Bacchus and Ariadne*' are easy, elegant, and poetical. The '*Little Ode*,' in which the calm life of the philosopher is compared to the gentle stream gliding through a silent grove, is highly pleasing to the mind and is perfectly elegant in the composition. The Lyrics are indeed all excellent. The poem on the immortality of the soul is ingenious, poetical, and an exact imitation of the style of Lucretius. In short the whole collection is such as would by no means have disgraced a Roman in the age of an Augustus.

"Time, if it does not cool the fire of the imagination, certainly strengthens the powers of the judgment. As our author advanced in life he cultivated his reason rather than his fancy, and desisted from his efforts in poetry to exert his abilities in the disquisitions of criticism. His observations on one of the fathers of English poetry need but to be more generally known in order to be more generally admired.

"Classical productions are rather amusing than instructive. His works of this kind are all juvenile and naturally flowed from a classical education. These, however, were but preparatory to his higher designs, and soon gave way to the more important enquiries which were peculiar to his profession. His "*Discourses on the Christian Religion*," one of the first fruits of his theological pursuits, abound with that sound sense and solid argument which entitle their author to a rank very near the celebrated Grotius.

"His dissertations are equally remarkable for taste, learning, originality, and ingenuity.

"His life of Erasmus has extended his reputation beyond the limits of his native country, and established his literary character in the remotest universities of Europe. Erasmus had long been an object of universal admiration; and it is matter of surprise that his life had never been written with accuracy and judgment. This task was reserved for Dr. Jortin, and the avidity with which the work was received by the learned is a proof of the merit of the execution.

"His '*Remarks on Ecclesiastical History*' are full

of manly sense, acute remarks, and profound erudition. The work is highly beneficial to mankind as it represents that superstition which disgraced human nature in its proper light, and gives a right sense of the advantages derived from religious reformation. He every where expresses himself with peculiar vehemence against the infatuation of bigotry and fanaticism. Convinced that true happiness is founded on a right use of the reasoning powers, he makes it the scope of all his religious works to lead mankind from the errors of imagination to a serious attention to dispassionate reason.

"Posthumous publications, it has frequently been remarked, are usually inferior in merit to those which were published in an author's life time. And indeed the opinion seems plausible, as it may be presumed that an author's reason for not publishing his works is a consciousness of their inferiority. The sermons of Dr. Jortin were, however, designed by their author as a legacy to mankind. To enlarge on their value would only be to echo back the public voice. Good sense and sound morality appear in them, not indeed dressed out in the meretricious ornaments of a florid style, but in all the manly force and simple graces of natural eloquence. The same caprice which raises to reputation those trifling discourses which have nothing to recommend them but a prettiness of fancy will again consign them to oblivion; but the sermons of Dr. Jortin will continue to be read with pleasure and edification as long as human nature shall continue to be endowed with the faculties of reason and discernment.

"The transition from an author's writings to his life is frequently disadvantageous to his character. Dr. Jortin, however, when no longer considered as an author but as a man, is so far from being lessened in our opinion that he excites still greater esteem and applause. A simplicity of manners, an inoffensive behaviour, an universal benevolence, candour, modesty, and good sense, were his characteristics. Though his genius and love of letters led him to choose the still vale of sequestered life, yet was his merit conspicuous enough to attract the notice of a certain primate who did honour to episcopacy. Unknown by personal acquaintance, and unrecommended by the solicitation of friends or the interposition of power, he was presented by Archbishop Herring to a valuable benefice in London, as a reward for his exertions as a scholar and a divine. Some time after he became chaplain to a late bishop of London, who gave him the vicarage of Kensington and appointed him archdeacon of his diocese. This was all the preferment he had, nor had he this till he was advanced in life. While blockheads were made bishops a man who had been uncommonly eminent in the service of learning and religion was left to pine in the shade of obscurity. Secker has been thought by many to have had only the shadow of piety and learning, but he had the substantial reward of them. Jortin was acknowledged to possess true virtue and real knowledge, but was left to receive his recompence in the suggestions of a good conscience and the applause of posterity."

JOSEPH.—This patriarch was the son of Rachel and was tenderly beloved by his father Jacob. Stung with envy and with the arrogance which they thought was displayed in his innocent dreams, his brothers sold him to some Ishmaelitish slave-dealers, by whom he was sold to Potiphar, a distinguished officer in Egypt.

The prudence and fidelity which he displayed in the service of his master ameliorated his condition; but his refusal to comply with the unlawful desires of Potiphar's wife caused him to be thrown into prison at her instigation. Yet even here Joseph was able to gain the confidence of the keeper; and the interpretation which he gave to a dream of the king's butler, who was likewise in prison, opened for him the way to a better fortune; for after the butler had been restored to favour Pharaoh and his whole court were troubled by a dream. The butler remembered the Hebrew boy who had given so happy an interpretation to his own dream when in prison. Joseph was brought to court and explained the king's dream of seven fat and seven lean kine. The monarch now released him from confinement and raised him to the second place in the empire. He suggested wise measures for preserving the people from famine during the unproductive years which he had predicted, and Pharaoh committed to him the charge of carrying them into execution. Married to the daughter of an Egyptian nobleman in possession of the highest power next to the royal, Joseph saw all his wishes gratified except his yearning after his relations. In the years of famine his brothers came to buy corn from the stores which he had collected in Egypt. Without making himself known to them, he endeavoured by some harsh treatment to discover their thoughts and to make them repent of the wrong which they had done him. His feelings at length overcame him. He disclosed himself to his brethren and provided them and his father with lands in Egypt. He was now their benefactor, and therefore Jacob, in his last blessing, gave to his two sons equal rights with the other brothers, and the two tribes of Manasseh and Ephraim preserved the memory of Joseph among the Hebrews.

**JOSEPH I.**—This celebrated emperor of Germany was the son of Leopold I., and was born at Vienna in July 1678. He received the crown of Hungary in 1689, and was soon after crowned as Roman king. In 1705 he began his reign, which though short was troubled by wars in the Netherlands, Hungary, Germany, Italy, and Spain. The protestants enjoyed toleration and some privileges under his reign. He died in April 1711.

**JOSEPH II.**—This German emperor was the son of Francis I. and Maria Theresa, and was born March 1741, at a time when Frederick the Great had already conquered half of Silesia, and the Bavarian army was approaching the Austrian frontiers, when the peace of Aix-la-Chapelle restored the sinking state. Joseph was inferior to his brother Leopold II. in learning, but he displayed an active and penetrating mind, and made much progress, particularly in the languages, mathematics, and music. His lively temperament often brought him into collision with his mother, whom he obeyed from respect but without conviction and with secret reluctance. He observed how much her devotional spirit was abused, and he imbibed an invincible aversion to the clergy. She set a great value on birth, and he early acquired a dislike for undeserved privileges. In the mean time, the seven years' war having broken out, every preparation was made for the young prince joining the army, when Maria Theresa recalled her order. In 1760 he married Elizabeth of Parma, who died on her second confinement. He also lost his second wife, a Bavarian princess.

He was elected king of the Romans in 1764, and, on the death of his father in 1765, German emperor. His mother declared him co-regent in the hereditary states of the house of Austria, and gave him the command of the army; but the real authority remained in her hands. During the war Joseph had had cause to admire the great enemy of his house. Animated by this example, he entered on his elevated career; but as he had but little real power excepting in military affairs, in which with the aid of Lascy he introduced some improvements, he employed his time in travelling and becoming acquainted with his states. On one of these journeys, under the title of Count Falkenstein, he visited Frederick the Great in his camp at Neisse. The two monarchs, dispensing with ceremonies, met on terms of familiarity like friends; and in the following year the emperor in his camp received a visit from Frederick. In 1777 Joseph made a journey to Paris, where he spent six weeks. At the end of this year the elector of Bavaria died, and the war of the Bavarian succession broke out between Prussia and Austria, to which Maria Theresa put an end without the knowledge, and contrary to the wishes, of her son, who was desirous of measuring himself in the field with his great adversary. In 1780 Joseph came into the possession of full dominion over his hereditary states, at the age of forty years, and was thus the sovereign of more than twenty-two millions of men with a fine army. His people adored him, the nobility and clergy alone had reason to fear him. Joseph had drawn on himself their hatred by ordinances which were in many respects very excellent. He allowed a greater freedom of the press, put an end to the connexion between Rome and the religious orders, diminished the pensions, placed the Jews on a better footing, abolished bondage, suppressed all nunneries, and many monasteries, particularly those in which there were no schools, or the sick were not taken care of, or the monks did not preach.

In the spring of 1782 Pope Pius VI. made a visit to Vienna, and Joseph afterwards returned his visit at Rome, still however continuing to suppress monasteries, so that in eight years the number belonging to the different orders had sunk from 63,000 to 27,000. All branches of the government, public education, the police, the state of the clergy, and the peasantry, were reformed. By a new code of laws capital punishments were abolished. His attempts at reform in Hungary, which he wished to render uniform with his German states, caused a rebellion of the Walachians, which he could quell only by the execution of its leaders, Horia and Gloska. Then followed, in 1784, the dispute with Holland respecting the free navigation of the Scheldt and the negotiations for the exchange of the Netherlands for Bavaria, against which the confederacy of the German princes was formed in 1785. In 1787, under the title of Count Falkenstein, Joseph made a journey into the Crimea, where Catharine gave him a most splendid reception at Cherson. After his return he experienced a series of misfortunes. On the 9th of February, 1788, he declared war against the Turks, but by the defeat at Lugos the army was obliged to retreat, and suffered dreadfully in consequence of the heat and the unhealthiness of the country. Joseph, himself exhausted and chagrined by the misfortune of his army, returned sick to Vienna in December. In the following year, however, fortune favoured the

Austrian arms; Belgrade was surrendered to Laudohn, and the Russians made great progress.

The principal cause of the difficulties which Joseph next had to encounter was the tax law introduced in November 1789. The nobility and peasantry showed themselves equally dissatisfied, and the signal was given for general disorder and open rebellion. The Netherlands declared themselves independent, and expelled the imperial forces from all the provinces, and Luxemburgh only remained in the possession of the imperial troops. Joseph showed himself ready to make concessions, but all his proposals were scornfully rejected. The Hungarians also, whose general dissatisfaction had been only slumbering, rebelled, and demanded the restoration of their ancient rights and constitution. To the astonishment of all Europe Joseph, in January 1790, declared all the acts of his government in that country revoked even to the edict of toleration passed on the 22nd of June, 1781. The Tyrolese now showed signs of dissatisfaction, and Joseph hastened to put every thing on its former footing. His health sunk under these accumulated mortifications, and the consequences soon became apparent, for early in February 1790 he was sensible that death was rapidly approaching, and on the 20th he died of a pulmonary consumption.

Joseph was of the middle size, of a lively disposition, fickle, and fond of action, of ruling, of destroying and building up. Courage in danger was a striking trait in his character. He had a strong and lively sense of the dignity of man and respected it in all. He caused the Augarten, hitherto closed, to be made public, and placed over the entrance the inscription, "Dedicated to all men by one who values them." When requested to permit only certain classes to walk in the Prater, in order that they might enjoy themselves there with their equals only, he refused and added, "If I would live only with my equals I must go to the tomb of the emperors at the Capuchin chapel and there spend my days." To Schmidt, the historian of Germany, he said, "Spare no one, and not even myself, if you come down so far with your history. Posterity must judge my faults and those of my predecessors." Frederick the Great wrote to Voltaire respecting him: "Joseph is an emperor such as Germany has not had for a long time. Educated in splendour, his habits are simple; grown up amidst flattery, he is still modest; inflamed with a love of glory, he yet sacrifices his ambition to his duty." Joseph's favourite object was to be sovereign in a peculiar sense, and to manage the great machine of the state entirely himself. Whatever his own reflections or his knowledge of other countries showed to be useful, he wished to introduce. But he did not sufficiently consider that he had to do with other men, with other relations, and that long habit rendered it difficult to change at once usages sanctified by time—that other men did not possess his knowledge and experience.

JOSEPH, NAPOLEON BONAPARTE, was born in January 1768, in the island of Corsica. He was the eldest brother of Napoleon, and of all the members of his family the one in whom the emperor placed the greatest confidence. His father being sent to Paris as the deputy of the estates of that province, carried him to the continent and placed him at the college of Autun in Burgundy, where he completed his course of studies with great diligence. Joseph was desirous of entering the military service,

but in compliance with the last wishes of his father, who died at Montpellier in the prime of life, he returned to his native country in 1785, and in 1792 became a member of the departmental administration under the presidency of the celebrated Paoli. When the English took possession of Corsica, Joseph retired to the continent, and in 1794 married the daughter of M. Clary, a rich citizen of Marseilles. Joseph united with his colleagues of the department in urgent entreaties for supplies requisite to drive the English out of the island, but their applications were disregarded until 1796; and it was not until after the occupation of Italy by the French army that their efforts were crowned with success. In the beginning of this campaign Joseph accompanied his brother Napoleon, who, after the victory of Mondovi, sent him to Paris to convince the directory of the necessity of concluding a peace with the king of Sardinia. Peace was concluded, and Joseph appointed minister of the republic at Parma, and a few months afterwards minister, and then ambassador at Rome. He had obtained from Pius VII. the promise of a brief, exhorting the Vendéans to lay down their arms and to submit to the republic, when the intrigues of the enemies of France and the temerity of the revolutionists produced the catastrophe which obliged him to leave Rome. The papal secretary of state, and the diplomatic characters connected with Joseph, united in rendering him justice in their statements to the French directory. The pope not giving satisfaction for the murder of General Duphot committed in the presence of Joseph, who never lost his calmness, and used every means in his power to prevent further bloodshed and outrage, the latter returned to Paris, where the directory expressed their entire satisfaction with his conduct at Rome. He was now offered the embassy to Prussia, but preferred to enter the council of the five hundred, which soon chose him their secretary. When Napoleon was in Egypt the French experienced important reverses in Europe. The battle of the Trebia had been lost; the French had evacuated the Genoese territory; the French army in Switzerland was in a critical situation until the decisive victory of Masséna at Zurich, and all the conquests in Italy were at stake. Joseph despatched a Greek of Cephallonia, named Burmbacki, to Egypt, to induce his brother to hasten back; and he assisted him in the revolution which placed Bonaparte at the head of the consular government.

Under the consulate Joseph was a member of the council of state, and as such was appointed with Rœderer and De Fleurieu to terminate the differences then existing between France and the United States. The treaty of September 1800 was signed at Joseph's estate of Mortefontaine. Soon after he signed with Count Cobentzl the treaty of Lunéville between France and Austria; and in March 1802 the treaty of Amiens was signed, which, on the part of France, had been likewise conducted under his direction. Whilst engaged in diplomatic pursuits, Joseph suggested a plan to unite France, England, Spain and Holland, for the suppression of that system of rapine and piracy, whereby smaller states were annoyed by the corsairs of Barbary, to the disgrace of the great powers of Christendom. His brother, then first consul, adopted the plan. In 1803 Joseph was created a senator and grand officer of the legion of honour, and presided in the same year in the electoral college of the department of the Oise. Joseph Bonaparte was one of

the signers of the concordate with the pope, by which the immunities of the Gallican church were secured, and the torch of fanaticism which burned in the West of France was extinguished. Nearly at the same time the treaty of guaranty was signed with Austria, Russia, Prussia and Bavaria, which recognised the various political changes which had taken place in the German empire. In this negotiation also, Joseph was invested with full powers on the part of France. When in 1804 the camp of Boulogne was formed, the consul made his brother colonel of the fourth regiment. When Napoleon ascended the imperial throne of France, the same *senatus-consulte* which (supported by 3,700,000 votes) created Napoleon emperor, declared Joseph and his children heirs to the throne in case of the death of Napoleon without issue. In the same year the crown of Lombardy was offered to him, but Joseph firmly resisted the entreaties of the emperor and of his friends, not choosing to renounce the new political bonds which attached him to France, nor to enter into engagements which pressed hard upon Lombardy.

During the campaign of Austerlitz in 1805, Prince Joseph presided in the senate and administered the government. A few days after the battle of Austerlitz, Joseph received an order from the emperor to place himself at the head of the army destined to invade the kingdom of Naples, whose sovereign had broken the treaty with France, and whose troops had been augmented by a large body of Russians and English, in consequence of which Napoleon had declared "Ferdinand has ceased to rule." On the 8th of February, 1806, the French entered the territory of the enemy. Joseph commanded the centre, whilst Masséna and Gouvion de Saint-Cyr commanded the two wings, took Capua, which surrendered without much resistance, and entered the capital; being received, if any reliance were to be placed upon public demonstrations of joy, as the deliverer of the people. King Ferdinand had fled to Sicily, and the English and Russians effected their retreat. All the fortresses were to be delivered up to the French; and Gaëta, commanded by the prince of Hesse-Philippsthal, only resisted the commandment disavowing the regency which Ferdinand had appointed before his flight, and which had concluded the treaty with Joseph. The very day of his entry Joseph was seen walking about in the street attended by one aide-de-camp only, even among the crowds of still excited *lazzaroni*, faithful to his opinion that the people feel confidence in those who trust them and never pay with bad treatment those who have treated them well. No sooner had he organized a provisional government in the capital than he set out with a *corps d'élite*, under the command of General Lamarque, to inform himself of the actual state of the country, and of the feasibility of an attempt upon Sicily. He soon convinced himself of the abject situation of the inhabitants (whom the character of former governments had rendered pretty indifferent as to any change of the administration, believing that nothing would improve their situation), and of the impracticability of a landing in Sicily. It was during this journey that Joseph first received intelligence that the emperor had recognised him king of Naples. Napoleon, fearing that Joseph would refuse the throne of Naples as he had refused that of Lombardy, consented that Joseph's relations with France should remain the same; and the senate, of which he was president in

his capacity of grand-electeur, deputed three of its members to him to induce him to accept the offered crown. These were Marshal Perignon, General Ferino and Count Röederer. Joseph received them as his old colleagues, lodged them in the palace, and retained Count Röederer, who had long been his friend, as minister of finance. Joseph was always pleased to acknowledge his obligations to this friend for his services in the administration of the finances, and in the formation of the laws and institutions which created a public credit—something till then unknown in that country. Napoleon said that the loss of Count Röederer from his council of state was never adequately supplied.

Joseph's reign in Naples forms the period of his life on which the biographer dwells with the greatest satisfaction. It was the misfortune of Joseph to be twice called to rule over nations guided by priests and left in ignorance, and therefore easily to be excited against any change; yet the critical nature of his situation did not deter him from trying every means in his power to ameliorate the condition of his subjects. He introduced into his council, among others, Frenchmen distinguished by their abilities; such as Röederer, Salicetti, Dumas, Miot, &c. With them he planned such changes as his unreserved conversations with men of all classes on his long journey had suggested to him. He held up to the members of his administration the advantageous consequences of the French revolution, contriving to avoid its evils and enjoining them to make justice and moderation the guides of all their measures. The country was soon entirely cleared of the enemy. Convents were abolished and their inmates provided for; their rich possessions were in part used to contribute to the solidity of the public credit; feudalism was overthrown, leaving only the honorary titles; provincial intendants were appointed instead of the former *presidi*, a kind of proconsuls; public instruction greatly improved; the finances regulated, as we have already mentioned, under the care of Röederer; the interior custom-lines, so injurious to the welfare of nations, removed to the frontiers; the system of justice greatly improved by substituting the French code for the confused *pragmatiche*, and by organizing the judiciary, national guards were formed—an institution which, in that as well as all the other Italian countries, would have had the best effects. These effects indeed were in part apparent in the growth of a civic spirit among the inhabitants, so long degraded by foreign or domestic tyranny. A new army was created, the public debt was put on a systematic footing, all banks were united into one, excavations at Pompeii and in Magna Græcia begun, and a learned society founded under the name of the royal academy, divided into four classes; the roads were improved; the system of the *mesta* abolished according to an early plan of the celebrated Filangieri; the stiff and pompous Spanish court etiquette was much curtailed, so that the king became accessible to his subjects; and the half-barbarous *lazzaroni* were civilized. Villages were established, and the *lazzaroni* were made to labour in excavations or workshops. Their pay was partly given in beds and in domestic utensils, so that their improvement was begun in the only way in which it could be successful—by accustoming them to a home. Thus a numerous class, who had resisted all attempts to civilize them, and with whom neither missionaries nor philanthropists

could be successful, were rendered useful, and a fruitful source of crime would soon have been entirely stopped. He who formed the idea of civilizing these beings by giving them a home, whether it was the king or one of his counsellors, richly deserves the thanks of the country, though the return of the Bourbons was unfortunately also the signal for the return of wretchedness.

The bands of robbers likewise vanished. When Joseph arrived in Naples, the revenue of the state did not exceed 7,000,000 ducati. It was augmented by him to 14,000,000, without increasing the public burdens. Naples then had no constitution, but Joseph, presiding in person at the meetings of the council of state, heard every measure discussed, and no instance is on record of a measure being adopted against the opinion of the majority. Success was crowning his laudable endeavours, when, unfortunately for him, he was, against his will, called by his brother to receive a prouder diadem. In an interview some months previous with the emperor Napoleon at Venice, he received an intimation of the feuds which distracted the reigning house of Spain, and of the political embarrassments to which they must lead. He now received from Bayonne, where the Spanish princes had joined Napoleon, a pressing invitation to proceed without delay to that city. Nothing was yet decided, and no views explained. In this uncertainty Joseph set out, cherishing the hope of again returning to his family at Naples.

At a short distance from Bayonne he was met by the emperor, who informed him that the passions of the Spanish princes had produced a crisis which had arrived but too soon; that they were as far from a harmonious agreement at Bayonne as they had been in Spain; that Charles IV. preferred retirement in France on certain conditions, to re-entering Spain without the prince of peace; that both he and the queen chose rather to see a stranger ascend the throne than to cede it to Ferdinand; that neither Ferdinand nor any other Spaniard wished for the return of Charles if he was determined to restore the reign of Godoy, and that they also would prefer a stranger to him; that he (the emperor) perceived that it would cost him a greater effort to sustain Charles with the prince of peace, than to change the dynasty; that Ferdinand appeared to him so inferior, and of a character so vague and uncertain, that it would be highly indiscreet to commit himself on his behalf, or attempt to sustain a son in the struggle to dethrone his father, and that such a dynasty was little suited to Spain; that no regeneration was practicable whilst it continued; that the first personages of the kingdom in rank, information and character, assembled in a national junta at Bayonne, were convinced of this truth; and that since destiny pointed out this course, and he then felt assured of accomplishing what he would not have voluntarily undertaken, he had nominated his brother the king of Naples, who was acceptable to the junta, and would be so to the nation at large. Ferdinand had long since solicited one of his nieces in marriage, and the kingdom of Etruria, but, since his residence at Bayonne, and more intimate knowledge of that prince, he did not think proper to accede to his wishes. He further urged that the Spanish princes had gone farther into France, and had ceded to him all their rights to the crown which he had transferred to his brother, the king of Naples; that it was highly important that his

brother should not hesitate, lest the Spaniards, as well as foreign monarchs, might suppose that he (Napoleon) wished to encircle his own brows with this additional crown, as he had done with that of Lombardy some years before, upon the refusal of Joseph to accept it; that the tranquillity of Spain, of Europe, the reconciliation of all the members of his own family, depended upon the course which Joseph was then about to adopt; that he could never allow himself to believe, that regret at leaving an enchanting country, where no danger or difficulty remained to be combated, could induce him to refuse a throne where many obstacles it was true were to be surmounted, but where also much good was to be accomplished.

When Joseph arrived at Bayonne the members of the junta were all assembled at the château of Marrac, and he was obliged to receive their addresses, to which he returned indefinite answers, postponing a decision until he could, in the course of a few days, see the different members in private. The Spanish princes were gone. The duke del Infantado and Cevallos passed for the warmest partisans of Ferdinand; both were presented the next day to take leave. Joseph had a long conversation with the duke, which terminated in a full offer of his services. This nobleman then observed, that he now found the intelligence which had been transmitted to him by his agents at Naples was true, and if Joseph was destined to be to Spain what he had been to Naples, no doubt could exist that the entire nation would rally round him. He also assured him that he would find the same dispositions in Cevallos, and in all the members of the junta; that those who were regarded as the most violent partisans of Ferdinand entertained for that prince, of whom they knew little, and expected every thing, merely that sort of attachment which a misgoverned nation exhibits towards any one whom it considers most competent to redress its grievances. Cevallos held nearly the same language to Joseph, who afterwards received in succession all the members of the junta. It consisted of nearly one hundred persons. They painted in strong colours the evils which afflicted their country and the facility of suppressing them. In fact the courtiers of the father and the son were agreed upon one point—the absolute impossibility, namely, of their living together under either of them. Joseph alone, by sacrificing the throne of Naples to ascend that of Spain, appeared to unite all parties, and promised, as they fondly hoped, to restore and even to surpass the happy reign of Charles III.

The rising at Saragossa, and in several of the provinces, under the pretence that Napoleon was seeking to annex Spain to France; the assurances given by all the members of the junta to Joseph, that his acceptance of the crown would quiet these troubles, ensure the independence of the monarchy, the integrity of its territory, its liberty and happiness—finally induced him to accept the throne, and he prepared himself to set out for Spain; but he would not leave the throne of Naples without obtaining a pledge that his institutions should be preserved, and that the Neapolitans should enjoy the benefits of a constitution which was in a great measure a summary of his own most important laws. He obtained for it the guaranty of the emperor Napoleon. A constitution founded nearly on the same principles was adopted by the junta of Bayonne for Spain, and also gua-

ranted by the emperor. Joseph and the members of the junta swore fidelity to it. Had events permitted them to maintain their oaths, it would have contributed much to the regeneration of that people. The recognition of national sovereignty represented in the cortes, the independence of their powers, the demarcation of the patrimony of the crown and the public treasure, would have extricated Spain from the abyss into which she had been sinking for centuries. The accession of Joseph to the throne of Spain was notified by the secretary of state (Cevallos) to the foreign powers, by all of whom, with the exception of England, he was formally recognised. Thus, at first, his relations with the monarchs and governments of the continent were satisfactory. The emperor of Russia had replied to the communication of General Pardo, ambassador of Spain, by felicitations grounded on the personal character of the new king. Ferdinand had written him letters of congratulation, and one among others wherein he implored his intervention and good offices to induce the emperor Napoleon to give him one of his nieces in marriage. The oath of allegiance of the Spaniards who were with him in France was annexed to these letters, which were made known by a Spanish nobleman to the chiefs of the insurrection. Most of the members of the junta had previous knowledge of them.

Upon his entry into Madrid, Joseph found the people greatly exasperated at the events of the 2nd of May, 1808. A stranger to all that had passed, he convened on the morrow, at the palace, all those persons who might naturally be regarded as representatives of the different classes of society—grandees of Spain, chiefs of the religious orders, members of the tribunals, priests, officers, generals, the principal capitalists, the syndics of the various handicrafts. All the saloons were crowded for the first time with a concourse of men who were astonished to find themselves together. The new king entered into free conversation with his guests, and expressed himself with candour on the events which had brought him into Spain on the motives of his conduct, on his views and intentions. He ventured alone into the different rooms filled with crowds of persons inimical to him, and inspired much confidence by this fearless reliance on their honour; but the gleams of popular favour were overcast by the disastrous intelligence from Baylen, which arrived six days after this entertainment. The retreat on Burgos was effected, and the king found himself in the midst of Marshal Bessières' army. The Spaniards flocked in from all quarters against the French army, which was unable to resume offensive operations until the month of November. The emperor arrived and put himself at the head of his army, but was soon summoned, first by the English to the frontiers of Galicia, whence he drove out our troops, and then by the Austrians to Germany. On his departure he left his brother in command of the forces that remained in Spain.

King Joseph returned to his capital on the 22nd of January, 1809. The people had not lost the remembrance of the hopes which they had conceived on his first entry. The inhabitants came individually to take the oath of allegiance to him, each in his respective parish, and Joseph exerted himself to foster and extend these favourable symptoms. On a solemn occasion he renewed the assurances he had already given of his determination to maintain the independence of Spain—to preserve her territory entire, to

support her religion, and to protect and uphold the liberty of her citizens—"conditions," he said, "of the oath which I took on accepting the crown: it shall never be dishonoured whilst on my head." He pledged himself for the convocation of the cortes, and for the evacuation of Spain by the French troops as soon as the country should be pacified. "If I love France as my family," he often exclaimed, "I am devoted to Spain as to my religion." The choice of his ministry was made with entire deference to public opinion. The nomination of the members of his council of state was governed by the same spirit. Five regiments were already organized, from which all persons stained by criminal convictions were carefully excluded. Infamous punishments were discontinued, and the stimulus of honour and love of country, as in the French army, was substituted for corporal inflictions, which are fit only to make slaves, not soldiers. Pursuing the same course which his own sense of justice and views of policy had dictated in his former government at Naples, he recognised the existing public debt and provided means for its extinction,—gave facilities for the secularization of monks, without at that moment compelling it,—inspected in person the works then unfinished and necessary to the completion of the Guadarama canal,—promoted that useful enterprise, and generally gave aid and countenance to national industry in its various departments.

The earliest military occurrences of his reign were propitious. The battles of Talavera and Almonacid paralyzed the movements of the British, and the king availed himself of the calm which ensued to regulate the administration of the interior. He now resolved to suppress entirely the religious orders, being convinced that the restoration of the finances and the claims of public tranquillity alike demanded this measure. All ecclesiastical jurisdictions were annulled, and their duties assigned to the civil tribunals, and the privilege of sanctuary heretofore allowed to the churches was abolished. The councils of the Indies, of the orders of finance, of the marine, and of war, whose functions were almost identical with those of the new council of state, were dissolved; the points for the collection of the duties fixed on the frontiers, the municipal system was settled; laws regulating public education were digested in the council of state; the debt which had been formerly recognised, was guaranteed; the ashes and monuments of the illustrious dead scattered through the suppressed convents, were assembled in several churches, and particularly in the metropolitan at Burgos. The buildings of the Escorial were assigned for the reception of fifteen hundred priests, members of the different religious orders, who were desirous of continuing to live in common, either from family reasons, considerations of health, or a strong bias to consecrate themselves to study in those vast deposits wherein lay buried large collections of manuscripts and other literary treasures, so richly meriting examination and perusal. The buildings of St. Francis were chosen for the sittings of the cortes, and the alterations to be made in them put under contract. One hundred millions of reals were appropriated as an indemnity to owners of property who had suffered by the ravages of war. Joseph proscribed no individual because he had been a member of any particular corporation. In his council of state were to be found superiors of religious orders who voted for the suppression of those orders,

general officers of the insurgents who voted against the insurgents, inquisitors voting against the inquisition, and in his family and household grandees of Spain openly advocating the most popular laws.

A few months after his return to Madrid Joseph received intelligence that 50,000 Spaniards had made a descent from the Sierra Morena into La Mancha. He marched against them, and, at Ocaña, they were entirely discomfited by 20,000 French, and 4,000 Spaniards in his service. 25,000 prisoners, most of whom entered his army, thirty standards and the entire artillery of the army were the fruits of this victory. The English, who had advanced to Truxillo and Badajoz, retired to Portugal as soon as they learned the destruction of the Spanish army. Upon his return to the capital, the king was informed of the successes of General Kellermann at Alba de Tormes, of Marshal Suchet in Arragon, and Marshal Augereau in Catalonia, where Gerona had fallen into his hands. He resolved to follow up this series of good fortune. The junta of Seville having summoned the cortes for the month of March, he determined to anticipate them. Leaving Madrid on the 8th of January, 1810, a very few days after the battle of Ocaña, he found himself on the 11th at the foot of the Sierra Morena, with a force of 60,000 men. Marshal Soult acted as major-general in place of Marshal Jourdan, the latter having returned to France. The positions of the enemy were carried in a few hours, and 8,000 or 10,000 prisoners taken. The king was attended by his ministers and the principal officers of his household and guard. He openly announced his intention to hold the cortes at Grenada in the month of March.

Joseph pledged himself without reserve, that as soon as the English evacuated the Peninsula the French armies should also leave it, and that he would follow in their steps, unless retained by the sincere wishes of the nation, when enlightened as to its true interests. He stated that the constitution of Bayonne was now sufficient for the habits and wants of the people, but admitted that it might hereafter be modified according to circumstances,—that the nation could never enjoy a greater share of liberty than the king wished it to possess, inasmuch as he never could feel himself truly her king until Spain was truly free and delivered from the presence of all foreign armies. Marshal Victor advanced upon Cadiz, and the king made his entry into Seville, where he was received with enthusiasm. It was in Seville that he received from the hands of the chapter the French eagles which had fallen into the hands of the Spaniards after the disastrous affair of Baylen. They had been left in the cathedral, where they lay hidden amongst relics of the saints. They were instantly forwarded to Paris by Colonel Tascher de la Pagerie. Ten thousand men, however, under the duke of Albuquerque, had anticipated Marshal Victor at Cadiz; the English also hastened thither, and strongly reinforced the garrison, whilst our squadrons blockaded the harbour. The chiefs of the insurrection had assembled at Port St. Mary's, in front of Cadiz. They surrounded the king, from whom they received the assurance of his positive determination to assemble the representatives of the nation at Grenada immediately. All the members of the central junta were to form part of this cortes, all the bishops, all the grandees, all the wealthy capitalists. This assembly would have a single ques-

tion to discuss—"Do we, or do we not, accept the constitution that the king offered to us by the junta of Bayonne?" If the negative was pronounced, Joseph would leave Spain, fully determined to reign, if at all, by the consent of the people, as he wished to reign for their benefit. But the deputies who undertook to go themselves and treat with their fellow citizens, unfortunately embarked in small boats, and were detained by the English squadron, and not allowed to land at Cadiz. On the other hand, the French government was becoming weary of the enormous sacrifices which the obstinate resistance of Spain required. They thought that the war there, as in other countries, ought to support itself. The king's system, on the contrary, forbade exactions, and tended to calm the exasperation of the Spaniards by kind treatment. He consequently required that France should continue her sacrifices and her expenditure.

About this time a measure was adopted by Napoleon, which gave the king the most lively concern. An imperial decree instituted military governments in the provinces of Spain, under which the French general of division became president of the administrative junta, and the Spanish intendant was reduced to the station of a simple secretary of the body in which he had formerly presided. This state of things could not fail to destroy all the good which had been effected by the campaign of Andalusia. Abandoning now all hopes of bringing about the surrender of Cadiz by the conciliatory measures which he had employed, Joseph left Port St. Mary's to visit the eastern part of Andalusia, and directed his route through Ronda. In the course of this journey he expressed to the deputations from Grenada, Jaën, and Malaga, his firm resolution never to consent to any dismemberment of the monarchy or to any sacrifice whatever of national independence—very far, in these particulars, from entertaining the sentiments of Ferdinand, who had actually proposed to the emperor a cession of the provinces on the Ebro. On his return to Seville, the king issued decrees prescribing territorial divisions, organizing the civil administration within these districts, and directing the formation of national guards. He then entrusted the command of the army of Andalusia to Marshal Soult, and returned to Madrid after an absence of five months. The duke of Santa Fé and the marquis of Almenara, two of his ministers, were despatched to Paris. The latter was the bearer of a letter from Joseph, announcing his determination to leave a country where he could neither do good nor prevent evil if the system of military governments was not abandoned. The situation of the emperor was then so complicated and critical that he could not yield to the wishes of the king. King Joseph proceeded in person to Paris, where he had an interview with his brother. The emperor induced him to return to Spain, by the positive assurance which he gave him, that the military governments should soon cease; that the system had already wrought a good effect upon the English government, who offered to retire from Portugal if the French troops would evacuate Spain, and to recognise King Joseph if the Spanish nation recognised him, and France would also consent, on her part, to recognise the house of Braganza in Portugal. The different military districts were to be put under the command of King Joseph; the cortes convened, and the French armies to evacuate

Spain as soon as the king was satisfied that their presence was no longer necessary.

The subsequent events of this war must be rapidly touched. Marshal Massena, who had entered Portugal at the head of an army of 75,000 men, after taking Almeida and Ciudad Rodrigo, and defeating the English at Busaco, was compelled in March 1811 to withdraw his troops, then reduced by sickness, forced marches, and want of provisions, to 35,000 men. Marshal Soult laid siege to Badajoz, which surrendered on the 19th March. Marshal Victor had been attacked in his lines at Chiclana. The English had kept alive the flames of insurrection by landing troops, money and arms at Carthagená and Alicant, and encouraged by every means in their power the resistance of Cadiz. It was at this moment that the first rumours were circulated of the approaching rupture between France and Russia. The English, no longer held in check by the army of Portugal, had occupied Ciudad Rodrigo and Badajoz. Marshal Victor, the remainder of the imperial guard, and several regiments of the line, were re-called to France. All hopes of a negotiation with England had vanished; partial insurrections multiplied, new guerillas were formed; supported by the gold of this country and the exasperation of the inhabitants, the communications became more difficult than at any previous time. Navarre was ravaged by the band of Mina, now swelled to an army; famine was laying waste the capital and the provinces. Such was the face of affairs when the emperor Napoleon, setting out on his Russian campaign, invested King Joseph with the command of the armies. Under such circumstances, honour no longer permitted him to retire from a post of difficulty and danger. Marshal Jourdan returned to him.

In the early part of May 1812, the English, having taken the fortifications erected for the defence of the Tagus, threatened at the same time the army of the south and the army of Portugal. Early in July Joseph marched from Madrid with the guard and the troops of the neighbouring garrisons, directed his march on Penaranda, and joined Marshal Marmont, who had passed the Tormes on the 20th, and been defeated at Arapiles. In November he returned to Madrid. Having remained a single day at Madrid, Joseph passed the Tormes, and found himself on the battle field of Arapiles, at the head of more than 100,000 men; but the rain, which had been falling in torrents, had rendered the roads nearly impassable, and greatly retarded the movements of the army of the south. The English profited by this delay, and hurried their retreat by the road of Ciudad Rodrigo, which still remained unoccupied. The success of this day was limited to 5000 or 6000 prisoners, among whom was the English general of cavalry, Lord Paget. The king entered Salamanca with the army of Portugal. The British retired to Portugal, and the French army soon found itself weakened by the loss of more than 30,000 men, who received orders to repass the Pyrenees. He soon after received a positive order from the emperor to leave Madrid and take up the line of the Duero. The state of affairs in Russia made obedience to this order a matter of positive duty, and the departure of the king for Valladolid took place instantly. As soon as Madrid was abandoned, the fires of insurrection were kindled and raged with greater violence than ever. Spaniards, English, Portuguese, all advanced

upon the French army, then enfeebled by the loss of its best officers, who had been withdrawn to aid in the formation of new corps in France. After the battle of Vittoria Joseph returned to Paris, where his brother, the emperor, again left him, with the title of his lieutenant, when he departed to put himself at the head of that army, which, after assailing all the armies of Europe in their respective countries, was at last reduced to defend itself on its own soil.

The empress Maria Louisa was left regent of the empire. Joseph, as the emperor's lieutenant, had the honour of the military command. Joseph was left as counsellor of the empress, together with the prince arch-chancellor of the empire, Cambacères. The empress had instructions to follow the advice of these counsellors. If the events of the war should intercept all communication between the imperial head-quarters and the capital, and the enemy make his way to Paris, Joseph had verbal instructions from the emperor; and after his departure, a written order to remove the king of Rome and the empress, to proceed with them to the Loire, and to cause them to be accompanied by the grand dignitaries, the ministers, the officers of the senate, the legislative body, and the council of state. Joseph soon after had ample reason to acknowledge the judgment and foresight which had dictated these precautions. Reserve was thrown aside, and many senators no longer dissembled their opinions in favour of proclaiming Napoleon the second, or the regency of the empress, and the lieutenantancy of Joseph under an infant emperor. Joseph then made known to his brother the necessity of concluding peace upon any terms; and when the slender corps of marshals Marmont and Mortier were brought under the walls of Paris, pursued by an enemy vastly superior, and all communication between the emperor and his capital was cut off, Joseph communicated to the empress and the arch-chancellor the last letter from his brother, which recognised and confirmed his former directions. The ministers, the grand dignitaries, and presidents of the sections of the council, were assembled, to the number of twenty-two members. They all admitted that the case provided for had occurred; and that it was better to leave Paris to its own authorities, and to its own particular forces, than to hazard the fate of the emperor, and thereby endanger that of the entire empire. The minister of war (the duke of Feltre) declared that there were no arms ready, that they had been daily given out to the new levies as they departed, and were now exhausted. Thus it was unanimously decided that the government should be removed to Chartres, and thence to the Loire. But Joseph remarked, they were yet uninformed as to what enemy they had to do with,—that the advancing forces might be reconnoitred, and measures adopted on the result of that reconnoissance. He offered not to set out with the empress. The ministers of war, of the administration of war, and of the marine, concurred with him, and promised not to return to the empress except in the last extremity, when they should be convinced that they were retiring before the entire mass of the allied armies. If, on the contrary, upon reconnoitring it should appear that they had only a detached corps to resist, which they could destroy without exposing the capital, they would support the two marshals with all the means under their controul. It was in the hope that the last hypothesis might

prove correct, that the proclamation of King Joseph was drawn up and published that evening. The empress, her son, the court, the members of the government, the ministers and M. de la Bouillerie, treasurer of the crown, with the funds entrusted to him, took their departure.

During the night the marshals were informed of the enemy's approach. The next morning they were in conflict with the out-posts. Joseph, accompanied by the ministers of war and of the marine, agreeably to the resolution of the council, left Paris to investigate the actual state of affairs more closely. The national guards were put under arms to maintain internal tranquillity, and posted at the different gates to prevent any insult which might be attempted by detached corps. In the morning Marshal Marmont, having sent the king information that he was too weak to repel the troops then before him, the king directed Marshal Mortier to reinforce him; an order which was promptly complied with. In the afternoon an officer of engineers of the French army, taken prisoner by the enemy, had been admitted to the presence of the emperor of Russia, the king of Prussia, and the Austrian generalissimo. This officer had seen the enemy's army drawn out, and came to make a report to the marshals, and afterwards to the king. Marshal Marmont declared that he could not hold out longer than four o'clock, nor prevent Paris from being inundated with irregular troops during the night. He demanded authority to treat for the preservation of the capital and the security of its population. Some legions of the national guards solicited permission to place themselves in line of battle outside the walls; it was refused, lest Paris might be deprived of their support where it could alone be useful—in the interior, and throughout the immense extent of its enclosure. The decision of the council under the presidency of the empress regent was literally carried into execution under these trying circumstances, when the ministers, who were with the king, admitted that the greatest part of the allied forces was under the walls of Paris. They did not leave Paris until four o'clock, when they learned that the enemy had occupied St. Denis and that in a few moments more it would be too late to cross the Seine. Joseph, passing through Versailles, ordered the cavalry at the depots in that city to follow him, and proceeded to Chartres, where he found the empress, and thence to Blois.

Great censure has been cast upon King Joseph for his proclamation, in which he assured the national guard that he was not to accompany the empress, but would remain at Paris. There is little justice in the exceptions taken to his conduct. No one can doubt that such were his intentions, and those of the council which was then held, and the object of the immediate annunciation of their views can be readily conceived. But a few hours afterwards every thing was changed by the arrival of the whole allied army under the walls of Paris. There remained to King Joseph the choice of three courses; to accompany the empress to the point designated by the emperor, to remain at Paris, or to follow the army of Marshal Marmont. In following the regent he did his duty. Subjected to the commands of the emperor, he was bound to obey them, and not to surrender his wife and son to the enemy. His orders in a given case, which actually occurred, were precise to assemble on

the Loire the national authorities around the regent, and to collect at the same point all the forces he could obtain. This order was punctually complied with; the armies of the dukes of Castiglione, Albufera and Dalmatia, were yet untouched; the armies of Arragon and of Spain were disposed to receive any impulse which the emperor chose to give them, but the idea of resistance was abandoned, and the abdication of Fontainebleau left Joseph no choice but a retirement to Switzerland, where he remained until March 19, 1815, the day on which he learned the arrival of his brother Napoleon at Grenoble. He set out alone with his children, and traversed all France, from Switzerland to Paris, constantly accompanied by the cries of the people—"Long live Napoleon, the emperor of our choice! let him remember that the nation desires him alone! no aristocracy! nothing of the old regime!" The first person Joseph saw on arriving in Paris was the generous patriot, who, some months previously, had received from him the perilous mission to proceed to Elba, and to warn Napoleon of the assassins who had been sent against him. He had arrived in time, so that the two first who landed were arrested, and Napoleon saved. Two celebrated personages contended for the honour of having saved Napoleon; one was Madame de Staël, who, as the first person informed of the plot, hastened to give notice of it to Joseph, and proposed to go herself to Elba; the other was Talma, who accompanied her on her visit. Joseph presented to Napoleon the son of Madame de Staël, Augustus, who was cordially received by the emperor. Joseph also introduced Benjamin Constant to Napoleon during the hundred days, who drew up the additional articles. Lafayette discussed several times with them the subject of the hereditary peerage, which Napoleon retained because he found it at his return from Elba, and because he had enemies enough without making new ones in the chamber of peers. After the battle of Waterloo, Joseph, when consulted by Napoleon, gave the same advice which Carnot and Merlin de Douai had already given: "Return to the army, and let us contend with the chamber." And this was the last act of his public life, as he almost immediately retired into obscurity.

JOSEPHINE, ROSE TASCHER DE LA PAGENIE.—This distinguished lady was born on the 24th of June, 1763, on the island of Martinique, and while very young was taken to France by her father to marry the viscount Beauharnois. Two children were the fruits of this union, which during one period was not altogether felicitous. Certain suspicions took place on the part of the husband, the tribunals were appealed to, and a separation was demanded. These at length decreed that the facts adduced were too uncertain to obtain a decree of so serious a nature, and the husband and wife were at length prevailed upon to resume their former cordiality and intercourse.

They now re-appeared at court, where they had always been well received. Madame de Beauharnois, who was a great favourite with the queen, about this time began to be considered one of the handsomest women in the royal circle at Versailles, and entered into all the dissipations of that period. But the assembling of the states-general, and the events that already seemed to prognosticate an approaching revolution, soon banished every idea of gaiety and pleasure from the palace of the kings of France. Her majesty often testified her fears on this subject in

private to Josephine, little dreaming that her friend should one day become her successor; while the latter, in her turn, evinced great uneasiness at the conduct of her brother-in-law, the marquis de Beauharnois, who then occupied a seat among the representatives of the nation."

This general inquietude was soon followed by a private alarm. Her own husband, who had been for some time a field-officer, and always evinced an eager desire for glory, was now about to join the army in consequence of an unexpected declaration of war. He accordingly repaired to his regiment, and soon attained the rank of general. But although attached to, and beloved in turn by, Louis XVI., he readily perceived that this monarch was destined, at no distant period, to lose that phantom of power which he then enjoyed, together with his life at one and the same moment. When all this occurred, as had been foreseen, M. de Beauharnois himself was denounced as an aristocrat by his own soldiers, deprived of his commission by superior authority, and conducted to Paris, where he was placed in a state of arrest. Josephine, the sensibility of whose heart is well known, immediately interposed, and adopted every possible mode, both through the medium of friends as well as by her own personal solicitations, to obtain his liberty. Her husband, on his part, was deeply moved by the affectionate attachment and unceasing assiduity of his wife, who was not only soon after denied the pleasure of consoling her unhappy husband, but actually deprived of her own liberty, having been seized and confined at the convent of the Carmelites. In the course of a few weeks the unfortunate vicomte was carried before the revolutionary tribunal, which instantly condemned him to death. He perished with great courage; not, however, without shedding tears at the fate of his wife and children; for he could not possibly dream that his scaffold was destined to be the first step to that throne on which his widow was fated to sit.

Dr. Memes has published so interesting an account of the empress Josephine, that we gladly avail ourselves of his valuable "Memoirs," which throw much new light on the domestic life of this accomplished female. Josephine, we need not remind our readers, was a Creole. The native elegance of mind and manner so often possessed by these transatlantic Europeans, their aptness in the acquisition of all external accomplishments, their warm temperament modified and restrained by natural self-possession, are generally known:—"As regards accomplishments, she played, especially on the harp, and sung, with exquisite feeling, and with science sufficient to render listening an intellectual pleasure without exciting the surmise that the cultivation of an attainment less showy, but more valuable, had been sacrificed. Her dancing is said to have been perfect. An eye witness describes her light form, rising scarcely above the middle size, as seeming in its faultless symmetry to float rather than to move—the very personation of grace. She exercised her pencil, and—though such be now antiquated for an *élégante*—her needle and embroidering frame, with beautiful address. 'A love of flowers,' that truly feminine aspiration, and, according to a master in elegance and virtue, infallible index of purity of heart, was with her no uninstructed admiration. She had early cultivated a knowledge of botany, a study of all others especially adapted to the female mind, which exercises without fatiguing the

understanding, and leads the thoughts to hold converse with heaven through the sweetest objects of earth. To the empress Josephine, France and Europe are indebted for one of the most beautiful of vegetable productions,—the *Camelie*. In all to which the empire of woman's taste rightly extends, hers was exquisitely just, and simple as it was refined. Her sense of the becoming and the proper in all things, and under every variety of circumstances, appeared native and intuitive. She read delightfully; and nature had been here peculiarly propitious, for so harmonious were the tones of her voice, even in the most ordinary conversation, that instances are common of those who, coming unexpectedly and unseen, within their influence, have remained as if suddenly fascinated and spell-bound till the sounds ceased or fears of discovery forced the listener away. Like the harp of David on the troubled breast of Israel's king, this charm is known to have wrought powerfully upon Napoleon. His own admission was, 'The first applause of the French people sounded to my ear sweet as the voice of Josephine.'

"The preceding attainments, perhaps, scarcely extend beyond mere accomplishment. They show a mental organization, however, singularly delicate, susceptible, and refined; and, unless we are deceived, the reader will discover, in the numerous letters of the present volume, proofs, not only of a mind highly cultivated, but, of a soundness and expanse of judgment for which Josephine has not always obtained credit. In the originals is found a graceful ease, not inferior to the playful elegance of De Sevigné, combined with a simplicity and unpretending expression of sentiment, which the more ambitious compositions of the latter frequently want. Many of these, too, were written while she was still very young and in the midst of tribulation."

A circumstance, trifling in itself, but for after events deserves to be recorded here—the prophetic intimation to Josephine, when little advanced beyond childhood, of her future high destinies. We need not express our utter rejection of the supposition that the prophetess believed her own prediction. We see, in the course of Josephine's story, that her remembrance of it aided to direct the course of events to its fulfilment. Still its coincidence, with a course of events which could be so directed, remains a startling and unaccountable fact.

"One day, some time before my first marriage, while taking my usual walk, I observed a number of negro girls assembled round an old woman, engaged in telling their fortunes. I drew near to observe their proceedings. The old sibyl, on beholding me, uttered a loud exclamation, and almost by force seized my hand. She appeared to be under the greatest agitation. Amused at these absurdities, as I thought them, I allowed her to proceed, saying, 'So you discover something extraordinary in my destiny?'—'Yes.'—'Is happiness or misfortune to be my lot?'—'Misfortune. Ah, stop!—and happiness too.'—'You take care not to commit yourself, my good dame; your oracles are not the most intelligible.'—'I am not permitted to render them more clear,' said the woman, raising her eyes with a mysterious expression towards heaven. 'But to the point,' replied I, for my curiosity began to be excited; 'What read you concerning me in futurity?'—'What do I see in the future? You will not believe me if I speak.'—'Yes, indeed, I assure you. Come, my good mother, what am I to

fear and hope?"—On your own head be it then; listen: you will be married soon: that union will not be happy; you will become a widow, and then—then you will be queen of France! Some happy years will be yours; but you will die in an hospital, amid civil commotion."

"On concluding these words," continued Josephine, "the old woman burst from the crowd, and hurried away, as fast as her limbs, enfeebled by age, would permit. I forbade the bystanders to molest or banter the pretended prophetic on this ridiculous prediction; and took occasion, from the seeming absurdity of the whole proceeding, to caution the young negresses how they gave heed to such matters. Henceforth, I thought of the affair only to laugh at it with my relatives."

We have already stated that Josephine was arrested and the merited but dreadful end of Robespierre alone saved Madame de Beauharnais, with about seventy others, destined for the usual morning sacrifice to the "deities of Reason and Revolution." Had we not her own confession, it might be deemed altogether incredible that, under such circumstances, Josephine's thoughts should involuntarily revert to, and dwell upon, the singular prediction which has been reported in the commencement of these memoirs. "In spite of myself," said the empress, long after, to her ladies, "I incessantly revolved in my mind this prophecy. Accustomed thus to exercise imagination, every thing that had been told me began to appear less absurd, and finally terminated in my almost certain belief. One morning the jailer entered the chamber, which served as a bedroom for the duchess d'Aiguillon, myself, and two other ladies, telling me that he came to take away my flock bed, in order to give it to another captive. 'How give it?' eagerly interrupted Madame d'Aiguillon; is then Madame de Beauharnais to have a better?"—"No, no; she will not need one," replied the wretch, with an atrocious laugh; 'she is to be taken to a new lodging, and from thence to the guillotine.' At these words my companions in misfortune set up a loud lamentation. I consoled them in the best manner I could. At length, wearied by their continued bewailings, I told them that there was not even common sense in their grief; that not only should I not die, but that I should become queen of France. 'Why, then, do you not appoint your household?' asked Madame d'Aiguillon, with something like resentment. 'Ah! that is true—I had forgotten. Well, my dear, you shall be maid of honour; I promise you the situation.' Upon this the tears of these ladies flowed more abundantly; for they thought, on seeing my coolness at such a crisis, that misfortune had affected my reason. I do assure you," continued the empress addressing the auditory, "that I did not affect a courage which I felt not; for I was even then persuaded that my oracle was about to be realized."

But we must now proceed to detail the means by which the future empress of France escaped from the guillotine beneath whose stroke her husband had suffered. The death of Robespierre, and the reprieve, at least, of his victims, was announced to the prisoners next morning. Josephine thus states the circumstances:—"Madame d'Aiguillon, feeling herself ill from the thoughts of my approaching execution, so abruptly communicated, I drew her towards the window, which I opened, in order to admit air. I then perceived a woman of the lower class, who was making

many gestures to us, which we could not understand. Every moment she caught and held up her gown, without our finding it possible to comprehend her meaning. Observing her to persevere, I cried out 'Robe' (a gown), on which she made a sign of affirmation. Then, taking up a stone, she put it in her apron, and again held up her gown to us, raising the stone in the other hand; 'pierre' (stone), I called out to her in return. Her joy was extreme, on perceiving, to a certainty, that we at length understood her. Putting the stone into her gown, she several times, and with great eagerness, made the sign of cutting a throat, and fell a-dancing and shouting. This singular pantomime excited in our minds an emotion which it is impossible to describe, since we dared not to think that the woman thus intimated to us the death of Robespierre. At the very moment, while thus between hope and fear, we heard a great noise in the corridor, and the formidable voice of the turnkey, who was speaking to his dog, and, in the act of kicking him away, cried out, 'Go, you d—d brute of a Robespierre!' This energetic phraseology proved we had no longer any thing to fear, and that France was saved. In fact, a few minutes after we beheld our companions in misfortune burst into our apartment, to give us the details of that grand event! It was the 9th Thermidor! My flock bed was restored to me, and, upon this couch, I passed the most delightful night of my life. I fell asleep, after saying to my companions,—'You see I am not guillotined—and I shall yet be queen of France.'"

We now come to the period of the marriage of Josephine with Napoleon, who was then but a young soldier of fortune. The following letter will best show the state of her affections towards Napoleon, and the views which induced her to accept his hand:

"My dear friend,—I am urged to marry again: my friends counsel the measure, my aunt almost lays her injunctions upon me to the same effect, and my children entreat my compliance. Why are you not here to give me your advice in this important conjuncture? to persuade me that I ought to consent to an union, which must put an end to the irksomeness of my present position? Your friendship, in which I have already experienced so much to praise, would render you clear-sighted for my interests; and I should decide without hesitation as soon as you had spoken. You have met General Bonaparte in my house. Well!—he it is who would supply a father's place to the orphans of Alexander de Beauharnais, and a husband's to his widow.

"Do you love him?" you will ask. Not exactly. "You then dislike him?" Not quite so bad; but I find myself in that state of indifference, which is any thing but agreeable, and which, to devotees in religion, gives more trouble than all their other peccadilloes. Love, being a species of worship, also requires that one feel very differently from all this; and hence the need I have of your advice, which might fix the perpetual irresolution of my feeble character. To assume a determination has ever appeared fatiguing to my Creole supineness, which finds it infinitely more convenient to follow the will of others.

"I admire the general's courage, the extent of his information—for, on all subjects, he talks equally well—and the quickness of his judgment, which enables him to seize the thoughts of others almost

before they are expressed; but, I confess it, I shrink from the despotism he seems desirous of exercising over all who approach him. His searching glance has something singular and inexplicable, which imposes even on our directors: judge if it may not intimidate a woman! Even—what ought to please me—the force of a passion, described with an energy that leaves not a doubt of his sincerity, is precisely the cause which arrests the consent I am often on the point of pronouncing.

“Being now past the heyday of youth, can I hope long to preserve that ardour of attachment which in the general resembles a fit of delirium? If, after our union, he should cease to love me, will he not reproach me with what he will have sacrificed for my sake? will he not regret a more brilliant marriage which he might have contracted? What shall I then reply?—what shall I do? I shall weep. Excellent resource! you will say. Good heavens! I know that all this can serve no end; but it has ever been thus; tears are the only resource left me when this poor heart, so easily chilled, has suffered. Write quickly, and do not fear to scold me should you judge that I am wrong. You know that whatever comes from your pen will be taken in good part.

“Barras gives assurance that if I marry the general he will so contrive as to have him appointed to the command of the army of Italy. Yesterday, Bonaparte, speaking of this favour, which already excites murmuring among his fellow soldiers, though it be as yet only a promise, said to me, ‘Think they then I have need of their protection to arrive at power? Egregious mistake! They will all be but too happy one day should I condescend to grant them mine. My sword is by my side, and with it I will go far.’

What say you to this security of success? is it not a proof of confidence springing from an excess of vanity? A general of brigade protect the heads of government! that, truly, is an event highly probable! I know not how it is, but sometimes this waywardness gains upon me to such a degree, that almost I believe possible whatever this singular man may take it in his head to attempt; and with his imagination, who can calculate what he will not undertake?

“Here we all regret you, and console ourselves for your prolonged absence only by thinking of you every minute, and by endeavouring to follow you step by step through the beautiful country you are now traversing. Were I sure of meeting you in Italy, I would get married to-morrow, upon condition of following the general; but we might, perhaps, cross each other on the route: thus I deem it more prudent to wait for your reply before taking my determination. Speed, then, your answer—and your return still more.”

This is quite in keeping with Josephine's character, as it has already been developed—gentle and elegant, but always self-possessed—weighing all her actions, both with a view to their consequences, and the light in which others would regard them—a character in which delightful natural dispositions were worked up into something highly artificial—something which would have been yet more pleasing than it was, but that the means by which it had been made so were too apparent.

After her marriage with Napoleon she remained for some time in France, but afterwards joined her husband at Milan, where she spent some of the hap-

piest days of her life. Previous to Bonaparte ascending the throne of France, she wrote him the following letter:—

“My Friend,—For the tenth time, perhaps, have I perused your letter, and must confess that the amazement into which it threw me subsides only to give place to sorrow and apprehension. You persist, then, in the resolution to re-establish the throne of France, and yet not to restore those who were deposed by the revolution, but to seat yourself thereon? What power, you ask—what grandeur—and above all, what advantage—in this design! And, for my part, I venture to reply, What obstacles present themselves to its success—how great the sacrifices which must be made before its accomplishment can be secured—how far beyond calculation the consequences, should it be realized! But let us admit that your purpose does succeed, will your views terminate with the founding of a new empire? Will not your power, opposed, as to a certainty it must be, by the neighbouring states, draw you into a war with them? This will probably end in their ruin. Will not their neighbours, beholding these effects, combine in turn for your destruction? While abroad such is the state of things, at home how numerous the envious and discontented—how many plots to disconcert and conspiracies to punish! Kings will despise you as an upstart, the people will hate you as an usurper, your equals as a tyrant; none will comprehend the utility of your elevation, all will assign it to ambition or to pride. Doubtless there will not be wanting slaves who will cringe to your power, until backed by another, which they esteem a more formidable influence, they will seek to elevate themselves on your ruin. Fortunate also beyond hope, if steel—if poison!—a wife, a friend, dare not give pause to alarmed imagination on images so dreadful. This brings me to myself, a subject about which my concern would be small indeed if I only were interested. But with the throne, will there not likewise arise the desire of new alliances? will you not consider it necessary, by new family ties, to provide for the more effectual security of that throne? Oh! whatever such connexions might be, could they prove, like those formed at first in propriety, and which affections the most tender have since consecrated! I stop at this perspective, which fear—must I say love—traces in an appalling futurity. You have alarmed me by your ambitious flight: restore my confidence by your return to moderation.”

Like all *Cassandras*, she was unheeded. Bonaparte had as little of the self-tormenting metaphysics and cold relents of *Macbeth* as Josephine of the masculine spirit of his spouse. The day came which was to realize the dream that had haunted her from youth. Dr. *Memes's* picture of her coronation is one of his most fortunate efforts:—

“At eleven precisely, the cavalcade moved from the *Tuileries* towards *Notre Dame*. The imperial carriage, drawn by eight bays, attracted general attention; it had been constructed for the occasion, in a very ingenious manner, the entire panelling being of glass, a circumstance which accounts for the mistake of their majesties having seated themselves like criminals, with their backs to the horses; but where so many omens and predictions have figured, it is surprising that the fact has been omitted. Josephine was the first to discover this error, which she instantly rectified, by lightly assuming the proper position;

saying at the same time to her companion, 'Mon ami, unless you prefer riding *vis-à-vis*, this is your seat,' pointing to the rich cushion on the right. Napoleon, laughing heartily at his blunder, moved to the place indicated. The procession advanced, attended by ten thousand horsemen, the flower of 'Gallic chivalry,' who defiled between double lines of infantry, selected from the bravest soldiers, extending about a mile and a half, while more than four hundred thousand spectators filled up every space whence a glance could be obtained. The thunders of innumerable artillery, the acclamations of the assembled multitude, expressed the general enthusiasm; and, as if to light up the gorgeous spectacle, the sun suddenly broke through the mists which till then had hung heavily over the city. The cortège stopped at the archiepiscopal palace, whence a temporary covered gallery, hung with the banners of the sixteen cohorts of the 'legion of honour,' conducted into the interior of the cathedral and to the throne. To this latter was an ascent of twenty-two semicircular steps covered with blue cloth, gemmed with golden bees, and crowded with the grand officers of the empire. On the throne, itself hung with crimson velvet, under a canopy of the same, appeared Napoleon, with Josephine on his left, attended by the princesses of the empire, and on his right, his two brothers, with the arch-chancellor and arch-treasurer. The religious ceremony continued nearly four hours, enlivened by music composed for the occasion chiefly by Paisiello, and sung by upwards of three hundred performers. The martial band was still more numerous, which executed, in the intervals, marches, afterwards adopted and still used in the armies of France. One of these, composed by Le Seur, for the army destined to invade our own shores, when now performed for the first time, is said to have aroused a visible emotion even in that august assembly. Alas! how cold are the hearts that then beat high with hope! how few, how very few survive of those upon whom the impulse wrought most stirringly! and, from the banks of the Tagus to the streams of the Volga, how varied the clime that settles on their graves! Yet not many years have passed—the story is contemporary history—the grand actor might have been amongst us not an aged man: be the moral, therefore, more impressively ours. Were all such thoughts of this life's greatness absent from Josephine's mind? It would appear not. Napoleon, at that part of the ceremony, stood up, laid his hand upon the imperial crown,—a simple diadem of gold wrought into a chaplet of interwoven oak and laurel,—and placed it on his head. He had even given express directions that Pius should not touch it. Popes had pretended that all crowns were bestowed by them; and perhaps the new emperor dreaded the belief that he had brought his holiness from Rome with reference to these ancient pretensions. He wished therefore to demonstrate that the right to reign originated in his own power, and that at his coronation the pope was but the bishop of Rome. Afterwards, Napoleon took the crown destined for the empress, and first putting it for an instant on his own, placed it upon his consort's brow as she knelt before him on the platform of the throne. The appearance of Josephine was at this moment most touching. Even then she had not forgotten that she was once 'an obscure woman;' tears of deep emotion fell from her eyes; she remained for a space kneeling, with hands crossed upon her bosom, then slowly and gracefully

rising, fixed upon her husband a look of gratitude and tenderness. Napoleon returned the glance. It was a silent but conscious interchange of the hopes, the promises, and the memories of years!"

The ridicule which has attached to the manners of Napoleon's court has been greatly exaggerated, and from evident design, in writings published by renegade courtiers since the restoration. We have Josephine's own authority, whose judgment and taste are indisputable, that the emperor himself, from the first, observed with ease the habitudes of his rank. "Most certainly," such are her own words when conversing in the little circle of her own exiled court, "most truly do I regard the emperor as a man who has no equal. In camps, at the council board, they find him extraordinary, but in the interior of his palace he ever appeared to me still more remarkable. I confess that, notwithstanding my experience of the world and its usages, the commencement of the imperial forms embarrassed me. The emperor on the contrary made a sport, a pleasure of them, and in all the palace he alone, beyond contradiction, best understood their observances. Lannes, who enjoyed full license of speech, made mockery of what he termed 'the hypocrisies of political worship; but estimating such things at their real value, the emperor regards them under relations more elevated, and conceives that in the eyes of the people they conduce to restore to power the majesty and ascendancy which so many years of anarchy had destroyed. He grants in truth that their principal influence springs from the personal qualities of those invested with the supreme rule; but he maintains that without equalling or superseding these qualities ceremonial institutions may supply their place with advantage. In supporting such a system Napoleon shows himself at least very disinterested, for who can stand less in need of appliances to impose upon men than one who seems born to govern? In proof of his argument, he adduces the example of a crowd of princes who have reigned, so to speak, rather seated or lying than standing upright, but whose couch, guarded by the barriers of etiquette, has been respected like a sanctuary."

Josephine on all occasions evinced a strong desire to be permitted to accompany her husband on his military expeditions. On his part, Napoleon loved to indulge this wish; and they differed only as to its being always possible. On one occasion however, after promising to take the empress, something having occurred to alter his intention, and to require speed, he resolved on departing privately without his companion. Fixing accordingly one o'clock in the morning, the hour when she was most likely to be asleep, for the time of setting out, he was just about to step into the carriage, when Josephine, in most piteous plight, threw herself into his arms. By some means she had obtained information of what was going forward, and called her women; but, impatient of any delay, had got up without waiting for them, and throwing about her the first drapery she could lay hands upon, had rushed down stairs. A moment later, and Napoleon would have been off like lightning; but he could rarely withstand the tears of his wife, so, placing her along the bottom of the carriage, he covered her with his travelling pelisse, giving orders himself about the clothes and proper attendants of the empress."

But we must now revert to the domestic privacy

of the empress. "From about midday till half-past two or three o'clock was passed by the empress in her apartments, working, conversing, and reading with her ladies. We have already mentioned how beautifully Josephine embroidered, and this accomplishment continued to be her chief amusement, much of the most splendid furniture in the various palaces being covered with pieces executed by her own hand, with the assistance of her ladies. While the rest were at work, one of the ladies, permanently appointed to the office of reader, read aloud at such times as conversation was not preferred. When any literary production gave more than usual pleasure, it was immediately begun from the commencement and perused a second time. The volumes selected were interesting but useful books, from the standard writers, and all new publications of repute. Works of taste and imagination constituted of course a large portion of these public readings; novels however, unless in particular instances, were excluded. Napoleon, indeed, disliked to see novels any where about his palaces; and traversing the antechambers, if he found any of his attendants reading, he seldom failed to examine the book, and if a novel, condemned it to the flames without mercy. The individual too was sure of a lecture, which usually began with the question,—'So, you could find no better reading than that?' While the empress and her ladies were engaged as described, the emperor was in the habit of looking in upon the fair party at intervals throughout the morning. On these occasions he is described as being extremely amiable, amusing, and in high spirits; for he rarely visited the saloon in the morning unless when in good humour, or, in his own phrase, 'when things went well.' Josephine, too though more rarely, would venture into his cabinet, but when he required her presence for any conference of importance, Napoleon knocked at the little door of private communication. The empress joyfully obeyed the signal, and these interviews, generally taking place in the evening, were often continued so long that on returning she found all her ladies asleep."

A favourite amusement of Josephine and Napoleon was a game called "prisoners"—the same as what our schoolboys call "French and English," or "Deals." There is something very striking in the account of the last opportunity they had of indulging in this relaxation:—"The interval between the 15th of August and the 27th of September, when the interview at Erfurth took place, was passed chiefly at St. Cloud, and might nearly be called the last of Josephine's happiness in Napoleon's society. Only a few days before his departure, Josephine and Napoleon, with their usual familiars, played a final game at the favourite amusement of 'prisoners.' It was dark night before the party finished, and footmen with torches were in attendance, to give light to the players. The effect could not have been without interest; the blaze of the torches now throwing bold, broad, and rich illumination upon the illustrious group as they assembled in front of the chateau, previous to each run, again flinging scattered and flickering lights upon the lawn, the trees, flowers, and rich dresses of the ladies, as the torchbearers dispersed, following irregularly the course of the runners. How closely resembling the lives of some of the noblest there,—this crossing, commingling, disappearing, sometimes in light, anon in darkness;

here all starting away amid brightness and expectation—there, a figure outstripping all others, only to be lost in gloom! But there was then no moralizing; all were joyous and for the moment artless, as if it had not been a court. Napoleon as usual fell, though only once, as he was running for Josephine. Being thus taken captive, he was placed in *ban*, which he broke as soon as he recovered breath, set again to running, and released the empress amid loud huzzas from his own, and shouts of 'fair play' from the opposite party. Thus ended the last repetition of youthful sports."

From what we have seen of the domestic life of Napoleon and Josephine no doubt can be entertained of his attachment to that lady. But his mind was constantly haunted by dreams of ambition. He panted for an heir, and wished that the mother should be eminently illustrious in point of birth, so that mankind might be inspired with respect both for himself and his progeny. Accordingly, in an evil hour, he pitched on a daughter of the emperor of Austria, and resolved on divorcing a consort whose marriage had been "secretly blessed by the pope," who had been crowned by his holiness, who had been the wife of Napoleon during fourteen whole years, and who could not be separated from him without a breach of his own express law, prohibiting every thing of this kind in the imperial family.

No sooner was this design resolved upon, than the necessity for communicating the painful fact to Josephine became apparent. The 30th of November, 1809, arrived, which Napoleon appears to have destined for declaring his final determination to Josephine. She had wept all day; they were to dine together as usual, and, to conceal her tears, the empress wore a large white hat, fastened under the chin, which, with its deep front, shaded the whole of the upper part of the face. Napoleon, also, had shown marks of the strongest agitation; he scarcely spoke to any one, but, with arms folded, continued at intervals to pace his library alone; from time to time a convulsive movement, attended with a hectic flush, passed for an instant across his features, and at table, when he raised his eye, it was only to look by stealth upon the empress with an expression of the deepest regret. The dinner was removed untouched—neither tasted a morsel, and the only use to which Napoleon turned his knife was to strike mechanically upon the edge of his glass, which he appeared to do unconsciously, and like one whose thoughts were painfully pre-occupied. Every thing during this sad repast seemed to presage the impending catastrophe. The officers of the court, even, who were in attendance, stood in motionless expectancy, like men who look upon a sight they feel portends evil, though what they know not; not a sound was heard beyond the noise of placing and removing the untasted viands, and the monotonous tinkling already noticed; for the emperor spoke only once to ask a question, without giving any attention to the reply. "We dined together as usual," says Josephine; "I struggled with my tears, which, notwithstanding every effort, overflowed from my eyes; I uttered not a single word during that sorrowful meal, and he broke silence but once, to ask an attendant about the weather. My sunshine, I saw, had passed away; the storm burst quickly. Directly after coffee, Bonaparte dismissed every one, and I remained alone with him." The evident

change in Bonaparte's domestic arrangements, which on this day first took place, seemed to indicate to Josephine that her cares were no longer indispensable to the happiness of her husband. She had risen as usual from table with Napoleon, whom she slowly followed into the saloon, and with a handkerchief pressed upon her mouth, to restrain the sobbing which, though inaudible, shook her whole frame. Recovering, by an effort, herself-command, Josephine prepared to pour out the coffee, when Napoleon, advancing to the page, performed the office for himself, casting upon her a regard remarked even by the attendants, and which seemed to fall with stunning import, for she remained as if stupified. The emperor having drank, returned the cup to the page, and by a sign indicated his wish to be alone, shutting with his own hand the door of the saloon. In the dining-room, separated by this door, there remained only the count de Beaumont, chief chamberlain, who continued to walk about in silence, and the favourite personal attendant of the emperor, both expecting some terrible event—an apprehension which was but too speedily confirmed by loud screams from the saloon.

We know, from Josephine's own words, what passed during this secret interview. "I watched in the changing expression of his countenance, that struggle which was in his soul. At length his features settled into stern resolve. I saw that my hour was come. His whole frame trembled, he approached, and I felt a shuddering horror come over me. He took my hand, placed it upon his heart, gazed upon me for a moment, then pronounced these fearful words,—'Josephine! my excellent Josephine! thou knowest if I have loved thee! To thee—to thee alone do I owe the only moments of happiness which I have enjoyed in this world. Josephine! my destiny overmasters my will. My dearest affections must be silent before the interests of France!'—'Say no more,' I had still strength sufficient to reply: 'I was prepared for this, but the blow is not less mortal.' More I could not utter, I cannot tell what passed within me. I believe my screams were loud. I thought reason had fled. I became unconscious of every thing, and, on returning to my senses, found I had been carried to my chamber."

When Josephine thus fainted, Napoleon hastily opened the door of the saloon, and called to the two individuals who remained in the dining-room. The opening of the door allowed them to see the empress on the floor, insensible, yet still speaking in broken murmurs—"Oh, no! you cannot surely do it!—you would not kill me!" M. de Beaumont entered on a sign from his master, and lifted in his arms the hapless Josephine, now perfectly unconscious of all that was passing. The emperor himself, taking a taper from the chimney-piece, lighted the way through a dark passage, whence there was a private staircase to the empress's sleeping-room. At first he had merely said that she had had a nervous attack, but in his increasing agitation allowed some expressions to escape whence the count first clearly perceived the nature of Josephine's calamity. When they had thus attained the private staircase it appeared too steep and narrow for M. de Beaumont, unassisted, to attempt to bear the empress down with safety. Napoleon then called the keeper of the portfolio, whose duty it was to be in constant attendance at the door of the cabinet, which also opened upon the corridor.

Giving the taper to this attendant, and directing him to precede, the emperor himself supported Josephine's limbs, and, descending last, the party thus attained the door of her bedroom. Here Napoleon dismissed both his companions, and laying the empress on the bed, rang for her women, who, on entering, found him hanging over her with an expression of the deepest anxiety.

On the 16th of the following December Napoleon assembled all the members of the senate, including the kings of Westphalia and Naples, the grand admiral, the prince viceroy of Italy, the arch-chancellor of state, the prince vice-constable, &c. After the usual ceremonies a project of a "Senatus Consultum" was read, respecting a dissolution of the marriage between the emperor Napoleon and the empress Josephine.

This deed of separation required by the two high contracting parties themselves, and approved of by a family council at which all the princes and princesses of the imperial family then at Paris had assisted, received on the same day the assent of the senate, after having been duly examined by a special commission. Jean-Jaques Regis Cambaceres, prince arch-chancellor of the empire, then stated that on the preceding day he had visited the palace of the Tuileries, attended by Michael Louis Etienne Regnault de St. Jean d'Angeley, count of the empire, minister of state, and secretary of state to the imperial family. On being introduced to the grand cabinet of the emperor, he there found his majesty the emperor and king, with her majesty the empress, attended by their majesties the kings of Holland, Westphalia, and Naples. His imperial majesty then addressed him in a speech in which he stated as follows:—"The politics of my monarchy, the interests and the wants of my people, which have constantly guided all my actions, require that after me I should leave children, inheritors of my love for my people, and of that throne on which Providence has placed me. Notwithstanding this, for several years past I have lost the hope of having children by my marriage with my well-beloved consort, the empress Josephine. This circumstance alone induces me to sacrifice the sweetest affections of my heart, in order to attend to nothing but the good of the state; and with this view I now wish the dissolution of my marriage. Arrived at the age of forty years, I may indulge the hope of living long enough to educate in my own views and sentiments the children which it may please Providence to give me. God only knows how much such a resolution has cost my heart; but there is no sacrifice beyond my courage when it is proved to me to be necessary to the welfare of France."

The empress-queen then spoke as follows:—"By the permission of our dear and august consort I ought to declare, that not preserving any hope of having children, which may fulfil the objects of his policy and the interests of France, I am pleased to afford him the greatest proof of attachment and devotion which has ever been given on earth. I possess all from his bounty; it was his hand which crowned me, and seated me on a throne, and I have received nothing but proofs of affection and love from the French people. I think I prove myself grateful in consenting to the dissolution of a marriage which heretofore was an obstacle to the welfare of France, by depriving it of the happiness of being one day governed by the descendants of a great man, evidently

raised up by Providence to efface the evils of a terrible revolution, and to re-establish the altar, the throne, and social order. But the dissolution of my marriage will in no degree change the sentiments of my heart. The emperor will ever find in me his best friend. I know how much this act, demanded by policy and by interests of a high nature, has effected my heart; but both of us exult in the sacrifice which we make for the good of the country." The instrument for dissolving the marriage was then signed by the following personages:—Napoleon, Josephine, Madame, (the mother of Bonaparte) Louis, Jerome Napoleon, Joachim Napoleon, Eugene Napoleon, Julie, Hortense, Catherine, Pauline, Caroline.

Josephine now withdrew from the palace of the Tuileries, and retired once more to Malmaison, where she was visited daily by Bonaparte until the period of his nuptials.

Henceforward Josephine's life was passed alternately at Malmaison and Navarre, and, gliding away in an equal tenour of benevolent exertion and elegant employment, offers but few incidents. A description of one day is the account of all. The villa of Malmaison, to which she first retired, from its vicinity to Paris, might be regarded as her residence of ceremony. Here she received the visits, almost the homage, of the members of the court of Napoleon and Maria Louisa; for it was quickly discovered that, however unpleasant they might be to her new rival, such visits were recommendations to the emperor's favour. A little after nine these receptions took place, and from the visitors of the morning were retained or previously invited some ten or twelve guests to breakfast at eleven. From the personages present being always among the most distinguished in Parisian society, and appearing only in uniform or official costume, these morning parties were equally agreeable and brilliant. After breakfast the empress adjourned to the saloon, where she conversed for about an hour, or walked in the delightful gallery adjoining, which contained many of the masterpieces of painting and sculpture. Of these, a few were ancient, but the greater number were the works of living artists, the most distinguished of whom were not without obligations to the patronage of Josephine; and while Gros, Girodet, Guerin, with their pencils, Spontini, Mehul, Paer, Boieldieu, with their voice or lyre, Fontanes, Arnault, Andrieu, Lemercier, with their pen or conversation, and Canova with his chisel, adorned the gallery or the parties of Malmaison, they ranked among the personal friends of the mistress of the retreat. The arrival of the carriages was the signal for the departure of the morning visitors; and after a drive of a couple of hours in the park, the empress and her suite retired to dress for dinner, to which never less than from twelve to fifteen strangers sat down. The evening passed in amusement, conversation, and music, and was always very gay, owing to the number of visitors from Paris. At eleven, tea, ices, and sweetmeats were served, and at midnight the empress retired. The apartments in which these re-unions took place were elegant and spacious, the furniture being covered with needlework on a ground of white silk, wrought by the empress and her ladies; but the residence altogether was small, an inconvenience still further increased through Josephine's veneration of every thing that had been Napoleon's. The apartment which he had occupied remained exactly as he had left it; she would not suffer even a chair

to be moved, and indeed very rarely permitted and one to enter, keeping the key herself, and dusting the articles with her own hands. On the table was a volume of history, with the page doubled down where he had finished reading; beside it lay a pen with the ink dried on the point, and a map of the world, on which he was accustomed to point out his plans to those in his confidence, and which still showed on its surface many marks of his impatience;—these Josephine would not allow to be touched on any account. By the wall stood Napoleon's camp-bed, without curtains; and above continued to hang such of his arms as he had placed there. On different pieces of furniture were hung various portions of apparel, just as he had used them last, for, among his other extraordinary ways, he had a practice, on retiring to rest, of flinging rather than taking off his clothes, casting down a coat here, a vest there, usually pitching his watch into the bed, and his hat and shoes into the farthest corner of the apartment.

The close of Josephine's life is thus described by Dr. Memes:—"A variety of grievances preyed upon Josephine's spirits, but without producing any appearance of disease till the 4th of May, when she dined at St. Leu with Hortense, Eugene, and the emperor of Russia. On returning to Malmaison she felt a general uneasiness, which, however, yielded to some gentle medicine, and the empress resumed her ordinary occupations, though evidently without the usual enjoyment. Some days after, Lord Beverley, with his two sons, breakfasted at Malmaison, and to this nobleman Josephine expressed herself warmly on the generosity of the English, who at that time, she said, alone spoke of Napoleon in a becoming manner. She complained bitterly of the ingratitude of those who, not satisfied with abandoning his falling fortunes, overwhelmed his memory with calumny. On the 10th, Alexander, with several distinguished foreigners, dined at Malmaison. Josephine, despite a headache and cold shiverings, which she laboured to conceal, did the honours of the table, and in the evening attempted even to take a part in a game of 'prisoners!' on the beautiful lawn in front of her residence. How many painful associations must have connected themselves with this amusement! Both mind and body unfitted her for such exercise, and she was constrained to become a spectator, but with such an altered appearance as to excite the alarm of her guests. To these anxious enquiries, however, she continued to reply with a faint smile, which belied the assurance 'that she was only fatigued, and would be well to-morrow.' To-morrow came, but Josephine was evidently worse; and for fourteen days her complaint, without assuming any definite form, or rendering absolute confinement necessary, was frequently attended at night with fainting, and sometimes a wandering of the mind, more from anxiety than delirium. On the 24th the empress had a slight attack of sore throat, but otherwise rallied so much as to insist on receiving the emperor of Russia and the king of Prussia, who were engaged to dine with her on that day. She did accordingly appear, but was forced to retire, and Hortense, who never left Malmaison during her mother's illness, took her place at table. Thenceforward the disease assumed a most alarming character, exhibiting symptoms of gangrenous quinsy, and its progress became fearfully rapid. On the morning of the 25th Alexander returned, and, filled with anxiety at the alteration in Josephine's appearance, requested per-

mission to send his own physician. This the empress declined; but she was attended by her own, and the two physicians attached to the households of her son and daughter. On the night of the 26-27th, a blister was applied between the shoulders, and synapisms to the feet; but though these gave some relief from pain, they effected no impression on the disease. Still Josephine, with the same angelic sweetness which had marked her whole life, endeavoured, by concealing her suffering, to soothe the anxiety of her surrounding friends. From the morning of the 26th she appears to have been perfectly sensible of her danger; for, looking then steadily upon the physician, and perceiving his alarm, she silently pressed his hand in token of consciousness and acquiescence. She even took an interest in her former occupations, and on the 27th, when informed that the celebrated flower-painter Redoubt  had come to draw two favourite plants in flower, she sent for him, extended her hand, then pushed him gently away, saying, 'You must not catch my sore throat, for next week' (this was on Wednesday) 'I hope to see you advanced with a fresh masterpiece.' The preceding night had passed in a lethargic sleep, and at ten in the morning of the 28th the physicians, after consulting, deemed it proper to prepare Eugene and Hortense for the final change. From those two cherished beings, whom she had loved so truly, Josephine heard a communication which thus lost all its bitterness. With pious resignation she received the last rites of the Romish faith from the ministrations of her grandchildren's preceptor, for the parish clergyman of Ruel happened to be absent. Late on the same day the emperor Alexander arrived, and was shown into the chamber of the sufferer, now evidently approaching the goal of all her sorrows. By the bed of their mother knelt Eugene and Hortense, too deeply moved to address the emperor; but at sight of a monarch whom she regarded with gratitude, Josephine seemed to acquire renewed strength, made a sign for all to approach, and said,—'At least I shall die regretted; I have always desired the happiness of France; I did all in my power to contribute to it; and I can say with truth to all of you now present at my last moments, that the first wife of Napoleon never caused a single tear to flow.' These were her last words, for she fell immediately after into a slumber, which continued, uninterrupted by a scarcely audible sigh, till half-past eleven on the morning of the 29th of May, when her gentle spirit calmly passed to a world of love and peace."

**JOSEPHUS, FLAVIUS.**—This ancient historian was born fifty-seven years after Christ, at Jerusalem. He was for a considerable time governor of Galilee, and afterwards obtained the command of the Jewish army, and supported with courage, with wisdom, and resolution, a siege of seven weeks, in the fortified town of Jotapha, where he was attacked by Vespasian and Titus. The town was ultimately betrayed to the enemy: 40,000 of the inhabitants were cut to pieces, and 1200 were made prisoners. Josephus was discovered in a cave, where he had concealed himself, and was given up to the Roman general, who was about to send him to Nero, when, as it is related, he predicted that Vespasian would one day enjoy the imperial dignity, and thereupon had the good fortune to obtain both freedom and favour. This induced him, when he went with Titus to Jerusalem, to advise his countrymen to submission. After the con-

quest of Jerusalem, he went with Titus to Rome, and wrote the "History of the Jewish War," of which he had been an eye-witness, in seven books, both in the Hebrew and Greek languages—a work which resembles the writings of Livy more than any other history. His "Jewish Antiquities," in twenty books, is likewise an excellent work. It contains the history of the Jews from the earliest times till near the end of the reign of Nero; but it is censured, as giving an incorrect account of the miracles of Christ, and as suppressing or altering every thing which might have given offence to the heathen. As a crafty politician, he made the predictions of a Messiah refer to Vespasian. His two books on the antiquity of the Jewish people contain valuable extracts from old historians, and are opposed to Apion, an Alexandrian grammarian, and an open adversary of the Jews.

**JOSQUIN DE PRES, ADRIAN**, one of the greatest musical composers of the fifteenth century, was born in the Netherlands, and having completed the early part of his education, he commenced studying under the celebrated Okenheim. He afterwards went to Italy, where he remained till his appointment to the office of chapel-master to Louis XII. of France, who reigned from 1498 to 1515; and it is scarcely probable that such an honour should have been conferred upon him till he had attained great eminence in his profession. It appears that Josquin was an ecclesiastic, for it is related that when he was first admitted into the service of Louis, he had been promised a benefice by his majesty; but this prince, contrary to his usual custom, for he was in general both just and liberal, forgot the promise he had made to his maestro di capella; when Josquin, after suffering great inconvenience from the shortness of the king's memory, ventured, by a singular expedient, to remind him publicly of his promise, without giving offence; for being commanded to compose a motet for the chapel royal, he chose part of the 119th psalm,—“Oh! think of thy servant as concerning thy word!” which he set in so exquisite and supplicating a manner, that it was universally admired, particularly by the king, who was not only charmed with the music, but felt the force of the words so effectually that he soon after granted his petition by conferring on him the promised preferment; for which act of justice and munificence, Josquin, with equal felicity, composed as a hymn of gratitude, another part of the same psalm, “O Lord! thou hast dealt graciously with thy servant.”

Josquin seems to have professed a certain vein of wit and humour, in addition to a musical genius, of which Glareanus has given us several instances. Among musicians Josquin was the giant of his age, and seems to have acquired an universal dominion over the affections and passions of the musical world. Indeed his compositions were as well known and as much practised throughout Europe, at the beginning of the sixteenth century, as Handel's were in England. In the music book of Prince Henry, afterwards Henry VIII., which is preserved in the Pepys collection at Cambridge, there are several of his compositions; and we are told that Anne Boleyn, during her residence in France, had collected and learned a great number of them. In a very beautiful manuscript in the British Museum, consisting of French songs of the fifteenth century, in three and four parts, there are likewise many of Josquin's compo-

sitions. It is perhaps sufficient to add, without enumerating the mere names of this great musician's professional contemporaries, either on the continent or in England, that they were every way inferior to him in talent, and that Josquin's fame has chiefly been acquired by his masses, and still more excellent motets, a large and perhaps the most valuable collection of which now extant, is preserved in the British Museum.

JOURDAN, JEAN BAPTISTE, COUNT, was born in 1762 at Limoges, where his father practised as a surgeon. He entered the military service in 1778, and fought in America; but after the peace he employed himself in commerce. In 1790 he took service in the national guard; in 1791 he commanded a battalion of volunteers in the army of the north; in May 1793 he was appointed general of brigade, and two months after, general of division. In the battle of Hondtschoote he mounted the enemy's works, at the head of his troops, and afterwards received the command of the army in the place of Houchard. On the 17th of October he gained the battle of Wattignies over the prince of Coburg; but, because he disobeyed the directions of the committee of safety, to act immediately on the offensive with newly levied and undisciplined troops, Pichegru received the chief command in his place. Jourdan, however, soon after received the command of the army of the Moselle, in the place of Hoche. He opened the campaign by the victory of Arlon, and afterwards effected the junction of his troops with the right wing of the army of the north, passed the Sambre, besieged Charleroi, and gained, June 1794, the victory of Fleurus, by which he became master of Belgium, and drove the allies beyond the Rhine. We can thus regard Jourdan as the conqueror of Belgium and of the left bank of the Rhine. In September 1795 he crossed the Rhine at Bonn, Neuwied, and Düsseldorf, while Pichegru did the same thing at Mannheim. He could not, however, maintain his station on the right bank; but he afterwards took the place of Pichegru, and undertook in 1796 the celebrated invasion of the right bank of the Rhine, in which he conquered Franconia, and pressed forward towards Bohemia and Ratisbon: but the arch-duke Charles defeated him, and his retreat towards the Rhine became at last a disorderly flight; upon which Beurnonville took the command, and Jourdan retired to Limoges as a private individual. In March 1797 he was chosen a member of the council of five hundred, and was twice their president. Being afterwards appointed general of the army of the Danube, he crossed the Rhine, in March 1799 entered Suabia, attacked the arch-duke Charles, was beaten at Stockach on March the 25th, and was forced to retreat. On the 10th of April he was superseded by Massena. In 1802 he became a member of the state council, and was chosen to the senate. In 1803 Napoleon named him general-in-chief of the army in Italy, and in 1804 marshal of France, and grand cross of the legion of honour. When, in September 1805, he declared that his army was too weak, Massena received the command of it. In 1806 he went as general-in-chief, under King Joseph, to Naples, and in 1808 he followed him as major-general in Spain. Vexed at finding every misfortune laid to his charge, he returned in 1809; but, when Napoleon undertook the war against Russia, Jourdan was ordered back

to his post in Spain. After the loss of the decisive battle of Vittoria in 1813, Jourdan lived in retirement at Rouen. In 1814 he was appointed commander of the fifteenth division. In this station he declared in favour of Louis XVIII., and on the 10th of March, 1815, he took the oath of allegiance anew to the king, and, when the latter left France, retired to his seat. Napoleon made him a peer in June, and entrusted him with the defence of Besançon. After the return of Louis, Jourdan was one of the first to declare for him. He afterwards presided instead of Moncey in the court-martial upon Marshal Ney, which declared itself incompetent to judge him. In 1816 the king of Sardinia sent him his portrait, as a token of his gratitude for his administration of Piedmont in 1800, and Louis XVIII. named him in 1817 commander of the seventh division, and in 1819 raised him to the peerage.

JOVELLANOS, GASPAR MELCHIOR DE, one of the most distinguished Spaniards of modern times. He was born at Gijon, in Asturia, on the 5th of January, 1744, of an ancient and noble family, and studied at Oviedo, Avila, and Alcala de Henares. As soon as he left college, according to the custom of the country to raise lawyers of noble birth immediately to the bench, Jovellanos was made "alcalde del crimen," or a member of the criminal branch of the "audiencia," in Seville. Count Aranda, then president of the council, becoming acquainted with him, seems to have marked him out for one of his new school of administration, in his attempts to improve the state of the country, and it is a singular circumstance, Jovellanos was the first judge in Spain who had the courage to abandon the wig; and it required all the support of the prime minister, Count Aranda, to countenance this step.

He advanced rapidly in his professional career, in the complicated system of the Spanish judiciary, and was finally appointed to the quiet and dignified station of member of the council of the military orders at Madrid. Here he became a useful member of various learned societies, particularly of the real sociedad economica matritense de amigos del pais; an institution intended for the promotion of agriculture, manufactures, and trade. In the meetings of this society he read his "Elogios" of the celebrated architect Don Ventura Rodriguez, and of King Charles III. and it was by the command of the same body that he wrote his celebrated "Informe Sobre un Proyecto de Ley Agraria," to which he mainly owes his fame. It is not true that he was prosecuted for the free principles expressed in this work. Jovellanos formed an intimate friendship with a brilliant French adventurer, Cabarrus, which proved fatal to him, for the latter became entangled in a prosecution instituted by Count Lerma, minister of finances, which led to his disgrace at court, and he was banished to his native place. Here he remained from 1790 to 1797, entirely devoted to his various studies and useful projects, including, among other things, the working of coal mines. He also founded the royal Asturian institution—his favourite project up to the last moments of his life.

Meanwhile, Don Manuel Godoy, afterwards prince of peace, had risen, or rather leaped, from the barrack to the station of prime minister. Godoy was an ignorant man, who happened to adopt the idea of being a "philosophical minister." Cabarrus became his favourite, and Jovellanos was again invited to hold

office, which he accepted with great reluctance. On his arrival at Madrid he dined with Godoy and his mistress, and we learn from one of his letters how repugnant this and the whole affair were to his stern virtue. Still the thought that he might do some good in the wretched state of the public administration kept him in public life. Jovellanos was made minister and a colleague of Francesco de Saavedra, with whom he soon formed a close friendship. They were both sensible of the miserable character of the government of Godoy, and prevailed on the king to dismiss him. Saavedra was appointed, in his place, minister of foreign affairs. But this administration was soon dissolved, and both lost their places. Jovellanos was not so much regretted as might have been expected from his noble character. The revenge of the prince of peace was slow, but deep. Marquis Caballero, than whom a baser instrument could hardly be found even in that court and in those times, was chosen to persecute him. A Spanish translation of Rousseau's "*Contrat Social*," in one of the notes of which Jovellanos was mentioned favourably, gave the pretext. He was arrested, carried from one place to another, and at last put in a Carthusian monastery in the island of Majorca. His addresses to the king from this place are bold and vigorous, and were read by the whole nation, because the hatred against the prince of peace was then at its height. Intestine commotions and foreign power at last put an end to the wretched government. Charles IV. was compelled to abdicate in favour of his son Ferdinand, with whom Caballero, betraying his friends, had sided, so that the mob, who had forced Charles IV. to abdicate, shouted "*Vive el picaro Caballero!*" (the knave Caballero for ever!)

Jovellanos was now recalled by the same person who had shamefully persecuted him. He demanded a trial, but Napoleon's policy at Bayonne changed the face of Spanish affairs. Joseph, his brother, anxiously engaged all men in his administration who stood high in the esteem of the people, and offered Jovellanos the portfolio of the interior, being advised to do so by Urquijo, D'Azanza, Massaredo, O'Farill, and Cabarrus, the intimate friends of Jovellanos, who said they had a positive assurance of his willingness to accept it. If this was actually the case, either the loss sustained by Joseph's party at Baylen, or the insurrection of the Spaniards soon after this event, made him change his mind. Jovellanos, on the other hand, assures us that his friends urged him to accept the ministry, but that he never thought of doing so, thus forming one of the few well-informed and liberal men who did not join Joseph. Jovellanos embraced the cause of the insurgents, and became a member of the central junta, where it was chiefly owing to him that the council—precisely the same in Spain as the parliaments in France, in *esprit-de-corps*, aristocratic feeling, sale of offices, &c.—was revived. No sooner had the council met than it opposed the central junta, which was finally resolved, and Jovellanos was greatly ill-treated. To expose the council, and defend himself and the junta, was the last of his labours as a writer. He died on the 27th of November, 1811. The cortes, though he objected to the principle upon which they were founded, declared him "*benemerito de la patria*," a distinction afterwards often bestowed injudiciously. His Spanish prose is considered the finest of modern times, and his "*Elogios*," though possessed of some faults inherent in all compositions

of that kind, are redeemed by great beauty of language and depth of thought. He also wrote an "*Essay upon Dramatic Exhibitions and Public Diversions*," some poems, and a tragedy entitled "*El Pelayo*," the brave Goth who defended the independence of Spain against the Moors, which was prevented by the clergy from being played before 1790, and a translation of the first book of Milton; but his poetry will not procure immortality for his name.

JOYCE, JEREMIAH.—This gentleman had the honour of publishing some of the earliest and best scientific dialogues that have appeared for the education of the young. He was, we believe, self-educated, and as there are but few memorials of his early life extant, we cannot do better than present our readers with the following sketch which appeared in a periodical work to which he was long a contributor. The editor states, that "he was first known to the public in consequence of the audacious attempt made by Messrs. Pitt and Dundas on the lives of several undaunted friends of parliamentary reform; and Mr. Joyce was specially marked for the vengeance of those unprincipled ministers by the circumstance of his being tutor to the sons of Earl Stanhope, then a leader among the patriotic reformers. Indeed the arrests and the subsequent state trials were said to have arisen from Mr. Joyce having written a laconic note to Mr. Tooke about a literary work then on the eve of publication, in which he asked the question, 'Shall you be ready by Wednesday?' This note miscarried, and on Tuesday the arrests took place. Mr. Joyce has often been heard to declare that he did not personally know more than six, and had never spoken to more than three or four, of the twelve strangers, against each of whom a grand jury were induced, under the misdirection of a judge, to find a true bill, as jointly engaged in a conspiracy of treason. After the honourable acquittals of Messrs. Hardy, Tooke, and Thelwall, the law-officers of the crown, in pure shame, dismissed Mr. Joyce and the others without trial, but also without compensation for many months' false imprisonment under charges which endangered their lives, and so deeply afflicted the feelings of the relatives of some of them as to cause their premature deaths. Earl Stanhope gave a splendid entertainment on the return of Mr. Joyce to Chevening; but some family events soon rendering the continuance of his services unnecessary, he settled in London, and began that career of literary industry which has often gratified the public, and is likely to prove so useful to the rising generation. One of the first employments in which he was thus engaged was as a coadjutor of the late Dr. George Gregory, in his compendious cyclopedia; and, the great success of that work having excited the avidity of other booksellers, Mr. Joyce was engaged by the body of them, who then met at the Chapter coffee-house, to compile a new work on the plan of Gregory's, and it appeared under the name of the late William Nicholson. Both works having rapidly succeeded each other, and being completed within thirty months, the co-labourer in one and the sole compiler of the other became justly celebrated for his industry and learning, and, we may add, for his zeal and integrity; but such great exertions brought on a severe attack of disease, from which he never fully recovered. Soon after Mr. Joyce completed his popular "*Elements of Arithmetic*," of which repeated editions of

10,000 have been sold, and it has long been adopted in the principal schools as the best in the language. His next publication was his well known 'Scientific Dialogues,' followed in the same line of composition by his 'Dialogues on Chemistry and on the Microscope.' His other works were, his 'Letters on Natural Philosophy,' his 'Introduction to the Arts and Sciences,' and, lastly, he co-operated with Messrs. Shepherd and Carpenter in a well-planned work, called 'Systematic Education,' which has been favourably received. For many years he contributed the meteorological report for this magazine, even that in the present number, and often illustrated its pages by his contributions on matter of fact and useful subjects. One of his last communications was the account of his late brother, in our magazine for May; and at that time, and till within two hours of his death, he was in as good health as he had been for several years past. The qualities of his mind are to be estimated by the variety and extent of his labours; and in regard to those of his heart, we, who knew him well, can assert, that an honest or better man never lived." Mr. Joyce died at Highgate in 1816.

**JUBA I.**, a celebrated king of Numidia and Mauritania. He had succeeded his father Hiempsal, and he favoured the cause of Pompey against Julius Cæsar. He defeated Curio whom Cæsar had sent to Africa, and after the battle of Pharsalia he joined his forces to those of Scipio. He was conquered in a battle at Thapsus, and being totally abandoned by his subjects, he killed himself with Petreius, who had shared his good fortune and his adversity, in the year of Rome 707. His kingdom became a Roman province, of which Sallust was the first governor.

**JUBA II.**, son of the former, was led among the captives to Rome to adorn the triumph of Cæsar. His captivity was the source of the greatest honours, and his application to study procured him more glory than he would have obtained from the inheritance of a kingdom. He gained the hearts of the Romans by the courteousness of his manners, and Augustus rewarded this fidelity by giving him in marriage Cleopatra the daughter of Antony, and conferring upon him the title of king, and making him master of all the territories which his father once possessed. His popularity was so great that the Mauritians rewarded his benevolence by making him one of their gods. The Athenians raised him a statue, and the Æthiopians also worshipped him as a deity. Juba wrote a history of Rome in Greek, which is often quoted and commended by the ancients. Of it only few fragments remain. He also wrote on the history of Arabia and the antiquities of Assyria, chiefly collected from Berosus; besides these he composed some treatises upon the drama, Roman antiquities, the nature of animals, painting, grammar, &c., which are now lost.

**JUGURTHA.**—This brave but cruel Numidian was the illegitimate son of Manastabal, the brother of Micipsa. Micipsa and Manastabal were the sons of Masinissa king of Numidia, and Micipsa, who had inherited his father's kingdom, educated his nephew with his two sons Adherbal and Hiempsal. He sent Jugurtha with a body of troops to the assistance of Scipio, who was besieging Numantia, hoping to lose a youth whose ambition seemed to threaten the tranquillity of his children. His hopes were frustrated; Jugurtha showed himself brave and active, and he en-

deared himself to the Roman general. Micipsa appointed him successor to his kingdom with his two sons, but the kindness of the father proved fatal to the children. Jugurtha destroyed Hiempsal, and stripped Adherbal of his possessions, and obliged him to fly to Rome for safety. The Romans listened to the well-grounded complaints of Adherbal; but Jugurtha's gold prevailed among the senators, and the suppliant monarch, forsaken in his distress, perished by the snares of his enemy. Cæcilius Metellus was at last sent against Jugurtha; and his firmness and success soon reduced the crafty Numidian, obliging him to fly among his savage neighbours for support. Marius and Sylla succeeded Metellus and fought with equal success. Jugurtha was at last betrayed by his father-in-law Bocchus, from whom he claimed assistance; and he was delivered into the hands of Sylla. He was exposed to the view of the Roman people, and dragged in chains to adorn the triumph of Marius. He was afterwards put in a prison, where he died six days after of hunger.

**JULIAN, FLAVIUS CLAUDIUS JULIANUS**, a Roman emperor to whom the Christians gave the surname of the Apostate. He was the son of Julius Constans (brother of Constantine the Great) and of Basilias, his second wife, daughter of the prefect Julian. When hardly six years old, he saw his father and several members of his family murdered by the soldiers of the emperor Constans II., his cousin. He and his younger brother, Gallus, narrowly escaped death. The education of the two princes was entrusted to Eusebius of Nicomedia, who gave them Mardonius for their instructor. They were brought up in the Christian religion, which was yet a new one at the court of the emperor. They were obliged also to enter the order of priests, that they might thus be removed from the throne, and they were chosen readers in their church. This education produced a very different effect on the minds of the two brothers, whose characters were very dissimilar. Gallus the younger never left Christianity, and thus obtained the praise of the ecclesiastical historians. Julian, being older, had felt more deeply the persecution of his family, and the constraint and fear in which he was obliged to pass his youth. He therefore sought consolation in the study of philosophy and belles-lettres. At the age of twenty-four he went to Athens and to Nicomedia, where he enjoyed the society of several instructors, particularly that of the sophist Libanius. Here he was induced to reject the religion of those who had massacred his family and to embrace paganism. Yet he does not appear to have had sufficient strength of mind to rise above the religious prejudices of that age. At least we find that he believed in astrology, in the science of the haruspices, in the art of calling up intermediate spirits to one's assistance, and learning from them the future, with several other superstitious notions. Constans, who feared an attack of the Germans upon the provinces of the Roman empire, determined at last, at the solicitation of his wife Eusebia, to give to Julian the command of an army against them; and he was proclaimed Cæsar by Constans at Milan in 355, whose sister Helen he received in marriage.

He now proceeded with a small body of troops to Gaul, which was laid waste by the Germans. It was hardly to be expected that a youth, who thus far had attended only to the study of philosophy and belles-lettres, would be able, especially with so small means,

to conquer the formidable enemy against whom he was sent. The emperor Constans himself appears not to have calculated upon the probability of such an event. After Julian had passed the winter in preparations for the ensuing war, he marched against the Germans, took several cities, conquered them in various engagements, and, in a great battle near Strasburg, completely defeated seven of their princes, and entirely delivered Gaul. He pursued the Germans beyond the Rhine, and conquered them in their own country. As a governor also, he displayed extraordinary talents. He gave to Gaul a new constitution. He settled the finances, diminished the taxes, and assessed them more justly, put an end to the abuses which had crept into the courts of justice, administered justice himself in the most important cases, and laid the foundation of cities and castles. While he was thus providing for the happiness of a great nation, he was accused, before Constans, of aiming at independence. The jealousy of the suspicious emperor could not fail to be excited by the brilliant career of his young kinsman in Gaul. He was even base enough to stir up secretly the Gauls against him, and to recall his best troops under pretence that he wanted to employ them against the Persians. This order caused a rebellion among the soldiers, who were unwilling to go to Persia. They proclaimed their leader, Julian, emperor, in March 360, in spite of his own resistance. Julian gave information of the state of things to Constans, who ordered him to renounce his title of emperor. Much as he was inclined to do this, the Gallic legions equally opposed his inclination. The emperor now sent an army against Julian, who made preparations in his defence. He left Gaul, where he had passed five years, took Sirmium, the capital of Illyria, and besieged Aquileia. Here he heard of the death of the emperor Constans. He now passed rapidly through Thrace, and reached Constantinople, December 11, 361, where he was immediately proclaimed emperor.

He began by putting a stop to many abuses, and limiting the splendour of his court. Of the thousand barbers and attendants at the baths, employed by his predecessors, he retained but a single one. The number of cooks, too, which was likewise very great, he reduced to one. The eunuchs were dismissed as well as those called *curiosi*, who, under pretence of informing the emperor of useful things, were dangerous spies and the bane of all social intercourse. After these retrenchments he was able to remit to the people the fifth part of all their taxes. Julian sought to restore the heathen worship in all its splendour, and on that account opposed Christianity as much as was in his power, without, however, like many of his predecessors, cruelly persecuting the Christians themselves. He took from the Christian churches their riches, which were often very great, and divided them among his soldiers. He sought likewise to induce the Christians, by flattery or by favour, to embrace paganism, and, failing in the attempt, he laboured to make their condition disagreeable. Thus, for example, he forbade them to plead before a court of justice or to receive offices in the state. Indeed the Christians were no longer allowed to profess their faith openly, for he well knew what powerful arms the Scriptures afforded for combating paganism. To render false the prophecy of Jesus, with regard to the temple at Jerusalem, he

permitted the Jews to rebuild it about 300 years after its destruction; but it is said that flames of fire arose from beneath and consumed some of the workmen.

In the meanwhile he wished to end the war with the Persians. His first campaign against them was successful, as he took several cities and advanced as far as Ctesiphon, but want of means of subsistence obliged him to retreat, and in June 365 he was mortally wounded, and died the following night, in the thirty-fourth year of his age. There is hardly, either in ancient or in modern history, a prince whom historians have judged so differently. Perhaps it is because his character was full of contradictions; and some believe that he had so many good and so many bad qualities that it is easy to blame or to praise him without violating the truth. On the one side, learned, magnanimous, moderate, temperate, circumspect, just, merciful, humane; on the other, inconsistent, fickle, eccentric, fanatical and superstitious in the highest degree, ambitious, and full of eagerness to be at once a Plato, a Marcus Aurelius and an Alexander; he sought chiefly for the means of distinguishing himself from all others. At the bottom of all these features in his character, there appears to lie a sarcastic, sophistic coldness and dissimulation. Some of his works have come down to us. Several speeches, letters and satires, among which the satire on the Cæsars, and that on the people of Antioch, called "*Misopogon*," are distinguished for wit and humour. The first is particularly esteemed. A critical judgment passed upon those who had sat upon the first of the thrones of earth, by a philosopher who had himself occupied the same seat, must indeed possess a peculiar charm. In his "*Misopogon*" Julian severely lashes the Antiochians, but spares no praise when he speaks of himself.

**JULIO, ROMANO**, a celebrated Italian painter, who was born in 1492, and studied successfully in the school of Raphael. He was early in life employed in the Vatican, but his greatest work is a representation of the destruction of the giants by Jupiter. Julio Romano was appointed architect of St Peter's in 1545, and died the following year.

**JUNG-STILLING, JOHN HENRY**.—This remarkable individual was born of mean parentage on the 12th September, 1740, at Hilchenback, in the principality of Nassau-Siegen, where in his juvenile years he pursued his father's occupation of tailor and village school-master. After experiencing a variety of trials and vicissitudes, he studied medicine at Strasburg, where he was fellow-student with Goethe, who became his intimate friend. He practised physic for a few years at Ellersfield, from whence he removed as teacher of political economy to Lautern. He subsequently filled the professor's chair in the universities of Heidelberg and Marburg, and finally became aulic privy councillor to the grand duke of Baden, whose particular favour he enjoyed until the decease of the latter in 1811, which was also continued to him by the present grand duke until the end of his life, which occurred in April 1817, in the seventy-seventh year of his age.

Jung-Stilling is the author of a number of popular religious works, as well as others of a scientific nature, but the most interesting and remarkable of them, and that which brought him first into public notice, is the history of his own life, under the assumed name of Stilling; the commencement of which was sent to

the press without his knowledge by his friend Goethe. This he subsequently continued, after having thrown aside his disguise; and the whole, including an account of his decease by his grandson, has recently been translated into English by Mr. S. Jackson, under the title of "Heinrick Stilling, his Childhood, Youthful Years, Wanderings, &c." Born in the same year with Lavater and Oberti, he lived on terms of the most intimate friendship with those eminent men, with whom he justly deserves to rank, in consequence of a life devoted to God and the best interests of mankind. He was an expert oculist, and succeeded in procuring sight to upwards of two thousand individuals, several of whom had been born blind; whilst by his religious writings, which are still widely circulated, he opposed a barrier to the torrent of infidelity, which, emanating from France, deluged at that period a great part of Germany.

**JUNOT, AUDOCHE**, a distinguished French general, who owed his elevation to the wars of the revolution. He was employed by Bonaparte in Portugal, where he was defeated at the battle of Vimiera. He died in 1813.

**JURIN, JAMES**, an eminent physician, who was born in 1684, and was educated at Cambridge in 1711. He was afterwards well known in London as physician to Guy's hospital, and was during several years an active member and secretary of the royal society; and at the time of his death, in 1750, president of the college of physicians. He distinguished himself by a series of ingenious essays, published in the "Philosophical Transactions" in 1718, 1719, &c., and afterwards printed collectively, in 1732, under the title of "Physico-Mathematical Dissertations," in which mathematical science was applied with considerable acuteness to physiological subjects. These papers involved him in several controversies; first with Keill, in consequence of his calculations in regard to the force of the contractions of the heart, against which also Senac published some objections, which he answered. To Smith's "System of Optics," published in 1738, Jurin added "An Essay upon Distinct and Indistinct Vision," in which he made subtle calculations of the changes necessary to be made in the figure of the eye to accommodate it to the different distances of objects. This paper was commented on by Robins, to whom Jurin wrote a reply. He had likewise controversies with Michelotti respecting the force of running water, and with the philosophers of the school of Leibnitz on living forces. He communicated to the royal society some experiments made with a view to determine the specific gravity of the human blood, and he contributed much to the improvement of their meteorological observations. Dr. Jurin was a warm defender of the practice of inoculation, and gave an account of its value in several publications of the day. Jurin died in 1750.

**JUSSIEU, ANTONY and BERNARD, DE.**—The name of two brothers who were born at Lyons in the latter part of the seventeenth century, and became eminent as physicians and botanists. Antony made a botanical tour, and brought from Spain a large collection of plants. After this he wrote upon subjects connected with natural history and medicine, and died in 1758, in the seventy-second year of his age, much lamented on account of his philanthropy. Bernard was born in 1699, and was appointed professor of botany in the royal botanical garden. We are indebted to him for a new edition, in two vo-

lumes, of Tournefort's "History of Plants in the Neighbourhood of Paris." This work was entitled "Histoire des Plantes qui naissent aux Environs de Paris," published in 1725. It is said that Jussieu's scholars used to bring him flowers which they had mutilated or compounded with others, for the purpose of testing his knowledge, and he always recognised them immediately. Jussieu, after having been a long time employed upon a systematic division of the vegetable kingdom, died in 1777. Cuvier, in a biographical memoir on Richard, calls Bernard de Jussieu "the most modest, and perhaps the most profound botanist of the eighteenth century, who, although he scarcely published anything, is, nevertheless, the inspiring genius of modern botanists."—Antony Laurence Jussieu, a nephew of Bernard, was born at Lyons in 1748. He was for many years a member of the academy of sciences at Paris, and of the royal medical school, and in 1804 made a report on the results of Captain Baudin's voyage to New Holland. In the anatomy of plants he distinguished himself by having made known the discovery of a substance enclosed in the kernel, called by him "perisperma."

**JUSTIN**, surnamed the Martyr, one of the earliest and most learned writers of the Christian church. He was the son of Priscus, a Greek, and was born at Flavia Neapolis, anciently called Sichem, a city of Samaria, in Palestine, towards the close of the first century. He was educated in the pagan religion, and after studying in Egypt became a Platonist, until, in the year 132, he was led by the instructions of a zealous and able Christian to embrace the religion of the gospel. He subsequently went to Rome in the beginning of the reign of Antoninus Pius, and drew up his first Apology for the Christians then under a severe persecution, in which he shows the cruelty and injustice of the proceedings against them. He was also equally zealous in opposing alleged heretics, and particularly Marcion, against whom he wrote and published a book. He not long after visited the East, and at Ephesus had a conference with Trypho, a learned Jew, to prove that Jesus was the Messiah, an account of which conference he gives in his Dialogue with Trypho. On his return to Rome he had frequent disputes with Crescens, a cynic philosopher, in consequence of whose calumnies he published his second Apology, which seems to have been presented to the emperor Marcus Aurelius in 162. Crescens preferred against him a formal charge of impiety for neglecting the pagan rites, and he was condemned to be scourged and then beheaded, which sentence was put into execution in 164, in the seventy-fourth or seventy-fifth year of his age. Justin Martyr is spoken of in high terms of praise by the ancient Christian writers, and was certainly a zealous and able advocate of Christianity, but mixed up too much of his early Platonism with its doctrines.

**JUSTIN**, a Latin historian, who lived at Rome in the second or third century. He made an epitome of the history of Trogus Pompeius, a native of Gaul, who lived in the time of Augustus, and whose works, in forty-four books, contain a history of the world from the earliest ages to his own time. His history of Macedonia was particularly complete. To judge from the epitome (for the original is lost), there were many errors in the work, especially in the Jewish history; but this epitome, which corresponds to the original in its title and arrangement, having

compressed into a brief space so much of the important matter of the old histories, has obtained a considerable reputation, and even now is often used in schools. The style is, on the whole, elegant and agreeable, but it is destitute of that noble simplicity and classical correctness which distinguish the work of a master.

**JUSTINIAN I.**, surnamed the Great.—This celebrated lawgiver was born in 483, of an obscure family. He shared the fortunes of his uncle, who from a common Thracian peasant was raised to the imperial throne. While consul in 521 he exhibited splendid games to the people, and also flattered the senate and sought their favour; in consequence of which that body conferred on him the title of *Nobilissimus*. His uncle, infirm from age and suffering from a wound, admitted him to a share of his power. Yet it was not till after his death, about August 527, that Justinian was proclaimed emperor. He now married Theodora, whom he raised from the condition of an actress and a public prostitute to the throne of the Cæsars. She acquired an absolute mastery over her husband. Under his reign the parties of the circus contended with great animosity, and under the names of the greens and the blues occasioned many bloody scenes in Constantinople. The violent means which Justinian used to quell the tumult only served to increase it, and a conflagration, which broke out in consequence, laid the greatest part of Constantinople and his own beautiful buildings in ashes. Justinian's own life was in peril. After the turbulence of these parties were extinguished by streams of blood and a multitude of executions, Justinian finished the war with the Isaurians, and his general, Belisarius, in 523 and 529 obtained three glorious victories over the Persians. This great general destroyed in 534 the empire of the Vandals in Africa, and carried Gelimer their king a prisoner to Constantinople. Spain and Sicily were reconquered, and the Ostrogoths, who possessed Italy, were vanquished. In 536 Belisarius made his entry into Rome, and the eunuch Narses, another of Justinian's generals in 553, put an end to the dominion of the Ostrogoths in Italy.

These successes restored to the Roman empire a part of its former vast possessions, and Justinian then turned his attention to the laws. He commissioned ten learned civilians to form a new code from his own laws and those of his predecessors. To this code Justinian added the *Pandects*, the *Institutes*, and *Novels*. These compilations have since been called collectively, the body of civil law (*corpus juris civilis*). Justinian was also intent upon building new cities, and upon fortifying others, and adorning them with new edifices; but he was particularly desirous of establishing peace in religious matters. Amongst other churches, he rebuilt that of St. Sophia at Constantinople, which had been burnt in the quarrel of the greens and the blues. It is esteemed a master-piece of architecture. The altar in it was made entirely of gold and silver, and adorned with a vast number and variety of precious stones. This church, a part of which is now standing, and is used by the Turks as a mosque, was so magnificent that Justinian, when on the day of its dedication he beheld it for the first time in its full splendour, cried out for joy, "To God alone be the glory! I have outdone thee, Solomon!" But it was his unhappy fortune, as it was that of the Jew-

ish king, to outlive himself. Towards the end of his life he became avaricious, without losing his love of splendour, suspicious and cruel. He oppressed the people with taxes, and lent a willing ear to every accusation. He suffered his own servants to commit the most flagrant crimes unpunished. He died in 565, in the eighty-third year of his age. His love of the monks, of saints, and of theological questions, did not protect him from the censure of the divines, who esteemed him a heretic. Much that was great and glorious was accomplished during his reign, but he had little share in it.

**JUVENAL, DECIUS JUNIUS**.—This celebrated Roman satirist flourished in the reign of the emperor Claudius. His father was a freed man, who, being rich, gave him a liberal education, and, agreeably to the taste of the times, bred him up to eloquence. In this he made a great progress, first under Fronto the grammarian, and then under Quintilian; after which he attended the bar, where he made a distinguished figure for many years, as we learn from some of Martial's epigrams. In this profession he had improved his fortune and interest at Rome before he turned his thoughts to poetry; the very style of which, in his satires, speaks a long habit of declamation. He is supposed to have been above forty years of age when he recited his first essay to a small audience of his friends; but being encouraged by their applause, he ventured a publication, in which Paris, a player, and Domitian's favourite, was satirized; this minion complained to the emperor, who sent the poet into banishment, under pretence of giving him the command of a cohort in the army quartered at Pentapolis, a city upon the frontiers of Egypt and Lybia. After Domitian's death he returned to Rome, cured of his propensity, to attack the characters of those in power under arbitrary princes, and indulge in personal reflections upon living characters. His thirteenth satire, addressed to Calvinus, was written in the third year of Adrian, when Juvenal was above seventy years old, and he died eight years after that period.

**JUXON, WILLIAM**, an eminent English prelate, who was born in 1582. After receiving a good education, and taking his degrees at Oxford, he was in 1627 appointed chaplain to King Charles I., whom he afterwards attended to the block. Dr. Juxon was appointed bishop of Hereford in 1633, and afterwards removed to the see of London; but when the commonwealth was established, he was deprived of his bishopric, and retired to his private estate, the manor of Little Compton in Gloucestershire, where he passed his time free from molestation, and in the occasional enjoyment of field sports, to which he was rather more addicted than became his rank in the church. At the restoration he was nominated archbishop of Canterbury in September, 1660, and at the coronation placed the crown on the head of Charles II.

Juxon was a man of a liberal and princely spirit. During the short period that he enjoyed the archbishopric he expended, in building and repairing Lambeth and Croydon palaces, nearly 15,000*l.*, and augmented the vicarages, the great tithes of which were appropriated to his see, to the amount of 1103*l.* In the decline of life he was much afflicted with the stone, of which he at length died June 4, 1663, and was interred with the greatest solemnity in the chapel of St. John's college, Oxford, near the remains of Archbishop Laud. To this college he had ever been a friend, and was at last a munificent benefactor, be-

queathing 7000*l.* to be laid out in the increase of fel-lowships. His other charitable bequests amounted to 5000*l.* His contemporaries unite in praising his piety, learning, charity, moderation of temper, and steady loyalty. As a divine he has left little by which we can appreciate his merits, as there is but one sermon of his extant, entitled, "The Subjects' Sorrow; or Lamentations upon the Death of Britain's Josiah, King Charles."

KÆMPFER, ENGELBRECHT, a celebrated traveller, born at Lemgo in 1657, and educated by his father, who was a clergyman. He performed a journey in 1683 as secretary to a Swedish embassy, by land through Russia to Persia; after which he visited Arabia, Hindostan, Java, Sumatra, Siam and Japan, in which last country he resided two years. In 1692 he returned, was appointed private physician of the count of Lippe, in his native city, and died in 1716. Of his writings, his "History and Description of Japan" is deserving of mention. This work was translated into English from the manuscript in 1727, and published in two folio volumes. The greater part of his manuscripts, rich in important observations, were purchased by Sir Hans Sloane from Kæmpfer's heirs, and they are now to be found in the British museum.

KÆSTNER, ABRAHAM GOTTHELF, a celebrated mathematician and epigrammatist, who was born at Leipsic in 1719. From his tenth year he received instructions in jurisprudence from his father, who was professor in Leipsic, and in his eleventh he joined a debating society of several youths studying law. He applied himself to philosophy, physics, and mathematics; metaphysics in particular, according to his own statements, had peculiar attractions for him. It is remarkable, that he found addition and multiplication very difficult, even after he had made considerable progress in mathematics. He continued also the study of the law, and in 1739 he held disputations, and began to deliver lectures on mathematics, philosophy, logic, and jurisprudence. He also attended to belles-lettres. Having obtained a professorship extraordinary in 1746, he was in 1756 established on advantageous terms in Göttingen as professor of natural philosophy and geometry. The study of mathematics was greatly promoted by his means. In general, his acute mind seems to have been too much directed to single points to allow him to grasp, and exhibit happily, the whole of the mathematical and physical sciences. He was not less celebrated for his wit than for the cultivation of the severer sciences. His epigrams, however, involved him in many quarrels. He died in 1800.

KALB, BARON DE, a major-general in the American army, who was born in Germany, about the year 1717. When young he entered into the service of France, in which he continued for forty-two years, and obtained the rank of brigadier-general. In 1757, during the war between England and France, he was sent by the French government to the American colonies, in order to learn the points in which they were most vulnerable, and how far the seeds of discontent might be sown in them towards the mother country. He was seized while in the performance of this commission as a suspected person, but escaped detection. He then went to Canada, where he remained until its conquest by the British, after which he returned to France. In 1777,

during the war of the revolution, he went a second time to the United States and offered his services to congress. They were accepted, and he was soon after made a major-general. At first he was placed in the northern army, but when the danger which threatened Charleston from the formidable expedition under Sir Henry Clinton, in 1778, rendered it necessary to reinforce the American troops in the south, a detachment was sent to them, consisting of the Maryland and Delaware lines, which were put under his command. Before he could arrive, however, at the scene of action, General Lincoln had been made prisoner, and the direction of the whole southern army in consequence devolved upon the baron, until the appointment of General Gates. Gates was defeated near Camden by Lord Rawdon, and in the battle Baron de Kalb, who commanded the right wing, fell covered with wounds, while gallantly fighting on foot. A tomb was erected to his memory, by order of congress, in the cemetery of Camden.

KALCKREUTH, FREDERIC ADOLPHUS, COUNT OF, a distinguished Prussian field-marshal, who was born at Eisleben in 1737, and entered the army in 1751. In the seven years' war he served as aide-de-camp of Prince Henry, ascended step by step to the office of general, and was made a count in 1788. In the war with France he manifested equal courage and ability. In 1793 he took Mayence. He soon after drove the French from Deux Ponts, and pressed forward to Saar Louis. Towards the end of 1795 he received the chief command of the troops in Pomerania, and in May 1806 was appointed governor of Thorn and Dantzic, and inspector-general of the cavalry. In the autumn he joined the main army in Thuringia, but took no part in the battle of Jena and Auerstädt, being stationed in the rear. In June 1807 he concluded with Berthier, at Tilsit, the truce between Prussia and France; after which, in conjunction with Golz, he concluded a peace with Talleyrand. He was immediately after appointed field-marshal, and in January 1810 the king appointed him governor of Berlin. In the last war Count Kalckreuth was governor of Breslau, and returned to Berlin in 1814, where he entered anew upon the government, and died in 1818.

KALKBRENNER, CHRISTIAN, a distinguished musical composer, who was born at Munden in Prussia in 1755. He became pupil to Emanuel Bach, and so far distinguished himself as to be received at a very early age in the chapel of the elector of Hesse-Cassel. He soon afterwards quitted that town for Berlin, where, attached to the suite of the prince Henry, brother of Frederick the Great, he composed for the prince's theatre the following operas: "La Veuve de Malabar," "Democritus," and "La Femme et le Secret." In 1796 he travelled to various parts of Germany and Italy, and finally settled at Paris, where he was appointed singing-master to the academy of music. For this theatre he produced the opera of "Olympie," but it was unsuccessful; and had written another opera, "Oenone," which was just about to be performed, when he died in 1806. Kalkbrenner published at Paris in 1802 the first volume of a "Histoire de la Musique." He had previously written several didactic works on music: he also published many compositions for the piano-forte.

KALKBRENNER, FREDERICK, the son of

Christian Kalkbrenner, was born at Cassel in 1784. He is considered as one of the best piano pupils of the celebrated Adam, and in composition was a pupil of Catel. In the year 1802 he gained two prizes at the conservatory at Paris, the one for composition, and the other for his performance on the piano, which prizes were presented to him by Chaptal, the minister of the interior. He composed voluminously for his instrument, both in this country and in Paris and Vienna. Much of his music evinces a fine taste and rich fertility of invention.

KANT, IMMANUEL.—This distinguished philosopher was born at Königsberg in Prussia Proper, in April 1724, and was the son of a harness-maker, in the suburbs of his native place—a man of integrity and respectability, though of a humble station. Kant's mother was a woman of great piety, and much attached to the strict tenets and discipline of Dr. Schultz, a professor of theology at the university of Königsberg, a distinguished divine in his day. Though far from being in easy circumstances, his parents resolved to bestow upon their son Immanuel the advantage of a liberal education. After having learned to read and to write in the charity school of the suburb, Kant was sent in 1732 to the Collegium Fredericianum at the suggestion of Dr. Schultz, who, even at that early period, had the penetration to discover the talents of the boy. At this school he contracted an intimate friendship with Rhunken, afterwards so celebrated as a philologist. Both were indefatigable students, and read and studied much together. It is remarkable, that at this period Kant devoted his attention principally to philological studies, while his friend Rhunken seemed to have more fondness for philosophy. In their maturer years they exchanged pursuits. In 1740 Kant repaired to the university of his native city, and at first studied theology in consequence of the necessity of depending entirely on his profession for future maintenance; but at no period did he neglect philosophy and mathematics. Hardly had he arrived at the age of manhood when he lost both his parents, who, indeed, had never been able to afford him much pecuniary assistance; but he was fortunate enough to meet some relations, whose aid, together with his own industry and economy, enabled him to continue his studies. His application was uncommonly great, as is proved by his bold and successful attacks on the doctrines of Leibnitz and Wolf, and his skilful use of the weapons of dialectics against the authority of the most eminent metaphysicians of the day, when he was only twenty-two years of age.

After a residence of about three years at the university, he acted in the capacity of a private tutor in several families, and lived about nine years with Count Hüllesen at Arnsdorf. Kant read much in his retirement, and traced the outlines of several of those philosophical treatises, which were soon afterwards published in rapid succession. In 1755 he returned to Königsberg, took the degree of M. A., and produced on this occasion, in the form of an inaugural dissertation, his treatise, entitled "*Principiorum Primorum Cognitionis Metaphysicæ Nova Dilucidatio*." In the same year he published his celebrated work on the "*Universal Natural History and Theory of the Heavens*, or an *Essay on the Constitution and Mechanical Structure of the Whole Globe*, according to the Newtonian System." In this treatise he anticipated several of the subsequent discoveries of the

astronomer Herschel, particularly the planet called after his name. Kant began to lecture, as *doctor docens*, on logic, metaphysics, mathematics, and natural philosophy, to which, at subsequent periods, he added natural law, moral philosophy, natural theology, and physical geography. He soon became popular with the students, but it was long before he obtained a professorship. He had no ambition beyond that of being useful in the sphere which he had chosen, nor could his noble and strictly upright character resort to any kind of art to promote his worldly interest.

In 1756 the *professor extraordinarius* of philosophy, Mr. Knutzen, died; but Kant solicited in vain for the vacant chair. In 1758 the *professor ordinarius* of philosophy died, but Kant was not appointed in his stead, though zealously aided by Dr. Schultz; but in 1766 he accepted the unsolicited situation of second keeper of the royal library, to which a small salary was attached; and, at the same time, he undertook the management of a private cabinet of curiosities. But these offices he resigned in 1772 on account of the interruptions to which he was exposed by the necessity of showing the books and rarities to strangers. In 1770 he was at length advanced to the ordinary professorship of logic and metaphysics in the university, to the lustre of which he had already so long contributed. He was now placed above the fear of want, and could employ his talents in a manner satisfactory to himself. Upon this occasion he produced his celebrated inaugural dissertation, "*De Mundi Sensibilis atque Intelligibilis Forma et Principiis*." In 1787 Kant was made a member of the royal academy of sciences at Berlin. Having once attained independence, his wish to improve his worldly concerns seems to have aspired no higher. He declined various advantageous proposals to transfer his talents to other universities, and at length died, by a gradual decay, on the 12th of February, 1804, in the eightieth year of his age, having witnessed the great sensation which his philosophy produced among his countrymen, though his patience was exposed in this particular also to severe trials. Six years elapsed before much notice was taken of his great work, the "*Critique of Pure Reason*;" and it is even said that the publisher of it was about to use the numerous copies of the work which remained on hand as waste paper when the demand suddenly increased, and three editions were disposed of in quick succession. Kant never went farther from Königsberg than to Pillau, seven German miles, about thirty-two English, distant. In the earlier part of his life he used to dine at the ordinary of the principal tavern; to which custom he was undoubtedly indebted in part for his knowledge of mankind.

Reichardt, in the "*Urania*," a German souvenir of 1812, describes Kant as an extraordinary lean small man. "*Leaner, nay drier,*" he says, "*than his small body none probably ever existed, and no sage probably ever passed his life in a more tranquil and self-absorbed manner. A high serene forehead, a fine nose, and clear bright eyes, distinguished his face advantageously, but the lower part of his countenance was marked with a strong expression of sensuality, which was conspicuous in his habits at table. He loved a mirthful company at a good dinner, and was himself an agreeable companion, who never failed to entertain and enliven the company by his extensive knowledge and an inexhaustible store of pleas-*

ing anecdotes, which he used to tell in the driest way without ever laughing himself, and by the humour of his repartees and observations. Kant's company was sought for by the first families of Königsberg, the more as he stood in the greatest esteem for his virtue and noble pride, which well became the most distinguished man of the city, and one of the deepest philosophers who have ever lived. He was, in his exterior, always neat, and even highly dressed. Kant was also fond of playing at cards, and he did not like to spend an evening without a game of ombre. He considered it as the only certain means of withdrawing his mind from deep thought and tranquillizing it. He possessed a boundless memory, which added much to the interest of his lectures, as he interspersed them with many illustrations, with which his immense reading in history, biography, travels, and novels, in fact, all works which could add to the stores of his knowledge, amply supplied him. Though he had his notes before him he seldom looked at them, and often quoted whole lines of names and dates from memory. His library was very small, but he had made a contract with a bookseller, who sent him all new publications, which, after reading, he sent back. He lectured the greater part of the forenoon, allowing himself twenty minutes' rest between each lecture. In the afternoon he seldom lectured. He rose early and studied them most ardently. His lectures on abstract philosophy were much easier to be understood than his works, because, in the former, he added many elucidations, examples, and explanations, which he thought unnecessary in his printed works."

Besides the great merits of Kant in regard to intellectual philosophy, we owe him much for his virtue and inflexible morality, which he placed again on their true elevated basis, after they had been referred exclusively to interest by Helvetius and others. As to the philosophy of this profound thinker, a full account cannot be expected in a work of this sort; a glance at it will be all which we can give. The inquirer into Kant's philosophy should be careful not to reject immediately what he cannot understand, and ought not to expect to understand without deep study and strict mental discipline. To form an opinion of a whole philosophical system from the pages of a general work is more easy than satisfactory or profitable. In fact, a man can hardly hope to acquire a good idea of Kant's philosophy without reading him in the original. When Kant appeared, two philosophical systems were most in vogue: the sensualism of Locke and his followers, and the idealism of Leibnitz, Wolfe, &c. Kant saw that little aid was rendered to the cause of truth by a dogmatic philosophy, whether founded on sensualism or idealism. He wished for certainty in the field of philosophy, and put to himself the questions—What can I know? What is it that I know originally? The acute scepticism of Hume had had its influence upon him. Hume proved very satisfactorily that our ideas of cause and effect are not derived from experience; but he rashly concluded, as Kant observes, "that they are the spurious offspring of the imagination, impregnated by custom." Kant discovered that Hume had been led to this hasty inference in consequence of having taken too limited a view of the great problem which he had thus partially attempted to solve. He perceived that the idea of cause and effect is by no means the only one which the mind makes use of

with the consciousness of its necessity, yet without having derived it from experience. This he found in his endeavours to ascertain what we can know, which led him to the fundamental laws of the mind.

Having arrived at this conclusion, he strove to ascertain the exact number of these original or transcendental ideas, or imperative forms; that is, such ideas as we do not derive from experience, but by which, on the contrary, we acquire experience. In the first rank of these are space and time. Kant shows that all our perceptions are submitted to these two forms; hence he concludes that they are within us, and not in the objects; they are necessary and pure intuitions of the internal sense. Truths acquired by experience never carry with them that absolute certainty; for instance, experience teaches us that the sun rises every day—that all men are mortal; yet we may imagine a day when the sun does not rise, and a man who does not die; but imagination itself cannot suppose any thing unconnected with space and time. This primitive intuition must have, as its basis, the primary laws of the understanding, without which we can comprehend nothing. As far as the transcendental ideas, or, as Kant calls them, categories, extend, so far extends the knowledge of the understanding *a priori*. Kant was at great pains in endeavouring to ascertain the number of these categories, and he found them to be all comprehended under the four classes of quantity, quality, relation, and modality. The categories themselves are twelve in number. Under the first head are comprised unity, multitude, totality; under the second, reality, negation, limitation; under the third, substance and accident, cause and effect, action and reaction; under the fourth, possibility, existence, necessity. These categories are necessary and indispensable for our understanding, as the forms of space and time were for our perceptions; we cannot figure to ourselves any thing without the relations of cause and effect, of possibility, quantity, &c., which, with other words, is, we cannot perceive any thing except by these original, necessary, unchangeable forms of thought. Hence the demonstrative certainty of mathematics, the objects of which—space, time, quantity, &c.—lie in the necessity of the forms and thought, and not in the range of error to which experience is subject. To produce results, the categories are applied to exterior objects, objects of experience, in which application they are subject to error. The three original faculties, through the medium of which we acquire knowledge, are sense, understanding, reason. Sense, a passive and receptive faculty, has, as has been already stated, for its forms or conditions, space and time. Understanding is an active or spontaneous faculty, and consists in the power of forming conceptions, according to the categories already given, which categories are applied to objects of experience through the medium of the two forms of perception, space and time. Reason is the third or highest degree of mental spontaneity, and consists in the power of forming ideas. As it is the province of the understanding to form the intuitions of sense into conceptions, so it is the business of reason to form conceptions into ideas.

The work in which Kant endeavoured to ascertain these categories and the province of certain human knowledge, is his "*Kritik der reinen Vernunft*"—"Critical Inquiry into the Nature of Pure Reason." Far from rejecting experience, Kant considers the

work of all our life but the action of our innate faculties on the conceptions which come to us from without. The philosophy thus started was called critical philosophy, a very poor name, but which has now become settled. Kant proceeds in a similar way with morality; the idea of good and bad is a necessary condition, an original basis of morals, which is supposed in every one of our moral reflections, and not obtained by experience. He treats this part of his philosophy in his "*Kritik der Praktischen Vernunft*"—a "*Critical Inquiry into Practical Reason*." Kant places unreservedly on two parallel lines all the arguments for and against human liberty, the immortality of the soul, the transitory or eternal duration of the world; and resorts to the feelings to make the balance incline, because the metaphysical proofs on the opposite sides are equally great. These opposite arguments on great questions are called, in the works of Kant, antinomies. In æsthetics, also, he pursues a similar course, and treats it in his "*Beobachtungen über das Gefühl des Schönen und Erhabenen*"—"Observations on the Feeling of the Beautiful and Sublime." Another important work of his is the "*Kritik der Urtheilskraft*"—Critical Inquiry into the Faculty of Judgment." We must also mention "*Metaphysische Anfangsgründe der Rechtslehre*"—"Metaphysical Elements of Legal Science;" "*Metaphysical Elements of Ethics*;" "*Metaphysical Elements of Natural Science*;" "*A Pragmatical Treatise on Anthropology*;" "*Of Perpetual Peace*;" "*Religion considered within the Limits of Reason*;" "*The Only Possible Evidence for Demonstrating the Existence of the Deity*." Most of Kant's smaller treatises, full of acute remarks, are contained in his "*Kleinere Schriften*"—"Smaller Works," and in the collection edited by Tieftrunk. Hufeland, the physician, published Kant's work, "*Of the Power of the Mind, by Mere Resolution, to control Morbid Feelings, with Notes*." Kant, of course, met with many opponents, the most prominent among whom were Hermann, Feder, Garve, Platner, Flatt, Jacobi, Herder, and particularly G. C. Shultze, as *Ænesidemus*, and in his "*Kritik der Theoretischen Philosophie*." But his adherents were the more numerous party, and his philosophy has been taught in nearly all the German universities.

**KAUFFMAN, MARIA ANGELICA.**—This talented female artist was born at Coire in Switzerland in 1740. She received from her father, who was himself an artist of some eminence, her first instruction in painting. She afterwards, however, went to Rome and Venice, where her talents and accomplishments rendered her an object of general admiration. In 1764 she removed to Venice, and in the following year accompanied Lady Wentworth, the wife of the British resident, to England. Here, enjoying royal favour, the arbitress of public taste, loved, esteemed, perhaps envied, by artists, decorated with academic honours, opulent and happy, she sunk her own name in that of Zucchi, a Venetian artist, whom she married, and, after a residence of seventeen years, returned to her native place, and afterwards settled at Rome. Mr. Fuseli, when speaking of this lady, says, that he "has no wish to contradict those who make success the standard of genius, and as their heroine equalled the greatest names in the first, suppose that she was on a level with them in powers. Angelica pleased, and deserved to please, the age in which she lived, and the race for which she wrought. The Germans, with

as much patriotism, at least as judgment, have styled her the paintress of minds; nor can this be wondered at from a nation, who, in Mengs, flatter themselves to possess an artist equal to Raffaello. The male and female characters of this artist never vary in form, features, and expression, from the favourite ideal she had composed in her mind. Her heroes are all, the man to whom she thought she could have submitted, though him perhaps she never found; and to his fancied manner of acting and feeling, she, of course, submitted the passions of the subject." Many of her best productions still remain in England, and a very large proportion have been engraved. This lady's death took place at Rome in 1807.

**KAUNITZ, WENCESLAUS ANTHONY**, an eminent German statesman, who was born in the city of Vienna. He was originally intended for the church, but he soon changed that profession for politics. In 1742 he was employed as minister plenipotentiary to the coast of Sardinia, and subsequently filled many of the most important political offices in the kingdom. He was instrumental in bringing the treaty of Aix-la-Chapelle to a conclusion. The empress Maria Theresa then conferred on him the order of the golden fleece, and sent him as envoy to Paris. On his return he was appointed to the rank of minister of state, which office he retained till his death, which took place on the 17th of June, 1794, in the eighty-fourth year of his age.

**KEAN, EDMUND.**—The life of this talented actor forms an era in the histrionic art. He was born in 1787, and his father was a tailor in very humble circumstances. "*Barry Cornwall*" has written his life, and he tells us that he was sent to a day school in London by Miss Tidswell, a popular actress. As soon as he grew old enough to be of any use to her, a Miss Carey claimed little Edmund and made him accompany her in her journeys from house to house, as a vender of perfumery, by which she filled up the intervals of time between one strolling engagement and another. The boy was remarkable for his beauty, and it would seem, too, for his readiness and mischief. We read of his playing one of the spirits in *Macbeth* under John Kemble's management, and tripping up the heels of his fellow imps, for which he was chastised by the stately tragedian. We read also of his drawing a little audience round him in the green-room by reciting portions of well-known tragedies. For a time, too, about this period, he was patronized by a Roman catholic lady, and actually officiated as one of the choir boys in the chapel. But he presently found another patroness, and an occupation, we suspect, more to his mind than swinging incense, or acquainting himself with the monotonies of the Gregorian chaunt; his patroness was a Mrs. Clarke, of Guildford Street, one of his mother's customers; and here is the account of his first interview with her—something different from that of Raffaele with the duchess d'Urbino:—"A thundering rap is heard at the door. The footman, with an approximation to a grin on his face, enters and announces—'Master Carey, ma'am.'—'Master Carey?' was the enquiry. 'Yes, ma'am; he comes from his mother, Miss Carey, who brings the perfumery here to sell. He says he is Master Carey.' 'Show him up by all means.' Mrs. Clarke stood. The door was thrown open, and a slim pale boy, of about ten years old, entered—very poorly clad, ragged, with dirty hands,

face washed, delicate skin, brilliant eyes, superb head of curled and matted hair, and a piece of a hat in his hand! With the bow and air of a prince, he delivers his message: 'My mother, madam, sends her duty, and begs you will be so good as to lend her a shilling to take the spangled tiffany petticoat out of pawn, as she wants it to appear in at Richmond to-morrow.' In answer to this petition, the lady put forth an interrogation: 'Are you the little boy who can act so well?' A bow of assent and a kindling cheek were the sole reply. 'What can you act?'—The answer was, 'Richard the Third, Speed the Plough, Hamlet, and Harlequin.' 'I should like very much to see you,' said the lady. 'I should be proud to act to you,' was the return. 'Well, here's the money for your mother,' said Mrs. Clarke; 'but stay,' added she, throwing open the door of the back drawing-room, where her husband sat writing. He was a grave stout man, who had left off going to plays. She brought forward our hero: 'This is little Edmund Carey.' A low bow from Master Edmund Carey finished the introduction. Mr. Clarke looked at him, and was struck with his air, as well as with his delicate and expressive features, and which, contrasted with the poverty of his clothes, must have touched and interested even the commonest observer. We do not know what commendation or good advice was bestowed by Mr. Clarke; but Mrs. Clarke and her young friend parted, with a promise, on his part, that he would come again at six o'clock that evening and give a specimen of his acting. In the mean time the lady, filled with the merits of her protégé, ran to her next door neighbour (who was the well-known Mr. John Mason Good), and to three or four other friends, and invited them all to come and see her 'extraordinary little boy.'

Mrs. Clarke continued to befriend him for some time, and he was current among her acquaintances, at whose houses he used to exhibit, with his small muster of properties,—“a little bell, which he rung when the imaginary music was to begin, a hat and feathers, a sword, and white gloves,”—some of his little plays he made for himself out of the “*Fairy Queen*.” The reason of his being discarded from this friendly and (it appears) judicious protection is so characteristic we must quote it:—“A gentleman and lady, with their two daughters, had come to Guildford Street on a visit. Upon this occasion, Edmund Carey, who at that time went to school in Hatton Garden, obtained a holiday, and delighted the little girls with his acting. In the evening they were all to go to the theatre; and a discussion arising at dinner as to how the party were to be conveyed there, the mistress of the house began to reckon up the play-goers, naming amongst them ‘Edmund.’ Upon this the gentleman exclaimed, ‘What, does he sit in the box with us?’ The answer was, ‘Oh, yes.’ The question however, involving as it did a doubt as to his fitness for the company into which he thus chanced to be thrown, was sufficient for the irritability of the boy. He would eat no more, but rose from the table, and notwithstanding his friend pressed him to go into the pit and tendered him money for the purpose, flung out of the room and disappeared. He was not at the theatre that evening, nor did he return home. He had fled—no one knew whither.

After the lapse of three weeks, however, during

which time many vain inquiries were made after him, he was brought back by a man who lived in an adjoining mews, having been found there sleeping on a dunghill in a state of exhaustion, ragged and foot-sore, and altogether in squalid disorder. He showed much remorse, and being called upon to explain where he had been, answered that he had resolved to go to America, and had actually travelled on foot as far as Bristol. None of the seafaring men, however, to whom he applied would receive him into their vessels on account of his being so little and apparently so weak. He returned to London, therefore, as well as he could, sleeping in outhouses, begging food, and enduring all sorts of distress and fatigue by the way.

We cannot trace this extraordinary actor through all the vicissitudes of his provincial career, and it may be enough to say, that he made his appearance as a first-rate performer on the metropolitan boards in February 1814. From this time forth till the moment when the managers of Drury Lane theatre, marveling at the treasure which had fallen into their hands, “followed him up to his dressing-room with oranges and negus,” the current of his fortunes turned. Success followed success, homage and gifts were showered upon him, more than he could gather. In his second character, Richard the Third, he confirmed the reputation to which he appeared to the astonished town to have leaped, as it were, with one single bound. Barry Cornwall's criticism on his appearance in the character of the crooked-backed tyrant, is so much to the purpose that we must give its concluding passage:—“We never indeed saw the active and intelligent Richard represented properly before he assumed the part. We lay less stress than other persons on certain bright points in his acting. We prefer commending the general, unabated, unequalled spirit, that he threw into the character. It was not only his ‘good night’ to his friends before the battle, or his combat and death scene (which were magnificent), but all the life and business of the play were given in a way that no other actor in our recollection ever approached in point of excellence. We have been told that some writer of memoirs, who appears to have been fonder of ‘dignity’ than of nature, says, after witnessing the terrible death-scene in Richard, ‘I left Kean acting Cribb and Belcher!’ The reader will smile when he hears that the fight and death in Richard, particularly where Kean used to strike at his adversary after having lost his sword (the action which the writer objects to), were actually copied from the death of an officer who fell in one of the battles of Spain! So much for the criticism of those who are perpetually complaining of ‘want of dignity.’ These persons would hide nature herself in ermine, and thrust a lay figure before us, and demand our sympathy, or bid us fall down and worship it.”

For a period of nineteen years did Kean pursue this extraordinary career. In the United States of America, where he staid from October 1820 to June 1821, his success was equal to that in his native country. In France, in 1818, he was indifferently received and unfairly appreciated; though Talma, a complete master of his science, entertained the highest opinion of Kean's genius.

Mr. Kean originally possessed an excellent constitution, which, had it not been impaired by excesses, would in all probability have enabled him to prop the drama in its decadence for years to come. But his dramatic career closed prematurely and unexpectedly,

under circumstances as unprecedented in the history of the drama as they were painfully affecting to all who witnessed the extraordinary scene. In person Mr. Kean was scarcely of the middle height, and was accordingly deficient in the dignity of deportment requisite for certain characters, as that of the noble Roman, Coriolanus. His features, though not sufficiently regular to be termed handsome, were capable of almost illimitable expression; his eyes, as it were, played with the passions in the very spirit of mastery; his voice in the undertones, "boomed with melancholy music," and in sudden transitions abounded with fine meteor-like effect; and although, as we have said, he was not of dignified stature, he walked the stage with ease and self-possession, attainable only by true genius.

Sir Robert Sinclair thus details the honourable reception he met with at the northern metropolis of our island:—"Mr. Kean performed the character of Macbeth on the Edinburgh stage, in October 1819, and it was one of the most perfect specimens of acting I had ever witnessed. Several of my friends being of the same opinion, we resolved to present him with a sword, as a proof of the high idea we entertain of his theatrical abilities. The intention was communicated to Mr. Kean in the following letter:—

"SIR,—Some of your friends in this city became extremely desirous of presenting you with a mark of the high estimation which they entertain for your talents as an actor, more especially having witnessed the very superior manner in which you performed the character of Macbeth. After considering the subject, it was at last resolved to present you with a sword of state, to be worn when you appear upon the stage in that tragedy, as the crowned king of Scotland. I have much pleasure in sending you the sword, which is prepared by some of our ablest artists, for the purpose of being transmitted to you. It is of the true Highland make, and ornamented with some of the most valuable precious stones that Scotland produces. Macbeth is, on the whole, the greatest effort of dramatic genius the world has yet produced; and none has hitherto attempted to represent the Scottish tyrant who has done, or could possibly do, more justice to that character than the gentleman to whom I have now the honour of addressing myself."

The following is Mr. Kean's characteristic answer:

"SIR,—I have the honour to acknowledge the receipt of your letter, announcing the transmission of a valuable sword, which you teach me to receive as a token of the flattering estimation in which my professional exertions in the northern capital are held by yourself and a portion of that public to whose fostering indulgence I am already bound in lasting gratitude. To those unknown patrons in whose name you have been pleased in such gratifying terms to address me, I beg you will convey the assurance that their kindness has not been lavished where it is not duly appreciated and deeply felt. I am happy in the conviction that I shall only do justice to their intentions in receiving this sword, as at once a record of national liberality and Scottish patronage of the stage.

"May I not recognise this as their object in their selection of the distinguished pen which has honoured me with the communication, as well as the costume of the present itself, which you are pleased to inform me is strictly national, both in its character and ornaments.

"Permit me to add, Sir, that my own feelings could know no higher gratification than to be instructed in the belief that I may have been the fortunate instrument of increasing the number of the patrons of our art; the difficulties of which may, in some measure, be appreciated by the rarity and instability of success, and in which we but too sensibly feel how necessary is public protection to encourage and sustain us, even in our least chequered and unclouded career. I have the honour to be, Sir, with grateful respects, your very obliged servant,

*George Kean*

Mr. Kean died at Richmond in 1833, and his end forms a strong moral lesson to those who step from comparative indigence to the highest pinnacle of popular fame and temporary prosperity. From the date of his first appearance at Drury Lane, till life was about to close upon him, he was never mentally sober. From that moment he became the dupe of every low companion and sensual passion, and in a social point of view his very success destroyed his fitness for society.

KEATE, GEORGE, an agreeable English writer who was born in 1730, and received his education from the Rev. Mr. Woodson, who resided at Kingston. He then went to Geneva, where he stayed some time. After finishing the tour of Europe he settled as a student in the Inner Temple, and sometimes attended Westminster Hall, though he did not meet with encouragement enough to induce him to persevere in his profession. His first performance was "Ancient and Modern Rome." It was published in 1760, and was received with merited applause. Soon after he printed "A Short Account of the Ancient History, Present Government, and Laws of the Republic of Geneva." This work he dedicated to his friend Voltaire. In 1763 he produced "The Alps," a poem which, for truth of description, elegance of versification, and vigour of imagination, surpasses all his other poetical productions. In 1769 he married Miss Hudson, of Wanlip, Leicestershire. Some months before which he had published "Ferne, an Epistle to Mons. de Voltaire," in which he introduced an eulogium on Shakspeare, which procured him, soon after, the compliment, from the mayor and burgesses of Stratford, of a standish, mounted with silver, made out of the mulberry-tree planted by that illustrious bard. In 1781 he collected his poetical works in two volumes, and dedicated them to Dr. Heberden. He had intended to compose a poem of some length on the subject of the emancipation of Switzerland from the oppression of the house of Austria, and had even settled the plan of his work, when he acquainted M. Voltaire with his intention, who advised him rather to employ his time on subjects more likely to interest the public attention: "For," said he, "should you devote yourself to the completion of your present design, the Swiss would be much obliged to you without being able to read you, and the rest of the world would care little about the matter." Whatever justice there was in this remark, Mr. Keate relinquished his plan, and never resumed it afterwards. A few years after he became engaged in a long and vexatious lawsuit, at the conclusion of which he showed that his good

humour had not forsaken him, as he gave to the public the principal circumstances of the case in a work entitled "The Distressed Poet, a Serio-comic Poem." In the next year, 1788, the last of his productions appeared, and the composition was very honourable to his talents and his liberality. In 1782 the Antelope packet was shipwrecked on the Pelew Islands, where the commander, Captain Wilson, and his crew lived some time before they could get off. The circumstances attending this extraordinary deliverance having been communicated to Mr. Keate, he offered to draw up the narrative of them for the advantage of his friend Captain Wilson. This he executed in "An Account of the Pelew Islands, situated in the western part of the Pacific Ocean; composed from the journals and communications of Captain Henry Wilson and some of his officers, who in August 1783 were there shipwrecked, in the Antelope, a packet belonging to the honourable East India Company." This work was written with great elegance, and if embellished with facts better calculated to have found a place in a novel than a genuine narrative, must be ascribed to the mis-information of those who were actors in the scene, and must first have deceived before they obtained credit. Mr. Keats died rather suddenly on the 27th of June, 1797.

KEATING, GEOFFREY, a clever Irish historian, who was born early in the seventeenth century, in the province of Munster. He was educated with a view to the Roman catholic church, and having received at a foreign university the degree of doctor of divinity, he returned to his native country and became a celebrated preacher. Being well versed in the ancient Irish language, he collected the remains of the early history and antiquities of the island, and formed them into a regular narrative. This work, which he finished about the time of the accession of Charles I., commences at a very early period, and goes on to the seventeenth year of King Henry II., giving an account of the lives and reigns of one hundred and seventy-four kings of the Milesian race, replete with fictitious personages and fabulous narratives, which however, it has been said, he gives as such, and does not impose them on his readers as true history. The work remained in MS. in the original language till it was translated into English by Dermot O'Conner, and published in London in 1723; but a better edition appeared in 1738, with plates of the arms of the principal Irish families, and an appendix not in the former, respecting the ancient names of places. Keating died about the middle of the seventeenth century.

KEATS, JOHN.—This talented English poet was born on the 29th of October, 1796, at his grandfather's residence in Moorfields, London. He was educated at Enfield, and subsequently apprenticed to a surgeon, but his inclination for poetry was so powerful that he abandoned his profession and devoted himself entirely to literature. He was no doubt influenced by an introduction to Leigh Hunt, who was struck with admiration at the specimens of premature genius laid before him. Mr. Keats's first volume of poems was published in 1817, when he was in his twenty-first year. It was followed in 1818 by his "Endymion," a poetic romance; and as this is his principal work it will require some little notice, as it is the one on which, his fame is principally founded. It was published in 1818, and it certainly displays great genius blended with an al-

most equal amount of extravagance. The models upon which he formed it are evidently those of the "Sad Shepherd" of Ben Johnson, and the "Faithful Shepherdess" of Fletcher. The subjoined choral hymn is found at the opening of the poem, and is strikingly characteristic both of his beauties and defects:—

"O thou, whose mighty palace roof doth hang  
From jagged trunks, and overshadoweth  
Eternal whispers, glooms, the birth, life, death  
Of unseen flowers in heavy peacefulness;  
Who lov'st to see the hamadryads dress  
Their ruffled locks where meeting hazels darken;  
And through whole solemn hours dost sit, and hearken  
The dreary melody of bedded reeds—  
In desolate places, where dank moisture breeds  
The pipy hemlock to strange overgrowth.—

"O thou, for whose soul-soothing quiet, turtles  
Passion their voices cooingly 'mong myrtles,  
What time thou wanderest at eventide  
Through sunny meadows, that outskirt the side  
Of thine enmossed realms: O thou, to whom  
Broad-leaved fig-trees even now foredoom  
Their ripen'd fruitage; yellow-girted bees  
Their golden honeycombs; our village leas  
Their fairest blossom'd beans and poppied corn;  
The chuckling linnet its five young unborn,  
To sing for thee; low creeping strawberries  
Their summer coolness; pent up butterflies  
Their freckled wings; yea, the fresh budding year  
All its completions—be quickly near,  
By every wind that nods the mountain pine,  
O forester divine!

"Thou, to whom every fawn and satyr flies  
For willing service; whether to surprise  
The squatted hare while in half-sleeping fit;  
Or upward ragged precipices slit  
To save poor lambkins from the eagle's maw;  
Or by mysterious enticement draw  
Bewildered shepherds to their path again;  
Or to tread breathless round the frothy main,  
And gather up all fancifulest shells  
For thee to tumble into Naiads' cells,  
And, being hidden, laugh at their out-peeping;  
Or to delight thee with fantastic leaping.  
The while they pelt each other on the crown  
With silvery oak apples, and fir cones brown—  
By all the echoes that about thee ring,  
Hear us, O satyr king!"

The accompanying lines, forming part of an ode to the nightingale, are of a very different character, and exhibit the poet in a new light:—

"O for a beaker full of the warm South,  
Full of the true, the blushful Hippocrene,  
With beaded bubbles winking at the brim,  
And purpled-stained mouth;  
That I might drink, and leave the world unseen,  
And with thee fade away into the forest dim:  
Fade far away, dissolve, and quite forget  
What thou among the leaves hast never known,  
The weariness, the fever, and the fret  
Here, where men sit and hear each other groan;  
Where palsy shakes a few, sad, last grey hairs,  
Where youth grows pale, and spectre-thin, and dies,  
Where but to think is to be full of sorrow  
And leaden-eyed despairs.  
The voice I hear this passing night was heard  
In ancient days by emperor and clown:  
Perhaps the self-same song that found a path  
Through the sad heart of Ruth, when sick from home,  
She stood in tears amid the alien corn;  
The same that oft-times hath  
Charm'd magic casements, opening on the foam  
Of perilous seas, in faery lands forlorn."

This work was followed by his last performance entitled "Lamia, Isabella, and other Poems." Mr. Keats's talents were of a nature to ensure a favourable notice under any circumstances, and would unquestionably have done so; but the political and other opinions to which his attention had early been directed, and which he freely expressed, soon brought on him a host of critics, some of whom were but too happy to mark their political hostility under the guise of public zeal, and an attack from a review,

the conductors of which were actuated by this motive, completed the difficulties with which he had to contend. His constitution, naturally weak, gave way, and after lingering for some months in England he was prevailed on to try the air of Italy, where he arrived in November 1820, and on the 27th of the December following he breathed his last in the arms of his old and tried friend, Mr. Severn, a gentleman well known for his artistical talents. So irrepressible were the poetical tendencies of this young poet, that a little before he died, when speaking of the grave he was about to occupy, he said that "he already felt the daisies growing over him."

**KEENE, EDMUND.**—This learned ecclesiastic was born at Lynn, in the county of Norfolk, in 1713. He received the rudiments of his education at the Charter House school, and was afterwards removed to Caius college, Cambridge. In 1740 he received from Sir Robert Walpole the valuable benefice of Stanhope, in the diocese of Durham, and in 1752 he was raised to the episcopal bench as bishop of Chester, and eight years after he was translated to the see of Ely, the revenues of which diocese he much improved. This prelate, who was as much distinguished for his unaffected piety as for his munificence, died in 1781.

**KEILL, JOHN,** a celebrated mathematician and experimental philosopher, who was born at Edinburgh in 1671. He was educated in that university, where he published a work which excited considerable interest. It was entitled "An Examination of Burnet's Theory of the Earth." In 1701 he published "Lectures on the New Philosophy," and continued to exercise his pen on scientific subjects till the time of his death, which occurred September 1, 1721.

**KEILL, JOHN DR.,** brother to the above, was born in 1673 and died in 1719. He was well known as a physician, and published several works connected with his profession.

**KEISER, REINHARD.**—This well-known musical composer was born at Leipsic in 1673, and was sent at a very early age to the university of his native city, where he much distinguished himself in his general studies, whilst at the same time he greatly improved in the science of music by a close attention to the best productions of Italy. His first attempt at composition was the pastoral of "Ismène," which he wrote for the court at Wolfenbuttel just after he quitted the university; it was received with the greatest approbation. His second opera, "Basilius," proved not less successful. Shortly after this he went to Hamburg, where the opera was in great perfection, the celebrated Hasse being a tenor singer on that stage at the time. Here he re-produced his "Basilius" and "Ismène," both of which were received with enthusiasm. He also brought out the opera of "Janus," which was equally successful. Gifted with first-rate talents, Keiser now found himself obliged to oppose their whole force to misfortunes which threatened him. He had become director of the Opera House at Hamburg, and the speculation was just on the point of failing when he saved the concern from ruin by writing and bringing out no less than eight operas in one year. Every one of them succeeded, and their receipts released the theatre from all pecuniary difficulties.

Soon after Keiser married a woman of property, and commenced, in conjunction with the learned Matheson, giving public concerts at Copenhagen, where he

was honoured with the nomination of chapel-master to the king. On his return to Hamburg he brought out "Circè," the last and most beautiful of his operas. This was first performed in 1734, and was the one hundred and eighteenth which this indefatigable artist had produced. Keiser is considered the father of German melody. Exclusive of his dramatic works, he composed divertimenti, serenate, and cantatas. Fancy and originality were the characteristics of all his productions, as they have since been in most of the compositions of the immortal Haydn. In fact, the vigour of a fertile imagination, corrected by study and experience, is discernible in all the effusions of the inexhaustible Keiser. He died in 1735.

**KEITH, JAMES,** an eminent military commander, who was born in 1696. He was educated in the college at Aberdeen, and commenced service in 1715. He afterwards entered into the Russian service, which he again changed for that of Prussia, and ultimately became field-marshal. He was killed at Hohkerchen in 1758.

**KEITH, THOMAS,** a good practical mathematician, who was born in 1759. After laboriously employing himself for several years as an accountant, he was appointed to a post in the British Museum, which he held to the time of his death in 1824. He is best known by his "Treatise on the Use of Globes," but his best work is entitled "An Introduction to the Theory and Practice of Plane and Spherical Trigonometry."

**KELLERMAN, DUKE OF VALMY.**—This brave French officer was born at Strasbourg in 1735, and entered the Confians legion as a hussar in 1752, and served in it the first campaigns of the seven years' war. He went through all the degrees of service, up to the rank of *maréchal de camp*, and at the breaking out of the revolution he so distinguished himself by patriotism and judgment that the citizens of Landau, in the garrison of which he was stationed, presented him with a civic crown. At the commencement of the war he received the command of the army of the Moselle, formed a junction in September with the main army under Dumouriez, and sustained, on the 20th of September, 1792, the celebrated attack of the duke of Brunswick. This cannonade of Valmy, as it is called, caused the allies to retreat, and perhaps decided, not merely the whole campaign, but also the fate of Europe and the supremacy of France, till 1813. In the following wars of France, Kellerman received various general commands. Napoleon loaded him with honours, and gave him Jönnahnsberg. After the restoration of the Bourbons he was appointed a member of the chamber of peers, where he espoused the liberal side. He died September 12, 1820, eighty-five years of age. In his last will he had ordered that his heart should be buried on the field of Valmy.

**KELLGREN, HENRY,** a Swedish poet and *savant*, was born in 1751, at Schonen, and studied at the university of Abo. Gustavus III. protected him against the assaults of envy in Stockholm, and placed him beyond the reach of want. He was one of the first members of the academy of sciences established by the same monarch at Stockholm. Kellgren's assiduous study was too much for his weak frame. He died in the Swedish capital in 1795. On his tombstone are the words *Poeta, philosopho, civi, amico lugentes amici*. He is considered as a poet of a very

rich imagination. His complete works appeared after his death at Stockholm. As editor of the literary part of the "Stockholm Journal," he laboured much to improve the taste of his countrymen, and his criticisms made him many enemies.

KELLY, HUGH, a dramatic writer, who was born in 1739 on the banks of the lake of Killarney. His father apprenticed him to a stay-maker in Dublin, which employment did not suit his inclination. However, he served his time and then came to London, and after suffering many privations obtained employment as a writer.

In 1762 he became editor of the "Lady's Museum," the "Court Magazine," and other periodical publications, in which he wrote so many original essays and pieces of poetry that his fame was quickly spread, and he now found himself fully employed in various branches of periodical literature, in the prosecution of which he exerted himself with the most unwearied industry.

About this time he began to write many political pamphlets, and among the rest "A Vindication of Mr. Pitt's Administration," which Lord Chesterfield makes honourable mention of in the second volume of his letters. In 1767 "The Babbler" appeared in two pocket volumes, which had at first been inserted in "Owen's Weekly Chronicle" in single papers; as did the "Memoirs of a Magdalene," under the title of "Louisa Mildmay." About this time also, perceiving that Churchill's reputation had been much raised by his criticism of the stage in the "Rosciad," Mr. Kelly produced his "Thespis," by much the most spirited of his poetic compositions, in which he dealt about his satire and panegyric with great freedom and acuteness. It is somewhat singular that while Mr. Kelly was making this severe attack upon the merits of the leading performers at our theatres, which had so great an effect upon the feelings of Mrs. Barry and Mrs. Clive, that they both for some time refused to perform in any of his pieces, he was actually writing for the stage, for in 1768 his comedy of "False Delicacy" made its appearance, and was received with such universal applause as at once established his reputation as a dramatic writer, and procured him a distinguished rank among the wits of the age. The success of this play induced Mr. Kelly to continue to write for the stage, and he soon produced another comedy, entitled "A Word to the Wise," which, on a report then current that he was employed to write in defence of the measures of the administration, met with a very illiberal reception; for, by a party who had previously determined on its fate, after an uncommon uproar, it was most undeservedly driven from the theatre.

In 1774, under the patronage of Mr. Addington, who kindly helped to conceal the name of the real author by lending his own to that performance, he produced his "School for Wives." By this manoeuvre he completely deceived the critics, who had not yet forgot their resentment; for the play was prepared for the stage, and represented, without the least discovery of his relation to it, though they pretended to be perfectly well acquainted with Mr. Kelly's style and manner of writing. However, after the character of the play was fully established, and any farther concealment became unnecessary, Mr. Addington, in a public advertisement, resigned his borrowed plumes, and the real author was invested with that share of reputation to which he

was entitled. But whilst Kelly was employed in these dramatic pursuits he was too wise to depend solely on their precarious success for the support of his family. He had therefore, some years before this period, resolved to study the law, had become a member of the society of the Middle Temple, and was called to the bar as early as 1774.

Mr. Kelly's next production was the farce of a "Romance of an Hour," which made its appearance about this time. This performance, though borrowed from Marmontel, he so perfectly naturalized that it bears every mark of an original. The comedy of "The Man of Reason" followed this piece of genuine humour, but was attended with less success than any of his former productions. This was his last literary attempt, for the sedentary life to which his constant labour subjected him injured his health; and early in 1777 an abscess formed in his side, which, after a few days' illness, put a period to his life.

KELLY, JOHN, a learned divine of the established church, who was born at Douglas in the Isle of Man. He is best known as the author of "A Practical Grammar of the Ancient Gaelic, or Language of the Isle of Man." This gentleman had also nearly completed a "Triglot Dictionary of the Celtic Tongue," when it was destroyed by the burning down of the office in which it was printing. Dr. Kelly died in 1809.

KELLY, MICHAEL.—This gentleman was the son of a wine merchant residing in Dublin, and was born in the year 1762. At a very early period he showed a very marked talent for music, which his father encouraged by placing him under the best musical professors in Dublin. Rauzzini being at that time engaged in the Irish metropolis, gave him lessons in singing, and prevailed on his father to send him to Naples for further instruction, where he arrived in his sixteenth year. He was immediately patronised by Sir William Hamilton, the British minister at that court. Having completed his musical education under Signor Avriole, his master gave him a powerful recommendation to Campigli, the manager of the Pergola theatre in Florence, and a kind of agent to every Italian opera in Europe. On his arrival at Leghorn he became acquainted with Signor and Signora Storace, was introduced by them to the British consul, and several mercantile men of importance, and was induced to give a concert, which was productive of both applause and profit.

The opera in which Mr. Kelly was to make his *debut* at Florence was "Il Francese in Italia,"—"The Frenchman in Italy." The eventful night fixed for his appearance at length arrived. Mr. Kelly was the first British male singer who had ever sung in Italy, or indeed on the continent. His reception was most flattering, and he was encored in two of his songs and a duet. While performing at Florence Mr. Kelly received a letter from Mr. Lindley, the father-in-law of Mr. Sheridan, and joint patentee with him in Drury Lane theatre, offering him an engagement for five years as first singer; and he was on the point of writing his answer of acceptance when he received another letter from Mr. Lindley, stating that he must reluctantly decline entering into any such engagement, as he had received a prohibition from Mr. Kelly's father, who even threatened to take legal means to prevent it, which Mr. Kelly's being under age allowed him to do.

He subsequently performed with great success at

most of the Italian theatres, in quality of first-tenor, and travelled through Germany with one of the original singers in the *Nozze di Figaro* of Mozart, with which celebrated composer he contracted a close intimacy during his stay at Vienna. At this city his reception was most gratifying. The emperor Joseph II., accompanied by his brother Maximilian, the archbishop of Cologne, were present at the performance, and evinced their approbation by the applause they bestowed. At that time the court of Vienna was perhaps the most brilliant in Europe. The theatre, which forms part of the royal palace, was crowded with a blaze of beauty and fashion. All ranks of society were passionately fond of music, and most of them perfectly understood the science. Mr. Kelly was fortunate enough to obtain introductions to the best society, his salary amply supplied his wants and wishes, and the public received him well whenever he appeared on the stage. While at Vienna, Mr. Kelly went and spent three days with Haydn at Eisenstadt, the palace of Prince Esterhazy; and afterwards was introduced to that prodigy of genius, Mozart—an event which he considered as one of the greatest gratifications of his musical life. Mozart conferred on Mr. Kelly what the latter deemed a high compliment. Mr. Kelly had composed a little melody to Metastasio's canzonetta "*Grazie agl' inganni tuori*," which was a great favourite wherever he sang it. It was very simple, but it pleased Mozart, and he composed some very beautiful variations to it.

Mr. Kelly, having received a letter from his father in Dublin, stating that his mother was in a declining state of health, and that it was her earnest wish that he should return to Dublin, if only for a few months, asked leave of absence for six months for that purpose, of the emperor. His majesty graciously ordered him to take leave for twelve months, adding, that his salary should be continued for that period; and giving him permission to accept of any engagement in London that he might consider advantageous. Mr. Kelly never returned to the continent, but after visiting Ireland settled in London. Here he made his first appearance at Drury Lane in the opera of "*Lionel and Clarissa*," and retained his situation as first singer at that theatre, the musical performances of which he also directed till his final retirement from the stage. Mr. Kelly's first appearance in England as a composer was in February 1797, when he furnished the music for the entertainment called a "*Friend in Need*," written by Prince Hoare, which met with universal approbation. He also composed the music for Monk Lewis's "*Castle Spectre*." For the same author Mr. Kelly, at various subsequent periods, composed the music of "*Adelmorn the Outlaw*," "*The Wood Demon*," "*Venoni*," and "*Adelgitha*." Having received the commands of George IV., then prince of Wales, to compose a simple ballad for him, Mr. Kelly applied to his friend Lewis to write the words, which he did, and the song became very popular.

The success of the "*Castle Spectre*" gave rise to the drama of "*Blue Beard*." The programme of the French romance of that name Mr. Kelly had brought with him from France; the piece was written by Mr. George Colman, and the music was composed by Mr. Kelly.

The great sums of money produced to the theatre by "*Blue Beard*" induced the Drury Lane proprie-

tors to prevail on Mr. Colman to write a musical after-piece to vie with it in splendour. This piece was entitled "*Feudal Times, or the Banquet Gallery*." Mr. Kelly composed the whole of the music for it, but, although performed for many nights, it was by no means so successful as "*Blue Beard*." In May 1799 Mr. Sheridan's celebrated play of "*Pizarro*" was produced, the whole of the music in which was composed by Mr. Kelly.

Some time previous to his retirement from Drury Lane stage, Mr. Kelly had made Madame Catalani a promise to accompany her for the second time to Dublin, which he did in August 1808. After performing six nights at Dublin, they performed six nights at Cork, a few nights at Limerick, and six more in Dublin. Mr. Kelly returned to London in September, and on the 24th of February, 1809, Drury Lane theatre was destroyed by fire. Mr. Kelly, who had been dining with some friends in the neighbourhood, had the poignant grief not only of beholding the magnificent structure burning with merciless fury, but of knowing that all the scores of the operas which he had composed for the theatre, the labour of many years, were then consuming. In October Mr. Arnold brought out at the Lyceum a musical piece of his own writing, entitled "*The Jubilee*." Mr. Kelly composed the music, and it ran a number of nights. In the season of 1811 Mr. Kelly composed the music for a musical drama called "*Gustavus Vasa*," brought out at Covent Garden; another musical drama called "*The Peasant Boy*," brought out at the Lyceum; a ballet of Des Hayes's production at the Opera House; and an historical play called "*The Royal Oak*," performed at the Haymarket. The summer of that year Mr. Kelly passed at Wroxton, with his kind friend Lord Guildford, and joined in the private theatricals which formed one of the amusements of that hospitable mansion. In autumn Mr. Kelly proceeded to Dublin to fulfil an engagement he had made with the manager of that theatre. On the 5th of September, 1811, he made his last appearance on any stage, on the stage where he had made his first appearance when a boy in 1779.

For some years before his death the gout almost deprived Mr. Kelly of locomotion. Both his parents had been sufferers from the same disorder; in him, therefore, it was constitutional, and not his age's penance for his youth's excess. His general health, however, was good, and his spirits were always excellent. "*One superior solace*," he observes in his reminiscences, "*under my worst visitations, I have indeed possessed, which yet remains untold. With some, perhaps, an avowal of it may draw upon me an imputation of pride or vanity; but, if I know myself, gratitude is paramount with me to either of those passions; and all liberal spirits, I trust, will excuse the apparent boast. Let me therefore declare, without equivocation or disguise, that the chief and dearest comfort remaining to me in this life, is the proud consciousness that I am honoured by the patronage of my beloved monarch.*" In addition to his hereditary complaint, Mr. Kelly suffered for some time prior to his death from paralysis, which partially deprived him of the use of his limbs; his faculties and memory, however, remained entire till his death, which took place at Margate on the 15th of October, 1826. Shortly before his death he published his "*Reminiscences*," from which we have already given a short extract. It is an amusing work, in two volumes,

replete with anecdotes of his contemporaries and friends.

**KEMBLE, JOHN PHILIP.**—This extraordinary actor and accomplished gentleman was born at Prescott in Lancashire in 1757. He received the rudiments of his education at a Roman catholic seminary in Staffordshire, and was afterwards removed to the university of Douay. Having finished his youthful studies, he returned to England before he was twenty, and, entertaining an unconquerable predilection for the stage, he made that which may be considered his *debut* in Chamberlain's company at Wolverhampton, in the character of Theodosius in the "Force of Love," but without much success. His second appearance was at the same place, in the character of Bajazet; in which he produced a stronger impression, and gave a decided promise of those talents which afterwards raised him to unrivalled eminence. Mr. Kemble next acted at Worcester, and afterwards with Mr. Younger, at the theatres royal in Manchester and Liverpool. From that time he rapidly improved in his profession, and at length joined Tate Wilkinson at York, who was delighted with him.

While at York, Mr. Kemble tried a new species of entertainment in the theatre of that city, consisting of a repetition of the most beautiful odes from Mason, Gray, and Collins, and of the tales of *Le Fevre* and *Maria*, from *Sterne*, with other pieces in prose and verse; and in this novel and hazardous undertaking he met with such approbation that the country has ever since been overrun by crowds of reciters, who want nothing but his talents to be as successful as their original. At York John Kemble became for the first time acquainted with his princely friend and patron, the late duke of Northumberland, whose munificence makes such a distinguished figure in his history. The officer on duty, belonging to a squadron of dragoons lying in York at the time, had somewhat bluntly refused to permit a few of the soldiers to attend the theatre on occasion of some procession in which their appearance was desired. Kemble wrote to Lord Percy, who commanded the squadron, and his request was instantly complied with. The duke afterwards nominally lent Kemble the sum of 10,000*l.*, and converted the loan into a gift by burning the obligation for repayment after the fire in Covent Garden. About this time, Mr. Wilkinson having taken the Edinburgh theatre, Mr. Kemble accompanied him to "the modern Athens," and established his reputation there among men of letters by the composition and delivery of a lecture on sacred and profane oratory, in which he proved himself an able critic and an eloquent declaimer.

In 1783 Mr. Kemble made his first appearance in the metropolis in the character of Hamlet, and Mr. Boaden, who has written his memoirs, says that "his person seemed to be finely formed, and his manners princely; but on his brow hung the weight of some intolerable woe. Apart from the expression called up by the situation of Hamlet, there struck me to be in him a peculiar and personal fitness for tragedy. What others assumed, seemed to be inherent in Kemble. 'Native, and to the manner born,' he looked an abstraction of the characteristics of tragedy. The first great point of remark was, that his Hamlet was decidedly original. He had seen no great actor whom he could have copied. His style was formed by his

own taste or judgment, or rather grew out of the peculiar properties of his person and his intellectual habits. He was of a solemn and deliberate temperament—his walk was always slow, and his expression of countenance contemplative—his utterance rather tardy for the most part, but always finely articulate, and in common parlance seemed to proceed rather from organization than voice."

In 1789 we find Kemble appointed manager of Drury Lane theatre. Before the new manager's time there was no such thing as regular costume observed in our theatres. The actors represented Macbeth and his wife, Belvidera and Jaffier, and most other parts, whatever the age or country in which the scene was laid, in the cast-off court dresses of the nobility. Kemble used to say that the modern dresses of the characters in the well-known print of a certain dramatic dagger scene, made them resemble the butler and house-keeper struggling for the carving-knife. Some few characters, by a sort of prescriptive theatrical right, always retained the costume of their times—Falstaff, for example, and Richard III.; but such exceptions only rendered the general appearance of the actors more anomalous. Jane Shore was occasionally acted with Richard in the old English cloak, Lord Hastings in a full court dress with his white rod, like a lord chamberlain of the last reign, and Jane Shore and Alicia in stays and hoops. These incongruities were perhaps owing to the court of Charles II. adopting, after the restoration, the French regulation, that players, being considered as in the presence of their sovereign, should wear the dress of the court drawing-room, while in certain parts the old English custom was still retained, which preserved some attempt at dressing in character. Kemble reformed all these anachronisms, and prosecuted with great earnestness a plan of reforming the wardrobe of the stage, collecting with indefatigable diligence from illuminated manuscripts, ancient pictures, and other satisfactory authorities, whatever could be gleaned of ancient costume worthy of being adopted on the theatre. Rigid and pedantic adherence to the dresses of every age was not possible or to be wished for. In the time when Lear is supposed to have lived, the British were probably painted and tattooed, and, to be perfectly accurate, Edgar ought to have stripped his shoulders bare before he assumed the character of Poor Tom. Hamlet, too, should have worn a bear skin instead of his inky suit; and whatever Macbeth's garb should have been, of course a philabeg could have formed no part thereof. But as the poet, carrying back his scene into remote days, retains still to a certain extent the manners and sentiments of his own period, so it is sufficient for the purpose of costume if every thing be avoided which can recal modern associations, and as much of the antique be assumed as will at once harmonize with the purpose of the exhibition, and in so far awaken recollections of the days of yore as to give an air of truth to the scene.

During his whole life Kemble was intent on improving, by all means which occurred, the accuracy of the dresses which he wore while in character. "Macbeth" was one of the first plays in which the better system of costume was adopted, and he wore the highland dress, as Macklin had done before him. With the subject of dress, the modes of disposing and managing the scenes are naturally connected; and here also Kemble, jealous of the dignity of his art,

called in the assistance of able artists, and improved, in a most wonderful degree, the appearance of the stage and the general effect of the piece in representation.

Processions and decorations belong to the same province as scenes and dresses, and should be heedfully attended to, but at the same time kept under, that they may relieve the action of the scene instead of shouldering aside the dramatic interest. Kemble carried his love of splendour rather to the extreme, though what he introduced was generally tasteful and splendid. He sacrificed perhaps his own opinion to the humour of the audience, and to the tempting facilities which the size of the modern theatres afford for what is called spectacle. "Macbeth" was, as has been hinted, one of the first of the old stock plays which he brought forward in this splendid manner, and in many respects it was admirably suited for such a purpose. The distant approach of Macbeth's army, as well as the apparitions of the cavern, were very well managed. By causing the descendants of the murdered thane to pass behind a screen of black crape, he diminished their corporeal appearance, and emulated the noble lines of Collins:

"From thence he sung how, 'mid his bold design,  
Before the Scot afflicted and aghast,  
The shadowy kings of Banquo's fated line  
Through the dark cave in gleamy pageant passed."

Kemble, though from a natural turn for magnificence he was somewhat too apt to indulge this love of show, often contrived to cater at the same time for those who admired in preference the legitimate scenes of the drama. Henry VIII. was produced chiefly on account of the processions, but who would not forgive any motive which could contribute to bring forward such complete personifications as Mrs. Siddons and her brother presented in Cardinal Wolsey and Queen Catherine? The trial scene and dying scene of the immortal actress were among the most splendid displays of her unrivalled excellence, and for Kemble's Wolsey, it was reality itself; you saw the full-blown dignity of the ambitious statesman sink at once before the regal frown, and you felt at the same moment that he had received the death wound. He seemed to totter and grow less before the eyes of the spectator; you saw that the spear he had leaned upon had pierced his side. Unhappily, although they were thus frequently combined, the taste for show prevailed over that for the legitimate drama. A display of splendour in the one theatre provoked rival magnificence in the other, and the example entailed ruinous expense on both.

Mr. Kemble, in the winter season of 1784-5, was superseded in his temporary character of manager by Mr. King's return to that situation, but in 1788-9 the veteran finally retreated from the office, and from that time Kemble remained manager of Drury Lane until 1796, when the irregularity with which the proprietors managed their pecuniary matters, and their frequent interference with his authority, induced him to resign the situation. He again returned to the thankless office in 1800-2, with some intention of obtaining a secure hold by purchasing one fourth part of the whole concern. This plan failed, and in 1802 Kemble finally retired from Drury Lane, and made a purchase of a fourth share of the Covent Garden patent. He was now not only a manager, but a large proprietor, a speculation which, producing some difficulties, afterwards inter-

fered with the quiet of his declining years. It may be fairly asked why, with no expensive habits, with professional emoluments to the amount of about 3000*l.* a year, and with a considerable sum of money saved, without which he could not have made the purchase, this amiable and good-tempered man should have involved his whole fortune in a property which he knew to be so very precarious that he himself always talked of it as a lottery, and confined himself for life to the duty of management, which he had often felt to be accompanied by intolerable grievances. But John Kemble was a sworn votary to the drama, and though he certainly did bow the knee to Baal in becoming an encourager of the inordinate rage for spectacle, which at once impoverished the concern and debauched the public taste, he laboured hard, on the other hand, to bring forward ancient pieces which he thought might be revived with renewed interest. He had undoubtedly the laudable wish to raise as high as possible the art to which, as much from the excellence of his personal as of his professional character, he was an honour. Kemble may be therefore considered as having, with his eyes open, made a sacrifice of fortune, of peace of mind, and of the bodily ease which frequent fits of the gout rendered desirable, in order to sustain the honour of his art.

The discomfort to which he was exposed never fretted his temper; and not even the gout itself, mistress of men's purposes and their actions too in most cases, could conquer his strong resolution to do his duty towards the public. He used to take the somewhat hazardous medicine *l'eau médicinale d'Husson* without hesitation, so as to enable him to perform the very day after his malady had made its most severe attacks.

The next great incident in Kemble's history was occasioned by a deplorable event, or rather one out of a course of events of the same nature which succeeded each other rapidly—we mean the sequence of fires by which the Pantheon, Opera House, Covent Garden, and Drury Lane theatres were burnt down. The wonderful coincidence of time and circumstance in these fatal accidents made persons imagine that some incendiary had, in a fit of zeal of a truly flaming character, undertaken the destruction of what he might consider as the resorts of profanity. But any one who has been behind the scenes of a theatre, and has seen how many lights are burning in the neighbourhood of scenery, and other articles of a character peculiarly combustible; has been witness, at the same time, to the explosion of guns and fireworks, scattering risk in every direction; and has observed how the shifting of scenes and alteration of lights are perpetually threatening to bring them into contact, will wonder that so few rather than that so many accidents of the kind in reality take place. There is, also, to be considered, the total want of party walls, and that ample room and scope afforded to the action of the flames renders fire a more dangerous, as well as a more probable, event in a theatre than any where else—unless it be aboard ship. The same resource against this imminent peril exists in both cases; namely, the great number of men who are perpetually moving about, both behind the scenes and in a vessel. Numerous accidents occur weekly, nay daily, in both which, where there were fewer eyes to observe, and fewer ready hands to assist, would produce the most fatal accidents. But the

destruction of Covent Garden theatre was attended with one consequence which we must always regard as detrimental, in the highest degree, to the theatrical art. The house was rebuilt on a plan too ample for its legitimate purpose, and far too magnificent for the profits which might naturally be expected from it. The proprietors of Drury had led the way in this great and leading error when they re-constructed that theatre and stage on which Garrick and his contemporaries had exhibited their astonishing talents. All the nicer touches of fine acting—the smile, however suppressed—the glance of passion which escaped from the actor's eye and indicated the internal emotion which he appeared desirous to suppress—the whisper which was heard distinctly through the whole circle of the attentive audience—are all lost or wasted in the huge halls which have since arisen. The finest art of the performer—that of modulating features, tones, and action to the natural expression of human passion, is now lost. Extravagant gesture must be used; excess of rant must be committed by the best actors in their finest parts; and even their violence of voice and gesticulation can hardly make them intelligible to the immense circle in front.

The Drury Lane proprietors having set the example of increasing the extent of their theatre, those of Covent Garden would not be left behind, and theirs also rose on a still more expanded and extensive scale.

It is not impossible that Mr. Kemble's classical taste, and the high sense which he entertained of the dignity of his art, induced him to give his assent too readily to those schemes of magnificence, which were favoured by his colleagues as the surest road to profit. The former was soon convinced of his mistake, beholding that he had only afforded an opportunity for the further predominance of sound and show over the real drama. But the others, who supposed that in consideration of the additional expenditure the public would submit to a small increase of entrance-money, were doomed to experience more direct disappointment and mortification. Of these, however, the chief burden fell in the first instance upon Kemble himself, though not more accessory than the other proprietors to the original proposal, and not at all guilty of some imprudent steps that had been taken in its pursuit.

Mr. Kemble remained, indeed, for two years making every effort to assist the theatre in its state of depression; and mighty were those efforts, for it was during that space that he brought back Julius Cæsar to the stage, and raised from his ashes the living Brutus. But in 1812, deeming he had done his part, desirous of some repose, and not unwilling, perhaps, to make the public sensible what the theatre might suffer by his absence, he withdrew himself from London for nearly two years. In the same year, and just before his departure, the stage lost its brightest ornament by the retirement of Mrs. Siddons.

Mr. Kemble's return to the British capital and stage was triumphant. The pit rose to receive him, and the boxes poured laurels upon the stage. He ascended to the very height of popularity, and was acknowledged as, without dispute, the first actor in Britain, probably in the world, until Kean arose to dispute the crown. The youth, activity, and energy of this new performer, the originality of his manner, which was in reality a revival of the school of Gar-

rick,—above all, the effects of novelty, had a great influence on the public mind, although the opinion of the more sound critics remained decidedly partial to that performer who relied for his success on deep and accurate study of the dramatic art, of the poet's words, and of the human mind, rather than vehement and forcible action, which, though it surprises the first or second time it is witnessed, is apt, when repeated, to have the resemblance of stage-trick. Perhaps Mr. Kemble's resolution to retire, even while his powers seemed to others in their full vigour, was hastened by the toil which he foresaw it must cost him to maintain at his age, and with health that was fast breaking, a contest with a rival in all the vigour of youth.

As we are now approaching the close of Mr. Kemble's professional life, the present is perhaps the most fit opportunity for saying something of his general qualifications for the stage. Mr. Kemble combined, in an eminent degree, the physical and mental requisites for the highest rank in his profession. To a noble form and classical and expressive countenance, he added the advantages of a sound judgment, indefatigable industry, and a decided genius and ardent love for the art of which he was so distinguished an ornament. He possessed, besides, that essential characteristic of a first-rate tragic actor, an air of intellectual superiority, and a peculiarity of manner and appearance, which impressed the spectator, at a glance, with the conviction that he was not of the race of common men. His voice was defective in the under-tones necessary for soliloquy, but in declamation it was strong and efficient, and in tones of melancholy indescribably touching. No music was ever heard which could better revive the tale of past times. It was indeed one of the most exquisite beauties of his performances that a single passage frequently recalled to the mind "a whole history." At the same time it must be confessed that there were occasions, principally while he was suffering from the languor of indisposition, when his enunciation was unpleasingly elaborate and prolonged.

To young and inexperienced critics he appeared to have too much art. Judging more from feelings than from principles, they regarded him as departing from propriety in the same degree in which they saw him depart from the character of nature as it existed in their own minds. Comparing him with their own notions, indeed in many cases with their own knowledge of the prototype in nature of the part which he was performing, they felt that the representation and the reality had very little resemblance, and that they had never met with any one who walked, looked, and spoke as he did. But when they saw him a second, and a third, and a fourth time, they began to understand the source of their error and the character of his excellence. They perceived that his whole performance was the result of profound study,—that he departed intentionally from simple nature, because he had seen that nature, artificially combined, would produce a greater effect,—that his playing therefore was not to be judged by its resemblance to ordinary nature and general character, but by its conformity with what nature would appear and become under certain selected circumstances. They saw that acting, like poetry or painting, ought not to take its subject from merely common nature; and that an actor, like a poet or a

painter, could never possess the genuine feelings, spirit, and genius of his art, unless he formed himself by a beau ideal in his own imagination.

While depicting in the most powerful manner possible the fiercest rage, the bitterest hatred, or the wildest desperation of a perturbed spirit,—while representing, in short, the “very whirlwind of passion,” he was always at a distance from the confines of extravagance. His acting was the finest exemplification conceivable of the truth, that distortion of visage and writhing of limb are ineffective in proportion as they are outrageous,—that eternal starts, and chafings, and restlessness, are significant only of littleness and imbecility,—that all such ingenuities are wretched substitutes for essential expression, and are, to adopt the language of La Rochefoucault, “mysteries of the body to conceal the defects of the mind.” To this the manner of Kemble was directly opposed. In all his numerous performances there were to be remarked no laborious effort, no painful tension of his faculties, no search after extrinsic embellishment or false and conceited contrast. Every thing had its distinct meaning; every look, every tone, and every gesture, were impressive, not only in themselves, but because they all converged to one point; they were all determined by, and had reference to, one pervading idea, which influenced and governed the whole.

But Mr. Kemble had now determined to retire from the stage of which he had so long been the ornament, and as soon as it became generally known that he was to perform for the last time on the night of the 23rd of June, every box in the house was secured, and the orchestra was fitted up for the accommodation of those lovers of the drama who longed to see their great actor once more. All the leading members of the profession, and among them M. Talma, were present. Mr. Kemble played Coriolanus with an abandonment of self-care, and a boundless energy, as though he felt that he should never play again, and that he needed to husband his powers no longer. The audience were borne along with him until they approached the close of the last act, and the curtain dropped amidst shouts of “No farewell! No farewell!” but, true to himself, the proud actor came forward, evidently “oppressed with grief, oppressed with care.” He struggled long before he could obtain silence,—and then he struggled long before he could break it. At length, he stammered out in honest, earnest truth, “I have now appeared before you for the last time; this night closes my professional life.” The burst of “No! No!” was tremendous; but Mr. Kemble stood his ground; continuing his farewell address, when the storm abated, in the following words; frequently interrupted by his own feelings, and by the ardent and affectionate cheers of the audience:—

“I am so much agitated that I cannot express with any tolerable propriety what I wish to say. I feared, indeed, that I should not be able to take my leave of you with sufficient fortitude,—composure, I mean,—and had intended to withdraw myself from before you in silence; but I suffered myself to be persuaded that if it were only from old custom, some little parting word would be expected from me on this occasion. Ladies and gentlemen, I entreat you to believe, that, whatever abilities I have possessed,—either as an actor, in the performance of the characters allotted to me,—or as a manager, in

endeavouring at a union of propriety and splendour in the representation of our best plays, and particularly of those of the divine Shakspeare,—I entreat you to believe that all my labours, all my studies, whatever they have been, have been made delightful to me, by the approbation with which you have been pleased constantly to reward them.

“I beg you, ladies and gentlemen, to accept my thanks for the great kindness you have invariably shown me, from the first night I became a candidate for public favour, down to this painful moment of my parting with you!—I must take my leave at once.—Ladies and gentlemen, I most respectfully bid you a long and unwilling farewell!”

At the moment of his withdrawing, a laurel wreath, attached to which was a scroll, containing an urgent request that he would not take his final leave, but consent to perform a few nights every season, as long as his health would permit, was passed by a gentleman in the pit to M. Talma, in the orchestra, for the purpose of being handed over by him to Mr. Kemble. This, however, not being effected in time, the manager was called for, and Mr. Fawcett appeared. He took the wreath, declaring the pride he felt in being commissioned to present it, and the audience then sadly and slowly left the theatre.

During his stay in England, Mr. Kemble assigned the whole of his property in Covent Garden theatre over to his brother, and then proceeded to the continent, where he determined to take up his abode at Lausanne. His house, called Beausite, was, as the name denotes, beautifully and romantically situated. Here his chief occupations were his books and his garden. In the latter he took great delight. He resorted to it with the first rays of the sun, and kept it in a state of cultivation that could not be surpassed. It is not surprising that the classical taste of Mr. Kemble should induce him to wish to visit Italy. In an unfortunate moment he resolved to gratify that inclination. Three months before his decease, and at a very inauspicious season, he went to Rome. Instantly becoming ill, his physician, Dr. Clarke, peremptorily ordered him to return to Lausanne forthwith. It was with difficulty he travelled thither; and although the renewal of his domestic comforts seemed to revive him, he never really overcame the influence of the malaria of Rome.

It was believed by his friends, however,—for how easily do we believe what we earnestly wish!—that he was fast recovering from the effects of his visit to Italy. On Wednesday, the 19th of February, Mr. Kemble dined at the house of an acquaintance in the neighbourhood, and was observed to be in extremely good spirits; a few friends drank tea with him on the following evening, when he played at cards (to which he was very partial), and appeared in excellent health. On the Sunday after this day Mr. Kemble walked for two hours in the sunshine of his garden, and no sign of illness was remarked. He arose on Monday morning as well as usual, and conversed with Mrs. Kemble on indifferent matters; when, according to his usual custom, he read a chapter in his Bible. He again joined Mrs. Kemble in the breakfast-room, and said to her, “Don’t be alarmed, my dear, I have had a slight attack of apoplexy.” Mrs. Kemble was naturally very much terrified, and assisted him to his chair, and, when seated, he took up a number of “Galignani’s Messenger;” but becoming worse, his friend and physician, Dr. Schole, was

sent for, who arrived in a short time, and found him in the position already described, but altered, and exhibiting very unfavourable symptoms. His left side had suffered a decided attack, and he could with difficulty articulate, but seemed extremely anxious to spare the feelings of Mrs. Kemble. Dr. Schole, with the assistance of his old attached servant George, helped him to his bed, and, in the act of conducting him thither a second attack took place, so suddenly that his clothes were obliged to be cut asunder in order that he might the more speedily be let blood; but nature was fast exhausting, and one attack succeeded another so rapidly that Mr. Kemble never spoke afterwards, though he seemed perfectly sensible at intervals. Until nine o'clock on Wednesday morning, the 26th of February, 1823, he lingered in this speechless state, when he expired without any apparent suffering. Thus died this amiable and intellectual man, full of years and honour, in a distant land.

**KEMP, JOSEPH**, an English musician of considerable talent, who was born in 1778 at Exeter, in which city he studied under the celebrated William Jackson. He resided for many years in London, during which period he delivered several courses of lectures at the Russel and other institutions, in which he explained his "System of Musical Education, proving the Science to be one of Simplicity arising out of a Scale of Nature." He was also the author of several valuable works on the science of music, with original compositions. Dr. Kemp subsequently returned to his native city, where he died in 1824.

**KEMPELEN, WOLFGANG**.—This clever mechanic is principally distinguished as the maker of an automaton chess-player, which was exhibited first at Paris, and then in London, when it excited the surprise and admiration of all who witnessed its performance. This very ingenious individual also constructed a speaking figure, of which he published an account in a curious work entitled "*La Mécanisme de la Parole suivi de la Description d'Une Machine Parlante*." He was also the author of several dramatic works. He died at Vienna in 1804.

**KEMPIS, THOMAS A.**—This ecclesiastic, who has been rendered celebrated by his devotional tract entitled "*De Imitatione Christi*," was born in 1380 at Kemp, a small village in the diocese of Cologne. He made great progress in ecclesiastical learning, and in 1399 entered the monastery of regular canons of Mont St. Agnes near Zwol, where his brother was prior. Thomas à Kempis distinguished himself in this situation by his eminent piety, his respect for his superiors, and his charity towards his brethren, and died, in great reputation for sanctity, July 25, 1471, aged ninety-one. He left a great number of religious works, which breathe the spirit of tender, solid, and enlightened piety, of which a collection was printed at Antwerp in 1615.

**KEN, THOMAS**.—This learned and pious divine was born at Berkhamstead in Hertfordshire, in 1637. He received the rudiments of his education at Winchester school, and afterwards removed to New college, Oxford, of which he became a probationer-fellow in 1657, and took his degree of B.A. in 1674. Some years after he became chaplain to the princess of Orange and went over to Holland, where he remained for some time, and acquired the confidence of his mistress; but in performing the duties of his office he happened to incur the dis-

pleasure of her consort, by obliging one of his favourites to perform a promise of marriage with a young lady of the princess's train whom he had seduced by that contract. This zeal in Ken so offended the prince, afterwards King William, that he very warmly threatened to discharge him from the royal household; which Ken as warmly resenting, requested leave of the princess to return home, and would not consent to stay till entreated by the prince in person. About a year after however he returned to England, and was appointed, in quality of chaplain, to attend Lord Dartmouth with the royal commission to demolish the fortifications of Tangier. The doctor returned with this nobleman April 1684, and was immediately advanced to be chaplain to the king, by an order from his majesty himself. Not only the nature of the post, but the gracious manner of conferring it, evidently showed that it was intended as a step to future favours; and this was so well understood that, upon the removal of the court to pass the summer at Winchester, the doctor's prebendal house was pitched upon for the use of the celebrated Nell Gwyn. But Ken was too pious to countenance vice in his royal benefactor, and therefore positively refused admittance to the royal mistress, which the king however did not take amiss as he knew the sincerity of the man; and previous to any application, nominated him soon after to the bishopric of Bath and Wells. A few days after this the king was seized with the illness of which he died; during which the doctor thought it his duty to attend him very constantly, and did his utmost to awaken his conscience to a sense of his licentious life. Bishop Burnet tells us that he spoke on that occasion "with great elevation of thought and expression, and like a man inspired." This pious duty was the cause of delaying his admission to the temporalities of the see of Wells; so that when King James came to the crown new instruments were prepared for that purpose.

When he was settled in his see, he attended closely to his episcopal function. He published "*An Exposition of the Church Catechism*" in 1685. For some time he held in appearance the same place in the favour of King James as he had in the former reign, and some attempts were made to gain him over to the interest of the catholic party at court, but these were in vain; for when the declaration of indulgence was strictly commanded to be read, by virtue of a dispensing power claimed by the king, this bishop was one of the seven who openly opposed the reading of it; for which he was sent to the Tower. Yet, though in this he ventured to disobey his sovereign for the sake of his religion, he would not violate his conscience by transferring his allegiance from him. When the prince of Orange therefore came over and the revolution took place, the bishop retired; and as soon as King William was seated on the throne, and the new oath of allegiance was required, he, by his refusal, suffered himself to be deprived. After his deprivation he resided at Longleat, a seat of Lord Weymouth, in Wiltshire, where he died in 1711. His works were afterwards published in four volumes octavo.

**KENNEDY, JAMES**.—This learned ecclesiastic, who was descended from a noble Scottish family, was born in 1406, and after some preparatory education at home was sent abroad to complete his studies. Having entered into holy orders, he was

raised by James the first to the bishopric of Dunkeld in 1437; shortly after which he went to Florence, but the schism which then prevailed in the church of Rome prevented his procuring the necessary powers. The pope, however, to show his esteem for him, gave him the abbey of Scone. In 1440, while he was at Florence, the see of St. Andrew's, becoming vacant, was conferred upon him; and on his return, after being admitted in due form, he restored order and discipline throughout his diocese. In 1444 he was made lord chancellor, but not finding his power equal to his inclination to do good in this office, he resigned it within a few weeks. The nation being much distracted by party feuds during the minority of James II., and Bishop Kennedy finding himself unable to compose these differences, determined to go again abroad and try what he could do in healing that schism in the papacy which had so long disturbed the quiet of the church. With this view he undertook a journey to Rome with a retinue of thirty persons, and it being necessary to pass through England, he obtained a safe conduct from Henry VI. for that purpose.

It does not appear that he was very successful as to the objects of this journey, but on his return home he founded a college or university at St. Andrew's, called St. Salvator's, which he liberally endowed for the maintenance of a provost, four regents, and eight bursars, or exhibitioners. He founded also the collegiate church within the precincts of the college, in which is his tomb. He founded also the abbey of the Observantines, which was finished by his successor, Bishop Graham. During the minority of James III. he was appointed one of the lords of the regency, but in fact was allowed the whole power, and, according to Buchanan, his conduct met with considerable applause. He died on the 10th of May, 1466.

**KENNEDY, JOHN**, a Scottish antiquary of considerable ability, who resided for some years at Smyrna. Very little of his personal history is known, but his "Dissertation on the Coins of Carausius," of which 260 were in his own possession, provoked a long controversy with Dr. Stukeley. The former maintained that Oriuna was the emperor's guardian goddess, while the latter affirmed that she was his wife. Mr. Kennedy died at a very advanced age in 1760.

**KENNICOTT, BENJAMIN**.—This eminent divine and biblical critic was born at Totness in Devonshire, on the 4th of April, 1718. After receiving his education at the grammar school in his native place, he obtained the post of master of a charity school in the same place. His superior attainments, however, attracted the attention of his friends, by whose assistance he was enabled to become a student of Wadham college, Oxford, in 1747. Here he applied himself to the study of theology, and in 1749 he gave a specimen of his talents in two dissertations, the first on "The Tree of Life in Paradise," and the second on "The Oblations of Cain and Abel." This work was printed at the university press, and dedicated to his early friends, by whose means he had been enabled to complete his education. The success of this work procured him several university honours, among which was that of M.A. in 1750. Mr. Kennicott continued his theological studies with great industry, and in 1753 published "The State of the Printed Hebrew Text

of the Old Testament considered; a Dissertation in Two Parts." In this work he first exhibited the utility and necessity of a collation of the Hebrew Text with the various ancient MSS. existing.

At this period the university of Oxford was much agitated by political disputes. In the rage of party it was not likely that any active member should escape the disorders of the times. Mr. Kennicott adhered to the side of government, and in consequence much of the abuse then liberally distributed amongst the friends of what was called the new interest, or Whig party, fell to his share. In 1758 he commenced his labours in searching out and collating Hebrew MS. He had, however, previously been presented to the vicarage of Culham in Oxfordshire, and been appointed one of the preachers at Whitehall. It appears when he began the study of the Hebrew language, and for several years afterwards, he was strongly prejudiced in favour of the integrity of the Hebrew text; taking it for granted that, if the printed copies of the Hebrew Bible at all differed from the originals of Moses and the prophets, the variations were very few and quite inconsiderable. In 1748 he was convinced of his mistake, and satisfied that there were such corruptions in the sacred volume as to affect the sense greatly in many instances. In 1758 the delegates of the press at Oxford were recommended by the Hebrew professor to encourage, amongst various other particulars, a collation of all those Hebrew MSS. of the Old Testament, which were preserved in the Bodleian library; and Archbishop Secker strongly pressed Dr. Kennicott to undertake the task, as the person best qualified to carry it into execution. In 1760 he was prevailed upon to give up the remainder of his life to the arduous work, and early in that year published "The State of the Printed Hebrew Text Considered, Dissertation the Second," in which he further enforced the necessity of the collation he had so strenuously recommended. In the same year he published his proposals, and was immediately encouraged by a liberal subscription from the universities of Oxford, Cambridge, and Dublin; the archbishops of Canterbury, York, and Dublin; many of the bishops, some noblemen, the principal of the dissenting ministers, and various clergymen, as well as other encouragers of literature. On the 6th of December, 1761, he took the degree of B.D., and on the 10th of the same month that of D.D. In that year his majesty's name was added to the list of annual subscribers to the work for the sum of 200*l*. The importance of the work being generally acknowledged, numberless articles of information were received from various parts of Europe, and the learned in every quarter seemed willing to promote the success of a plan so apparently beneficial to the interests of revelation. Some, however, doubted the necessity, and some the usefulness of the undertaking, and objections were soon raised. Amongst others, Dr. Rutherford published "A Letter to the Rev. Mr. Kennicott, in which his Defence of the Samaritan Pentateuch is examined, and his Second Dissertation on the State of the Printed Hebrew Text of the Old Testament is shewn to be in many instances injudicious and inaccurate. With a postscript, occasioned by his advertizing, before this letter was printed, that he had an Answer to it in the Press." To this Dr. Kennicott published an immediate reply under the title of "An Answer to a Letter from the

Rev. T. Rutherforth," in the postscript to which he declared it to be his resolution not to be diverted from his principal design by engaging in any further controversy. This resolution he was unable to persevere in. An antagonist, whose influence was too great to be treated with neglect, made his appearance. This was Dr. Warburton, bishop of Gloucester, then possessed of all his powers, and exercising authority in the world of letters almost without controul. This learned writer, finding an explanation of a passage in the Proverbs different from his own sentiments, attacked the collation of the Hebrew MSS. in the preface to his "Doctrine of Grace," 1764, in a style not unusual with him and calculated to make an unfavourable impression on the public mind. To repel the attack, Dr. Kennicott published "A Sermon preached before the university of Oxford at St. Mary's church, on Sunday, May 19, 1765," in the notes to which he defended himself with great spirit and even assailed his opponent, whose reflections he observed, with regard to his work, were a mere fortuitous concurrence of words of heterogeneous and incompatible meanings, which were incapable of forming any regular system of opposition, and had therefore the benevolent faculty of destroying one another. At length the important work was concluded within the period of ten years originally promised. On this occasion he published the ten annual accounts of the progress of this laborious undertaking, by which it appeared that the whole money received from the subscribers amounted to the sum of 911*l.* 7*s.* 6*d.*, on the recital of which Dr. Kennicott exclaims, "Reader! What a sum is here! Let foreign nations read with astonishment this story of Britons and their king, joined by one foreign prince and one foreign academy, voluntarily contributing for ten years their several bounties, with a degree of public spirit beyond all example, for the accomplishment of a work purely subservient to the honour of revelation—a work sacred to the glory of God, and the good of mankind! And, under the powerful influence of this view of my work, it is impossible for me to be sufficiently thankful, either to those who have honoured with their patronage me, as the humble instrument in beginning and completing it, or to Divine Providence for granting me life to finish it, as well as resolution to undertake it." He then states, that after deducting his income to live on during these ten years, the money spent in collations abroad and assistants at home, there remained only 500*l.*, all which was likely to be swallowed up in further expences, which he had engaged to pay. His industry had been unremitting; his general rule being to devote to it ten or twelve hours in a day, and frequently fourteen; at least, he says, "This was my practice till such severe application became no longer possible, through the injuries done to my constitution." In this final statement he also, with proper indignation, notices some insinuations which had been thrown on him during the progress of the work. He had declared at the outset of his undertaking that he had no doubt of receiving from the public the reward of his labours. Accordingly, on the death of Dr. Ballard, in June 1770, he was appointed a prebendary of Westminster, which in October he exchanged for a canonry of Christ Church, Oxford. In 1776 he gave the public the first fruits of his long and laborious task, by the publication of the first volume of the

Hebrew Bible, with the various readings; and this was followed in 1780 by the second volume, with a general dissertation, which completed the work. He had enjoyed an extraordinary share of good health until near the conclusion of his labours, when the infirmities of age impaired his exertions, and terminated his life on the 18th of August, 1783. He was buried in Christ Church cathedral. His last employment was to prepare for the press, "Remarks on Select Passages in the Old Testament, to which are added, Eight Sermons;" part was printed in his life-time, and the whole published in 1787.

KENNET, WHITE, a learned English prelate who was born at Dover in 1660. He received the rudiments of his education at Westminster, but completed it at Edmund college, Oxford. In 1684 he took the degree of M. A., and shortly after was presented to the living of Ambrosden in Oxfordshire. His first work of importance was his translation of Pliny's "Panegyric on the Emperor Trajan," which was considered as a covert eulogium on James II.; he however denied the imputation with considerable warmth. He soon after entered into the catholic controversy and refused to sign the declaration for liberty of conscience in 1688, and went with the body of the clergy in the diocese of Oxford, when they rejected an address to King James, recommended by Bishop Parker in the same year. While he continued at Ambrosden, he contracted an acquaintance with Dr. Hickeys, whom he entertained in his house, and was instructed by him in the Saxon and Northern tongues, though their different principles in church and state afterwards dissolved the friendship between them.

In 1691 Mr. Kennet was chosen lecturer of St. Martin's in Oxford, having some time before been invited back to Edmund Hall, to be tutor and vice-principal there; where he lived in friendship with the learned Dr. Mill, the editor of the New Testament, who was then principal of that house. In February 1692 he addressed a letter from Edmund Hall to Bromes, the editor of Somner's "Treatise of the Roman Ports and Forts in Kent," containing an account of the life of that antiquary, which gave him an opportunity of displaying his knowledge in the history of the Saxon language in England.

On May 5, 1694, Mr. Kennet took the degree of B. D., that of D. D. July 19, 1699, and in 1700 was appointed minister of St. Botolph, Aldgate, in London. In 1701 he engaged in a controversy with Dr. Atterbury in the disputes about the rights of convocation, of which he became a member about this time as archdeacon of Huntingdon, to which dignity he was advanced the same year by Dr. Gardiner, bishop of Lincoln.

Shortly after he entered warmly into a new controversy with Bishop Atterbury relative to the power of the English convocation. He now courted the patronage of the Whigs, whom he had originally satirized, and through the influence of the duke of Devonshire he obtained the deanery of Peterborough in 1707. In 1709 he published "A Vindication of the Church and Clergy of England from Some Late Reproaches rudely and unjustly cast upon them." In 1710 he was greatly reproached for not joining in the London clergy's address to the queen. When the great point in Sacheverell's trial, the change of the ministry, was gained, and addresses succeeded, an address was prepared from the bishop and clergy of London, so worded that they who would not subscribe it might

be represented as enemies to the queen and her ministry. Dr. Kennet, however, refused to sign it, which was announced in one of the newspapers. This zealous conduct in Kennet in favour of his own party raised so great an odium against him, and made him so very obnoxious to the other, that very uncommon methods were taken to expose him; and one, in particular, by Dr. Welton, rector of Whitechapel. In an altar-piece of that church, which was intended to represent Christ and his twelve apostles eating the passover and the last supper, Judas, the traitor, was drawn sitting in an elbow-chair, dressed in a black garment, between a gown and a cloak, with a black scarf and a white band, a short wig, and a mark in his forehead between a lock and a patch, and with so much of the countenance of Dr. Kennet, that under it, in effect, was written "the dean, the traitor." This picture attracted much notice, and being deservedly reprobated, it was at length removed by the order of the bishop of London. Dr. Kennet maintained his rank in spite of all opposition, and in 1718 he was promoted to the bishopric of Peterborough, which he held till his death, which took place in 1728. The works of Dr. Kennet display considerable talent, and they relate to antiquities, ecclesiastical history, and theology.

**KENRICK, WILLIAM**, a miscellaneous writer possessed of more talents than principle, who was born at Watford in Hertfordshire, and is believed to have been educated for a mechanic trade; he however quitted it early in life, and devoted himself entirely to literature. His first appearance as an author was in a pamphlet entitled "The Grand Question Debated, or an essay to prove that the soul of man is not, neither can it be, immortal," which was immediately followed by a "Reply to the Grand Question Debated, fully proving that the soul of man is, and must be, immortal." Both are superficial enough, and seem intended as a trial of that author-craft which he afterwards so often practised in attacking or defending himself under anonymous signatures when he found no one else disposed to do either. About the same time he published a poem entitled "Kapelion, or the Poetical Ordinary," which was followed in 1753 by the first of those attacks on his brethren which kept him in perpetual warfare; it was entitled "The Pasquinade, with notes variorum, book the first," and intended as an imitation of the Dunciad. Dr., afterwards Sir John Hill, and Christopher Smart, were the chief heroes. His "Epistles, Philosophical and Moral," or "Epistle to Lorenzo," appeared in 1758, and may be reckoned among the best specimens of his poetry, which is not without ease and elegance. About the same period he published a review of Dr. Johnson's new edition of Shakspeare; he also wrote a comedy entitled "Falstaff's Wedding" and "The Widowed Wife." In 1771 he published an account of his discovery of the perpetual motion, entitled "A Lecture on the Perpetual Motion," which he had delivered at a tavern. In all this Dr. Kenrick was harmlessly if not successfully employed, and certainly evinced a considerable knowledge of the science of mechanics, but in 1772 he disgraced his character by an attack on Garrick in a poem called "Love in the Suds," for which that gentleman commenced a prosecution in the court of king's bench. Kenrick immediately published "A Letter to David Garrick, &c." in which he informed the public of the cause of his quarrel with him, and the motives of his writing

"Love in the Suds." A public apology also appeared in the newspapers as false as the libel itself. In 1773 he collected the works of Lloyd, with a life of that unfortunate poet. In the same year he produced "The Duellist," a comedy, acted only one night, and published a dictionary of the English language, in the preliminary parts of which are many shrewd and useful discussions and remarks. In January 1775 he commenced his "London Review," which was published for some years with considerable success. In the same year he began a translation of Buffon, to be published in numbers, and in 1775 a translation of Voltaire's works. His last dramatic attempt was "The Lady of the Manor," a comic opera, taken from Johnson's "Country Lassies," and his last original publications, both of some degree of merit, were "Observations on the Marriage Contract," and "Observations on Jenyns's View of the Internal Evidence, &c." This last had formed an article in his Review, whence other articles of equal ability might be selected were they not all contaminated by a style vituperative and malignant. In his latter days his constitution was so much injured by inebriety that he generally wrote with a bottle of brandy at his elbow, which at length terminated his career on the 10th of June, 1779.

**KENT, EDWARD AUGUSTUS, DUKE OF.**—This illustrious member of the English royal family was the fourth son of his late majesty George III. He was born November 2, 1767, and at eighteen years of age proceeded to Germany to complete his education. From thence he went to Geneva, and returned to England in his twenty-third year. In 1791 the duke of Kent was appointed to a military command in the French West India Islands. This expedition proved completely fortunate, and soon after his arrival at the place of his destination his royal highness, greatly to his joy, obtained the command of the detached camp of La Coste, and displayed his gallantry at the attack of Fort Royal in Martinique, which, out of compliment to him, was afterwards named Fort Edward. At St. Lucie and Guadaloupe he also distinguished himself in several perilous affairs, and by his bravery and good conduct obtained the praise and approbation of the commander-in-chief, whose despatches fully testified the high idea entertained of his courage and good conduct.

The purposes of the armament having been all duly fulfilled, his royal highness returned to North America, and was soon after rewarded with the government of Nova Scotia, to which was superadded the rank of lieutenant-general. During his residence at Halifax, in consequence of the fall of his horse under him, it was deemed necessary for Prince Edward to return to England, and in 1799 he was called to the house of lords by a patent creating him duke of Kent and Stratherne, and also earl of Dublin.

He was shortly afterwards appointed commander-in-chief of all the forces in British America, where he immediately proceeded. On this occasion the government transport which carried out the whole equipment was unfortunately lost, in consequence of detention by an embargo, an event that afterwards led to the most serious embarrassment, for every thing had been supplied on credit, and a new outfit, accompanied by a new debt, was the necessary consequence. On this occasion the conduct of the new commander-in-chief was such as to produce universal

satisfaction. The people were pleased with his dignified but easy manners, his uniform politeness, and kind and unremitting attention to all; while the assembly testified its entire approbation by the vote of five hundred guineas for the purchase of a diamond star.

In consequence of a severe bilious attack, the duke of Kent solicited and obtained leave to return to England, and he accordingly arrived here early in the autumn of 1800. A few days after this, he was nominated colonel of the Royal Scots, a regiment which he retained until his death. Early in 1803 he obtained the government of Gibraltar, and proceeded thither in the spring. This proved a most inauspicious period in the life of his royal highness, who, being now possessed of the supreme command, determined to introduce all the rigour of German tactics. A striking example of military obedience in his own person, he required the most complete subordination from all around him. Rising before the sun—abhorring the excesses of the table—punctual in the discharge of all his duties, however numerous—he exacted nothing from others but what he himself was ready to comply with. Yet it was found utterly impossible for any body of men, particularly of soldiers, to imitate the abstemiousness, the regularity, and the austere habits of the new governor. On the continent, he had imbibed a taste for the most correct uniformity in the dress, accoutrements, and equipments of the soldiery. But, on the other hand, it ought to be recollected, that the inhabitants of the rock were loud in their complaints of military licence,—that the troops were slovenly and insubordinate,—and that the means of intoxication were so easy that its disgusting effects became every where visible. To strike at the root of this evil, his royal highness, notwithstanding the serious loss accruing to himself, determined to shut up many of the wine-houses, to restrain the soldiers within their respective barracks, and to adopt such a system of inspection as should preclude both inebriety and insubordination. It is lamentable to state, that these numerous regulations were not attended with the salutary effects that might have been expected. On the contrary, a mutiny took place, December 24th, 1802, in which it was said the governor's life was actually aimed at. On this occasion several officers distinguished themselves by their zeal and activity; while the timely arrival of a detachment of artillery, under Captain Dodd, not only endeared that officer to his royal highness during the remainder of his life, but contributed not a little to restore order in the garrison. The duke of Kent was soon after recalled, and in 1805 received the baton of a field-marshal.

From this moment his royal highness remained unemployed; and all efforts to obtain a restoration to his government, or attain any command in the army, proved unavailing. Between his royal highness and the commander-in-chief a jealousy for some time unhappily subsisted; and this was greatly increased in consequence of the parliamentary inquiry relative to the conduct of the duke of York. His royal highness, however, proved soon after, to the satisfaction of all dispassionate persons, that he had not in any degree either countenanced or participated in the accusation. But although the duke of Kent was now deprived of the exercise, not only of his official situation as governor of Gibraltar, but also of his professional services, he did not relapse into in-

dolence, or remain an useless member of society. On the contrary, although he declined all parliamentary intervention out of deference to others, yet he opened a noble career by aiding, supporting, and patronising most of the public charitable institutions of his native country. To some he gave his advice and assistance; to others, notwithstanding the pecuniary state of his affairs, he became a liberal subscriber: to almost all he acted as a chairman, and conducted himself with such great propriety, while he evinced such a glowing eloquence on every occasion, that those institutions derived great benefit from his countenance and protection. But the duke of Kent's pecuniary embarrassments prevented much of that social comfort which his excellent moral character, and the rank he held in the state, ought to have ensured him; and his royal highness, who had lived for many years at Kensington Palace, without any of the splendour of royalty, determined to make over his income to a committee, consisting of certain respectable individuals, and to circumscribe his expenditure within still narrower limits, for the express purpose of paying off his creditors within a certain limited period. As retrenchment was difficult in England, in 1816 he repaired to the continent, and settled at Brussels, in a house which his royal highness rented of an English admiral for 300*l.* per annum. Here he lived with great privacy and little expense; his chief object in settling in that city being the theatre, in which he took great delight. Thence, too, he made frequent excursions into Germany, for the purpose of visiting several branches of his family; and it was during one of these that he first saw and admired his future consort.

On the demise of her royal highness the princess Charlotte of Wales, a failure of the succession began to be dreaded, and several marriages on the part of the younger branches of the royal family were projected for the express purpose of averting so great a calamity. On this occasion, the duke of Kent paid his addresses to the sister of the prince of Saxe-Cobourg. Victoria-Maria-Louisa, youngest daughter of his late serene highness reigning duke of Saxe-Cobourg, was born in 1786, and was brought up under the eye of her mother, a princess of the house of Reuss, conjointly with her brother Prince Leopold. In her sixteenth year this amiable princess, in consequence of the earnest entreaties of her family, became the consort of the hereditary duke of Linen-gen, a prince entirely devoted to the sports of the field, and who was old enough to be her father, having been born in 1758. The marriage with the duke of Kent, which bereaved the bride of part of her dower, was celebrated with all due splendour at Cobourg, May 29, 1818, in conformity to the Lutheran rites, and soon after solemnised afresh at Kew according to the ceremonial of the church of England. This must be allowed to have proved a fortunate, for it was a happy union; they exhibited to each other the most marked affection and regard, and the birth of a daughter seemed to be but the precursor of a numerous progeny, when a sudden period was put to their happiness by the hand of death.

In pursuance of the economical plan laid down and adopted by his royal highness, the royal pair returned to the continent and settled at Amorbach, which the duchess, as guardian of her son, and regent of the principality, had before occupied as her residence. An event soon after occurred that con-

tributed at once to the felicity and embarrassments of the duke of Kent. The duchess having in due time proved pregnant, it was deemed proper that the offspring of this union should draw its first breath on English ground. Notwithstanding the great additional expense occasioned by this sudden removal they immediately returned, and were soon after gratified with the birth of a daughter, named Alexandra-Victoria, born at Kensington Palace on the 24th of May, 1819. This highly distinguished and accomplished princess has, since the preparation of this article, ascended the throne of Great Britain.

As the recovery of her royal highness was rather slow, it was determined to try the purer and milder climate of Devonshire. Thither they accordingly went, and settled at Sidmouth, where the effects were such as had been anticipated. But amidst this scene of happiness, his royal highness, who had now attained a high degree of popularity, was seized with a fever, produced from cold, from neglecting to change his wet boots. From the first, all the symptoms exhibited the most fatal prognostics, and he died on Sunday, January 23rd, 1820, in the arms of his duchess, who had attended her husband, and administered to his comforts with an unexampled degree of zeal and affection.

KENT, JAMES, a talented musical composer, who was born in the city of Winchester in the year 1700. He was admitted into the choir of that cathedral, under the superintendence and tuition of Mr. Vaughan Richardson, the organist. After having been some time in this situation he became one of the children of the chapel royal. Here, under the care of Dr. Croft, he laid the foundation of his future excellence. He studiously observed the style, and happily caught the manner, of that justly celebrated composer.

The first public situation which Kent obtained in his profession was that of organist of the chapel of Trinity college, Cambridge; and lastly, in 1737, of the cathedral church of the chapel of the college at Winchester, in which city he continued to reside until the day of his death. Whilst he was the organist of Trinity chapel he conducted himself so much to the satisfaction, and was, in other respects, in such high esteem with the members of that college, that when he was promoted to his situation at Winchester they presented him with an elegant piece of plate, in token of their great esteem and regard.

As a composer of sacred music, Kent followed closely to the style of Dr. Croft, and few persons have succeeded better than he in that due intermixture of harmony and melody which renders this species of music interesting both to learned and unlearned auditors. In his compositions the full sense and meaning are generally given to the words; and, although we sometimes observe in them what may be thought to border on conceit, yet their merit is for the most part so conspicuous that we readily overlook their defects. By any one conversant in church music it will easily be discovered that Kent was a pupil of Dr. Croft. Indeed he often, without hesitation or scruple, followed the ideas of this great master in his compositions. He once said to that excellent singer, J. Norris, who was attending the rehearsal of a new anthem, "I know your thoughts; there is the same passage in Dr. Croft; but could I have possibly done better than copy him in this place?" His talents were too great, and his disposition too ingenuous, to allow him to dissemble that

he occasionally availed himself of the excellencies of his favourite master. Of his own originality he has left us ample proof. So modest and unassuming was this excellent man, that it was not until towards the decline of his life that he could be prevailed with to give his works to the public; and he afterwards printed and published a second volume, containing a morning and evening service, and eight anthems. Some of these have since been printed separately, and a few of them have been admitted into Page's "*Harmonia Sacra*." Kent was remarkably mild in his disposition, amiable in his manners, and exemplary in his conduct: and, as an organist, was conscientiously diligent in performing all the duties of his situation. He died at Winchester in the year 1776.

KENT, WILLIAM.—This talented architect was born in Yorkshire in 1685, and was early in life apprenticed to a coach-maker. He however soon quitted this employment and came to London, where he obtained the patronage of Lord Burlington and several other noblemen, who sent him to Rome for improvement, under M. Luti, in the art of painting. He did not, however, obtain distinction in this department of art, his talent principally lying in ornamental architecture and gardening. The patronage of the queen and several persons of distinction procured him the posts of keeper of the pictures to the crown, principal painter, architect, &c.; in all of which he distinguished himself by his talents and application. Horace Walpole considered him as the inventor of modern gardening, which he rendered more natural, graceful, and pleasing. He broke up the old uniformity of straight lines, and threw wood, water, and picturesque ground-work into the beautiful and varied forms presented by nature. Mr. Kent died at Burlington House in 1748, and was buried at Chiswick.

KENYON, LLOYD, LORD, an eminent English lawyer, who was born at his father's seat at Gredington in Flintshire in 1733. Having completed his education he was entered at Lincoln's Inn, and commenced barrister in 1761. He particularly distinguished himself by his defence of Lord George Gordon on his indictment for treason in 1780. He was made attorney-general in 1782, and succeeded Lord Mansfield as chief justice of the court of king's bench in 1788, when he was raised to the peerage.

Perhaps a man of more unblemished integrity never filled the seat of justice than Lord Kenyon. In private life his habits were of singular regularity and temperance. In his family he was greatly beloved and respected, and the assistance and advice he so readily gave to the injured and distressed was as honourable to his feelings as to his sense of justice. His moral code was unusually strict; he had a right to hold such; and, to the credit of English feeling be it added, that the virtues of private life have never been without their due weight in public life.

One great merit of Lord Kenyon was, the unremitting attention he paid to the lower class of law transactions. Perhaps there never was a body of men, whose proceedings require stricter watchfulness than attorneys. That among them are multitudes of just and honourable men, it would be at once folly and falsehood to deny; but the opportunities of, and the temptations to, dishonest practices, are so many, and so strong, that too severe an eye cannot be turned on this branch of the legal profession. 'The glorious uncertainty of the law has passed into a proverb; that the remedy is worse than the disease, is another;

and we daily see individuals submitting to injustice rather than have recourse to legal redress. And to what is this owing but in a great measure to the fraud and extortion of clever yet unprincipled men, who form too large a portion of the legal profession? Over such as these, Lord Kenyon's vigilance was unceasing.

Lord Kenyon was not an eloquent speaker in parliament, though his great legal abilities, his uprightness, and the plain good sense of his speeches, always obtained due attention. His charges to the jury were always very solemn; his method of summing up the evidence was clear and convincing; and, in passing sentence, his earnestness and solemnity were singularly impressive. In address, he was the very reverse of his courteous predecessor, Lord Mansfield, the grace and urbanity of whose manner extended even to the bench. Lord Kenyon, on the contrary, was hasty, abrupt, and somewhat harsh. Never was there a man who was less inclined to make nice distinctions, or to admit that the advantages of the higher classes should be construed into privileges. This was strongly evinced when called to pronounce judgment in any gambling transactions. This destructive vice was carried to a frightful excess in his time, the very houses of the nobility were turned into common gambling-houses. In deciding on some petty case, Lord Kenyon most severely animadverted on the encouragement given by the higher classes, whose pernicious example carried contagion with it like a pestilence. He took the opportunity of observing, that, let the rank of the offender be what it would, to the utmost he would exact the strictest penalty of the law. "The higher the station, the more incumbent was the respect it owed to the laws; and if such could forget what they owed to their position and their characters, they should stand in the pillory were they the first ladies in the land." This threat from a man, who, it was well known, would fulfil it to the letter, produced its due effect. It was one great cause of subduing the passion for gambling in private life, certainly its most destructive mode; for it gives facilities to so many who would otherwise be out of the reach of temptation. It was well said, in a publication of his day, in summing up his character, that—"He was profound in legal erudition—patient in judicial discrimination—and of the most determined integrity." The next statement was still more to his credit, at a time when party-spirit ran so high—"He does not sacrifice his official to his parliamentary character, the sphere of his particular duty is the great scene of his activity, as of his honour; and, though as a lord of parliament, he will never lessen his character, it is as a judge that he looks to aggrandize it." For years his professional emolument was very great, and habits of economy increased what had been thus acquired. He died in 1802 worth upwards of 300,000*l*. It was supposed that his death was hastened by grief for the loss of his eldest son.

KEPLER, JOHN, the greatest astronomer of the sixteenth century. He was born in 1571, and early applied himself to study and observe the heavens, so that he was soon distinguished as an inventor. Kepler began with taking a more accurate view of astronomical refraction than had yet been done, and he appears to have been the first who conceived that there must be a certain fixed law which determined the quantity of it, corresponding to every altitude from the horizon to the zenith. The application of the principles of optics to astronomy, and the accu-

rate distinction between the optical and real inequalities of the planets, are the work of the same astronomer. It was by the views thus presented that he was led to the method of constructing and calculating eclipses by means of projections, without taking into consideration the diurnal parallax. These are valuable improvements, but they were, however, obscured by the greatness of his future discoveries.

The planes of the orbits of the planets were naturally, in the Ptolemaic system, supposed to pass through the earth; and the reformation of Copernicus did not go so far as to change the notions on that subject which had generally been adopted. Kepler observed that the orbits of the planets are in planes passing through the sun, and that, of consequence, the lines of their nodes all intersect in the centre of that luminary. This discovery contributed essentially to those which followed. The opposition of the planets or their places when they pass the meridian at midnight, offer the most favourable opportunities for observing them, because they are at that time nearest to the earth, and because their places seen from thence are the same as if they were seen from the sun. The true time of the opposition had, however, been till now mistaken by astronomers, who held it to be at the moment when the apparent place of the planet was opposite to the mean place of the sun. It ought, however, to have been when the apparent places of both were opposed to one another. This reformation was proposed by Kepler, and, though strenuously resisted by Tycho, was finally received.

Having undertaken to examine the orbit of Mars, in which the irregularities are most considerable, Kepler discovered, by comparing together seven positions of that planet, that its orbit is elliptical,—that the sun is placed in one of the foci,—and that there is no point round which the angular motion is uniform. In the pursuit of this inquiry he found that the same thing is true of the earth's orbit round the sun: hence by analogy it was reasonable to think that all the planetary orbits are elliptical, having the sun in their common focus. The industry and patience of Kepler in this investigation were not less remarkable than his ingenuity and invention. Logarithms were not yet known, so that arithmetical computation, when pushed to great accuracy, was carried on at a vast expense of time and labour. In the calculation of every opposition to Mars, the work filled ten folio pages, and Kepler repeated each calculation ten times, so that the whole work for each opposition extended to one hundred such pages: seven oppositions thus calculated produced a large folio volume.

In 1601 Tycho Brahé introduced Kepler to the emperor Rodolphus at Prague, who received him very kindly, and made him his mathematician, upon condition that he should serve Tycho as an arithmetician. From that time Kepler enjoyed the title of mathematician to the emperor all his life, and gained more and more reputation every year by his works. Rodolphus ordered him to finish the tables begun by Tycho, which were to be called the "Rodolphine Tables," and he applied himself very vigorously to this work; but such difficulties arose in a short time, partly from the nature of it and partly from the delay of the treasurers, that the tables were not finished and published till 1627. He complained that, from 1602 and 1603 he was looked upon by

the treasurers with a very invidious eye; and when in 1609 he had published a noble specimen of the work, and the emperor had given orders that, besides the expense of the edition, he should immediately be paid the arrears of his pension, which he said amounted to two thousand crowns, and likewise two thousand more, yet that it was not till two years after that the generous orders of Rodolphus in his favour were put in execution. He met with no less discouragement from the financiers under the emperor Matthias than under Rodolphus; and therefore, after struggling with poverty for ten years at Prague, began to think of quitting his quarters again. He was then placed at Lints by the emperor Matthias, who appointed him a salary from the states of Upper Austria, which was paid for sixteen years. In 1613 he went to the assembly at Ratisbon, to assist in the reformation of the calendar, but returned to Lints, where he continued to 1626. In November of that year he went to Ulm, in order to publish the "Rodolphine Tables," and afterwards, with the emperor's leave, settled at Sagan in Silesia, where he published the second part of his "Ephemerides," for the first had been published at Lints in 1617. In 1630 he went to Ratisbon to solicit payment of the arrears of his pension; but, being seized with a fever, which, it is said, was brought upon him by too hard riding, he died there in the same year.

To this sagacious philosopher we owe, as has already been seen, the first discovery of the great laws of the planetary motions, namely, that the planets describe areas that are always proportional to the times; that they move in elliptical orbits, having the sun in one focus; and that the squares of their periodic times are proportional to the cubes of their mean distances, which are now generally known by the name of Kepler's laws.

**KEPPEL, AUGUSTUS.**—This gallant English officer was the son of William earl of Albemarle. He entered the sea-service very early in life, and was one of the officers who accompanied Admiral Anson round the world. In 1778 he was appointed to the command of the Channel fleet, and on the 12th of July in that year he fell in with the French fleet, under Count D'Orvilliers, off Ushant, when a warm engagement ensued. A short delay becoming necessary to repair damages, when that labour was accomplished, the admiral made signal for his van and rear divisions to assume their proper stations. Sir Hugh Palliser, commanding the rear, took no notice of the signal, and refused to join his commander, until night prevented a renewal of the battle. The conduct of the rear-admiral being fiercely attacked, and Keppel refusing a disavowal of the charges brought against him, Palliser immediately exhibited articles of accusation against him. Keppel was honourably acquitted, and received the thanks of both houses of parliament for his services. Palliser was next tried, and reprimanded; but the public indignation was so great that he was obliged to resign his seat in the house of commons, and to vacate several offices which he held under government. In 1782 Admiral Keppel was raised to a peerage under the title of Viscount Keppel, and was at two different periods appointed first lord of the admiralty. He died in October, 1786.

**KÉRATRY, AUGUST HILARION**, member of the French chamber of deputies, celebrated as a writer and orator, was born at Rennes in 1769. He

studied at Quimper and afterwards in his native city, where he became acquainted with General Moreau, at that time an instructor in the law school in that city. During the session of the constituent assembly in 1789, Kératry, who had inherited a patrimonial estate in the department of Finisterre, presented a petition in favour of the equal division of estates in noble families, and the abolition of the privileges of primogeniture. During his residence in the capital, he became connected with many distinguished literary men. He was arrested on his return home by the terrorist Carrier, but was liberated at the request of the commune. From this time he devoted himself to the learned sciences, and held many municipal offices.

In 1818 Kératry was chosen deputy of the department of Finisterre by a unanimous vote. Here he defended the fundamental principles of the revolution, although its excesses had never received his approbation. All efforts to undermine the foundations of the fundamental laws found in him a firm and bold opponent. It was in this spirit that he wrote his "Documens Historiques," "La France telle qu'on l'a faite," and "Sur la Loi des Municipalités." This last work, which was written in connexion with Lanjuinais, was directed against a proposition which threatened to cut off one of the best guarantees of the rights of the people by a limitation of the municipal privileges. As an orator in the chamber of deputies, he belonged to the moderate liberal party. Among his writings, which are political, poetical, and philosophical, are his idyls and tales (after the manner of Gesner); his "Inductions Morales et Philosophiques;" his excellent "Traité de l'Existence de Dieu;" his "Commentary on Kant's Observations on the Sublime;" his work "Sur le Beau dans les Arts de l'Imitation." His works prove him to be a man of a cultivated mind, and a close thinker. His "Les Derniers des Beaumanoirs, ou la Tour d'Helvin," is a true picture of the manners and character of the "good old times" in France.

**KERGUELEN, TREMAREC IVES JOSEPH-DE**, an eminent French navigator, born at Brest about 1745. He entered young into the navy, and obtained the rank of lieutenant in 1767. After being employed on an expedition to the coast of Iceland to protect the whale fishery, he was sent by his government on a voyage of discovery to the South Sea. On his return he gave a flattering account of a supposed continent towards the south pole, some points of which he had visited. He was sent in 1773 to make further discoveries, but the result of his researches only served to show the little value of the country he discovered, and he was arrested and confined in the castle of Saumur, after his return to France, on the charge of having ill-treated one of his officers. In his prison he wrote several memoirs relative to maritime affairs; and having at length obtained his liberation, he again engaged in the sea-service. He died in 1797. Kerguelen published accounts of his voyage to Iceland, and likewise of his southern expeditions. His name is preserved in the appellation of an island in the southern hemisphere—Kerguelen's Land, or the Isle of Desolation.

**KERR, ROBERT**, an industrious Scottish writer who was bred to the study of medicine. He is best known by his "Natural History of the Quadrupeds and Serpents," and his translations from the works

of Berthollet, Lavoisier, and Cuvier. He died in May 1814.

**KETT, HENRY**, a distinguished divine of the church of England, who was born at Norwich in 1761. He was educated at Oxford, and became Bampton lecturer in 1793. Mr. Kett published "History, the Interpreter of Prophecy," but the work by which he is best known is his "Elements of General Knowledge." He died in June 1825.

**KIDDER, RICHARD**, a prelate of the church of England, who was born at the close of the sixteenth century. He was educated at Cambridge, and became bishop of Bath and Wells in 1691. He died in 1703. His "Commentaries on the Pentateuch," is to be found in most theological libraries, and "The Young Man's Duty" is a popular work.

**KIEN-LONG**, emperor of China, distinguished for his love of literature, was born in 1710, and succeeded his father, Yuntschin, in 1735. He favoured the Christian religion in private, but in 1753 interdicted its exercise by a formal order, and he had previously even persecuted those who openly professed it. The missionaries were in consequence obliged to proceed with great caution, although several of them were in the emperor's service, and treated with great respect as men of science and learning. On the suppression of the Jesuits in 1774, China was less visited by scientific persons than formerly, which induced Kien-Long to send to Canton, and invite artists and learned men of all the European nations, and particularly astronomers. This sovereign possessed, on his own part, a taste for poetry and natural history. Resolving to immortalize the remembrance of his victories by the graver, he engaged French artists to copy some Chinese paintings in which they were represented; but Louis XV. had them engraved for him at his own expense. He died at Peking in 1786, after a reign of fifty years.

**KIESEWETTER, CHRISTOPHER GOTTFRIED**.—This celebrated violinist was born at Anspach in 1777, and having completed his musical education, he came to London in 1821. He was warmly received by the British public, but we cannot better describe his reception than in the words of a critic of the day. He says, "His first performance at the Philharmonic concert of London—perhaps the severest test to which power can be brought, because the major part of the audience consists of professors or persons most immediately connected with music—his first performance, we might almost say, was greeted with the very extravagance of approbation and applause. For although his extraordinary ability deserved the most complete expression of the delight which could not but be felt, yet it was remarked amongst the judicious, that the loudest plaudits were mingled with an expression of pleasure bordering on a laugh, a manner which praise adopts when caught by surprise at quaint or unexpected turns, rather than when captivated by solid excellencies. By this remark we would not be thought to detract a particle from the abundant talent which we willingly admit Kiesewetter to possess; his abilities are, in every sense of the word, admirable indeed: we merely wish to have it understood, that there are points of peculiar skill which, when pushed beyond certain limits, run into defeat, however vehemently applauded these very exertions may be by the multitude of auditors, who are ever more stimulated by novelty and surprise than by the appropriate disposition of parts and of

the whole, which is the result of deep consideration and fine taste. Kiesewetter's command of the instrument appears to render him superior to every possible difficulty, and out of this superabundant power, perhaps, arise those temptations which almost necessarily lead to excess. For, although sobriety of judgment rejects superfluous execution as well as superfluous ornament, yet, when warmed with exercise, there are few who can resist the power of demonstrating acquirements which others have not reached." He subsequently performed in a masterly style at most of the London concerts, and died much regretted at his house in Great Portland Street, on the 28th of May, 1827.

**KILLIGREW**.—Three brothers of this name were distinguished by their loyalty, wit, and talents, during the reign of the two Charleses. They were the sons of Sir Robert Killigrew.—William, the eldest, was born in 1605 at Hanworth, Middlesex, and after going through the usual course of a university education at St. John's college, Oxford, made the tour of Europe. On his return to England, he obtained a place at court, as one of the gentlemen ushers of the privy chamber to Charles I. During the civil wars he suffered materially, both in purse and person, in consequence of his adherence to the royal cause; in recompence for which he received, after the restoration, the honour of knighthood, and on the marriage of Charles II. obtained the post of vice-chamberlain. He composed four plays—"Selindra," the "Siege of Urban," "Ormasdes," and "Pandora," all of which were popular in their day. His other writings are, "Midnight and Daily Thoughts," and "The Artless Midnight Thoughts of a Gentleman at Court." He died in 1693.—Thomas, the second, was born in 1611, and died before his elder brother in 1682. He was one of Charles the First's pages, and accompanied the prince of Wales into exile. During his absence from England, he visited France, Italy, and Spain, and after the restoration, was appointed by the new king (with whom he was a great favourite), one of his grooms of the bed-chamber. A vein of lively pleasantry, combined with a certain oddity, both of person and manner, placed him high in the good graces of Charles, who would frequently allow him free access to his person when characters of the first dignity in the state were refused it, till Killigrew at length became almost the inseparable companion of the monarch's familiar hours. He wrote eleven pieces for the stage, which have been collected and printed in one volume folio in 1664; but we look in vain in them for traces of that facetiousness and whim which, together with the encouragement he received from royalty, procured him the appellation of King Charles's jester. He lies buried in Westminster abbey.—Henry, the youngest of the three, was one year younger than his brother Thomas, whom he survived about six years. He was educated for the church at Christ Church, Oxford, and acted as chaplain to the cavaliers. In 1642 he graduated as doctor in divinity, and obtained a stall at Westminster. On the re-establishment of monarchy, he obtained the living of Wheathamstead, Herts, and the mastership of the Savoy. He wrote a tragedy when only seventeen years old, called "The Conspiracy." In 1652 he published a corrected version of this piece, changing the name to that of "Pallantus and Eudora."—The females of this family were also distinguished.—Ca-

therine Killigrew, wife of Sir Henry, was celebrated as one of the most accomplished scholars of her day. She was the daughter of Sir Anthony Cooke, born about the year 1530, and to a familiar acquaintance with the classical, as well as some of the Oriental languages, united considerable poetic talent. Her death took place in 1600.—Anne Killigrew, was the daughter of Henry Killigrew, and was born in 1660. She gave strong indications of genius at an early age, and became equally eminent in poetry and painting, as well as distinguished for her piety and unblemished virtue amidst the seductions of a licentious court. She fell a victim to the small-pox, in the summer of 1685, and has been characterized by Wood as “a grace for beauty, and a muse for wit.”

**KING, DR. HENRY.**—This divine was the son of Dr. John King. He was born in 1591 and educated at Oxford. He subsequently became chaplain to King James I. and Charles I. In 1638 he was made dean of Rochester, and in 1641 was advanced to the see of Chichester. Upon the breaking out of the civil wars and the dissolution of episcopacy, he was treated with great severity by the friends to the parliament, but recovered his bishopric at the restoration. This prelate died in 1669, and was interred at his cathedral of Chichester, where a monument was erected to his memory. He published the psalms of David turned into metre, poems, elegies, paradoxes, and sonnets, several sermons, and other works.

**KING, DR. JOHN,** a learned English bishop, who was educated at Oxford. After he had entered holy orders he was appointed chaplain to Queen Elizabeth, and in 1611, after the queen's death, he was made dean of Christchurch, in addition to which, he was for several years vice-chancellor of Oxford. In 1611 he was raised to the bishopric of London. Besides his “Lectures upon Jonah,” delivered at York, he published several sermons. King James I. used to style him “the king of preachers,” and Lord Chief Justice Coke often declared, that “he was the best speaker in the star-chamber in his time.” He was so constant in preaching after he was a bishop that, unless he was prevented by ill health, he omitted no Sunday on which he did not perform his pastoral duty.

**KING, PETER,** a learned lord high chancellor of Great Britain, who was born in Devonshire in 1669. His inclination to learning was so strong that he devoted every moment of his leisure hours to study, and by that means became an excellent scholar. His first publication was entitled “An Inquiry into the Constitution, Discipline, Unity, and Worship of the Primitive Church, that Flourished in the First Three Hundred Years after Christ.” He afterwards published the second part of the “Inquiry into the Constitution, &c.” and having desired in his preface to be shown, either publicly or privately, any mistakes he might have made, that request was first complied with by Mr. Edmund Elys. Several letters passed between them upon the subject, which were subsequently published by Mr. Elys in 1694.

His acquaintance with Locke, to whom he was related, and who left him half his library at his death, was of great advantage to him: by his advice, after he had studied some time in Holland, he commenced the study of the law, in which profession he rose with great rapidity. In the two last parliaments during the reign of King William, and in five parliaments during the reign of Queen Anne, he served as bur-

gess for Beer-Alston in Devonshire. In 1702 he published in London, without his name, his “History of the Apostles’ Creed,” with critical observations on its several articles. In 1708 he was chosen recorder of the city of London, and in 1710 was one of the members of the house of commons at the trial of Dr. Sacheverell. In 1714 he was appointed lord chief justice of the common pleas, and the April following was made one of the privy council. In 1715 he was created a peer by the title of Lord King, baron of Ockham in Surrey, and appointed high chancellor of Great Britain; in which post he continued till 1733, when he resigned; and in 1734 died at Ockham in Surrey.

**KING, RUFUS,** a distinguished American orator, statesman, and diplomatist, who was born in 1755 at Scarborough, in the district of Maine, where his father was an opulent merchant. He was entered at Harvard college, Cambridge, in 1773, but in 1775 his collegiate pursuits were interrupted by the commencement of the revolutionary war, the buildings appertaining to the institution having become the barracks of the American forces. The students were in consequence dispersed until the autumn of the same year, when they re-assembled at Concord, where they remained until the evacuation of Boston by the British forces in 1776. In 1777 he received his degree, and immediately afterwards entered as a student of law into the office of the celebrated Theophilus Parsons at Newburyport. Before he was admitted to the bar in 1778, he volunteered his services in the enterprise conducted by General Sullivan and count d’Estaing against the British in Rhode Island, and acted in the capacity of aid-de-camp to the former. In 1780 he began the practice of his profession, and soon after was elected representative of the town of Newburyport, in the legislature or general court, as it is called, of Massachusetts, where his success paved the way to a seat in the old congress in 1784. His most celebrated effort in the legislature was made in that year, on the occasion of the recommendation by congress to the several states to grant to the general government a five per cent. impost, a compliance with which he advocated with great power and zeal. He was re-elected a member of congress in 1785 and 1786. In the latter year he was sent by congress, with Mr. Munroe, to the legislature of Pennsylvania, to remonstrate against one of its proceedings. A day was appointed for them to address the legislature, on which Mr. King rose first to speak; but before he could open his lips, he lost the command of his faculties, and in his confusion barely retained presence of mind enough to request Mr. Munroe to take his place. Meanwhile, he recovered his self-possession, and on rising again, after complimenting his audience by attributing his misfortune to the effect produced upon him by so august an assemblage, proceeded to deliver an elegant and masterly speech.

In 1787 when the general convention met at Philadelphia for the purpose of forming a constitution for the country, Mr. King was sent to it by the legislature of Massachusetts, and when the convention of that state was called, in order to discuss the system of government proposed, was likewise chosen a member of it by the inhabitants of Newburyport. In both assemblies, he was in favour of the present constitution. In 1788 he removed to New York city. In 1789 he was elected a member of the New

York legislature, and during its extra session in the summer of that year, General Schuyler and himself were chosen the first senators from the state under the constitution of the United States. In 1794 the British treaty was made public, and a public meeting of the citizens of New York having been called respecting it, Mr. King and General Hamilton attended to explain and defend it; but the people were in such a ferment that they were not allowed to speak. They therefore retired, and immediately commenced the publication of a series of essays upon the subject, under the signature of "Camillus," the first ten of which, relating to the permanent articles of the treaty, were written by General Hamilton, and the remainder relative to the commercial and maritime articles, by Mr. King. The most celebrated speech made by Mr. King in the senate of the United States was in this year, concerning a petition which had been presented by some of the citizens of Pennsylvania against the right of Albert Gallatin to take a seat in the senate to which he had been chosen by that state, on the ground of want of legal qualification, in consequence of not having been a citizen of the United States for the requisite number of years. Mr. King spoke in support of the petition, and in answer to a speech of Aaron Burr in favour of Mr. Gallatin, who was ultimately excluded. In the spring of 1796 Mr. King was appointed, by President Washington, minister plenipotentiary to the court of London, having previously declined the offer of the department of state. The functions of that post he continued to discharge until 1803, when he returned home.

In 1813 he was a third time sent to the senate by the legislature of New York, at a period when the nation was involved in hostilities with Great Britain. His speech on the burning of Washington by the British was one of his most eloquent displays, and teemed with sentiments which had echoes from all parties. In 1816, whilst engaged with his senatorial duties at Washington, he was proposed as a candidate for the chief magistracy of the state of New York by a convention of delegates from several of its counties. The nomination was made without his knowledge, and it was with great reluctance that he acceded to it at the earnest solicitation of his friends. He was not, however, elected. In 1820 he was re-elected to the senate, where he continued until the expiration of the term in March, 1825. Several of the laws which he proposed and carried in that interval were of great consequence. In the celebrated Missouri question, he took the lead. On his withdrawal from the senate, he accepted from President Adams the appointment of minister plenipotentiary at the court of London. During the voyage to England, his health was sensibly impaired. He remained abroad a twelvemonth, but his illness impeded the performance of his official duties, and proved fatal soon after his return home. He died, like a Christian philosopher, on the 29th of April, 1827, in the seventy-third year of his age. The name of Mr. King is conspicuous in the annals of the American Union, in connexion not merely with the history of parties, but with that of the formation and establishment of the federal republican system. Politicians of every denomination bore testimony to the value of his public services and the eminence of his talents and virtues.

KING, WILLIAM, a learned Irish prelate, who

was a native of Antrim, but of Scottish extraction. His zealous opposition to the measures of the Roman Catholic party in the reign of James II. ensured his preferment after the expulsion of that prince. After holding several inferior offices, he was made in 1702 archbishop of Dublin. He died May 8, 1729, aged seventy-nine. He was distinguished for his wit as well as his learning. Having been disappointed in his expectations of being raised to the primacy of Ireland on the death of Archbishop Lindsay, it being assigned as a reason for passing him over that he was too far advanced in years, he received Dr. Boulter, the new primate, at his first visit without paying him the customary compliment of rising to salute him, apologizing for the apparent incivility by saying, "My lord, I am sure your grace will forgive me, because you know I am too old to rise." Archbishop King is principally known at present as the author of a treatise "*De Origine Mali*," the object of which is to show that the presence of natural and moral evil in the world is not inconsistent with the power and goodness of the Supreme Being. This work provoked the animadversions of the celebrated Bayle, as it impugned his arguments on the Manichean system.

KING, DR. WILLIAM, a talented English writer, who was born in the seventeenth century. He was descended from the noble families of Clarendon and Rochester, and was in 1682 elected a student of Christ Church, Oxford. He afterwards directed his attention to the law, and took the degree of doctor of civil law. He soon acquired a considerable practice. He attended the earl of Pembroke, lord-lieutenant of Ireland, into that kingdom, where he was appointed judge-advocate, sole commissioner of the prizes, keeper of the records, and vicar-general to the lord primate of Ireland. He died on Christmas-day in 1712, and was interred in the cloisters of Westminster abbey. His writings are numerous. The principal are "*Animadversions on a Pretended Account of Denmark*," wrote by Mr. Molesworth, afterwards Lord Molesworth, "*Dialogues of the Dead*," a volume of poems, an historical account of the heathen gods and heroes, and several translations; the writing of these procured Dr. King the place of secretary to princess Anne of Denmark.

KING, DR. WILLIAM.—This theological writer and divine was born at Stepney in 1685. He was made doctor of laws in 1715, was secretary to the duke of Ormond and earl of Arran, as chancellors of the university, and ultimately principal of St. Mary's Hall on the death of Dr. Hudson in 1719. When he stood candidate for member of parliament for the university, he resigned his office of secretary, but enjoyed his other preferment, and it was all he did enjoy to the time of his death. Dr. Clark, who opposed him, carried the election; and after this disappointment, he in the year 1727 went over to Ireland, where he is said to have written an epic poem, called "*The Toast*," which was a political satire, printed and given away to his friends, but never sold. On the dedication of Dr. Radcliff's library in 1749, he spoke a Latin oration in the theatre at Oxford, which was received with the highest acclamations. At the memorable contested election for Oxfordshire in 1755, his attachment to the old interest drew on him the resentment of the new, and he was libelled in newspapers and pamphlets, against which he defended himself in an "*Apology*," and warmly re-

taliated on his adversaries. He wrote several other things, and died in 1762. He was a learned scholar, an excellent orator, an elegant and easy writer, and esteemed by the first men of his time for his wit and general knowledge.

**KINGSTON, ELIZABETH, DUCHESS OF.**—This notorious female was born in 1720, and was the daughter of Colonel Chudleigh, governor of Chelsea college, who, dying while she was young, left her almost unprovided for. She resided with her mother, who, through the interest of Pulteney, afterwards earl of Bath, procured her the post of maid of honour to the princess of Wales, the mother of George III. Her wit and beauty procured her many admirers, and, in spite of the levity of her manners, a serious offer of marriage from the duke of Hamilton. But while that nobleman was on the continent, Mrs. Hammer, the aunt of Miss Chudleigh, with whom she was on a visit, persuaded her niece to marry privately Captain Hervey, a naval officer, afterwards earl of Bristol. She soon conceived a violent dislike of her husband, heightened by the discovery that she had been deceived into an opinion that the duke of Hamilton had forgotten her. Her marriage, which took place in August 1744, was kept a secret; and her refusal of advantageous proposals of marriage which she subsequently received offended her mother, and subjected her to reproaches, which induced her to go abroad. She went in company with a major in the army, with whom she proceeded to Berlin, where they parted. She is said to have been well received by the king of Prussia, and also at the court of Dresden; and, on her return to England as Miss Chudleigh, she resumed her situation as maid of honour. Desirous of breaking off her union with Captain Hervey, she adopted the infamous expedient of tearing the leaf out of the parish register in which her marriage was entered; but, repenting of this step in consequence of her husband's succeeding to the peerage, she contrived to have the leaf replaced. Not long after, the duke of Kingston made her a matrimonial offer, on which she endeavoured to procure a divorce from Lord Bristol. He at first opposed her scheme, but at length he assented to it, and she obtained the wished-for separation; and in March 1769 she was openly married to Evelyn Pierrepont, duke of Kingston, on whose death in 1773 she found herself left mistress of a splendid fortune under the condition of her not again becoming a wife. But she did not enjoy her riches undisturbed. The heirs of the duke commenced a suit against her for bigamy, as having been divorced by an incompetent tribunal. She was tried before the house of lords, and was found guilty; but, on her pleading the privilege of peerage, the usual punishment of burning in the hand was remitted, and she was discharged on paying the fees of office. Her property had been so secured that it was not affected by this process. The remainder of her life was spent abroad, and she died at her seat near Fontainebleau, in France, on the 28th of August, 1788.

**KINSBERGEN, JOHN HENRY VAN,** a Dutch admiral, born in May 1735 at Doesborg in Guelderland. From his ninth year he served in the army, and from the age of fourteen in the navy, in which he made his way with uncommon rapidity from the rank of a cadet to that of a vice-admiral. With the permission of the Dutch government, he entered the Russian service in 1767 at the commencement of the war against the Turks. Kinsbergen enjoyed the

unlimited confidence of Catharine II., of which he proved himself worthy by his brilliant success in an engagement on the Black sea, when, with five ships of forty guns, and some smaller men of war, he captured the whole Turkish fleet. In this battle several celebrated naval movements were first attempted by him, which have since been generally adopted. His memorial to Catharine, on the free navigation of the Black sea, recommended his political talents to the notice of the empress, who loaded him with marks of esteem. Kinsbergen returned to his own country in 1776, and was employed to negotiate a treaty with the emperor of Morocco, in which he was successful. On the celebrated day of the Dogger-bank, so honourable to the Dutch marine, Kinsbergen commanded, under Admiral Zoutman, seven ships of the line, and had the principal merit of the victory over Admiral Parker.

After the peace of Paris of 1783, the empress of Russia and the king of Denmark endeavoured to induce Kinsbergen to enter their respective marines, but he refused every offer. During the war of the French revolution he was of great assistance to his country, particularly in the campaigns of 1793 and 1794. After the unsuccessful campaign of 1795 and the change of administration, Kinsbergen remained in retirement, declining the most brilliant offers. Even Schimmelpenninck, his personal friend, could not tempt him from his retreat, where he occupied himself in study, agricultural pursuits, and the education of the lower classes. King Louis Napoleon appointed him first chamberlain, count of Doggerbank, counsellor of state, and gave him the grand cross of the order of the union, but he could not induce him to leave his country seat at Guelderland, in the neighbourhood of Appeldoorn, nor to accept any of the salaries which were connected with these appointments. After the union of Holland with France in 1810, Napoleon also endeavoured to gain him over, and appointed him senator. Kinsbergen could not refuse the dignity, but he declined the income connected with it. Master of a large fortune, he applied it to benevolent and useful institutions. He died in 1820.

**KIPPING, HENRY,** a learned German Lutheran born at Bostock, where, after having received the degree of master of arts, he was pressed into the army. This, however, did not prevent his following his studies. One day while he was upon duty, holding his musket in one hand and the poet Statius in the other, a Swedish counsellor, who perceived him in that attitude came up to him, and finding the amount of his information to be far above his apparent rank in life, he immediately took him into his house, made him his librarian, and procured him the under-rectorship of the college of Bremen, where he died in 1678. He wrote several works in Latin, the principal of which are, "A Treatise on the Antiquities of the Romans," another on "The Works of Creation," and several dissertations on the Old and New Testament.

**KIPPIS, ANDREW,** a dissenting divine, who was born at Nottingham, in March 1725; in 1746 he became minister of a dissenting congregation at Boston in Lincolnshire, and in 1753, pastor to a dissenting congregation in Westminster. In 1763 he was appointed classical and philological tutor to the academy supported in London by the funds of William Coward. In 1767 he received the degree of doctor of divinity from the university of Edin-

burgh, and in 1778 and 1779 became a fellow of the society of antiquaries and of the royal society. He died in 1795. Doctor Kippis laid the foundation of the "New Annual Register." He devoted his principal attention, during the later years of his life, to an improved edition of the "Biographia Britannica," but this work was conducted on a plan so elaborate that no termination of it on the same scale is likely to be attempted.

KIRBY, JOHN JOSHUA, a draughtsman and architect of considerable talent, who was a native of Parham in Suffolk. He first became known as an author by his "Treatise on Perspective," which appeared in 1754. He subsequently published a work entitled "The Perspective of Architecture," which was printed at the expense of the king. He was for many years clerk of the works at Kew Palace, and died in 1774.

KIRCH, CHRISTIAN FREDERIC, a celebrated astronomer, was born at Guben in 1694, and acquired great celebrity in the observatories of Dantzic and Berlin. Godfrey Kircher his father, and Mary his mother, acquired considerable reputation by their astronomical observations. This family corresponded with all the learned societies of Europe, and their astronomical works are still popular.

KIRCHER, ATHANASIUS.—This learned German author was born at Fielda about the commencement of the seventeenth century. He was educated at Wurtsburg in Franconia, and then entered the fraternity of Jesuits, of which he soon became a distinguished member. He taught philosophy, mathematics, the Hebrew and Syriac languages, in the university of Wurtsburg. In 1635 he went to France on account of the ravages committed by the Swedes in Franconia, and lived some time at Avignon. He was afterwards called to Rome, where he taught mathematics in the Roman college, collected a rich cabinet of machines and antiquities, and died in 1680. His works amount to twenty-two folio volumes, eleven quarto, and three octavos; enough to employ a man for a great part of his life even to transcribe them. Most of them are rather curious than useful; many of them visionary and fanciful. Kircher's principal works are, "Prælectiones Magneticæ;" "Primitiæ Gnomonicæ Catoptricæ;" "Ara Magna Lucis et Umbræ;" "Obeliscus Pamphilus;" "Oedipus Ægyptiacus," four volumes folio; "Itinerarium Extaticum;" "Obeliscus Ægyptianus," in four volumes folio; "Mundus Subterraneus;" and "China Illustrata;" and his "Musurgia Universalis," which is one of the most valuable of them all—it is divided into ten books. In the preface, the author states that he was aided in the compilation of it by Antonio Maria Abbatini, chapel master of the churches of St. Maria Maggiore and Pietro Herediæ in Rome, also by Kapsberger and Carissimi. In the first book he treats of the anatomy of the ear, not only in man but in various kinds of quadrupeds and birds. From this he passes to the consideration of the voice in the human race, and also of the vocal organs in several species of animals.

In the second book he speaks of the music of the Hebrews, and gives the forms of some of their instruments. He then proceeds to the music of the Greeks, and of which he gives a general and superficial account.

The next book enters deeply into the doctrine of harmonics, first explaining the several kinds of proportion, and afterwards demonstrating the ratios of

intervals. This book contains a system of arithmetic taken from the writings of Boethius and others, in which are contained rules for the addition, subtraction, multiplication, and division of intervals by means of characters adapted to the purpose.

The fourth book is entirely on the division of the monochord, and the method of finding the intervals by various geometric and algebraic processes. The fifth book contains directions for the composition of music in consonance. In this he explains the nature of counterpoint, both simple and figurate, and also of fugue, and gives some general rules for composition in one, two, three, and more parts. Towards the close of the book he speaks of that spurious kind of fuge, called *fuga in nomine*, and not only explains the nature of the canon, but gives examples of canons, some of which are very wonderful in their contrivance. He mentions one, which he says might be sung by twelve millions two hundred thousand voices. In the sixth book he treats of instrumental music, and of the various instruments in use among the moderns. Nearly the whole of this book is taken from the Latin work of Mersennus. At the conclusion he gives a particular description of the great bell at Erfurt. The seventh book contains a comparison between the ancient and modern music, with some specimens of the ancient Greek musical characters, taken from Alypius. This book is of a miscellaneous nature, and, amongst other things, comprises a general enumeration of the most eminent musicians of the author's time, and contains a great variety of fine compositions selected from their works.

The second volume begins with the eighth book. In this is inserted tables of all the possible combinations of numbers, as they relate to musical intervals; as also some minute investigations into the various kinds of metre used in poetry, and particularly Greek and Latin poetry, which are illustrated by musical characters.

Kircher mentions, as a contrivance of his own, the Æolian harp, which he describes at considerable length. But although he might have been ignorant of the fact, St. Dunstan is said, by Fuller, to have had one which must have been of a nature very similar to Kircher's. In this book it is that he gives an account of the celebrated hydraulic organ of Vitruvius, which no one has hitherto been able to comprehend. The tenth book is on the subject of analogical music, as Kircher has termed it, and the chief intention of it is to demonstrate the harmony of the four elements and of the planetary system. The author endeavours to prove that the principles of harmony are discoverable in the proportions of our bodies, in the passions of the mind, and even in the seven sacraments of the church of Rome. From these he proceeds to the consideration of political and metaphysical harmony; and in conclusion to that harmony, if any one can understand what he means by it, which subsists in the several orders of intellectual beings, and which is consummated in the union between God and the universe.

KIRWAN, RICHARD, a distinguished modern writer on chemistry, geology, and the kindred sciences. He was a native of the county of Galway, in Ireland, and was educated at the university of Dublin, where he took the degree of LL.D. He devoted himself with great ardour to chemical and mineralogical researches, and became a member of the royal Irish academy, and also a fellow of the

royal society. He published in the "Philosophical Transactions" for 1781, 1782, and 1783, experiments and observations on the specific gravities and attractive powers of various saline substances; which important subject he farther prosecuted in the "Philosophical Transactions" for 1785. In 1784 appeared his "Elements of Mineralogy," which was translated into German by Crell, and subsequently re-published with additions and improvements. In 1787 he published an "Essay on Phlogiston and the Constitution of Acids," designed as a defence of the theory of chemistry advanced by Dr. Priestley. This very ingenious production was translated into French by the advocates for the anti-phlogistic hypothesis, and published, with animadversions on the rival system, which made a convert of Dr. Kirwan, whose rejection of the principles he had so ably supported, had a considerable influence in producing the revolution which took place in chemical science. He produced besides the foregoing works, "An Estimate of the Temperature of Different Latitudes," a treatise on the "Analysis of Mineral Waters," and another on "Logic," to which may be added various communications to the learned societies to which he belonged. At Dublin he founded an association for the express purpose of cultivating mineralogy; and as a geologist, he advocated what has been called the Neptunian theory of the earth, in opposition to that of Dr. James Hutton. His death occurred in 1812.

KIRWAN, WALTER BLAKE, an Irish divine, eminent for his popularity as a preacher. He was born at Galway in 1754, and educated at the English Catholic college of St. Omer's, whence he removed to Louvain, where he took orders, and became professor of philosophy. In 1778 he was appointed chaplain to the Neapolitan embassy in London, and attained great celebrity by his exertions in the pulpit. In 1787 he resolved to conform to the establishment, and preached to his first Protestant congregation in St. Peter's church, Dublin. In 1788 he was preferred to the prebendary of Howth, and to the rectory of St. Nicholas, Dublin, and finally presented to the deanery of Killala. Wonders are told of his attraction as a preacher, and it was often necessary to keep off the crowds from the churches in which he preached by guards and palisades. He died exhausted by his labours in 1805, leaving a widow with two sons and two daughters, to the first and last of whom was granted a pension of 300*l.* per annum.

KITCHINER, WILLIAM.—This eccentric writer and physician was the son of a coal-merchant residing in Beaufort Buildings, Strand. He received his early education at Eton, and took his degree at Glasgow, but as he inherited a good property from his father he did not follow his profession. Dr. Kitchiner was hospitable in his domestic relations, and acquired a reputation for epicureanism which his general habits by no means warranted. Dr. Kitchiner's hours of rising, of eating, of retiring to rest, were all regulated by system. His lunches, to which only the favoured few had the privilege of *entrée*, were superb. They consisted of potted meats of various kinds, fried fish, savoury *pâtés*, rich *liqueurs*, &c. &c. in great variety and abundance. His dinners, unless when he had parties, were comparatively plain and simple, served in an orderly manner—cooked according to his own maxims—and placed

upon the table invariably within five minutes of the time announced. His usual hour was five. His supper was served at half-past nine; and at eleven he was accustomed to retire.

His public dinners, as they may be termed, were things of more pomp, ceremony, and *étiquette*. They were announced by notes of preparation, which could not fail of exciting the palates of the "thorough bred grand-gourmands of the first magnitude," who were honoured with an invitation. One of these notes is well entitled to preservation as a curiosity:—

"Dear Sir,—The honour of your company is requested to dine with the Committee of Taste, on Wednesday next, the 10th instant. The specimens will be placed upon the table at five o'clock precisely, when the business of the day will immediately commence. I have the honour to be, your most obedient servant,  
"W. KITCHINER, Secretary."

"43, Warren Street, Fitzroy Square."

"At the last general meeting, it was unanimously resolved, that:—1st. An invitation to Eta Beta Pi, must be answered in writing as soon as possible after it is received, within twenty-four hours at latest, reckoning from that on which it is dated, otherwise the secretary will have the profound regret to feel that the invitation has been definitively declined.

"2nd. The secretary having represented that the perfection of several of the preparations is so exquisitely evanescent, that the delay of one minute after their arrival at the meridian of concoction will render them no longer worthy of men of taste, therefore, to ensure the punctual attendance of those illustrious gastrophiliasts, who, on grand occasions are invited to join this high tribunal of taste for their own pleasure and the benefit of their country, it is irrevocably resolved, 'That the janitor be ordered not to admit any visitor, of whatever eminence of appetite, after the hour which the secretary shall have announced that the specimens are ready. By order of the committee,  
"WILLIAM KITCHINER, Sec."

Dr. Kitchiner's most celebrated works were entitled, "Practical Observations on Telescopes," an "Essay on the Size best adapted for Achromatic Glasses, with Hints to Opticians and Amateurs of Astronomical Studies on the Construction and Use of Telescopes in General." These established his fame as an amateur optician; and the "Apicius Redivivus, or Cook's Oracle," signalized him as an amateur gastronomist. In 1822 he published "The Art of Invigorating and Prolonging Life by Food, Clothes, Air, Exercise, Wine, Sleep, &c., and Peptic Precepts," to which is added the "Pleasure of Making a Will." In 1822 he issued a small octavo volume of "Observations on Vocal Music," and in the same year a handsome folio of "The Loyal and National Songs of England," selected from original manuscripts and early printed copies in his own library. Next followed "The Housekeeper's Ledger;" and in 1825 he revised his former work on optics, and published it under the title of "The Economy of the Eyes," in two parts; the first on the subject in general, and on spectacles, opera-glasses, &c., and "Part II. of Telescopes." At his death he left ready for the press a work which has since been published under the title of "The Traveller's Oracle." Dr. Kitchiner was married, but a separation soon ensued, and a natural son, who was educated at Cambridge, inherited the bulk of his property. The Doctor's will was remarkable for its eccentricity, and it is said that another, making some

serious alterations in the disposal of his property, was intended for signature on the Wednesday following the night on which he died.

On the 26th of February, 1827, Dr. Kitchiner dined out, and was in better spirits than usual, as for some time previously, in consequence of a spasmodic affection and palpitation of the heart, he had been occasionally observed in low spirits. He had ordered his carriage at half-past eight, but the pleasure he experienced in the company induced him to stay till eleven. On his way home he was seized with a violent fit of palpitation, of which he died immediately after his arrival at home.

**KLAPROTH, MARTIN HENRY**, a German chemist, who distinguished himself by his skill in analyzing various chemical compounds, and also by his works on practical chemistry and mineralogy. Many of his works have been translated into the English language, and they are valuable from the great practical knowledge of their author. Klaproth died at an advanced age in 1817.

**KLEBER, JEAN BAPTISTE**, a French general, distinguished not less for his humanity and integrity than for his courage, activity, and coolness, was one of the ablest soldiers which the revolution, so fertile in military genius, produced. His father was a common labourer, and young Kléber was himself peacefully occupied as an architect when the revolutionary troubles led him to the career of arms. Having entered a French volunteer corps as a simple grenadier in 1792, his talents soon procured him notice; and after the capture of Mayence he was made general of brigade. Although he openly expressed his horror at the atrocious policy of the revolutionary government, his services were too valuable to be lost, and he distinguished himself as a general of division in the campaigns of 1795 and 1796. In 1797 Kléber, dissatisfied with the directory, retired from the service; but General Bonaparte prevailed upon him to join the expedition to Egypt. Although no favourite of the general-in-chief, yet such were the talents that he displayed in the campaign in Syria, and the battle of Aboukir, and such was the esteem in which he was held by the army, that Bonaparte left him the command when he himself returned to France. His situation was difficult; the army was weakened by a series of laborious marches and sanguinary conflicts, and all communication with France was intercepted; yet he maintained himself successfully against the enemy, and introduced order into the government; but in the midst of new preparations for securing possession of the country, he was assassinated by a Turkish fanatic on the 14th of June, 1800.

**KLEIST, VON NOLLENDORF, EMILIUS FREDERIC, COUNT**, one of the most distinguished Prussian generals in the campaign of 1813 and 1814 against Napoleon. He was born at Berlin in 1762, served in the campaign of 1778, and rose by his courage and military talents, so that in 1803 he was made reporting adjutant-general to the king of Prussia. After the enterprise of Schill he was made commandant of Berlin—a post which required at that time much talent and skill. In 1812 Kleist commanded a corps of Prussians, auxiliary to Napoleon's grand army; and he highly distinguished himself in the battle of Bautzen. When Napoleon forced the allies to retreat from Dresden, Kleist followed the general retreat; but Vandamme

had entered Bohemia before him with 40,000 men, and Kleist had only the alternative of surrendering his army, or fighting for life and death. He took the bold resolution of throwing himself down from the mountains into the rear of Vandamme, and was victorious at the village of Nollendorf. His success saved Bohemia, against which Napoleon had directed his masterly demonstrations. Kleist died in 1821.

**KLEIST, EWALD CHRISTIAN VON**.—This celebrated German poet was born at Zebelin, in Pomerania, and studied for nine years at the Jesuit college at Kron, in Great Poland, then at the gymnasium at Dantzic, and went in 1731 to Königsberg to study law. Besides his acquisitions in mathematics, philosophy, literature, and law, he made great proficiency in modern languages. Having tried in vain, several times, to obtain a civil appointment, he entered the army, and became in 1736 a Danish officer. He studied with zeal the military art, and when Frederic the Great of Prussia began his reign, Kleist entered his service. He always disliked the military profession, which, together with an unfortunate attachment, gave to his poems the tone of melancholy which distinguishes them. Few German poems, from an author without previous reputation, have met with such immediate success as his "Frühling" or Spring, which was first printed in 1749. In 1757 Kleist was made major, and two years after he lost his leg in the battle of Kunnersdorf, and lay, during the whole night, with his wounds exposed on the field of battle. The next noon he discovered himself to a Russian officer who was passing by, and who had him carried to Frankfort. Eleven days after the battle the fractured bones parted and tore an artery, and he died on the 24th of August, 1759. Kleist was an amiable and upright man. He composed several war-songs, and liked to call himself a Prussian grenadier. His admiration of Frederic the Great was deep, as many of his most beautiful compositions prove.

**KLOPSTOCK, FREDERICK GOTTLIEB**.—This talented German poet was born at Quedlinburg on the 2nd of July, 1724. He received the rudiments of his education at the university of Jena, but completed his studies at Leipsic. From his earliest youth he was distinguished for great enthusiasm of character, and also by deeply religious feelings. These were cherished by his early and devoted attention to the Bible, which he made his pocket companion, not merely as a duty, but for pleasure. This close acquaintance with the phraseology of the Hebrew language became so familiar to him, that he unconsciously used to employ its beautiful figurative expressions when he wished to describe any thing with peculiar earnestness. Walking one day with his father, in a fine spring morning before he was fourteen years of age, they sat under an oak, and as a cool western breeze blew on them, he expressed himself in the following words, "All around the oak receives us in his shadow. Soft airs breathe on us, like a whisper of the presence of God." Then again he said, "How peaceful grows the tender moss on the bosom of the cool earth! The hills lie round about shaded in lovely twilight, as though newly created, and blooming like another Eden." Religion was not with Klopstock a mere speculation; it was an exalted idea of the Redeemer, and the pure feeling of gratitude and love. With this enthusiasm of soul he produced the first three books of the "Messiah,"

indeed before his poetical talents had even been suspected beyond the narrow circle of a few select friends. The publication of this extraordinary poem excited a degree of attention no other book had ever awakened in Germany.

It became the theme of the pulpit, the subject of meditation for the devout Christian, and even procured him the patronage of the king of Denmark, with a pension and residence at Copenhagen. He soon after married Margareta Moller, whose affectionate disposition constituted the happiness of his married life. This lady died in childbed in the year 1758. He bore this severe trial with pious resignation, and continued to cherish her memory with the devotion of a poet to the latest moments of his existence. He used to delight himself with planting white lilies on her grave, because he believed the lily was the most exalted of flowers, and she was the most exalted of women.

The remaining years of Klopstock's life do not afford many events beyond his literary productions. In 1791, in the sixty-eighth year of his age, he married a near relation of his first wife. Her domestic attentions, the society of his chosen friends, and the exercise of his poetical powers, which he retained till the close of life, contributed to the comfort of his serene and cheerful old age. The 14th of March, 1803, this venerable poet closed his long and valuable career at Hamburgh, in the eightieth year of his age. As symptoms of his dissolution approached, his fervent piety, and the hopes of that immortality his lofty Muse had so often sung, disarmed death of its terrors, and whispered peace to his departing spirit. He was in the habit of frequently reading his "Messiah" before his death, "but think not," he observed to a friend, "that I now peruse it as a poet, "I only occupy myself with the ideas it contains, and the hopes of salvation it offers." That happy close of a virtuous life, and that Christian triumph, which he sang in the twelfth canto of this poem with such sublime and glowing language, attended his last moments. In this painful struggle of expiring nature he pronounced these sacred words, which he has so finely illustrated in one of his odes—"Can a woman forget her sucking child, that she should not have compassion upon the son of her womb? Yea, they may forget, yet will I not forget thee." Klopstock was buried with every mark of honour by his countrymen, and a tomb erected to his memory.

KLOSE, FREDERICK, a clever English composer and musician, who was born in London, where his father followed the same profession, and from whom he received the rudiments of his musical education. He afterwards studied composition and the piano-forte under a variety of masters, among the principal of whom was the late celebrated Francesco Tomich. Klose was an able instrumental performer, and was a member of most of the orchestras in London, particularly of the King's theatre, and concert of ancient music, the whole of which, with the exception of the last, he resigned, to devote himself exclusively to teaching and composition. As a piano-forte teacher few excelled him in the art of imparting that sure elementary foundation on which, where there is ability, the best superstructure may afterwards be raised. He also excelled in ballads of a pathetic and sentimental character, of which several have acquired a considerable degree of celebrity, as for instance, "The rose had been washed," by Cow-

per; "My native land good night," by Lord Byron; and "Canst thou bid my heart forget?" from Glenarvon, &c. &c. He was also the author of several ballets and detached pieces which have been performed with success at the King's theatre. Mr. Klose died in London on the 8th of March, 1830.

KLOTZ, CHRISTIAN ADOLPHUS, was born in 1738, at Bischofswerda, in Lusatia. He studied at Jena, and in 1762 was appointed professor of philosophy in Göttingen. Klotz distinguished himself chiefly by his Latin poems, his numismatic treatises, his works on the study of antiquity, and on the value and mode of using ancient gems. After having contributed much to the "Deutsche Bibliothek," under the signature "E," he established a paper in opposition to it, called "Acta Literaria." Lessing was the acutest and wittiest of his opponents. His disputes with Lessing and Burmann took a tone of undue violence. Klotz's irregular life hastened his death, which took place on the 31st of December, 1771.

KNELLER, SIR GODFREY, an eminent portrait painter, who was born at Lubeck about 1648. He was designed for a military life, and sent to Leyden to study mathematics and fortification, but, showing a decided bent for painting, was placed under Bol and Rembrandt at Amsterdam. He visited Italy in 1672, where he became a disciple of Carlo Maratti and Bernini, and painted several historical pieces and portraits both at Rome and Venice. On his return he was induced to visit England, in 1674; and, having painted a much-admired family picture, which was seen by the duke of York, the latter introduced the painter to Charles II., by whom he was much patronized. He was equally favoured by James II. and William III., for the latter of whom he painted many pictures at Hampton Court, and several of the portraits in the gallery of admirals. He also took the portrait of the czar Peter for the same sovereign, who in 1692 knighted him, and made him gentleman of the privy chamber. Queen Anne continued him in the same office, and George I. made him a baronet. He continued to practise his art to an advanced age, and had reached his seventy-fifth year at his death, in 1723. His interment took place in Westminster Abbey, under a splendid monument erected by Rysbrach, on which appears an epitaph by Pope. The airs of his heads are graceful, and his colouring is lively, true, and harmonious; his drawing correct, and his disposition judicious. He displays a singular want of imagination in his pictures, the attitudes, action, and drapery being insipid, unvarying, and ungraceful.

KNIGGE, ADOLPHUS FRANCIS FREDERIC LOUIS, BARON DE, a popular German writer, who was born in 1752, at Brendenbeck, not far from Hanover. His father died in 1766, leaving him an estate deeply embarrassed. Knigge wrote a variety of works, and his novels were very popular, on account of their easy style of narration, and a tinge of satire and popular philosophy. His "Journey to Brunswick" was, for a considerable time, much read; but the work which gave him the greatest reputation was his "Ueber den Umgang mit Menschen," "On Intercourse with Men;" a book which contains some good advice, but is disfigured by a minuteness of petty precepts. Knigge was also a member of the illuminati, and thus became implicated in some of the disputes relating to that order. He died after a very unsettled life in May 1796.

**KNIGHT, RICHARD PAYNE**, a patron of learning and the fine arts, to the study and encouragement of which he devoted a great portion of his time and ample fortune. His father, from a dread lest his son's constitution should be impaired by the discipline of a public school, kept him at home till his fourteenth year; but, on his decease, young Knight was placed at a large seminary, where he soon distinguished himself by his progress in classical literature, his favourite study. His splendid collection of ancient bronzes, medals, pictures, and drawings in his museum at his house in Soho Square, gave equal proofs of his taste and liberality. This collection he bequeathed, at his death, to the British Museum. His principal writings are, "Remains of the Worship of Priapus, lately existing in Naples, and its Connexion with the Mystic Theology of the Ancients;" "An Analytical Essay on the Greek Alphabet;" "Analytical Inquiry into the Principles of Taste;" and "Prolegomena in Homerum," reprinted in the "Classical Journal." He died in 1824.

**KNIGHT, THOMAS**, an actor and dramatic writer, who was a native of Dorsetshire. His father being in good circumstances, educated his son for the law, but owing to a strong predilection for the stage, he quitted his profession and procured an engagement at York, where he performed for several seasons. He afterwards went to Bath, and subsequently came to London, and obtained a good engagement at Covent Garden. In 1797 he displayed his talents as a writer in the farce of "Honest Thieves," which was followed by "The Turnpike Gate," "Tag in Tribulation," and several other works of a similar character. He died in 1802.

**KNOLLES, RICHARD**, a clever historical writer, who was entered at the university of Oxford about 1560, and became a fellow of Lincoln college, which he left to be master of the free school of Sandwich, in Kent. His "History of the Turks," of which a folio edition appeared in 1610, was the labour of twelve years. It has passed through several editions, and is executed in a manner which has transmitted his name with honour to posterity. Knolles is also author of the lives and conquests of the Ottoman kings and emperors until 1610, and "A Brief Discourse on the Greatness of the Turkish Empire." He translated Bodin's "Six Books of a Commonwealth."

**KNOWLES, THOMAS**, an excellent English classical scholar and divine, who was born at Ely in 1723. He was the author of several very important theological works, among which we may enumerate his "Reply to Clayton's Essay on the Spirit," and a work "On the Divine Legation of Moses." His death took place in 1802.

**KNOX, HENRY**.—This distinguished American leader was born at Boston, in the United States, July 1750, and received the best education which the schools of his native town could afford. He commenced business as a bookseller when quite young, but relinquished it on the breaking out of the revolutionary war, in order to devote his energies to the cause of his country. He had previously at the age of eighteen been chosen one of the officers of a company of grenadiers, and evinced a fondness and ability for the military profession. At the battle of Bunker's Hill he served as a volunteer, and was constantly exposed to danger, in reconnoitring the movements of

the enemy. He soon afterwards undertook the perilous and arduous task of procuring from the Canadian frontier some pieces of ordnance, the American army being entirely destitute of artillery—an enterprise which he successfully accomplished. He received the most flattering testimonials of approbation from the commander-in-chief and congress, and was entrusted with the command of the artillery department with the rank of brigadier-general, in which he remained until the termination of the war. Throughout the whole contest he was actively engaged, principally near the commander-in-chief, whose confidence he eminently enjoyed. In the battles of Trenton and Princeton, Germantown and Monmouth, he displayed peculiar skill and bravery, and subsequently contributed greatly to the capture of Cornwallis at Yorktown. Immediately after this event he was created a major-general by congress, at the recommendation of Washington. The capture of that place having put a period to the war, he was named one of the commissioners to adjust the terms of peace—a duty which was satisfactorily performed. He was deputed to receive the surrender of the city of New York, and shortly afterwards was appointed to the command at West Point, where he had to execute the delicate and difficult task of disbanding the army, and inducing a soldiery disposed to turbulence by their privations and sufferings to resume quietly the character of citizens.

In March 1785 he was appointed by congress to succeed General Lincoln in the secretaryship of war, and in this office he was continued by Washington after the adoption of the constitution of the United States. His duties were subsequently much increased when he received the charge of the navy department; and America is greatly indebted to his efforts for the creation of its naval power. For eleven years the functions of the war office were discharged by General Knox. At the end of that period, in 1794, he obtained a reluctant consent from Washington to retire, in order that he might adequately provide for his family, the salary attached to his office being insufficient for that purpose. He then settled in the district of Maine, where he possessed a large tract of land in the right of his wife; but he did not abandon entirely public life, being repeatedly induced to become a member both of the house of representatives and of the council of the state. He died in 1806, at his seat in Thomaston, Maine. His death was caused by internal inflammation, the consequence of swallowing the bone of a chicken.

**KNOX, JOHN**.—This celebrated Scottish reformer was descended from an ancient family, and born at Gifford, in East Lothian, in 1505. He received his education at the university of St. Andrew's, where he took the degree of master of arts much before the usual age. Having embraced the ecclesiastical profession, he began, as usual, with the study of scholastic divinity, in which he so much distinguished himself that he was admitted into priest's orders before the time appointed by the canons. He soon became weary of the theology of the schools, and resolved to apply himself to that which was more plain and practical. This alteration of opinion led him to attend the sermons of Thomas Guillaume, or Williams, a friar of eminence, who was so bold as to preach against the pope's authority; and he was still more impressed by the instructions of the celebrated George Wishart, so that he relinquished all

thoughts of officiating in the church of Rome, and became tutor to the sons of the lairds of Long Niddrie and Ormistoun, who had embraced the reformed doctrines. Here he preached, not only to his pupils, but to the people of the neighbourhood, until interrupted by Cardinal Beaton, archbishop of St. Andrew's, who obliged him to conceal himself; and he thought of retiring to Germany. The persuasion of the fathers of his pupils, and the assassination of Beaton by the Leslies, encouraged him to remain; and he took shelter, under the protection of the latter, in the castle of St. Andrew's, where, notwithstanding the opposition of the clergy of St. Andrew's, he preached the principles of the reformation with extraordinary boldness, until the castle of St. Andrew's surrendered to the French in July 1547, when he was carried with the garrison into France, and remained a prisoner on board the galleys until the latter end of 1549.

Being then set at liberty, he passed over to England, and, arriving in London, was licensed either by Cranmer or the protector Somerset, and appointed preacher, first at Berwick, and afterwards at Newcastle. In 1552 he was appointed chaplain to Edward VI., and preached before the king at Westminster, who recommended Cranmer to give him the living of Allhallows, in London, which Knox declined, not choosing to conform to the English liturgy. It is said that he refused a bishopric, regarding all prelacy as savouring of the kingdom of antichrist. He, however, continued his practice as an itinerant preacher until the accession of Mary, in 1554, when he quitted England, and sought refuge at Geneva, where he had not long resided before he was invited by the English congregation of refugees at Frankfort to become their minister. He unwillingly accepted this invitation, at the request of John Calvin, and continued his services until embroiled in a dispute with Dr. Cox, afterwards bishop of Ely, who strenuously contended for the liturgy of King Edward. Knox, in his usual style of bold vituperation, having, in a treatise published in England, called the emperor of Germany as great an enemy to Christ as Nero, his opponents accused him to the senate of treason both against the emperor and Queen Mary; on which he received private

notice of his danger, and again retired to Geneva, whence, after a residence of a few months, he ventured, in 1555, to pay a visit to his native country. Finding the professors of the protestant religion greatly increased in number, and formed into a society under the inspection of regular teachers, he finally joined them, and produced so great an effect by his exertions, both in Edinburgh and other places, that the Roman catholic clergy, alarmed at his progress, summoned him to appear before them in the church of the Blackfriars, in that metropolis, on the 15th May, 1556. This summons he purposed to obey, resting on the support of a formidable party of nobles and gentry, which so alarmed his opponents that they dropped the prosecution. Thus encouraged, he continued preaching with additional energy and boldness, and was even induced to write to the queen regent, Mary of Lorraine, a letter, in which he earnestly exhorted her to listen to the protestant doctrines. While thus occupied, he was strongly urged to pay a visit to the English congregation at Geneva; and he accordingly departed for that place in July 1556.

He was no sooner gone than the bishops summoned him to appear before them; and, as that was impossible, they passed sentence of death against him as a heretic, and burnt him in effigy at the cross at Edinburgh. Against this sentence he drew up an energetic appeal, which was printed at Geneva in 1558, previously to which he was invited to return to Scotland, and had actually reached Dieppe on his way when he received other letters recommending delay; which epistles he answered by such strong remonstrances against timidity and backsliding, that those to whom he addressed them entered into a solemn bond or covenant, dated December 1557, "that they would follow forth their purpose, and commit themselves, and whatever God had given them, into his hands, rather than suffer idolatry to reign, and the subjects to be defrauded of the only food of their souls." Knox, in the mean time, had returned to Geneva, where he published his treatise entitled "The First Blast of the Trumpet against the Monstrous Regimen of Women, chiefly aimed at the Cruel Government of Queen Mary of England, and at the Attempt of the Queen Regent of Scotland to Rule without a Parliament." A second blast was to have followed; but the accession of Queen Elizabeth to the throne of England, who was expected to be friendly to the protestant cause, prevented it.

In April 1559 he would have visited England, but was prevented by the resentment felt by Elizabeth at his late treatise. He therefore proceeded directly to Scotland, where he found a persecution of the protestants just ready to commence at Stirling. He hurried to the scene of action to share the danger, and, mounting a pulpit, inflamed the people by a vehement harangue against idolatry. The indiscretion of a priest, who, immediately on the conclusion of this discourse, was prepared to celebrate mass, precipitated his hearers into a general attack on the churches of the city, in which the altars were overturned, the pictures destroyed, the images broken, and the monasteries almost levelled to the ground. These proceedings were censured by the reformed preachers, and by the leaders of the party. From this time Knox continued to promote the reformation by every means in his power, and, by his

correspondence with the secretary Cecil, was chiefly instrumental in establishing the negotiation between his party and the English, which terminated in the march of an English army into Scotland. Being joined by almost all the chief men of the country, these forces soon obliged the French troops, who had been the principal support of the regent, to quit the kingdom; and the parliament was restored to its former independence. Of that body, the majority had embraced protestant opinions, and no opportunity was omitted of assailing the ancient religion, until at length the presbyterian plan, recommended by Knox and his brethren, was finally sanctioned, the old ecclesiastical courts being abolished, and the exercise of religious worship according to the rites of the Roman church prohibited.

In August 1561 the unfortunate Mary, then widow of Francis II. king of France, arrived in Scotland to reign in her own right. She immediately set up the mass in the royal chapel, which, being much frequented, excited the zeal of Knox, who was equally intolerant with the leaders of the conquered party; and in the face of an order of privy council allowing the private mass, he openly declared from the pulpit, "that one mass was more frightful to him than 10,000 armed enemies landed in any part of the realm." This freedom gave great offence, and the queen had long and angry conferences with him on that and other occasions, in which he never paid the slightest homage either to sex or rank. He preached with equal openness against the marriage of Mary with a papist; and Darnley, after his union being induced to hear him, he observed in the course of his sermon, that "God set over them for their offences and ingratitude, boys and women." In the year 1567 he preached a sermon at the coronation of James VI., when Mary had been dethroned and Murray appointed regent.

In 1572 he was greatly offended with a convention of ministers at Leith, for permitting the titles of archbishop and bishop to remain during the king's minority, although he approved of the regulations adopted in reference to their elections. At this time his constitution was quite broken, and he received an additional shock by the news of the massacre of St. Bartholomew. He had, however, strength enough to preach against it, which he desired the French ambassador might be acquainted with, but soon after took to his bed and died on the 24th of November, 1572. He was interred at Edinburgh, several lords attending, and particularly the earl of Morton, that day chosen regent, who, when he was laid in his grave, exclaimed, "There lies he who never feared the face of man, who hath been often threatened with dag and dagger, but yet hath ended his days in peace and honour; for he had God's providence watching over him in an especial manner when his life was sought."

The character of this eminent reformer has been sketched by Dr. Robertson in his "History of Scotland;" who, in observing upon the severity of his deportment, impetuosity of temper, and zealous intolerance, observes, that the qualities which now render him less amiable, fitted him to advance the reformation among a fierce people, and enabled him to encounter dangers and surmount opposition to which a more gentle spirit would have yielded. John Knox was a man of exalted principles, great intellectual energy, undaunted intrepidity, and exemplary piety

and morality. He was twice married, and had two sons by his first wife. His writings, in addition to those already mentioned, are, "A Faithful Admonition to the Professors of the Gospel of Christ in the Kingdom of England;" "A Letter to Queen Mary, Regent of Scotland;" "Steady Exhortation to England for the speedy embracing of Christ's Gospel." After his death appeared his "History of the Reformation of Religion within the Realm of Scotland."

KNOX, VICESIMUS, a writer of considerable celebrity in the last century. He was born in 1752 and educated at Oxford, where he held a distinguished rank for his literary attainments. In 1778 Mr. Knox was elected master of Tunbridge school, an appointment which he held with the highest credit for thirty-three years. About the time of his first settling at Tunbridge in this capacity he married the daughter of Mr. Miller, a respectable surgeon of that place, who died in 1809, leaving behind her two sons and a daughter. A short time after his marriage, Mr. Knox accepted the degree of doctor of divinity, conferred upon him by a diploma from Philadelphia, without solicitation, in the handsomest manner, as a compliment for the benefit America had derived from his admirable essays, which had been exceedingly popular in that country. The next work of Dr. Knox was his celebrated "Treatise on Liberal Education," a subject he was especially qualified to discuss. This production, like those which had preceded it by the same author, was very favourably received by the public.

In 1787 Dr. Knox published a series of miscellaneous papers, entitled "Winter Evenings," in three volumes octavo. They have passed through several editions, although they have not, on the whole, been as popular as those which preceded them. They contain a great deal of agreeable discussion on a variety of subjects, mostly connected with literature and the fine arts. The "Elegant Extracts in Prose and Verse" next occupied the attention of Dr. Knox, and the extraordinary popularity of these useful compilations must have been highly gratifying to the editor. The "Elegant Epistles" were also subsequently collected by Dr. Knox, who, besides these valuable works, edited an edition of Horace, upon the expurgata plan. It would have been well if his example had been followed by other editors, for it is a scandal to the country, that the books commonly put into the hands of young persons for the purposes of education are precisely of a nature to debauch and deprave their minds. It is difficult to conceive why we permit our children to have access to the most revolting obscenities, for so unsatisfactory a reason as that of their being written in the dead languages.

Mr. Fox early sought the acquaintance of Dr. Knox, and there is no doubt, if political events had afforded the opportunity, but that he would have filled the highest station in the church. Preferment, however, was not his object, nor ever occupied his thoughts. He was, from conscientious conviction, a firm friend of the establishment. His strenuous support of its doctrines in his theological works excited the hostility of the Socinians and other separatists. Dr. Disney addressed a letter to him upon the publication of his sermons. On the other hand, though of political sentiments diametrically opposite, that distinguished prelate, Bishop Horsley, publicly eulogised his treatise on the Lord's Supper, in his episcopal charges, "recommending it to the general

attention of the clergy, and describing it as no inconsiderable monument of the learning and piety of the writer." Another prelate, of inferior reputation indeed to Dr. Horsley as a polemic and divine, but justly held in universal esteem for his amiable character and his useful labours in the church, Bishop Porteus, entertained a high sense of the value of Dr. Knox's religious works, and recommended them for perusal, as containing the most attractive delineations of the pure spirit of Christianity. Notwithstanding his strong attachment to the establishment, Dr. Knox was a friend to religious as well as civil liberty, and therefore an advocate for a very liberal toleration.

Dr. Knox was rector of Rumwell and Ramaden Crays in Essex, and minister of the chapelry of Shipbourne in Kent, to which he was presented by Viscount Vane. The duties of a parish priest he discharged for nearly forty years with a regularity, an ability, and a zeal, seldom surpassed; scarcely during that long period requiring any assistance in the performance of the service of the church. After his retirement, while he lived in London, he never withheld his powerful aid from the pulpit whenever it was solicited in favour of the various charities with which the metropolis abounds. There are few of these institutions which have not greatly benefited by his exertions. Dr. Knox enjoyed a long course of uninterrupted health, and retained his mental faculties in their full vigour to the last moment of his life; within the three last days of it he was as capable as ever of any laborious literary research or professional exertion. Dr. Knox died at Tunbridge, September 6th, 1821.

Dr. Knox was an elegant Latin scholar, and his English compositions are models for taste and purity of expression. The subjoined specimen from his "Moral and Literary Essays," is characteristic of Dr. Knox's style:—

"The poetical passages of Scripture are peculiarly pleasing in the present translation. The language, though it is simple and natural, is rich and expressive. Solomon's Song, difficult as it is to be interpreted, may be read with delight, even if we attend to little else than the brilliancy of the diction; and it is a circumstance which increases its grace, that it appears to be quite unstudied. The Psalms, as well as the whole Bible, are literally translated; and yet that translation abounds with passages exquisitely beautiful, and irresistibly transporting. Even where the sense is not very clear, nor the connexion of ideas obvious at first sight, the mind is soothed and the ear ravished with the powerful, yet unaffected, charms of the style. It is not indeed necessary to enlarge on the excellence of the translation in general: for its beauties are such as are to be recognised by feeling more than by description, and it must be owned that they have been powerfully felt by the majority of the nation ever since the first edition. In many a cottage and farm-house where the Bible and Prayer-book constitute the library, the sweet songs of Judah, and the entertaining histories of Joseph and his brethren, Saul and Jonathan, constitute a never-failing source of heartfelt pleasure.

"It is false refinement, vain philosophy, and an immoderate love of dissipation, which causes so little attention to be paid to this venerable book in the gay world. If we do not disclaim all belief in its contents, it is surely a great omission in many gentlemen and ladies who wish to be completely accomplished, or

think themselves so already, to be utterly unacquainted with the sacred volume. It is our duty to inspect it, and it is graciously so ordered that our duty in this instance may be a pleasure; for the Bible is truly pleasing, considered only as a collection of very ancient and curious history and poetry."

KORNER, THEODORE, an eminent German poet, who was born at Dresden in 1788. From his earliest youth he manifested an ardent imagination and a taste for literature which was encouraged by the attentions of the celebrated Schiller, who was a friend of his father. In 1811 he finished his studies at Leipsic. Being forbidden to attend any of the Saxon universities on account of his political sentiments, he went to Vienna and commenced dramatic writer and poet. Always an enthusiast for the liberty of Germany, the retreat of Bonaparte from Russia inspired him with the most enthusiastic military ardour. He whose energetic poems helped so powerfully to kindle a patriotic spirit among his countrymen, could no longer endure the indolent occupations of a poet. He left Vienna in March 1813, and joined a distinguished free corps, in which he rose to a high rank, and soon became the idol of his comrades. He courted danger and death with the cool devotion of heroism, and his poems perpetually breathe a spirit of quiet foreboding of his approaching fate.

He was killed in an engagement with the French at Rosenburgh, in Meeklenburgh, on the 26th of August, 1813. The poetry of Korner, like the patriot songs of republican France, seemed to have produced an almost magical effect on his countrymen. They rushed from their homes singing his battle songs, and joined the standard of their country with a noble enthusiasm which had long appeared to be extinct in Germany. The most celebrated of Korner's compositions is called the "Song of the Sword," and we subjoin a translation of this spirit-stirring composition. And it may be enough to state that it was written a few hours before the death of its author:—

"Thou sword upon my side,  
Why glance thy beams so wide?  
Fair art thou in my sight,  
Thou art my joy, delight.  
Hurrah!

"Me doth a brave knight bear,  
Therefore I shine so fair;  
I guard a free man's right,  
That brings the sword delight.  
Hurrah!

"Good sword! yes! I am free,  
And from my soul love thee.  
As though upon my side  
Thou wert a lovely bride!  
Hurrah!

"To thee for woe or weal,  
I gave my life of steel;  
Oh! that we married were—  
Thy bride where wilt thou bear?  
Hurrah!

"The trumpet's solemn warning  
Marks our bridal morning:  
When yonder cannons bray  
I bear my Love away!  
Hurrah!

"Oh! blest by thee embraced,  
Thou bridegroom, bear me! haste!  
In keen desire I wait!  
My wreath doth thee await.  
Hurrah!

"Why clashest thou for fight,  
Thou iron joy so bright?  
Within thy sheath so wild  
Why clashest thou, my child?  
Hurrah!

- " I clash within the sheath,  
To meet the strife of death ;  
Wild longing for the foe,  
Thou seest me clashing so.  
Hurrah !
- " In thy small house abide ;  
What wilt thou here, sweet Bride ?  
Stay, in thy chamber stay,  
Soon bear I thee away.  
Hurrah !
- " Thy love then quickly prove,  
Oh ! garden fair of love,  
Where blood-red roses grow,  
And death is seen to blow.  
Hurrah !
- " Now from the sheath arise,  
Delight of warriors' eyes,  
Come out, come out, my sword :  
I will fulfil my word.  
Hurrah !
- " How joyous is the air !  
The bridal dance how fair !  
The steel, mid sunny beams,  
In bridal splendour gleams.  
Hurrah !
- " Up, up ! ye warriors bold,  
Ye German knights of old,  
Your heart the loved one warms,  
Then take her to your arms.  
Hurrah !
- " Erst on the left she threw  
Stol'n beams, concealed and few ;  
God, on the other side,  
Doth bless the chosen bride.  
Hurrah !
- " With glowing love impress'd,  
Her bridal mouth he press'd,  
Then to your arms receive her,  
And cursed be they who leave her.  
Hurrah !
- " Now may the loved one sing  
And beams around her fling ;  
The bridal morn gleams wide—  
Hurrah ! thou Iron Bride !  
Hurrah !"

KOSCIUSKO, THADDEUS, the last generalissimo of the republic of Poland, and one of the noblest characters of his age. He was descended from an ancient and noble, though not rich family, in Lithuania, and was educated in the military school at Warsaw. The prince Adam Czartoriski, perceiving his talents and industry, made him second lieutenant in the corps of cadets, and sent him at his own expense to France, where he studied drawing and the military art. After his return he was made captain. But the consequences of an unhappy passion for the daughter of Sosnowski, marshal of Lithuania, obliged him to leave Poland. Solitary studies, particularly in history and mathematics, and an elevated character, prepared him for the struggle for freedom, in which he engaged under Washington, who made him his aid-de-camp. He distinguished himself particularly against the British troops, and was very highly esteemed by the army and the commander-in-chief. He and Lafayette were the only foreigners admitted into the Cincinnati. Kosciusko received the rank of general, and in 1786 returned to Poland. When the Polish army was formed in 1789, the diet appointed him a major-general. He declared himself for the constitution of May 1791, and served under Prince Joseph Poniatowski. In the campaign of 1792 he distinguished himself against the Russians at Zielonek and Dubienka. At the latter place, under cover of some works which he had thrown up in the course of twenty-four hours, he repulsed with 4000 men three successive attacks of 18,000 Russians, who prevailed only after the loss of 4000 men. Kosciusko retired without having suffered severely. When King Sta-

nislaus submitted to Catharine, he with sixteen other officers left the army, and was therefore obliged to retire from Poland. He went to Leipsic, and the legislative assembly of France at this time gave him the rights of a French citizen.

The Poles becoming impatient under the oppression of Russia, some of Kosciusko's friends in Warsaw determined to make an effort for the liberation of their country. They chose Kosciusko their general, and made him acquainted with their plans. He imparted them to the counts Ignatius Potocki and Kolontai in Dresden, who thought the enterprise injudicious. Kosciusko, however, went to the frontier, and sent General Zajonczeck and General Dzialynski into the Russian provinces of Poland, to prepare every thing in silence. But when the Polish army was merged in part in the Russian, and the remainder reduced to 15,000 men, the insurrection broke out before the time fixed on. All now flew to arms, the Russian garrison was immediately expelled from Cracow, and just at this moment Kosciusko entered the city. The citizens now formed the act of confederation of Cracow on the 24th of March, 1794, and Kosciusko at their head called upon the Poles to restore the constitution. Kosciusko then advanced to meet the Russian forces. Without artillery, at the head of only 4000 men, part of whom were armed with scythes and pikes, he defeated 12,000 Russians at Racławice, on the 4th of April, 1794. His army was now increased to 9000 men, and he formed a junction with General Grochowski.

In the mean time the Russian garrisons of Warsaw and Wilna had been put to death or made prisoners. Kosciusko checked the outbreak of popular fury, sent troops against Volhynia, and organised the government at Warsaw. He marched out of the city with 13,000 men to oppose 17,000 Russians and Prussians, attacked them at Szezokocini June 6, but was defeated after an obstinate conflict. He retreated to his entrenched camp before Warsaw. The Prussians took Cracow. Disturbances broke out, in consequence, in Warsaw, and the people murdered a part of the prisoners, and hung some Poles who were connected with the Russians. But Kosciusko punished the guilty, and restored order. The king of Prussia now formed a junction with the Russians, and besieged Warsaw with 60,000 men. Kosciusko, however, kept up the courage of his countrymen. After two months of bloody fighting, he repelled, with 10,000 men, a general assault. All Great Poland now rose, under Dombrowski, against the Prussians. This circumstance, together with the loss of a body of artillery, compelled the king of Prussia to raise the siege of Warsaw. Thus this bold general, with an army of 20,000 regular troops, and 40,000 armed peasants, maintained himself against four hostile armies amounting together to 150,000 men. His great power consisted in the confidence which his fellow-citizens reposed in him. The nephew of the king, once his general, served under him. Kosciusko had unlimited power in the republic, but he displayed the integrity of Washington and the activity of Cæsar. He attended to procuring supplies, superintended the raising and payment of money, and prevented plundering and fraud, and was equally active in the council and the field. His days and nights, all his powers, were devoted to his country. He secured the administration of justice, abolished bondage, and finally restored to the nation, in the supreme national council

which he established, the great power which had been delegated to him. Catharine at length decided the contest by an overwhelming superiority of numbers. Suwaroff defeated the Poles under Sierakowski at Brzec in Volhynia. Repnin penetrated through Lithuania, and formed a union with Suwaroff; General Fersen was to support them with 12,000 men. To prevent this, Kosciusko marched from Warsaw with 21,000 men. Poninski was to have supported him with his division, but the Russians intercepted the messenger. The united Russian armies under Fersen attacked the Poles, who were not more than one-third as strong as the Russians, at Macziewice, about fifty miles from Warsaw; they were three times repulsed, but on the fourth attack they broke through the Polish lines. Kosciusko fell from his horse covered with wounds, exclaiming, "Finis Poloniæ," and was made prisoner by the enemy.

In losing him, his country lost all. Suwaroff stormed Praga; Warsaw capitulated; Madalinski left Great Poland; and an Austrian army appeared before Lublin. But the noble efforts of the conquered had awakened the regard of Europe towards the unhappy country, and the dearest hopes of the nation—the restoration of their monarchy with a free constitution—found a powerful support in public opinion. Catharine caused the hero and his noble colleagues, who were prisoners of war, to be thrown into a state-prison, but Paul I. gave them their liberty, and distinguished Kosciusko by marks of his esteem. He presented his own sword to the general, who declined it with these words—"I no longer need a sword, since I have no longer a country." To the day of his death he never again wore a sword. Paul then presented him with 1500 peasants, and his friend Niemcewicz, the poet, with 1000. When on the Russian frontier, Kosciusko declined this present by a letter. He and his friend now went to America in 1797. On his return to his native country after the war of the revolution, he had received a pension from America, and he now found there such a reception as he deserved. In 1798 he went to France. His countrymen in the Italian army presented to him the sabre of John Sobieski, which had been found in 1799 at Loretto. Napoleon afterwards formed the plan of restoring Poland to its place among the nations, and thus, at the same time, injuring Russia and extending his own power over the east of Europe. But Kosciusko would take no part in this struggle, which was conducted by Dombrowski in 1807 and 1808, being prevented less by ill health than by having given his word to Paul I. never to serve against the Russians. To Napoleon's proposals he answered, that "he would exert himself in the cause of Poland when he saw the country possessed of its ancient territories, and having a free constitution." Fouché tried every means to carry him to Poland. Having purchased an estate in the neighbourhood of Fontainebleau, he lived there in retirement until 1814, when he wrote to the emperor Alexander to ask of him an amnesty for the Poles in foreign lands, and to request him to become king of Poland, and to give to the country a free constitution, like that of England. In 1815 he travelled with Lord Stewart to Italy, and in 1816 he settled at Soleure, until a fall with his horse from a precipice, not far from Vevay, occasioned his death on the 16th of October, 1817, at Soleure. In 1818 Prince Jablonowski, at the expense of the emperor Alexander, removed his body, which,

at the request of the senate, the emperor allowed to be deposited in the tomb of the kings at Cracow.

KOSEGARTEN, LOUIS THEOBUL, a poet and preacher, who was born on the 1st of February, 1758, at Grevesmuhlen, a small town of Mecklenburg. He studied at Griefswald, and was for some time a tutor in the family of a nobleman in Pomerania. He afterwards became a preacher at Altenkirchen, in the island of Rugen, and was made in 1793 doctor of theology. Upon this patriarchal island he lived in the enjoyment of nature, his family, poetry, literature, and in a faithful discharge of the duties of his office, a number of happy years, till he received in 1807 an invitation to a professorship at Griefswald, where he died in 1818, rector of the university, in the sixty-first year of his age. The fruits of his leisure hours—his romances, for instance, his rhapsodies, his legends, his epic-idyllic poems, his patriotic songs—have obtained for him no mean rank in German literature; but his muse, often full of natural power and fire, frequently runs into bombast and prolixity.

KOSLOFF, IWAN, a Russian nobleman, who was born about 1780, and passed his youth in the great world. In the social circles of the nobles of Moscow and St. Petersburg he led an animated rather than a busy life. His genius was not as yet awakened; still he loved literature, was master of the French and Italian languages, and familiar with their classics. But he had recourse to these studies only when in want of occupation, and to recruit his mind exhausted by dissipation. His activity was mainly devoted to the pleasures of the world and the care of his family. When about forty years old, he was attacked with a severe sickness which deprived him of the use of his feet. Removed thus at once from the company which he loved, loneliness compelled him to seek in himself an indemnification for the loss of worldly pleasure. This stroke did not prostrate him: on the contrary, his mind took a higher flight. He became a poet. The ideal world which he now inhabited indemnified him fully for the reality of which he was deprived. Upon his bed of pain he discovered in himself a talent hitherto unknown to him. In a short time he made himself familiar with the English language and literature. Yet a more severe trial awaited him; he lost his sight. This misfortune did not depress his courage; on the contrary, he made it a means of moral and spiritual elevation. With his blindness burst forth his poetic spirit. He soon commenced the study of the German language, and made himself acquainted with the classical poetry of Germany. Kosloff lived in the world of recollection and of fancy, and that Providence which veiled his eyes, said to his soul, "Let there be light."

Kosloff made some very good translations from English and Italian poetry, and his "Monk," in poetic power, reminds us of Byron's "Gaiour."

KOTZEBUE, AUGUSTUS FREDERIC FERDINAND VON.—This prolific German writer was born on the 3rd of May, 1761, at Weimar. At the age of sixteen years he entered the university of Jena, where his inclination for the drama, already awakened at Weimar by the celebrated company of players in that city, was confirmed by his connexion with a private theatre. The marriage of his sister to a gentleman of Duisburg induced him to enter the university, then at that place, but in 1797 he returned to Jena, and studied law, without, however, ceasing to compose for the theatre. On leaving the university, he

was admitted a lawyer. He imitated Schiller, Göthe, Wieland, Hermes, Brandes, and Musæus. In 1781 he went to St. Petersburg, at the suggestion of the Prussian minister at that court, and became secretary to the governor-general, Van Bowr, who died two years afterwards. He had, however, recommended Kotzebue to the empress, and she became his patroness. He was finally appointed president of the government of Esthonia, and as such was ennobled, in consequence of which he wrote his work "On Nobility," in which he defended this institution, after having often attacked it as a poet.

In 1790, on a journey to Pyrmont, he published "Doctor Bahrdt with the Iron Forehead," under the name of Knigge, by which he sunk greatly in the public esteem. In 1795 he retired to a country place about thirty-five miles from Narva, in Esthonia, but soon after removed to Weimar, with a pension of a thousand guilders, and again returned to Petersburg, where his sons were educated in the imperial military school. Although he had a passport, yet on his arrival at the frontiers he was arrested, and sent to Siberia, without learning the reason. A small drama of his, an indirect eulogy of Paul I., was translated into Russian, and laid in manuscript before the emperor, who was so delighted with it that he recalled Kotzebue and took him into favour; but after the death of this emperor he again went to Germany. In 1802 he was chosen member of the academy of sciences of Berlin,—by what intrigues we do not know,—and, with Merkel formed a party against Göthe and Schlegel, in which contest the latter, of course, was much superior. In 1806 he went again to Russia, to avoid the French, and lived from 1807 on his estate at Schwartz, in Esthonia, never ceasing to write against Napoleon. In 1813, as counsellor of state, he followed the Russian head quarters, constantly writing to excite the nations against Napoleon, and published in Berlin the Russian-German National Gazette, entitled "Volksblatt." He established the "Literary Weekly Paper," in which he passed judgment on the publications of the day, and advanced political opinions equally dishonourable and obnoxious to Germany, ridiculing every attempt at liberal institutions. The state of things before the French revolution was his standard of perfection. Kotzebue was regarded with aversion by the liberal party in Germany, as an enemy to the freedom of his country, and, among the young and ardent, his ridicule of their noblest sentiments and most cherished hopes awakened bitter hatred. This feeling was so strong in the case of a young enthusiast named Sand, that he formed the plan of putting Kotzebue to death as the enemy of his country, and deliberately murdered him on the 23rd of March, 1819, after which he immediately gave himself up to justice. Kotzebue was three times married, and left thirteen children. His best productions are his comedies, which seem to be much more popular with foreigners than with Germans. A sickly sentimentality in his graver dramas, and the insipidity of his comedies, are seldom redeemed by higher excellences.

KLANACH, LUCAS.—This artist was born in 1472, in the bishopric of Bamberg. He went to Coburg after having learned a little of the art of painting from his father, who was a wood-cutter and card-painter. The elector Frederick the Wise admitted him to his court, and he accompanied him on his journey to Palestine in 1493. In 1504 he was

appointed painter to the elector and his brother, Duke John Frederick, was made a noble, and in 1537 burgomaster of Wittemberg, accompanied the elector John Frederick in his captivity to Inspruck, returned with him, and died in 1553 at Weimar. His son, Lucas Kranach, who was also burgomaster at Weimar, where he died in 1586, painted many of the pieces ascribed to Kranach. We are most indebted to Kranach for his portraits of Luther, Melancthon, and other persons celebrated at the time of the reformation.

KRASICKI, IGNATIUS, count of Sietzen, archbishop of Gnesna, a poet and author, who was born at Dubiecko in February 1735. When the partition of Poland in 1772 obliged him to give up his office in the senate of the republic, he turned his attention to science. He excelled in describing the ridiculous in the national customs of his country. His conversation was agreeable and witty. Frederick the Great once said to him, "I hope Mr. Archbishop, you will carry me under your episcopal cloak into Paradise." "No, sire," answered Krasicki, "your majesty has cut it so short that it will not serve for smuggling." Among the works of this poet are his mock-heroic poem "La Mycheide, or La Sourjade," in ten cantos, translated into French, the subject of which is from the ancient chronicle of Bishop Kadlubek, which describes how mice and rats eat up King Popiel; also his "War of the Monks," in six cantos, perhaps his masterpiece. Frederick the Great is said to have induced him to write it when he lodged him in the room in Sans Souci, where Voltaire had lived with the intimation that it would doubtless inspire him with poetical ideas. His "Antimonomachie," also in six cantos, has less merit. Several of his fables are classic; not so his satires. "The War of Choczim," in twelve cantos, describing the victory of Choczkiw over Sultan Osman, under the reign of Sigismund, has too much of an historical character, but his prose works are full of spirit. He died at Berlin on the 14th of March, 1801.

KRUDENER, JULIANA, BARONESS OF.—This distinguished lady was born about 1766 in Riga. Her father, Baron Vietinghoff, one of the richest landed proprietors in Courland, gave her a careful education; and when a young girl her parents took her to Paris, where her father's house was the resort of men of talents, and her wit, beauty, and cheerfulness were admired. In her fourteenth year she was married to Baron Krüdener, a Livonian about thirty-six years old. She accompanied her husband to Copenhagen and Venice, where he was Russian minister. In these places, and in Petersburg, Madame Krüdener, placed by rank and wealth in the first circles, was one of their most brilliant ornaments. She was surrounded by admirers of her talents and beauty, but she was not happy. She became the mother of two children, but, as she herself indicates, in a letter to her son-in-law, her natural liveliness of temperament and the allurements of the world led her into levities, which finally caused a divorce from her husband. In 1791 she returned to her father's house in Riga, where she was universally considered one of the most accomplished ladies of the day. But Riga did not satisfy her, and she lived alternately in Paris and Petersburg in Russia. Her love of dissipation involved her in Paris, as well as in Petersburg, in many difficulties. In the midst of these circumstances she wrote a novel, of which she had formed

the plan at an earlier period, "*Valérie, ou Lettres de Gustave de Linar à Erneste de G.*," in which she delineated certain scenes of her own life. The disasters of Prussia arrived, and Madame Krüdener, being then about the person of the queen of Prussia, and participating in her affliction, turned her mind from the pleasures of the world to the subject of religion, though, perhaps, as is often the case, little change may have been produced in the essentials of her character. Ambition, a lively sensibility, and love of excitement, seem to have remained the great springs of her actions. She was now attracted by the principles of the Moravians. She again went to Paris, where she found many disciples—a fact easily explained from the circumstance that the highest circles of Paris always contain a number of persons who, having been accustomed to live on excitements from early youth, and having become sickened with those of fashionable life, turn with pleasure to those of devotion.

On the commencement of the war of the northern powers against Napoleon, Madame Krüdener went to Geneva, and at Carlsruhe she became connected with the mystical Jung. She began to believe herself called to preach the gospel to the poor. She therefore went into the prison at Heidelberg, and preached to the criminals condemned to death. In 1814 she returned to Paris, where she became acquainted with Alexander emperor of Russia, who had already for some time shown a disposition to religious contemplations. Madame Krüdener's conversation with the emperor had a great influence on him. In Paris she had prayer-meetings attended by distinguished personages, where she was seen in the background of a suite of rooms, in the dress of a priestess, kneeling in prayer. It is very generally believed that her conversations in Paris with Alexander were mainly instrumental in suggesting the idea of the holy alliance; it is certain that in her later sermons she held it up almost as a new covenant. She gave a description of the feast celebrated by the Russian army in the plains of Chalons, under the title "*Le Camp de la Vertu*," in which she gives her views respecting the history of the time. In 1815 she went to Basle, where a small community of devout mystics was already collected. Here a young clergyman of Geneva, named Empeytas, followed her, and preached in the prayer-meetings which the baroness held every evening. Women and girls went ardently to these prayer-meetings, and gave liberally to the poor, often to a degree much beyond what they could afford. These meetings, as is too often the case under circumstances of similar excitement, had a bad moral effect. Cases were reported which excited great scandal, and a preacher named Fäsch finally denounced the priestess. The magistracy of Basle obliged her to leave the city. She experienced the same treatment in Lörrach, Aarau, &c.; yet, according to the common course of things, the number of her followers increased, particularly among young females. At the same time she carried on an extensive correspondence; money was sent her from great distances.

In 1816, with her daughter, she went to reside not far from Basle in Baden, on the Horn of Grenzach. Besides M. Empeytas, she was accompanied by Professor Lachenal of Basle, and a Mr. Kellner. Here she assembled many poor people, great numbers of whom were vagabonds, whom she provided with food and lodging, without labour. These were very

ready to profit by the kindness of the benevolent lady, who preached against the coldheartedness of the rich as the source of all evil. The public peace was so much disturbed by these proceedings, that the Horn was surrounded by soldiers in 1817, and the disciples of Madame Krüdener carried away to Lörrach. She wrote in consequence a remarkable letter to the minister at Carlsruhe, in which she spoke of the "desert of civilization" through which she was obliged to wander, and reminded him of the law of God requiring the authorities to take care of the poor. She now travelled about preaching in the open air, often surrounded by 3000 people, and giving bountifully to the poor. Wherever she arrived, she was under the surveillance of the police. In Leipsic police officers were at length even placed at her door, so that nobody could be admitted to see her. Mr. Krug, professor of philosophy in the university of that city, published "*Gespräch untur vier Augen mit der Frau von Krüdener*," according to which she appeared as an estimable enthusiast, pouring out pious effusions, mingled with arrogant prophecies. At length the police transported her to the Russian frontier, where she received orders not to go to Petersburg nor to Moscow. In 1824 she went with her daughter and her son-in-law to the Crimea, and died there the same year at Karafubasar.

KRUNITZ, JOHN GEORGE, a learned physician, who was born in 1723, and studied at Göttingen and at Frankfort on the Oder. In 1759 he returned to Berlin, devoted his whole life to literary pursuits, and died in 1796. A great number of useful publications upon medicine, natural history, geography, and other subjects, original and translated from various languages, are the fruits of his industry. His chief work is the "*Ökonomisch-technologische Encyclopädie*," which he began in 1773. It amounted to seventy-three volumes, and had just reached the article "*Leiche*" (or corpse) when he was removed by death. The work is valuable, as containing much matter carefully selected.

KRUSENSTERN, ADAM JOHN, CHEVALIER DE, a celebrated Russian naval officer, who is well known from his voyage round the world. Indeed the Russians had made many voyages of discovery, but Krusenstern's voyage surpassed those of his predecessors in its extent and its results. Before him, Russian navigators, in the Atlantic Ocean, had never reached the tropics. Krusenstern sailed from lat. 60° N. to 60° S. in the western hemisphere, and on this voyage of more than three years he lost not a single man. The emperor Alexander caused every thing to be done for the success of this scientific enterprise, and, among other things, purchased the best instruments of Troughton, Arnold, and Pennington; and he rewarded the navigator with great liberality. He bestowed upon Krusenstern's wife the income of an estate which amounted to 1500 roubles yearly, in order, as he expressed it, to comfort her husband during his absence in regard to the condition of his family. The honour of the enterprise, however, both in plan and execution, is due to the modest Krusenstern. No navigator has combined more philanthropy, care, and sacrifice of his own convenience, with a comprehensive knowledge of his own department. Von Krusenstern also made himself known in the literary world by an essay in "*Storch's Annals*," in which he exhibits the difficulties of trading by way of Ochotsk to the islands and coasts

of America, and showed that this trade could not become important until ships should go to the north-west coast of America by passing out of the Baltic round Cape Horn or the Cape of Good Hope. But, if Russia would take part in the direct trade with China and India, he saw that she must obtain seamen acquainted with the Indian ocean.

Krusenstern had collected the necessary information on this subject in the war of 1793, when he served in the English fleet. Count Woronzoff, the Russian ambassador at the English court, now procured for him an opportunity to go to India on board a British vessel bound to China. He remained at Canton during 1798 and 1799, and there acquired a knowledge of the advantages which would accrue to the Russian possessions on the American coast from the direct transportation of furs to this place. As soon as Count Romanzoff, the minister, and Mordwinoff, the admiral, directed the mind of Alexander to Krusenstern's proposal, he took up the subject, and entrusted this active seaman with the charge of making a closer examination of the north-west coast of America, according to the instructions drawn up by Count Von Romanzoff, then minister of commerce, afterwards chancellor of the empire.

A secondary object was ultimately combined with the same, namely, to renew the commercial connexions of Russia with Japan at Nangasacki, which, since Laxman's voyage to Japan, had been broken up. Two ships were entrusted to him, the *Nadeshda* and the *Neva*. He gave the command of the *Neva* to Lieutenant-captain Lisanskoy. October 5, 1803, he left the road of Falmouth; and, November 26, the Russian flag waved, for the first time, on the other side of the equator.

Krusenstern discovered the Orloff Islands, and gave much information respecting the New Marquesas, or Washington's Islands, especially Nookahiva and the Straits of Sangaar. He added particularly to the geography of Australia, of the coast of the islands of Japan and those in the Chinese sea. But the island lying east of Japan, which the Spaniards were said to have discovered in 1610, Krusenstern was as unsuccessful in finding as Bries and Lapérouse before him. On the other hand, he carefully examined the western coast of the island of Jedao, the straits of Lapérouse, and the coasts of the island of Saghalien. Krusenstern's desire to re-establish commercial connexions with Japan failed of being gratified, and the chamberlain, Von Resanoff, who had been appointed ambassador thither, was not received. The result of this voyage will become truly important, in a commercial view, if the proposed improvements in the management of the Russian colonies on the Aleutian Islands and the north-west coast, to the abuses in which Krusenstern's attention was directed, are carried into effect.

Krusenstern's official report concerning Captain Golownin's voyage for the examination of the Kurile Islands, contains the latest proofs of the odium which the Russians have brought upon themselves in Eastern Asia. Krusenstern's voyage, therefore, is interwoven, in more than one respect, with the history of the Russian empire. Of his literary labours, which have particularly enriched nautical geography, specimens are contained in the "Universal Geographical Ephemerides;" among others, the essay concerning Maldona's supposed discovery of a north-west passage in the year 1588, and his "Mémoire sur une Carte

du Dédroit de la Sonde et de la Rade de Batavia." He has also published "Vocabularies of the Languages of Several Nations of Eastern Asia and the North Coast of America;" "Contributions to the Hydrography of the Great Oceans;" and a "Recueil des Mémoires Hydrographiques pour servir d'Explication à l'Atlas de l'Océan Pacifique." Krusenstern's arrangement for securing the magnetic needle against the influence of cannon, and other iron substances, by enclosing the compass in metallic plates, was introduced by the Russians in 1825.

KUH, EPHRAIM MOSES, was born in 1731 of Jewish parents, and showed early an uncommon strength of memory, vivacity of mind, and a restless desire of knowledge. His father, a rich trader, intended at first to educate him in Jewish learning; and when the result by no means answered his expectations, he desired to make him a merchant. He allowed him to receive instruction in the French, Italian, and English languages, by which means he attained a knowledge of modern literature and poetry. After his father's death he went to Berlin as first clerk in the counting-house of his uncle. Here his talents gained him the friendship of Mendelssohn, Ramler, Lessing, and other learned men, by intercourse with whom his poetical talent began to be developed. He possessed considerable property besides a good salary, but his easy good-nature, which made him often the prey of the fraudulent, united with an extravagant love of books, in a few years exhausted his means. He left Berlin, travelled through Holland, France, Italy, Switzerland, and Germany, and became, at last, dependent on his family. These circumstances produced in him a fixed melancholy which at length increased to insanity, from which he was restored only by the activity of a skilful physician. In his lucid intervals he produced the best of his poems. In 1785 he was deprived of strength and speech by apoplexy, in which state he died in 1790.

KUTUSOFF, GOLENISCHTSCHIEFF KUTUSOFF, PRINCE SMOLENSKY, a celebrated Russian field-marshal, who was born in 1745, and entered the army in 1759. He stormed the fortress of Shumla, and at a later period contributed greatly to the subjugation of the rebel Pugatscheff. In 1788 he was present at the siege of Oczakow, having been appointed governor-general of the Crimea the year before. After the storming of Ismail under Suwaroff, he was advanced to the rank of lieutenant-general, and in the negotiations with Turkey, which took place shortly after, he gained the fame of an able diplomatist. In 1793 he was appointed ambassador at Constantinople, and in the subsequent Polish war we find him in the Russian army under Suwaroff. He was particularly conspicuous during the memorable day of Praga. After the restoration of peace, Kutusoff was first appointed commander-in-chief of Finland; Paul afterwards named him governor-general of Lithuania. He resided several years at Wilna, and endeavoured to retrieve by study the deficiencies of his early education. For a short time he filled the situation of ambassador to Berlin, but soon returned to Wilna to his governor-generalship. After this he was appointed chief of the corps of cadets, and in 1801 governor-general of St. Petersburg.

In 1805, when he was at the age of sixty, the emperor Alexander gave him the chief command of the first Russian corps against the French. He led it towards the Inn, but did not arrive there until after

the capitulation of Ulm, upon which he united himself with the small Austrian corps of General Kienmayer, and checked the whole of the French army. On the right bank of the Danube, to which he had crossed over, he was closely pursued by the French, and had several engagements with them, especially that near Durnstein, where he encountered Marshal Mortier on the 18th and 19th of November, the issue of which contest was fortunate for him. The emperor of Germany sent him on this occasion the grand cross of the order of Maria Theresa. Hereupon, having joined the other Russian corps, he commanded the allied army under Alexander at Austerlitz, where he was wounded. In the Turkish war he received orders from Alexander to close the campaign on the Danube. This being done, Kutusoff returned to Russia, and when Barclay de Tolly resigned the command after the first retrograde movement, he received, at the age of seventy, the chief command of the Russian army in the war of 1812. After the battle of Mosaisk he adopted a new plan of warfare. To commemorate his victories he received from Alexander the surname of Smolenskoi.

Foreseeing the fate which awaited the retreating enemy on the banks of the Berezina, he pursued but slowly, and the campaign was already at an end when he reached Wilna, where he received his emperor. This campaign had exhausted Kutusoff's strength. He was not in favour of a continuation of the war; for to him, a man beyond seventy years of age, it appeared too bold an enterprise to attack the enemy in the seat of his power. After having issued the celebrated Russian proclamation from Kalisch, he died at Buntzlau in April 1813. After the death of his widow, the emperor continued the pension of 86,000 roubles annually to her five daughters.

**KYAU, FREDERIC WILLIAM, BARON OF**, remarkable as a man who owed his poetical success to his wit. Kyau was born in 1654, and when seventeen years old entered the Brandenburg army, in which he rose, after ten years, to the rank of ensign. Some imprudences obliged him to leave Brandenburg. He went to Saxony, where the elector and king of Poland, Augustus II., became acquainted with his humour, took him into favour, made him his aid-de-camp, and at length, adjutant-general and commandant of Konigsmuth, which he always used to call his "stone wife." He remained faithful to her until his death in 1733. He was an honest man, hating all flattery. He was a real scourge of the court nobility. There are two biographies of this man, whose memory is still popular in the north of Germany, and of whom a thousand sayings are afloat among the people.

**KYRLE, JOHN.**—This individual, who was celebrated by Pope as the "Man of Ross," was a country gentleman residing at Ross in Hertfordshire, where he died in 1754. So high did he rank in the estimation of his contemporaries that Dr. Warton, in his "Essay on the Writing and Genius of Pope," says "that Kyrle was the Howard of his age, and that he deserved to be celebrated beyond any of the heroes of Pinder." The eulogium of Pope on Mr. Kyrle is too well known to need repetition.

In the subjoined engraving we give a view of the summer house of this gentleman, which adjoined his residence in the town of Ross. In this little structure this practical philanthropist usually spent his evening when the season permitted; and it is believed

that in it Pope gave to some of his best productions their form and finish.

**LAAR, PETER VAN.**—This distinguished artist was born in 1613 at Laaren in Holland, and early in life displayed great talent as a painter. For nearly twenty years of his life this artist enjoyed the society of the most distinguished painters, amongst whom we may enumerate Poussin, Claude Lorraine, Sandrart, &c., and had considerable influence on the taste of the Italians. In 1673 or 1674 he put an end to his life, probably from hypochondria. He received his surname of Il Bamboccio during his residence at Rome, according to most writers on account of his deformity; according to others, from his humorous representations of objects of common life, which he brought into favour. Even in his earliest youth it was his constant occupation to draw every thing which he met with. His memory served him so admirably that he could represent objects most strikingly which he had only seen once or a long time previous. He was also one of the greatest musicians of his time. He only attempted minor objects, such as fairs, children's games, hunting scenes, landscapes, &c., but his paintings possess great power and animation.

**LABARRE, JOHN FRANCIS LEFEVRE.**—This unfortunate individual was one of the latest victims of religious fanaticism in France. His father having spent his fortune, his aunt, the abbess de Villancourt, took charge of his education, and the youth made much progress in his studies. The command of a company of cavalry had been promised to him, when the following horrible event put a stop to his career. In the year 1765 a wooden crucifix on the bridge of Abbeville had been defaced, and the bishop of Amiens, de la Motte d'Orléans, issued a proclamation, demanding a disclosure of the perpetrators of the crime, under penalty of ecclesiastical censures and excommunication. Duval de Saucourt, counsellor of the presidial of Abbeville, the private enemy of the abbess de Villancourt, accused the chevalier de Labarre of the crime. Several witnesses were heard. Labarre and Détallonde, a youth of the same age, were ordered to be arrested. The latter fled and entered the service of Prussia, in which he distinguished himself, but Labarre was apprehended and brought to trial. The indictment charged him with having passed a procession without taking off his hat, of having spoken against the eucharist, and of having sung impious and licentious songs. The

tribunal sentenced the young man to have his tongue cut out, his right hand cut off, and to be burnt alive. A decree of the parliament of Paris, of June 1776, passed by a small majority, commuted the sentence into decapitation before burning. This decree was executed on the 1st of July. Labarre, hardly nineteen years old, was carried to the place of execution in a cart, with the words impious, blasphemous, sacrilegious, abominable, and execrable, written on his breast. Voltaire exerted himself as zealously against this infamous act as he had against the execution of Calas. Under the name of M. de Casen, advocate of the royal council, he published "A Relation of the Death of the Chevalier De Labarre." "A Dominican," he says, "was appointed to attend him as confessor, a friend of his aunt, the abbess, with whom he had often supped in the convent. This good man wept, and the chevalier comforted him. Dinner was brought to them, but the Dominican was unable to eat. 'Let us take a little food,' said the chevalier to him, 'you will need strength to support the spectacle which I am going to exhibit.' He ascended the scaffold with calmness, without complaints, without anger, and without ostentation, merely saying to the monk who assisted him, 'I did not think that a young nobleman could be put to death for such a trifle.'"

LABAT, JEAN BAPTISTE, a learned Dominican missionary and traveller, who was born at Paris in 1663, and took the vows at the age of nineteen. He afterwards taught mathematics and philosophy at Nancy, where, at the same time, he performed the duties of a preacher. In 1693 he returned to Paris, to the Dominican convent in the street St. Honoré, and on a letter arriving shortly after from the superior of the Dominicans in the French Antilles, in which this ecclesiastic urged his brethren in Europe to come to his aid, an infectious disease having carried off many of the members of the order, Labat determined to carry into execution the plan he had long entertained of becoming a missionary. As the superiors of the order expected great benefit from his services in France, it was with difficulty that he succeeded in carrying his intention into effect. He embarked, with several brethren of the order, at Rochelle in 1693, landed at Martinique in 1694, and immediately undertook the care of the parish of Macouba, which he superintended for two years, after which he was sent to Guadaloupe for the purpose of building a mill on an estate belonging to the order. His mathematical knowledge recommended him to the governor there, whom he accompanied during a tour through the island, to assist him in selecting the points best adapted for works of defence. On his return to Martinique, Labat found his cure occupied by another, and he received the office of procureur-général of the mission, in which an opportunity was afforded him of displaying the whole extent of his useful activity at the same time that he served the government by his mathematical knowledge.

During several voyages in the service of the mission he visited all the Antilles, and, on the attack of Guadaloupe by the English in 1703, he rendered his countrymen important services as an engineer. In 1705 he was sent to Europe on business of the order, and, landing at Cadiz, he embraced the opportunity to survey, geometrically and scientifically, the environs and the whole coast of Andalusia as far as Gibraltar. He likewise went to Italy, and finally returned to Paris in 1716, where he occupied himself with the

publication of a part of his works, and where he died on the 6th of January, 1738. His "Voyage aux Iles de l'Amérique," of which several editions have appeared, and which has been translated into several languages, contains an account of the natural history, particularly of some of the smaller and less frequented islands; of their productions; the origin, customs, religion, and governments of the inhabitants, as well as the chief political events which occurred during the author's residence there. He also published "A Description of the Countries on the Senegal, and between Cape Blanco and Sierra Leone," "Travels in Spain and Italy," and a translation of Cavazzi's work on Western Æthiopia. In addition to which he edited several important works.

LABE, LOUISA.—This lady is best known by the name of *la belle cordière*; she was born at Lyons in 1526 or 1527. Her father had her instructed in music, in several languages, and also in riding and military exercises. This excited in her a desire to enter the army, and in 1543 she served at the siege of Perpignan, under the assumed name of Captain Loys. The French being obliged to abandon the siege of Perpignan, Louisa renounced the military service, and devoted herself to literature and poetry. She married a rich rope-maker, Ennemond Perrin, by which means she acquired an opportunity to follow freely her bent for literature. With many agreeable accomplishments, she combined a knowledge of the Greek, Latin, Spanish, and Italian, and in consequence her house became the resort of men of learning, rank, and wit. She excited the admiration of the poets, but at the same time the envy of the ladies of Lyons. Some contemporary writers have praised her for her virtue, while others have accused her of licentiousness; but her generosity, her taste for learning, and her acquirements, so extraordinary for the times, effaced this stain in the eyes of most of her contemporaries. The tribute which contemporary authors pay her, and the circumstance that the street in Lyons where her house was situated was named after her, prove how much she was esteemed. Her principal works are, "Epistle to Clemence de Bourges," and "The Dispute between Love and Folly," a work full of interest and originality.

LABORDE, ALEXANDER LOUIS JOSEPH, COUNT DE, a celebrated traveller, who was born in 1774 at Paris, and entered the Austrian service, where, in consequence of a letter from his father to Joseph II., who entertained great esteem for his father, and had expressed the wish to see one of his sons in his service, he was appointed lieutenant in the regiment Wenzel-Colloredo, and was afterwards removed to the light-horse regiment Kinsky as captain. Laborde would willingly have served his country in the French revolutionary war, but his name was on the list of emigrants. At that time, while lying wounded at Heidelberg, he made the acquaintance of General Oudinot (who had been taken prisoner by the regiment Kinsky) and others of his countrymen. This strengthened him in his resolution. As soon as the peace of Campo-Formio was concluded, he left the Austrian service, and obtained the erasure of his name from the list of emigrants. On his return to France he devoted himself to science, made a journey to England, Holland, Italy, and Spain, and, on his return, published his splendid work, "Voyage Pittoresque et Historique de l'Espagne;" his "Itinéraire de l'Espagne;" his "Description of

the Collection of Greek Vases belonging to Count Lamberg;" his "*Voyage Pittoresque en Autriche*;" and the commencement of his work on the monuments of France in chronological order.

He was elected a member of the institute, and Napoleon entrusted him with important business as counsellor of state. He likewise accompanied the emperor to Spain and Austria. In 1814 Laborde commanded a division of the national guard of Paris, and concluded, together with Tourton, in the name of Marshal Moncey, the capitulation with the Russians. After the restoration he made a second journey through England, and, on his return, published the first book in France on the system of mutual instruction.

**LACEPEDE, BERNARD GERMAIN ETIENNE, COUNT DELAVILLE SUR ILLON DE.**—This distinguished naturalist was born at Agen in 1756, and was from his youth passionately attached to natural history and music; he consequently abandoned the military profession, for which he was destined, and devoted himself to the study of natural history. His teachers and friends, Buffon and Daubenton, procured him the important situation of keeper of the collections belonging to the department of natural history in the *jardin des plantes*. At the breaking out of the revolution, he was elected a member of the legislative assembly, and belonged to the moderate party. To withdraw from the storms of the period of terrorism, he resigned his situation, and retired to his country-seat at Leuville. He again made his appearance under the directory, and was appointed one of the first members of the institution. Napoleon made Lacépède a member of the conservative senate, and conferred on him the dignity of grand chancellor of the legion of honour. Lacépède became one of the most zealous adherents of the emperor, and during the ten years of the imperial reign few public celebrations occurred at which he did not appear as an orator. His benevolence and his inattention to his own affairs involved him in debt; Napoleon, therefore, gave him a salary of 40,000 francs. After the first restoration Lacépède lost his situation of grand chancellor of the legion of honour, but was raised to the peerage by the king. During the hundred days the emperor appointed him grand master of the university, but he declined this office and devoted himself solely to the sciences. In 1817 he published a new edition of Buffon's works, and announced, at the same time, that, at the desire of his deceased friend Lagrange, he intended to publish his "*Theory on the Formation of Comets*." He likewise published a continuation of the work on the "*Cetacea*," commenced by his great predecessors. His "*History of Fishes*" is considered his principal work. The complete collection of his works, in which are included two small novels, which appeared anonymously, and the opera "*Omphale*," is voluminous. He died on the 6th of October, 1825, at his country-seat near St. Denis, of the small-pox.

**LACHAISE, FRANCOIS D'AIX DE.**—This talented member of the catholic church was born in the chateau d'Aix, in August 1624. The family D'Aix de Lachaise was one of the most respectable in France, and a grand uncle of François de Lachaise, Father Cotton, had been confessor of Henry IV. In the Jesuit college at Rohan, which had been founded by one of his ancestors, Lachaise commenced his course of studies, and finished it at Lyons. He was

the provincial of his order when Louis, on the death of his former confessor, Father Ferrier, appointed Lachaise his successor. This appointment occasioned surprise, because, on the one hand, the disputes between the parties of Jansenists, Molinists, &c., divided the court of Louis XIV., already infected by the example of the king, with a sickly kind of devotion, as also the capital, which fluctuated, in imitation of the court, between licentiousness and bigotry; and, on the other hand, no Jesuit, since Father Cotton, had been chosen to this important situation. The new confessor was soon involved in a web of court intrigues. Mme. de Montespan and Mme. de Maintenon, who headed the Jansenists and Jesuits, stood opposed to each other, and Louis, moved by sensuality and superstition, wavered like a reed between these parties. Nevertheless, Lachaise maintained his ground, although he was equally obnoxious to Mme. de Montespan and Mme. de Maintenon, who frequently expressed their dislike to him in bitter sarcasms. On every occasion—at the celebrated declaration of the French clergy respecting the liberties of the Gallican church, at the revocation of the edict of Nantes, on occasion of the disputes of the Quietists, at the marriage of Mme. de Maintenon with the king in 1686, and similar important events of the time—Father Lachaise, in consequence of his office, was more or less forced to play a part; and, although he reflected well on every step he took, he constantly received the severest reproaches from both parties. The most intelligent men, however, never judged unfavourably of his private character and his conduct; and St. Simon, who was no friend to the Jesuits, as well as Voltaire, in his account of the age of Louis XIV., De Boza, Spon, and others, acknowledge that the confessor of the vainest monarch, and the mediator between the most exasperated parties, knew how to conduct himself under all circumstances with address, coolness, and sagacity; and that, although a zealous Jesuit, he never allowed himself to be drawn into violent measures against his opponents.

That Louis formally married Mme. Maintenon, Voltaire attributes principally to the counsels of Lachaise; but that this marriage remained secret, and was not publicly acknowledged, according to the desire of that ambitious woman, may likewise be attributed to Lachaise, who, on this account, had constantly to endure her hatred. Lachaise, maintaining his ground in the favour of his monarch till his end, and acting as his counsellor, even when age and weakness had almost converted him into a living skeleton. He died in January, 1709, at the age of eighty-five. He left philosophical, theological, and archæological works. His taste for the study of numismatics, and the great share which he had in the improvement of this branch of science in France, are well known. Louis XIV. had a country-house built for him at the end of the [present Boulevard neufs, which at that time, owing to its situation on a hill, received the name of Mont-Louis. Its extensive garden now forms the cemetery of Père Lachaise, the largest in Paris, and many splendid monuments now adorn the place where, formerly, the courtiers of Louis XIV. used to meet to pay their respects to the confessor of their absolute master.

**LACLOS, PIERRE FRANCOIS CHODERLOS DE.**—This well-known French writer was the author of the licentious romance "*Les Liaisons Dangereuses*," which first appeared in 1782. He was

born at Amiens in 1741, and, before the revolution, was a French officer of artillery and secretary to the duke of Orleans. Laclos was considered, when he was young, as one of the most talented and agreeable, and, in a moral point of view, as one of the most dangerous men. His enemies have maintained that he has drawn his own character in that of the viscount de Valmont in his romance. Others celebrate the simplicity, honesty, and good nature of his character, at least in the latter part of his life. He was one of the leaders of the Orleans faction as it was called. Being implicated in the political affairs of the duke of Orleans, he followed him to London. After the return of the king from Varennes, Laclos endeavoured, by means of the Jacobin club, to effect the foundation of a republic, as he conceived that this step would lead eventually to the elevation of the house of Orleans to the French throne. At the breaking out of the war Laclos was transferred as an assistant to the old Luckner, and after the fall of the house of Orleans he disappeared from the stage. It is difficult to explain how Robespierre came to spare a man who was one of the firmest adherents of this proscribed house; and thus the report originated, that Laclos prepared the speeches of the tribune of the people. He, however, returned to the military profession, and was advanced to the office of inspector-general of artillery. He died at Tarentum in 1803.

LACRETELLE, the name of two brothers, well-known as authors, but entirely opposed to each other in principles.—Pierre Louis Lacretelle, the elder, or, as he was commonly called, Lacretelle *ainé*, was born in 1751 at Metz, where his father was an advocate. Animated by the masterly works of the advocate-general Servan to the study of law, ethics, and literature, he went in 1778 to Paris, where he became parliamentary advocate, and, by his "Eloge de Montausier," which obtained the second prize in 1781, his "Mémoires du Comte de Saunois," a work new and unique in its kind, and the "Discours sur le Préjugé des Peines Infamantes," rendered himself worthy of a place in the institute, where he succeeded La Harpe, in conjunction with whom he edited the "Mercure," an occupation which he undertook anew in 1817 under very different circumstances, in conjunction with Jouy, Jay, Constant and others. Lacretelle embraced the principles of the revolution with the ardour of a noble mind, but without concurring in its excesses. In the legislative assembly in 1792 he was one of the leaders of the constitutional party, in opposition to the Girondists, who were in favour of republicanism. After the 10th of August Lacretelle devoted his attention wholly to literature. We find him again in public life in 1801, when he was a member of the legislative body of Napoleon. Here he retained his independence in the midst of political revolutions. When the government of Napoleon destroyed his hopes of the establishment of a liberty founded on the laws, he again retired. His poverty, which he neither complained of nor regretted, was honourable to him. The aristocratical re-action which took place in France after the second restoration, and was particularly memorable in the chamber of 1815, threw him into the opposition which the liberal party at that time began to form, and in support of which they had undertaken the direction of the "Mercure de France." But this journal, which appeared on fixed days, be-

coming subject, in consequence of a new law, to the inspection of the censor of the press, was given up, and the "Minerve Française," which appeared irregularly, took its place. Lacretelle, in conjunction with Aignan, had the direction of this literary and political journal. The "Minerve Française" obtained so decided an influence upon public opinion, that this was also subjected, by a new ordinance, to the censorship, after eight volumes had been published, upon which it was immediately discontinued. Lacretelle, who was now a bookseller, hazarded a continuation of it in the form of small pamphlets; but he was subjected to a prosecution, in which he defended himself with great energy and ability. He was condemned, however, to imprisonment; but Louis XVIII. remitted the sentence on account of his age and infirmities, and the general esteem in which he was held. From that time till his death, which took place in September 1824, Lacretelle employed himself upon a collection of his works. He was the author of many logical, metaphysical, and ethical articles in the "Encyclopédie Méthodique." His scattered essays and treatises appeared in 1802, under the title of "Œuvres Diverses," in five volumes, to which, in 1817, he subjoined "Fragmens Politiques et Littéraires," and, in 1822, "Œuvres," and "Portraits et Tableaux," in two volumes. His theatrical romance, "Malherbe, ou le Fils Naturel," is an excellent dramatic poem. His "Soirées avec Guillaume Lamoignon de Malesherbes," and his "Etudes sur la Révolution Française," are also highly esteemed.

Charles Lacretelle, the younger brother of Pierre Louis, went, when very young, to Paris at the breaking out of the revolution. He soon attracted attention by his logical acuteness, and the editorial department of the "Journal des Débats," which was established at that time, was committed to him in connexion with another individual by the name of Ducos. His second literary production was his "Précis de la Révolution," which was a continuation of the work of Rabaud St. Etienne. On the occasion of the opposition of the Parisian sections to the decree of the national convention retaining two thirds of their number in the new legislature, Charles Lacretelle composed, in the name of the sections, the caustic addresses to the convention, as well as to the electoral assemblies of France; but Bonaparte put an end to these commotions. Being, however, attached to the then existing opposition, and using his influence in its favour, he was arrested and retained prisoner for two years. In 1813 he received Esmenard's place in the national institute, and in 1816 the presidency of the French academy, or the third class of the institute.

The historical lectures, which, as professor of history, he delivered before the university of Paris, were among the most frequented in that city. As an historical writer he possessed a peculiarly brilliant diction, although his ideas want force and profundity. His "Histoire de France pendant les Guerres de Religion" is more highly esteemed than his "Histoire de France pendant le dix-huitième Siècle."

LACTANTIUS, LUCIUS CELIS FIRMIANUS, a celebrated father of the Latin church, who was distinguished as an orator and author. He lived for a long time at Nicomedia as a teacher of rhetoric, until Constantine the Great committed to his care the education of his eldest son, Crispus. He died

about A. D. 325. His writings are characterized by a clear and agreeable style, and he is, on account of his pure and eloquent language, frequently called the Christian Cicero. His seven books, "*Institutiones Divinæ*," are particularly celebrated, and worthy of notice.

LACY, DE.—This name is so distinguished in the history of England, Ireland, Spain, and Russia, that without attempting to go deeply into individual memoirs, we must give a brief view of some of its most celebrated branches.

At Horseleap near Killeghan are the ruins of one of the first of the castles built by the Norman conquerors to quell the Irish. Sir Hugh de Lacy, the great grantee of Meath, commenced the erection of this stronghold, but it was not his fate to see it finished; for while this great man, the favourite of his sovereign and one of the most valiant of that extraordinary race who came over with Strongbow, was inspecting the rising fortress, and stooping down to give directions to a workman, an Irish labourer, who was deeply imbued with a sense of his country's wrongs, clove his head with a single blow of his mattock. Tradition says, that though the most active, valiant, and superior of men, De Lacy was but small in stature, and was called "*Le Petit*,"—and from hence the *Le Petits* of Westmeath derive their name and origin. Another historian says, "Small men have often been found not only wise in council, but brave leaders in the field; their energies seem to act with more power as more concentrated; and Sir Hugh De Lacy *Le Petit*, as well as Napoleon, together with thousands of other little, but great men, have shown that the mind, the immortal mind, can nerve a little body to achieve great things. Sir Hugh was an extraordinary noble man, his leap over the drawbridge of his fortress is yet recorded and the spot shown; and the name of the place and village will record, as long as time lasts, this feat of a Norman knight. Alas! for the De Lacys like the De Courcys of that day; they did not respect the prejudices of the people, the castle he was building he dared to found on the site of an ancient abbey." The Irish were shocked at the profanation, the act therefore of the assassin was applauded by all, and even the avenging peasant's deed was counted religiously meritorious as exciting the anger of St. Columbkille on him who was the usurper of his abbey and the spoiler of his churches. Be it as it will, the De Lacys were a noble and valiant race. Hugh, the founder of Ardnochar or Horseleap Castle, left two sons; Hugh the eldest contrived to supplant John De Courcy, the conqueror of Ulster, in the favour of King John, and eventually succeeded in driving him out of the province and assuming the government. Sir Walter Scott introduced De Lacy into an English story, but did not follow up the subject by making use of the materials which Irish history affords of this noble race—their strange vicissitudes of fortune—now favourites—now rebels—defeated to day by De Courcy—and in a short space of time supplanting him and driving him from Ulster—again falling under the displeasure of their monarch, and obliged to fly for refuge to France, and there forced to work as gardeners on the grounds of a Norman abbot—and again, when unable to conceal their noble bearing, they were detected by the good ecclesiastic, and by his intercession reconciled to their king and restored to their fiefs. We find John writing a letter to Walter De Lacy, entreating him to forget all animosities

and assuring him of future favour and protection. The whole of this race have been military heroes; one of them was recently general in the Austrian service; another was field marshal of Russia, and commander-in-chief of Black and White Russia, and lord of the celebrated palace of Grodno. The chief lineal representatives of this family are the De Lacys of Spain and Russia, and the Murphys and Pierces of Limerick. The O'Briens (lineally descended from the celebrated Brian Borsheine, hero of Clontarg, king of Ireland) intermarried with the De Lacys in 1585. The houses of Lansdowne, Clancarde, Thomond, and Fitzgeralds, are connected with this family, "which has distracted Ireland for six hundred years," but were stripped of great possessions at the reformation. An Irish historian of Limerick says, "The county of Limerick may be justly proud of this family, its greatest pride and ornament—England, Spain, Normandy, and Russia, have vied with each other in doing homage to this great family."

LAENNEC, RICHARD, a learned French physician, who was born at Quimper in Brittany, and educated at Paris, where in 1802 he gained two grand prizes for medical and surgical dissertations offered by the institute. He is best known in this country by a work entitled "*De l'Auscultation Médicale, ou Traité du Diagnostic des Maladies, des Poumons et du Cœur*." In this work he gives an account of his experiments with a valuable instrument of his own invention, called a stethoscope, for the discovery of diseases of the heart and lungs. He died in August 1826.

LAFAYETTE, GILBERT MOTTIER.—This celebrated politician was born at Chavagnac, near Brioude in Auvergne, 1757. He was educated in the college of Louis le Grand in Paris, placed at court as an officer in one of the guards of honour, and, at the age of seventeen, was married to the granddaughter of the duke de Noailles. It was under these circumstances that the young marquis de Lafayette entered upon a career so little to be expected of a youth of vast fortune, of high rank, of powerful connexions, at the most brilliant and fascinating court in the world. He left France secretly for America in 1777, and arrived at Charleston, South Carolina. The state of that country, it is well known, was at that time most gloomy; a feeble army, without clothing or arms, was with difficulty kept together before a victorious enemy; the government was without resources or credit, and the American agents in Paris were actually obliged to confess that they could not furnish the young nobleman with a conveyance. "Then," said he, "I will fit out a vessel myself;" and he did so. The sensation produced in America by his arrival was very great; it encouraged the almost disheartened people to hope for succour and sympathy from one of the most powerful nations in Europe. Immediately on his arrival, Lafayette received the offer of a command in the continental army, but declined it, raised and equipped a body of men at his own expense, and then entered the service as a volunteer without pay. He lived in the family of the commander-in-chief, and won his full affection and confidence.

He was employed in Pennsylvania and Rhode Island in 1778, and, after receiving the thanks of the country for his important services, embarked at Boston in January 1779 for France, where it was

thought he could assist the cause more effectually for a time. The treaty concluded between France and America about the same period was, by his personal exertions, made effective in their favour, and he returned to America with the intelligence that a French force would soon be sent to that country. Immediately on his arrival he entered the service, and received the command of a body of infantry of about 2000 men, which he clothed and equipped in part at his own expense. His forced march to Virginia in December 1780, raising 2000 guineas at Baltimore on his own credit, to supply the wants of his troops; his rescue of Richmond; his long trial of generalship with Cornwallis, who boasted that "the boy could not escape him;" the siege of York-town, and the storming of the redoubt, are proofs of his devotion to the cause of American independence. Desirous of serving that cause at home, he again returned to France for that purpose. Congress, which had already acknowledged his merits on former occasions, now passed new resolutions, in which, besides the usual marks of approbation, they desired the American ministers to confer with him in their negotiations. In France a brilliant reputation had preceded him, and he was received with the highest mark of public admiration. Still he urged upon his government the necessity of negotiating with a powerful force in America, and succeeded in obtaining orders to this effect. On his arrival at Cadiz he found forty-nine ships with 20,000 men ready to follow him to America, had not peace rendered it unnecessary. A letter from him communicated the first intelligence of that event to congress. He received pressing invitations, however, to revisit America. Washington, in particular, urged it strongly; and, for the third time, Lafayette landed in the United States on the 4th of August, 1784. After passing a few days at Mount Vernon, he visited Baltimore, Philadelphia, New York, Boston, &c., and was every where received with the greatest enthusiasm and delight. Previous to his return to France, congress appointed a deputation, consisting of one member from each state, "to take leave of him on behalf of the country, and assure him that the United States regard him with particular affection, and will not cease to feel an interest in whatever may concern his honour and prosperity."

After his return he was engaged in endeavouring to mitigate the condition of the protestants in France, and to effect the abolition of slavery. In the assembly of the notables in 1787, he proposed the suppression of *lettres de cachet* and of the state-prisons, the emancipation of the protestants, and the convocation of the representatives of the nation. When asked by the Count D'Artois, afterwards Charles X., if he demanded the states-general,—“Yes,” was his reply, “and something better.” Being elected a member of the states-general, which took the name of national assembly in 1789, he proposed a declaration of rights, and the decree providing for the responsibility of the officers of the crown. Two days after the attack on the Bastille, he was appointed commander-in-chief of the national guards of Paris. The court and national assembly were still in Versailles, and the populace of Paris, irritated at this, had already adopted, in sign of opposition, a blue and red cockade, being the colours of the city of Paris; and Lafayette added to this cockade the white of the royal arms, declaring at the same time

that the tricolour should go round the world. On the march of the populace to Versailles, the national guards clamoured to be led thither. Lafayette refused to comply with their demand, until, having received orders in the afternoon, he set off, and arrived at ten o'clock, after having been on horseback from before day-light. He requested that the interior posts of the *château* might be committed to him; but this request was refused, and the outer posts only were entrusted to the national guards. This was the night on which the assassins murdered two of the queen's guards, and were proceeding to further acts of violence, when Lafayette, at the head of the national troops, put an end to the disorder, and saved the lives of the royal family. In the morning he accompanied them to Paris.

On the establishment of the Jacobin club at Paris he organized with Bailly, then mayor of Paris, the opposing club of Feuillans; and on the 20th of January, 1790, he supported the motion for the abolition of titles of nobility, from which period he renounced his own, and never after resumed it. The constitution of a representative monarchy, which was the object of his wishes, was now proposed, and in July 1790 was appointed for its acceptance by the king and the nation, and in the name of 4,000,000 national guards Lafayette swore fidelity to the constitution. Declining the dangerous power of constable of France, or generalissimo of the national guards of the kingdom, after having organized the national militia, and defended the king from the popular violence, he resigned all command and retired to his estates. The first coalition against France in 1792 soon called him from his retirement. Being appointed one of the three major-generals in the command of the French armies, he established discipline, and defeated the enemy at Philippeville, Maubeuge, and Florennes, when his career of success was interrupted by the domestic factions of his country. Lafayette openly denounced the terrible Jacobins, declaring that the enemies of the revolution, under the mask of popular leaders, were endeavouring to stifle liberty under the excesses of licentiousness. He afterwards appeared at the bar of the assembly to vindicate his conduct and demand the punishment of the guilty authors of the violence. But the Mountain had already overthrown the constitution, and nothing could be effected. Lafayette then offered to conduct the king and his family to Compiègne. This proffer being declined, he returned to the army, which he endeavoured to rally round the constitution. Shortly after he was burnt in effigy at the Palais-Royal, and was accused of treason before the assembly. Still he declared himself openly against the proceedings of the 10th of August; but finding himself unsupported by his soldiers, he determined to leave the country and take refuge in some neutral ground. Some persons have charged General Lafayette with a want of firmness at this period, but it is without a full understanding of the situation of things. Conscious that a price was set on his head at home, knowing that his troops would not support him against the principles which were triumphing in the clubs and the assembly, and sensible that, even if he were able to protract the contest with the victorious faction, the frontiers would be exposed to the invasions of the emigrants and their foreign allies, with whom he would have felt it treason against the nation to have negotiated, he

had no alternative. Having been captured by an Austrian patrol, he was delivered to the Prussians, by whom he was again transferred to Austria. He was carried with great secrecy to Olmütz, where he was subjected to every privation and suffering, and cut off from all communication with his friends, who were not even able to discover the place of his confinement until late in 1794. An unsuccessful attempt was made to deliver him from prison by Dr. Bollman, a German, and Mr. Huger. His wife and daughters, however, succeeded in obtaining admission to him, and remained with him nearly two years, till his release. Washington had written directly to the emperor of Austria on his behalf without effect; but after the memorable campaign of Bonaparte in Italy the French government required that the prisoners at Olmütz should be released, which was done on the 25th of August, 1797, after a negotiation that lasted three months. He almost immediately retired to his estate at La Grange, and, declining the dignity of senator offered him by Bonaparte, he gave his vote against the consulate for life, and, taking no further part in public affairs, devoted himself to agricultural pursuits.

On the restoration of the Bourbons in 1814 he perceived that their principles of government were not such as France required, and he did not therefore leave his retirement. The 20th of March, 1815, again saw Napoleon on the imperial throne, and endeavouring to conciliate the nation by the profession of liberal principles. Lafayette refused, though urged through the mediation of Joseph, to see him, protested against the *acte additionnel*, declined the peerage offered him by the emperor, but accepted the place of representative, to which the votes of his fellow-citizens called him. He first met Napoleon at the opening of the chambers; the emperor received him with great marks of kindness, to which however he did not respond; but although he would take no part in the projects of Napoleon he gave his vote for all necessary supplies, on the ground that France was invaded and that it was the duty of all Frenchmen to defend their country. When Napoleon returned from Waterloo, and it was understood that it was determined to dissolve the house of representatives and establish a dictatorship, two of his counsellors informed Lafayette that in two hours the representative body would cease to exist. Immediately on the opening of the session he ascended the tribune, and addressed the house as follows:—"When, for the first time after an interval of many years, I raise a voice which all the old friends of liberty will still recognise, it is to speak of the dangers of the country, which you only can save. This, then, is the moment for us to rally round the old tri-coloured standard, the standard of '89, of liberty, of equality, of public order, which we have now to defend against foreign violence and domestic usurpation." He then moved that the house declare itself in permanent session, and all attempts to dissolve it high treason; that whoever should make such an attempt should be considered a traitor to the country, &c. In the evening Napoleon sent Lucien to the house to make one more effort in his favour. Lucien, in a strain of impassioned eloquence, conjured the house not to compromise the honour of the French nation by inconstancy to the emperor. At these words Lafayette rose in his place, and, addressing

himself to the orator, exclaimed, "Who dares accuse the French nation of inconstancy to the emperor? Through the sands of Egypt and the wastes of Russia, over fifty fields of battle, this nation has followed him devotedly; and it is for this that we now mourn the blood of 3,000,000 of Frenchmen." This appeal had such an effect on the assembly that Lucien resumed his seat without finishing his discourse. A deputation of five members from each house was then appointed to deliberate in committee with the council of ministers. Of this deputation General Lafayette was a member, and he moved that a committee should be sent to the emperor to demand his abdication. The arch-chancellor refused to put the motion, but the emperor sent in his abdication the next morning.

A provisional government was formed, and Lafayette was sent to demand a suspension of hostilities of the allies, which was refused. On his return he found Paris in possession of the enemy, and a few days after the doors of the representatives' chamber were closed and guarded by Prussian troops. Lafayette conducted a number of the members to the house of Lanjuinais, the president, where they drew up a protest against this act of violence, and quietly separated. Lafayette now retired once more to La Grange, where he remained till 1818, when he was chosen member of the chamber of deputies. Here he continued to support his constitutional principles by opposing the laws of exception, the establishment of the censorship of the press, the suspension of personal liberty, &c., and by advocating the cause of public instruction, the organization of a national militia, and the inviolability of the charter.

In August 1824 he landed at New York, on a visit to the United States, upon the invitation of the president, and was received in every part of the country with the warmest expressions of delight and enthusiasm. He was proclaimed by the popular voice "the guest of the nation," and his presence was every where the signal for festivals and rejoicings. He passed through the states of the Union in a sort of triumphal procession, in which all parties joined to forget their dissensions, in which the veterans of the war renewed their youth, and the young were carried back to the doings and sufferings of their fathers. Having celebrated at Bunker's Hill the anniversary of the first conflict of the revolution, and at York-town that of its closing scene, in which he himself had borne so conspicuous a part, and taken leave of the four ex-presidents of the United States, he received the farewell of the president in the name of the nation, and sailed from the capital in a frigate named, in compliment to him, the "Brandy-wine," on the 7th of September, 1825, and arrived at Havre, where the citizens, having peaceably assembled to make some demonstration of their respect for his character, were dispersed by the *gendarmes*. In December following the congress of the United States made him a grant of 200,000 dollars, and a township of land, "in consideration of his important services and expenditures during the American revolution." The grant of money was in the shape of stock, bearing interest at six per cent., and redeemable on the 31st of December, 1834.

In November 1827 the chamber of deputies was dissolved. Lafayette was again returned a member by the new elections. Shortly before the revolution of 1830 he travelled to Lyons, &c., and was enthu-

astatically received—a striking contrast to the conduct of the ministers towards him, and an alarming symptom to the despotic government. During the revolution of July 1830 he was appointed general-in-chief of the national guards of Paris, and, though not personally engaged in the fight, his activity and name were of the greatest service. To the Americans, Lafayette, the intimate friend of Washington, had appeared in his late visit almost like a great historical character returning from beyond the grave. In the eyes of the French he is a man of the early days of their revolution—a man, moreover, who has never changed sides or principles. His undeviating consistency is acknowledged by all, even by those who do not allow him the possession of first-rate talents. When the national guards were established throughout France, after the termination of the struggle, he was appointed their commander-in-chief, and his activity in this post was admirable. His influence with the government seems to have been for some time great, but whether his principles were too decidedly republican to please the new authorities (a few days after the adoption of the new charter he declared himself against the hereditary peerage, and repeatedly called himself a pupil of the American school), or whether he was considered as the rallying point of the republican party, or whatever may have been the reason, he sent in his resignation in December 1830, which was accepted, and Count Lobau appointed chief of the national guards of Paris.

**LAFAYETTE, MARIA MAGDALENA, COUNTESS DE**, a lady of literary celebrity, who was a daughter of the governor of Hâvre de Grace, Aymar de la Vergne. A careful and classical education had given her a great love for literature. In 1655 she married Count Francis de Lafayette, and her house now became a place of meeting for the most distinguished men of her time. The celebrated duke of Rochefoucauld was one of her intimate friends. Among the learned men who surrounded her, the most distinguished were, Huet, Ménage, Lafontaine, and Ségrais. She died in 1693. Her works entitle her to an honourable place among French writers. The most distinguished of them are “Zaïde,” “La Princesse de Clèves,” and “La Princesse de Montpensier.”

**LAFFITTE, JACQUES.**—This distinguished French banker was born at Bayonne in 1767, and by his own diligence and merit acquired a fortune in the banking-house of the senator Perregaux. In 1805 he became the head of the house, which he made one of the first houses in France. In 1809 he was appointed director of the bank of France, and in 1814 president of the same establishment. He discharged the duties of this important office without accepting the large salary connected with it. In 1809 he was made president of the chamber of commerce in Paris, and in 1813 judge of the tribunal of commerce. When the credit of France in 1815 was at a very dangerous crisis, Laffitte advanced 2,000,000 in ready money, by which means a necessary article in the capitulation of Paris was settled. It was owing to his counsels that France was enabled to support the burden of the military contributions imposed on her without injury to the credit of the state. But when Laffitte joined the left side in the chamber of deputies, and opposed the encroachments of the infatuated absolutists, the laws of exception and the

clergy, he became an object of hatred to the ultras, and of suspicion to the ministry. In 1819 he was deprived of the presidency of the bank, which was bestowed on the duke of Gaeta, with a large salary; yet he was in 1822 unanimously re-elected to the office of *regent de la banque*. His eloquent speeches in the chamber, some of which were extemporaneous, prove his talents and knowledge, especially in the department of finance. He also spoke with energy on the occasion of the disturbances in Paris in 1819, when the young Lallemand was shot in the street by one of the watch, and old men, children, and women were trampled down by the gendarmes. He was not re-elected for the session of 1824.

By favouring the reduction of the *rentes* he appears to have lost his popularity. The chamber of deputies accepted the proposal for the reduction of the interest on the public securities then in circulation, but the chamber of peers rejected it. To prove the justice and advantages of this plan, and to justify his own conduct in the project, he wrote his “*Reflexions sur la Reduction de la Rente et sur l’Etat du Credit*,” a financial work of much merit. How great the confidence reposed in Laffitte has been, the following fact will serve to show. When Louis XVIII. was compelled to flee in 1815, he entrusted his private property for safe keeping to Laffitte; three months after, Napoleon under the same circumstances showed him the same confidence, and at St. Helena named him his executor. As Napoleon in the hundred days had respected the private property of Louis, so Louis XVIII. respected that of the emperor, and put no obstacles in the way of the execution of his last will. Among the merits of Laffitte, his great benevolence to the poor ought not to pass unnoticed. The publishers of the Latin classics at Paris were also assisted by him in carrying on their useful undertaking. Laffitte was in 1827 again elected to the chamber of deputies, and his only daughter was married in 1828 to the prince of Moskwa, eldest son of the celebrated Marshal Ney. He took an active part in the revolution of July 1830, being one of the deputies who signed the protest, and declared themselves deputies of France in spite of Polignac’s order to annul the election. Laffitte was also one of the deputies, who, during the struggle of the 29th of July, 1830, went to Marshal Marmont in order to put a stop to the conflict. On the 3rd of November, 1830, he was made minister of finance and president of the council, in which situation he remained until March 1831, when he was succeeded by M. Casimir Perrier.

**LAFITAU, JOSEPH FRANCIS**, a French Jesuit, who was a native of Bordeaux, and was employed as a missionary among the savages of North America. On his return to Europe he published a work entitled “*Mœurs des Sauvages Américains comparées aux Mœurs des Premiers Temps*,” and another on the discoveries and conquests of the Portuguese in the New World. In the former he maintains that the North American savages are descended from the barbarians who inhabited Greece at an early period. He died in 1740.

**LAFONTAINE, AUGUSTUS HENRY JULIUS.**—This popular German novelist was born in 1756 at Brunswick, and received a good classical education. Among the numerous romantic productions of this author we may enumerate “*Emilia in the World*,” “*Charles and Emma, or the Infant*

Friends;" "The Baron de Flemming," and "Blanche and Mirma;" besides which he published "The Agamemnon and Chæphoræ of Æschylus, with notes. Lafontaine also wrote several dramatic works. in addition to his other valuable productions. He died at Halle in 1831.

LAGRANGE, JOSEPH LOUIS, a celebrated mathematician, who was born in 1736 at Turin, and originally directed his attention to philosophy, but his natural taste for mathematics soon unfolded itself, and he studied with such ardour, that in his eighteenth year, in a letter to the celebrated Fagnano, he communicated to him a number of mathematical discoveries which he had made. He also solved the questions which had been proposed a long time before by Euler on the calculation of isoperimetrical figures, and on the theory of the least action. When scarcely nineteen years of age, Lagrange was made mathematical professor in the artillery school at Turin, and the memoirs of the scientific association, which he established with the approbation of the government, and in conjunction with the celebrated Cigna and the marquis of Saluces, excited such attention in the literary world that he was elected a fellow of the academy at Berlin, and Euler and D'Alembert entered into a constant correspondence with this young man. During a journey to Paris, which he made in company with his friend Caraccioli, who was sent as an ambassador to London, Lagrange became personally acquainted with the Parisian savants, and was received with general respect. But ill health soon obliged him to return home, where he applied himself with renewed diligence to his scientific labours. At this time he obtained the prize of the academy of sciences in Paris, for a treatise on the theory of the satellites of Jupiter, and, at the same time, by his exposition of the leading features of his doctrine in regard to the planetary system, rendered his name immortal.

He soon after received an invitation from Frederic the Great to go to Berlin, with the title of director of the academy, in place of Euler, who had gone to St. Petersburg. The king of Sardinia was, however, very reluctant to permit his distinguished subject to depart. Esteemed by the great Frederic, who preferred his independent spirit to the somewhat too submissive character of Euler, and valued highly by all who became acquainted with him, Lagrange lived in Berlin in pleasant circumstances during the lifetime of the king. After Frederic's death the regard which had been paid to men of genius and talent at the Prussian court declined, and Lagrange began to look about for another situation. At this period Mirabeau saw him in Berlin, and resolved to obtain this renowned geometrician for France. Lagrange accepted the offers made him from Paris, and declined the proposals of the ambassadors of Naples, Sardinia, and Tuscany. He was received at Paris in 1787 with the highest tokens of respect, but a deep melancholy seemed to have taken entire possession of him, and to have palsied his mind, notwithstanding all the efforts which his friends made to remove it. He suffered the same inconvenience which D'Alembert had once before experienced, viz., of having lost all love for his science. Lagrange now zealously employed himself upon the history of religion, the theory of ancient music, languages, and even the medical sciences. His own favourite science alone had no attractions for him, and he even suffered

his most celebrated work, "La Mécanique Analytique" (for which Du Chatelet, to whom Lagrange had given the manuscript, was for a long time unable to find a publisher), to lie untouched for two years after its publication. At the proposal of Du Séjour, he was in 1791 confirmed by the national assembly in his pension of 6000 francs, and, in order to indemnify him for the depreciation of the paper currency, he was first appointed a member of the committee for rewarding useful inventions, and in 1792 one of the directors of the mint. Dissatisfied with this station, although Cicero had discharged similar offices, he soon resigned it, considering it as an oppressive burden. In the same year he was married, for the second time, to a daughter of the academician Lemonnier, hoping to lead a tranquil life in the midst of the storms of the revolution.

The decree of October 1793, commanding all foreigners to leave France, and the execution of Bailly, Lavoisier, and other distinguished men, soon, however, destroyed his illusions. Through the instrumentality of Guyton Morveau, the severe law of banishment from the country was not put in force against him; but the danger of becoming a victim to the rage of the infuriated populace remained. Hérault de Séchelles offered to procure him a place in an embassy to Prussia, but Lagrange, who had conceived a warm affection for his new country, preferred to remain there in spite of the danger. Peace and quiet at length returned. It was proposed to restore the institutions for the promotion of learning, which had been destroyed during the reign of anarchy, and Lagrange was appointed professor in the newly established normal school at Paris. In this new sphere of influence his former love for his science returned with all its strength. At the formation of the institute, the name of Lagrange was the first on the list of members, and he was likewise the first member of the newly constituted bureau of longitude. His fame now increased from day to day, and France, feeling honoured in the possession of such a man, determined to give him a public mark of her esteem. By the command of the directory, the minister of foreign affairs, Talleyrand, commissioned the French chargé d'affaires in Turin, citizen D'Eymar, to visit Lagrange's father, and congratulate him, in the name of France, in having such a son. This commission was performed by D'Eymar in the most brilliant manner, accompanied by several generals and other distinguished persons.

Napoleon respected the talents and services of Lagrange not less than the republic had done; and while consul and emperor, he never ceased to show him distinguished tokens of his favour in every possible way. Member of the senate, grand officer of the legion of honour, and count of the empire, Lagrange saw himself surrounded with every external honour; but neither this, nor the confidence reposed in him by the head of the state, could make him vain, and, as modest and retiring as ever, he devoted himself with the same zeal and industry to his studies. His application probably hastened his death. Notwithstanding his advanced age, he could not be content to relax his exertions, and had superintended the publication of the second edition of his "Théorie des Fonctions Analytiques," enriched with annotations, when, exhausted by his labours, he died on the 10th of April, 1813. His remains were interred in the Pantheon. Lacépède and La Place

pronounced funeral addresses over his body. Lagrange was no less amiable than modest, and was never led by the honours bestowed upon himself to underrate the merits of others. His respect for Euler was unlimited, and he was frequently accustomed to say to his scholars, "Study Euler, if you would become geometricians." His works have been partly published separately, and are partly contained in the memoirs of the academies of Turin, Berlin, and Paris, in the journal of the Polytechnical school, the "Connaissance de Temps," and in the "Éphémérides." The most important are his "Mécanique Analytique," "Théorie des Fonctions Analytiques," "Résolutions des Equations Numériques," "Leçons sur le Calcul des Fonctions," and "Essai d'Arithmétique Politique."

LAHARPE, FREDERIC CESAR, a celebrated director of the Helvetic republic, who was born at Rolle, in a family belonging to the nobility of the Pays de Vaud, in 1754. He cultivated the sciences with great zeal, particularly mathematics. At Geneva, Saussure and Bertrand were his teachers. After having been a lawyer in Berne, he travelled with a young Russian of a distinguished family through Italy and Malta, and in 1783 he became teacher of the grand-duke Alexander and his brother at Petersburg. After the French revolution had broken out he drew up, in the name of his fellow-citizens, a respectful petition to the council of Berne, requesting a meeting of deputies for the purpose of abolishing abuses. Soon after, troubles broke out, and the government, who considered him as one of the instigators, put his name on the list of exiles, and his enemies succeeded in removing him from the person of Alexander. He then went to Geneva, and was about to return to Berne when he learned that orders for his arrest had been given there. Indignant at this, he went in 1796 to Paris, where he continued to write in favour of the cause of liberty, and published a work entitled "Lettres de Philanthropos." In consequence of a petition addressed by him and twenty-two other exiles from the Pays de Vaud and Friburg, to the French directory, requesting the fulfilment of the guarantee established by the treaty of Lausanne in 1565, the directory interfered in the affairs of Switzerland, the Swiss revolution broke out, French armies penetrated into Switzerland, and a new organization was given to that country. Laharpe was made one of the directors of the Helvetic republic, and exerted himself energetically in carrying on the new system, until a violent quarrel took place between the legislative body and the body of directors, and the latter was dissolved, and Laharpe put under surveillance. Friends and enemies both allowed the honesty of his intentions.

In 1800, when on the point of leaving Lausanne for Paris, he was deceived by a letter, probably a forgery, communicating intelligence of a conspiracy against the first consul Bonaparte, who was then commanding in Italy. This he gave up to the proper authorities, and was in consequence arrested by the legislative council of Berne, as himself concerned in the conspiracy. He escaped by flight to Paris, where he was coolly received by Bonaparte, and went to live at Plessis Piquet, near Paris. In 1801 he made a journey to Russia, and returned with proofs of the esteem of his former pupil the emperor. In 1814 he visited him in Paris, and was appointed a general in the Russian service. At the congress

of Vienna he laboured actively to effect the independence of the cantons of the Pays de Vaud and Aargau, and their separation from Berne. He then retired as a private man to his native country, enjoying the highest esteem of his countrymen.

LAHARPE, JEAN FRANCOIS DE, a French dramatic poet, critic, and philosopher of the last century, who was born at Paris in November 1739. His father, a Swiss officer in the French service, dying in indigence, Asselin, president of the college of Harcourt, admitted him into that seminary, where he received an excellent education. A lampoon on his benefactor, which was, in all probability without foundation, attributed to him, occasioned the confinement of the suspected satirist for some months in the Bastille. This circumstance disgusted him with his situation, and at a very early age he threw himself on his own talents as an author for support. In 1762 he published a collection of poems. The tragedy of "Warwick," which appeared in 1763, was very beneficial to him in a pecuniary point of view, and procured him considerable reputation. It still remains on the stage. His "Timoleon and Pharamond" met with less success; but a series of eulogies on Charles V., Catinat, Fénelon, Voltaire, and Henry Quatre, especially the latter, gained him much credit in a different department of literature. On the breaking out of the revolution, Laharpe embraced the principles of republicanism; but, during the reign of terror, his moderation rendering him an object of suspicion to those then in power, he was thrown into prison in 1793, and while in confinement is said to have owed his conversion to Christianity to the arguments of his fellow-captive, the bishop of St. Brieux. Though sentenced to deportation, the changes of the times finally restored him to liberty, and he passed the remainder of his days in literary retirement. A short time before his death, his remarks on the measures of the government excited the displeasure of the first consul, and he was banished to Orleans. He soon returned however, and died in 1803, in his sixty-fourth year. His principal work is the "Lycée, or a Complete Course of Literature." Among the rest are "Gustavus Vasa," "Timoleon," "Pharamond," and "Philoctetes," tragedies; the latter an elegant translation from the Greek of Sophocles; "Tangu et Félimé," translations of Camoens' "Lusiad," "The Psalms of David," and "The Works of Seutonius."

LAHYRE, ETIENNE VIGNOLES, a brave knight who lived in the reign of Charles VII. of France, and was the faithful companion of the Maid of Orleans. Lahyre hated the English bitterly, as his family had been ruined by their invasions. In 1418, when Coucy was surrendered to the Burgundians, the allies of the English, in consequence of the treachery of the mistress of the commandant, Lahyre and the equally brave Peter de Xaintrailles placed themselves at the head of the remnant of the garrison, and successfully led their little band, in the midst of constant skirmishes, through a country filled with enemies. After many valiant deeds in Valois and in Champagne, Lahyre hastened to the relief of Orleans. The government of the town sent him with a petition to the dauphin Charles VII. to implore his assistance. He found the weak and pleasure-loving prince preparing for an entertainment. "What are your thoughts?" said Charles to the knight, who viewed with indignation the frivolity of the court.

"I think," replied Lahyre, "that a kingdom could not be lost more merrily." Returning to Orleans, he did his utmost to save the town and to assemble the relics of the beaten army. In 1429 the Maid of Orleans appeared, and Lahyre immediately joined her, and was with her at her entrance into the town. He followed the defeated English and distinguished himself in the battles of Jargeau and Patay. In the middle of winter he stormed Louviers, and advanced to Rouen with the intention of liberating the imprisoned Joan, but the English took him prisoner. He soon, however, obtained his liberty, and renewed his exertions with Xaintrailles against the enemy. To his death Lahyre was the most inveterate enemy of the invaders of his country, and injured them greatly. He was repeatedly taken prisoner, often by the treachery of false friends; but he always succeeded in liberating himself: for a time he even braved his own king, continuing a petty warfare against the English and the Burgundians, and garrisoning several towns although Charles had concluded a peace. On a journey to Montauban, where he accompanied Charles VII. in 1442, he died in consequence of his wounds. His romantic valour, together with his attachment to the Maid of Orleans, procured him after his death the honour of having his name added to the knave of hearts in the French playing cards, the pictures of which are, as it is well known, designated by the names of different heroes.

LAINE, JOSEPH HENRY JOACHIM, a celebrated peer of France, who was born at Bordeaux in 1767. He was a lawyer at the outbreak of the French revolution in the last century, when he embraced republican principles. His zeal procured him in 1792 some important posts in the administration, in which he showed great activity. He also distinguished himself as an orator. In 1808 he was chosen member of the *corps législatif* for the department of the Gironde, and was distinguished for his liberal opinions. About this time he received the star of the legion of honour, but entered into a correspondence with the friends of the royal family. After Napoleon's disasters in Russia the legislative body appointed a committee in 1813 to report the wishes of the nation. It consisted of Lainé, Raynouard, Gallois, Flaugergues, and Maine de Biran. Raynouard was chairman, and the language of the report was bold. The *corps législatif*, so long submissive, now made bold by the disasters of the emperor, was prorogued. Lainé went to Bordeaux, and in 1814 was made prefect of the city by the duke of Angoulême, who had arrived there, and soon after president of the chamber of deputies. On Napoleon's return from Elba, Lainé spoke with zeal against him, and called him "the common enemy," and on the emperor's entry into Paris published a protest against the dissolution of the chamber, and absolving all "Frenchmen from obedience to the demands of the usurper." He left Bordeaux, it is said, for Holland, when the duchess of Angoulême quitted that place, and after the second restoration again appeared as president of the chamber, and held the portfolio of the interior from June 1816 to December 1818, when Decazes succeeded him. He often spoke while in these stations against the pretensions of the ultras and their attacks upon the charter; but after this period he inclined more and more to the right side, and advocated the change in that law of election which he had formerly defended.

LAING, ALEXANDER GORDON.—Our knowledge of African geography, as well as the manners and customs of the people that inhabit that extraordinary portion of the globe, has been much increased by the labours of this traveller. He was born at Edinburgh in 1794, and educated in the university of that city. In 1811 Mr. Laing went to Barbadoes, where his uncle, Colonel Gordon, then was, and with whom he remained a short time till he obtained an ensigncy in the York light infantry, which regiment he immediately joined at Antigua; and two years afterwards he was promoted to a lieutenantancy in the same corps, which he held until the regiment was reduced, and Lieutenant Laing was then placed upon the half-pay. Having no relish for inactive life, he exchanged, as soon as the business could be negotiated, into the second West India regiment, which he joined at Jamaica. While there, he had to undertake the duties of deputy quarter-master-general, the exertions of which department induced a liver complaint; and in order to re-establish his health, the medical gentlemen recommended a sea voyage. He accordingly sailed to Honduras, by which his complaint was considerably relieved; but the governor, Colonel Arthur, finding him an active and intelligent officer, appointed him to the office of fort-major, and would not suffer him to return to Jamaica, but had him attached to another division of his regiment, then in Honduras, where he remained until a return of his complaint forced him to come home. The effects of this attack made a serious impression on his constitution, and in consequence he remained for nearly eighteen months with his friends in Scotland. During this time, however, one-half of the second West India regiment, that to which he was attached, was reduced, and he was again placed upon half-pay. In the autumn of 1819 he returned to London, and having been sent for by the late Sir Henry Torrens, then colonel of his regiment, was appointed lieutenant and adjutant, and proceeded to Sierra Leone.

In 1822 Lieutenant Laing was sent by Sir Charles M'Carthy on an embassy to Gambia and the Mandingo country, to ascertain the political state of those districts, the disposition of the inhabitants to trade, and their sentiments in regard to the abolition of the slave trade. Having executed that mission to the complete satisfaction of the governor, and some alarm having arisen as to the fate of Sannasse, a chief in amity with our government, who had been taken prisoner by Yarradee, a warrior of the king of Soolima, Lieutenant and Adjutant Laing, —though his health, which had suffered from the effects of his former journey, was yet only in a state of convalescence,—was appointed to undertake a second embassy for the purpose of procuring Sannasse's release from captivity. On arriving at the camp of the Soolima army, he was informed that the unfortunate Sannasse had been set at liberty after his town had been burnt, and that his life had been spared only from the fear of offending the British governor. While upon the second mission, he had observed that many men who accompanied the Soolima army possessed considerable quantities of gold; and having learned that ivory abounded in Soolima, he suggested to the governor the advantages to the colony of opening an intercourse with these people, remarking that such an attempt would not be attended with much hazard or expense, and

that a great object would be attained by the knowledge of many countries to the eastward of the colony, which, like that of the Soolimas, was known only by name. This suggestion was submitted to the council, who approved the undertaking, and left it to the judgment of the traveller to pursue his own route. He was now as much a volunteer traveller as before he had been a volunteer officer; nay, more so, being in fact allowed to prosecute his own enterprise in his own way. This third mission, upon which he set out from Sierra Leone on the 16th of April, 1822, led him to penetrate through a far more extensive tract of country than before, much of it previously unexplored, but which is particularly described, together with the inhabitants, their manners, customs, &c., in his highly interesting journal, since published.

While at Falaba upon his third embassy, he received intelligence of his promotion to the rank of captain, and immediately on his return to Sierra Leone, in the autumn of 1822, he was ordered to join his regiment on the Gold Coast, where he was employed in the command of a considerable native force on the frontier of the Ashantee country, and was frequently engaged with detachments of the Ashantee army. Upon the death of Sir Charles M'Carthy, in 1824, Captain Laing was sent to England to acquaint the government with the state of the command in Africa. At this period he obtained a short leave of absence to revisit Scotland, and returned to London in October 1824. An opportunity now presented itself, which our traveller had long anxiously desired, of proceeding under the auspices of government, on an expedition to discover the course and termination of the Niger. He was promoted to the rank of major, and departed from London on that enterprise early in February 1825, with the intention of leaving Tripoli for Timbuctoo in the course of the summer of that year.

At Tripoli, Major Laing married the daughter of Mr. Warrington, the British consul at that place, and two days after that event proceeded on his mission. From the time of his leaving Tripoli until he reached Tuat, which he was forced to do by a circuitous route, letters were frequently received from him. At length, on the 18th of August, 1826, he reached Timbuctoo; and on the 21st of September he addressed the following letter, the last that was ever received from him, to his father-in-law, Mr. Warrington:—

“My dear Consul,

“A very short epistle must serve to apprise you, as well as my dearest Emma, of my arrival at, and departure from, the great capital of central Africa; the former of which events took place on the 18th ult.—the latter will take place, please God, at an early hour to-morrow morning. I have abandoned all thoughts of retracing my steps to Tripoli, and came here with an intention of proceeding to Jenne by water; but this intention has been entirely upset, and my situation in Timbuctoo rendered exceedingly unsafe by the unfriendly disposition of the Foulahs of Massino, who have this year upset the dominion of the Tuareg, and made themselves patrons of Timbuctoo, and whose sultan, Bello, has expressed his hostility towards me in no equivocal terms, in a letter which Al Saidi Boubokar, the sheik of this town, received from him a few days after my arrival. He has now got intelligence of

my being in Timbuctoo; and as a party of Foulahs are hourly expected, Al Saidi Boubokar, who is an excellent good man, and who trembles for my safety, has strongly urged my immediate departure; and I am sorry to say that the notice has been so short, and I have so much to do previous to going away, that this is the only communication I shall for the present be able to make. My destination is Sego, whither I hope to arrive in fifteen days; but I regret to say the road is a vile one, and my perils are not yet at an end; but my trust is in God, who has hitherto borne me up amidst the severest trials, and protected me amidst the numerous dangers to which I have been exposed.

“I have no time to give you any account of Timbuctoo, but shall briefly state that, in every respect, except in size (which does not exceed four miles in circumference), it has completely met my expectations. Kabra is only five miles distant, and is a neat town, situated on the very margin of the river. I have been busily employed, during my stay, searching the records in the town, which are abundant, and in acquiring information of every kind; nor is it with any common degree of satisfaction that I say my perseverance has been amply rewarded. I am now convinced that my hypothesis concerning the termination of the Niger is correct.

“May God bless you all! I shall write you fully from Sego, as also my lord Bathurst; and I rather apprehend that both letters will reach you at one time, as none of the Ghadamis merchants leave Timbuctoo for two months to come. Again, may God bless you all! My dear Emma must excuse my writing. I have begun a hundred letters to her, but have been unable to get through one. She is ever uppermost in my thoughts; and I look forward with delight to the hour of our meeting, which, please God, is now at no great distance.”

This letter was left behind at Timbuctoo, and appears to have been brought by the nephew of Babani, together with an important document in Arabic, of which the following is the substance:—“About a month after their safe arrival at Timbuctoo (Laing and young Moktah), the prince of the faithful, Sultan Ahmad, Ben Mohammed Labo, the lord and sovereign of all those countries, wrote a letter to his lieutenant-governor Osman, containing as follows:—‘I have heard that a Christian intends coming to you; but whether he has already arrived or not I do not know. You must prevent him from arriving, if he has not reached you; and if he has, you must expel him the country in such a manner as to leave him no hope of returning to our countries, because I have received a letter from the tribe of Foulah, containing a caution against allowing Christians to come into the Mussulman countries in Soudan; which letter was written in the east, and contained an account of the mischiefs and impieties by which they have corrupted Spain and other countries.’

“When Governor Osman received this letter, he could not but obey it. He therefore engaged a sheik of the Arabs of the desert named Ahmad, son of Obeid-allah, son of Rehal, of Soliman Barbooshi, to go out with the Christian, and protect him as far as the town of Arwan. Barbooshi accordingly went with him from Timbuctoo; but on arriving at his own residence, he treacherously murdered him, and took possession of all his property. This is within

our knowledge who know the affair, and have seen the letter of the prince of the faithful, Sultan Ahmad Labo."

Thus perished in the full vigour of manhood this brave and persevering traveller. It is, however, generally believed that the Arabic document does not furnish a correct version of the affair, and that his own confidential attendant was the murderer. The accompanying specimen of Major Laing's style as an author will sufficiently attest the minuteness of his observations as a traveller. It is descriptive of his entrance into Falaba:—

"About ten o'clock we came in sight of this long-looked for town, which covered a large extent of ground in a beautiful valley, hemmed in on all sides by gentle acclivities. We descended upon it by the south, but were conducted along to the northern gate, through which we were ushered into the capital of the Soolima nation. We passed along a street, or defile, of about half a mile in length, to a spacious piece of open ground, which stands nearly in the centre of the town, in one corner of which we found seated upwards of 2000 men, armed with muskets, bows, and spears. On my entrance I was saluted by a heavy and irregular discharge of musketry, which, unfortunately, put my horse on his mettle, and as I had neither whip nor spur to teach him good manners, I was obliged to resort to jerking him with the curb, of the severity of which I was as yet ignorant; in consequence he backed among the armed assemblage, who were, by this retrograde movement, thrown into some confusion, and certainly not impressed with much opinion of my horsemanship. Being recovered from the awkwardness of my first appearance, I ordered the salute to be returned with three rounds from my party, and then alighting, shook hands with his majesty, who put into my hand two massive rings of gold, and made a motion for me to sit down beside him. I found him a good-looking man, about sixty years of age; his countenance, mild, agreeable, and inoffensive in its expression; he is rather taller than the generality of Soosoos, being about five feet eleven inches in height; and his plain loose garment of black country cloth became him well. I was scarcely seated when my old friend Yarradee (habited in rather a more costly manner than when I first beheld him at the camp in the Mandingo country), mounted on a fiery charger, crossed the parade at a full gallop, followed by about thirty warriors on horseback and 2000 on foot, the latter making a precipitous rush, and firing in all directions. After a lapse of a few minutes the party on horseback returned, and performed various movements and evolutions for about half an hour, much to the amusement and admiration of my party, several of whom had been with the late unfortunate Major Peddie, and subsequently with Major Gray in Boondon, and who declared it to be a show passing any thing they had ever before witnessed. Yarradee now alighted from his horse, and, seizing his bow, pulled the string to its full extent, affecting to shoot an arrow at some distant object; he appeared to watch it on tiptoe with eager expectation till it reached its destination, when he gave a leap and a smile of satisfaction; then striking his breast with his right hand, and distorting his naturally ugly visage into a most hideous grin, he beckoned his war-men to follow, which they did, with a shout that rent the skies. After advancing a few paces they stopped short, and watching Yarradee, who,

with the eye of a hawk, was intent on the motions of the supposed enemy, waited his direction to discharge their arrows; and having done so, each individual appeared to trace the flight of his own arrow, and betrayed signs of satisfaction or disappointment at its supposed execution or failure. A discharge of musketry followed the flight of arrows, after which the spears and cutlasses were put in requisition to hack and cut to pieces the discomfited foe. While those warlike movements were going forward, another set of people were by no means idle; there were above one hundred musicians, who playing upon divers instruments, drums, flutes, ballafoos, harps of rude workmanship, with many other kinds, which it would be tedious to enumerate, kept up a din sufficient to crack the tympanum of ordinary ears, and which compelled me to fortify mine with a little cotton; two fellows, in particular, with crooked sticks, kept hammering with provoking perseverance, and with the violence of blacksmiths at the anvil, upon two large drums which stood about four feet high, in shape similar to a chess-castle turned upside down; their only desire appeared to be that of making a noise, and in that I suppose the chief art consisted, for the harder they beat, the more applause they obtained. A nod from the king at length put a stop to this clang of steel and din of drums, and I was flattering myself with the hope of being permitted to retire to the apartment allotted for me, but my motion was interrupted by the king, who said I must hear something more. Being again seated, a Jelle, or singing man, elegantly attired in the Mandingo costume,—his wrist and elbows ornamented with bells, and beating on a sweet-toned ballafoo, the notes of which he ran over with taste and velocity,—stepped out, and, after playing a sort of symphony or prelude, commenced a dialogue in song with some persons who were to be invisible at first, but who afterwards joined him."

LAING, MALCOLM, a Scottish historian, who was born in 1762, and educated at the university of Edinburgh. His principal work is "A History of Scotland" in four volumes; but he subsequently published an edition of "Ossian's Poems." He died in 1819.

LAIRESSE.—There was a family of Flemish painters of this name, of whom Gerard, son to the elder Lairese, has acquired by far the greatest reputation. He was born in 1640 at Liege, and was particularly distinguished by the high finish with which his pictures are executed; indeed he was considered the Raphael of the Dutch school; nor have any of his countrymen ever equalled him in historical painting. This talented artist was also a good engraver, and understood music scientifically, while of his literary abilities he has left a favourable specimen in a treatise on the principles of his art. He survived the loss of his sight some years, and died at length at Amsterdam in 1711. His three brothers, Ernest, John, and James Lairese, were artists of some note, the two former excelling in the delineation of animals, the latter in flowers. Two of his sons also followed the profession of their father, but with inferior ability.

LAKE, GERARD, VISCOUNT, a distinguished English general, who was born in 1774, and served in Germany during the seven years' war. He subsequently went to America with Lord Cornwallis, and in 1800 was appointed commander-in-chief of the

British forces in India, where he greatly distinguished himself by his success against the native princes. He returned to England in 1807, when he was raised to the peerage, and died in February 1808.

**LALANDE, JOSEPH JEROME.**—This celebrated French astronomer was born at Bourgen Bresse in 1732. His father intended him for the profession of the law, which he studied for some time with considerable success, when the sight of an observatory awakened in him a propensity which deranged the projects of his parents and became the ruling passion of his life. He put himself under the instructions of Le Monnier, one of the then most celebrated astronomers of France, and profited much by the lessons of his able instructor. When the great astronomer Lacaille was preparing to set out for the Cape of Good Hope, in order to determine the parallax of the moon, and its distance from the earth, it was necessary he should be seconded by an observer placed under the same meridian, and at the greatest distance that could be conveniently chosen on the globe. Berlin was fixed on, and Le Monnier signified his intention of undertaking the business himself, but the moment when he appeared ready to depart, he got his pupil appointed in his stead. On his return, the account which he gave of his mission procured him free access to the academy of sciences, and its Transactions were enriched every year by important communications from the young astronomer. He subsequently published the French edition of Dr. Halley's tables, and the history of the comet of 1759, and he furnished Clairault with immense calculations for the theory of that celebrated comet.

In 1760 he was charged with the compilation of the "*Connaissance des Temps*." In 1764 appeared the first edition of his "*Traité Astronomique*," which he afterwards completed, and upon which his principal claim to celebrity rests. Lalande was the first who calculated the perturbations of Mars and Venus; and in the theory of satellites, in which but little progress had been made, he explained a motion which Bailli claimed as his own discovery. A literary dispute arose out of this circumstance, which, however, was conducted with every regard to decency; and the probable result, as seen by disinterested spectators, was, that both had been led to the same discovery. He composed all the astronomical articles for the "*Encyclopædia of Yverdon*," those for the supplements to the "*Encyclopédie de Paris*," and those for the "*Encyclopédie Méthodique*," substituting for the articles furnished by D'Alembert, and which he had compiled from the works of Le Monnier, such as were more complete and more modern from his own observations and improved theories. In 1761 he became first master in the chair of astronomy in the college of France, and gave a new lustre to this curious part of public instruction in a celebrated school, which possessed the most distinguished professors of every kind, and which enjoyed and merited the extraordinary privilege of out-living the tremendous storms of a revolution, and escaping the almost universal destruction which levelled all around it. As a professor, he taught with so much ability that his school became a seminary of disciples who peopled the different observatories of the world. In the midst of his other labours he drew up his "*Voyage d'Italie*," the most complete collection of curious objects that travellers can consult, his "*Traité des Canaux*," and his "*Bibliogra-*

phie Astronomique." In 1793 he published "*Abregé de Navigation Historique, Théorique, et Pratique*," containing many valuable rules and tables; and in 1802 he published a new edition of Montucla's "*History of Mathematics*."

A member of almost all the distinguished scientific societies in the world, he was their common bond of union by the correspondences which he maintained; and he promoted a circulation of intelligence from one to another. He employed the credit arising from the reputation which he enjoyed for the general benefit of the sciences and their cultivators. To the extraordinary ardour and activity of his character he joined a love for the truth, which he carried to the borders of fanaticism. Every degree of concealment appeared to him unworthy of an honest man; and he therefore, without reserve, uttered his sentiments on all occasions, and by the bluntness of his manners he sometimes made himself enemies, who not only called in question his real merits, but who excited against him a crowd of detractors, and because they could not rival his high reputation, they attempted to injure his well-earned fame. This great astronomer closed his long and active life on the 4th of April, 1807.

**LALLY, THOMAS ARTHUR.**—This brave but unfortunate Irish officer served in the French army for some years with great distinction, and on account of his talents was selected by the French court as governor of Pondicherry. He, however, wanted prudence and moderation, and after some slight success against the British troops, he and the whole of the garrison were taken prisoners. He arrived in England in 1761, and the following month was allowed to return to France, where he was instantly placed under arrest, and after a long imprisonment was brought to trial under an accusation of treachery, abuse of authority, and unjust exaction. Being found guilty, he was condemned to be decapitated, which sentence he endured with circumstances of great cruelty on the 6th of March, 1766. His son afterwards obtained possession of his father's estates, and a reversal of the proceedings, when it was proved that Count Lally was sacrificed by an incapable administration to satisfy public clamour.

**LA MAR, JOSE.**—This brave Peruvian was born at Guayaquil in Columbia; he was educated in Spain, and served in the peninsula in the early part of his life. In 1793 he was out in the campaign of Rousillon, as lieutenant in the Sahaya regiment. In 1808 he had attained the rank of major, and signalized himself as one of the heroic defenders of Saragossa. He afterwards commanded a grenadier column in Valencia. While confined in the hospital of Tudela by his wounds, he was included in the capitulation of Blake's forces, and was conveyed to France as prisoner of war, but constantly refused to give his parole. In 1813 he eluded the vigilance of his guard, and effected his escape, and on arriving at Madrid was raised to the rank of brigadier. In 1816 he returned to America with the appointment of inspector-general of the army in Peru. Whilst employed there as governor of the castles of Callao, he was compelled by the patriots to capitulate, and afterwards sent in his resignation to the viceroy. Subsequently to this period he became actively engaged in the cause of his country, and of the insurgent patriots, who had esteemed the refinement of his character and feelings, and the purity of his

principles, even while he belonged to the royalist party. As evidence of this, he was elected president of the junta gubernativa of Peru. In 1823 Riva-Aguero was proclaimed president of the republic, and La Mar took the command of the Peruvian division of the liberating army under Bolivar. La Mar acted in this capacity at the battle of Ayacucho, and ably seconded General Sucre on that decisive day. During the period of Bolivar's arbitrary government of Peru we hear little of La Mar, who would not accept of office in the circumstances of the times; but the revolution of January 1827 again brought him into notice, and he was elected president of the republic by the constituent congress, being much beloved and respected in Peru, where he had few political and no personal enemies.

**LAMARCK, JEAN BAPTISTE ANTOINE PIERRE MONET, CHEVALIER DE.**—This learned naturalist was born in 1745, in Picardy, of a noble family. He applied himself at first to medicine, but afterwards, in consequence of hearing Jussieu's illustrations of botany, he was led to the study of natural science. Jussieu, on a botanical excursion in which Lamarck accompanied him, had intimated that the old method of instruction in this department left much to be wished for, and Lamarck determined to remedy this deficiency. He laboured with great diligence on a treatise in which he showed the defects of the old system, and proposed a new one himself, which met with universal approbation. He then applied his new system to the plants of France, and delivered to the academy his "*Flore Française, ou Description Succincte de toutes les Plantes que croissent en France.*" This work was printed by the recommendation of the academy at the expense of the government, for the benefit of the author, in 1780, under the date of 1778, in three volumes; a second edition appeared in 1793; and the third, enlarged and revised by Decandolle, in 1805.

Lamarck now turned his whole attention to this science, and made several botanical excursions to Auvergne and into Germany, in the last of which he was accompanied by the son of the great Buffon. On his return to Paris he undertook the botanical department of the encyclopædia which Panckoucke was publishing, and applied himself to this task with such assiduity that in 1783 he produced the first half of the first volume, with an introduction containing a sketch of the history of the science. He published the second volume in 1788; but a dispute between him and the publisher in regard to the admission of certain articles, brought the undertaking to a stand. Many of his botanical treatises, however, were published in the memoirs of the academy, and in the "*Journal d'Histoire Naturelle,*" edited by him, together with the abbé Haüy, Fourcroy, Bruquière, Olivier, and Pelletier, which makes us regret that their author ever abandoned this branch of science.

At the breaking out of the revolution he was the second professor in the royal jardin des plantes, but in consequence of new arrangements he was made professor in the department of zoölogy, in which he was soon as much distinguished as he had been in botany. His "*Système des Animaux sans Vertèbres, ou Tableau Général des Classes, des Ordres, et des Genres de ces Animaux,*" his "*Philosophie Zoologique,*" and his "*Histoire Naturelle des Animaux sans Vertèbres,*" are his principal works in this depart-

ment of science. Lamarck's comprehensive mind was also directed towards physics, and he published in 1794, "*Recherches sur les Causes des Principaux Faits Physiques,*" in which he exposes many false theories in this science. With the same view he also wrote his "*Refutation de la Théorie Pneumatique,*" &c., which appeared at Paris in 1796. He collected his meteorological observations in his "*Annuaire Météorologique,*" which first appeared in 1799, and was continued to 1809.

**LAMARQUE, MAXIMILIAN,** a French military officer, who was born at Saint-Sever, of rich and respectable parents. In 1792 he entered the army as a private soldier, choosing to obtain promotion only by merit, and became captain of grenadiers in the celebrated corps of Latour d'Auvergne, known under the title of the infernal column. He was in the vanguard of the army of the Pyrenees in 1793, under the command of General Moncey, and received two severe wounds while with a single company he was sustaining the attack of a column of the Spanish army that endeavoured to turn the French division. He afterwards marched against Fontarabia, at the head of 200 grenadiers, and, precipitating himself into the moat, drew down the draw-bridge, and gained possession of the place. Eighty pieces of cannon and 1800 prisoners were the fruit of this coup-de-main, which procured Lamarque, then but twenty years old, the rank of adjutant-general.

In 1801 he was made general of brigade, and distinguished himself at the battle of Hohenlinden. He then served in Spain, and in the campaign of 1805, so brilliantly terminated by the battle of Austerlitz. He was sent in 1807 against the insurgents of Calabria, and, near Marathea, defeated a body of 1200 English that were sent to support them. He took the town, and made 1800 prisoners, which exploit gained him the rank of general of division. He was employed by Murat in 1808, and took the island of Caprea from the British, which was considered impregnable, and was defended by a garrison superior in numbers to the assailants. He afterwards joined the army in Germany, and at the battle of Wagram had four horses killed under him. He served in Russia and in Spain in 1812, and after the evacuation of the peninsula, returned to France, and was created a knight of St. Louis in July 1814. On the return of Napoleon he was appointed to the first military division, as commander-in-chief of the army of the Loire. In his operations against the insurgents of La Vendée, he distinguished himself not less by his forbearance and humanity than by his decision, and after obtaining some successes at La Roche-Serviere, he effected a pacification at Chollet. After the return of the Bourbons he was comprised in the second article of the law of the 24th of July, 1815, and retired to Saint-Sever under the inspection of the minister of police. He afterwards took refuge at Brussels, but was ordered from thence by the king of the Netherlands, upon which he passed into Austria. In 1815 he published "*A Defence of General Maximilian Lamarque,*" in a manly, bold, and candid tone. In 1818 he was permitted to return to France, and in 1820 produced an able pamphlet on the necessity of a standing army. General Lamarque afterwards became a conspicuous member of the chamber of deputies, and in the last revolution in France zealously adopted popular principles. He died at Paris on the 1st of June, 1832.

LAMARTINE, ALFONSE DE, one of the most distinguished lyric poets of France, who established his reputation by his "*Méditations Poétiques*," which he published when he was twenty years of age. He there describes the ancient court of the Bourbons as a mirror of morality, honour, and chivalry. His poems are distinguished by depth of thought and feeling, and also by their beautiful language. With regard to the spirit of his poetry, Lamartine is rather to be compared to the British than the French. An often gloomy melancholy, a longing lost in sorrowful misgiving, an inclination for the mystical and supernatural, and a great predilection for poetical landscape-painting, form the peculiar characteristics of this poet, who, nevertheless, often descends into an artificial and prolix style, and sometimes runs into the bombastic. His "*Mort de Socrate*," which appeared in 1823, was not so successful, although there are many beautiful passages scattered here and there throughout the work. The plan of this poem seems not to have been properly matured; the language, too, is unequal, and the versification sometimes neglected. But the young poet has again shown himself bold, elevated, and imaginative, in his "*Nouvelles Méditations Poétiques*," which appeared at Paris in 1823. The mystical tone and foreign style of Lamartine, in which Young and Byron were his examples, displeased the classical school of France, but his deep earnestness is the characteristic in which the light and superficial poetry of the French has hitherto been deficient. One of the last poems in this collection is inscribed to Bonaparte. Among the finest pieces in the volume are, "*The Crucifix*," "*To the Past*," "*The Dying Poet*," and "*Freedom*." From these and similar poems it would seem that the study of the romantic in the German and British poets diverted the enthusiastic and susceptible mind of the young Lamartine from the poetical track customary in France since the time of Boileau.

LAMB, CAROLINE.—The literary and social career of this "noble lady" reminds us strongly of the pictures of fashionable life in France during the worst periods of the French revolution. Highly educated, and in some respects highly gifted in an intellectual point of view, she appears to have materially diminished the value of her talents, and perverted her opportunities, by a total disregard of worldly opinion. Lady Caroline Lamb was born in 1785, and her character early developed itself. Wild and impatient of restraint, rapid in impulses, generous and kind of heart,—these were the first traits of her nature, and they continued to the last. On the 3rd of June, 1805, this lady was married to the Hon. William Lamb, and Lady Caroline's literary pursuits were congenial with those of her husband. She was mistress of several of the living as well as of the dead languages; as a reader she was greatly admired, and her style of reciting the noblest Greek odes was of the most graceful and impressive character. Yet, with all this, not the slightest pedantry was apparent. Her powers of conversation were lively and brilliant; and her compositions, in verse as well as in prose, were evidently the emanations of an elegant mind. She was an amateur and a patroness of the fine arts; indeed, several of her pencil sketches, executed even in childhood, are strongly indicative of genius. On Lady Caroline Lamb's entrance into the world the singularity as well as the grace of her manners, the rank of her own connexions, and the talent of her hus-

band's, soon made her one of the most celebrated *dames du château* of the day. That day was remarkable for the literary début of Lord Byron. Much has been written and much said respecting the intimacy that subsisted between Lady Caroline and that remarkable person; but it is not amidst gossip that we are to look for truth. "*The world*," says an acute writer of the present day, "is very lenient to the mistresses of poets." It was nearly three years before the intimacy between Lord Byron and Lady Caroline was broken off. According to Captain Medwin, Lord Byron most cruelly and culpably trifled with her feelings. She never entirely recovered it.

"*Glenarvon*" was written immediately after this rupture, and the chief character in it was generally understood at the time to be a portrait of Lord Byron. Some of its scenes were undoubtedly much too highly coloured. It was, however, the first testimony that had been given, in the form of a novel, of the dangers of a life of fashion; and a host of able writers have since availed themselves of the hint thus afforded them.

Subsequently appeared "*Graham Hamilton*," a book of a very different nature. Its design was suggested to Lady Caroline by Ugo Foscolo. "Write a book," said he, "which will offend nobody: women cannot afford to shock." It is composed with more care and more simplicity than "*Glenarvon*." The leading object of "*Graham Hamilton*" is to show that an amiable disposition, if unaccompanied by firmness and resolution, is frequently productive of more misery to its owner and to others than even the most daring vice or the most decided depravity. It has been supposed by some that, in the course of the work Lady Caroline, although perhaps unconsciously, delineated much of her own character. Speaking of Lady Orville, Graham Hamilton says—"I never heard her breathe an unkind word of another. The knowledge that a human being was unhappy at once erased from her mind the recollection either of enmity or of error." Again:—"Before I finish the sad history upon which my imagination loves to dwell, of a being as fair as ever nature created—let me at least have the melancholy consolation of holding up to others those great and generous qualities which it would be well if they would imitate, whilst they avoid her weaknesses and faults. Let me tell them that neither loveliness of person, nor taste in attire, nor grace of manner, nor even cultivation of mind, can give them that inexpressible charm which belonged to Lady Orville above all others, and which sprang from the heart of kindness that beat within her bosom. Thence that impression of sincere good-will which at once she spread around; thence that pleasing address, which, easy in itself, put all others at their ease; thence that freedom from all mean and petty feelings—that superiority to all vulgar contentions. Here was no solicitude for pre-eminence—here was no apprehension of being degraded by the society of others—here was no assumed contempt—here was the calm and unassuming confidence which ought ever to be the characteristic of rank and fashion."

Lady Caroline's third and favourite novel was "*Ada Reis*." Full of a latent and personal satire very imperfectly understood, it has seemed the most obscure, and proved, notwithstanding its originality, the least popular of her works. Besides these three tales, Lady Caroline was the authoress of many others

never published, and of various trifling pieces of poetry of unequal merit. For many years Lady Caroline Lamb led a life of comparative seclusion, principally at Brompton Hall. This was interrupted by a singular and somewhat romantic occurrence. Riding with Mr. Lamb, she met, just by the park gates, the hearse which was conveying the remains of Lord Byron to Newstead Abbey. She was taken home insensible: an illness of great length and severity succeeded. Some of her medical attendants imputed her fits, certainly of great incoherence and long continuance, to partial insanity. At this supposition she was invariably and bitterly indignant. Whatever be the cause, it is certain, that from that time her conduct and habits materially changed, and a separation ultimately took place between her and Mr. Lamb, who continued, however, frequently to visit, and to the day of her death to correspond with her. It is just to both parties to add, that Lady Caroline constantly spoke of her husband in the highest and most affectionate terms of admiration and respect. The next event in her life was its last. The disease—dropsy—to which she fell a victim, beginning to manifest itself, she removed to town for medical assistance. Three or four months before her death she underwent an operation, from which she experienced some relief, but it was only of a temporary nature. Aware of her danger, she showed neither impatience nor dismay; and the philosophy which, though none knew better in theory, had proved so ineffectual in life, seemed at last to effect its triumph in death. She expired without pain and without a struggle, on the evening of Friday, the 26th of January, 1828.

Lady Lamb's literary works can convey no idea of the particular order of her conversational talents, though they can of their general extent; for her writings are all more or less wild and enthusiastic, and breathing of melancholy and romance: but her ordinary conversation was playful and animated, pregnant with humour and vivacity, and remarkable for the common sense of the opinions it expressed. Lady Caroline was indeed one of those persons who can be much wiser for others than for themselves; and she who disdained all worldly advice was the most judicious of worldly advisers. The friend of Byron, Wellington, and De Stäel—intimately known at the various periods of her life to the most illustrious names of France, Italy, and England—her anecdotes could not fail to be as interesting as the inferences she drew from them were sagacious and acute. For the rest, it is a favourite antithesis in the cant morality of the day to oppose the value of a good heart to that of a calculating head. Never was there a being with a better heart than the one whose character we have just sketched: from what single misfortune or what single error did it ever preserve its possessor? The world does not want good hearts, but regulated minds; not uncertain impulses, but virtuous principles. Rightly cultivate the head, and the heart will take care of itself; for knowledge is the parent of good, not good of knowledge.

LAMB, CHARLES, a distinguished prose writer and critic, who was born in 1774. There are but few materials illustrative of the early life of this amiable man, but he appears to have been sent to the Blue-coat school in 1782, being then about eight years of age, and remained there till 1789. He has left

us his "Recollections" of this place, in two charming papers. These are evidently works of love, yet, being written with sincerity as well as regard, they communicate to the reader a veneration for the ancient school.

It was not long after he quitted Christ's Hospital, we believe, that he obtained the situation of clerk in the India House. Here he remained for many years, rising gradually from a small salary to a comfortable yearly stipend, until in 1805, or thereabouts, he was pensioned off liberally (with "two-thirds of my accustomed salary," he says) by the directors. The paper in which he has made grateful mention of this, and in which he bids farewell to the "stately house of merchants," and to the partners of his toils, should be hung up in the India House, to remind the merchants of one of their generous deeds; and to tell the young and repining clerk, that a man of rare genius once toiled (as he may do) so many years within those walls. During this period he dwelt in various places; sometimes in London, sometimes in the suburbs. He had, amongst other residences, chambers in the Temple, lodgings in Russell Street, Covent Garden—a house at Islington, on the border of the New River—lodgings at Dalston or Shacklewell,—at Enfield Chase—and finally, at Edmonton, where he died, December 27th, 1834.

A few lines will suffice to enumerate the principal published works of this distinguished author, but a notion of his varied powers may be best acquired by a few extracts from his most striking productions. In 1808 appeared "Specimens of the English Poets;" in 1818, his "Works" generally; in 1823, "Elia;" in 1833, "The Essays of Elia;" after which we need only enumerate "The Adventures of Ulysses," and "Tales from Shakspeare."

We may first take this amiable man in the half-serious, half-comic mood he delighted to write in. He says "Not childhood alone, but the young man till thirty, never feels practically that he is mortal. He knows it, indeed; and, if need were, he could preach a homily on the fragility of life; but he brings it not home to himself, any more than in a hot June we can appropriate to our imagination the freezing days of December. But now shall I confess a truth? I feel these audits but too powerfully. I begin to count the probabilities of my duration, and to grudge at the expenditure of moments and shortest periods, like misers' farthings. In proportion as the years both lessen and shorten, I set more count upon their periods, and would fain lay my ineffectual finger upon the spoke of the great wheel. I am not content to pass away 'like a weaver's shuttle.' Those metaphors solace me not, nor sweeten the unpalatable draught of mortality. I care not to be carried with the tide that smoothly bears human life to eternity, and reluct at the inevitable course of destiny. I am in love with this green earth—the face of town and country—the unspeakable rural solitudes, and the sweet security of streets. I would set up my tabernacle here. I am content to stand still at the age to which I am arrived—I, and my friends, to be no younger, no richer, no handsomer. I do not want to be weaned by age, or drop like mellow fruit, as they say, into the grave. Any alteration on this earth of mine, in diet or in lodging, puzzles and discomposes me. My household gods plant a terrible

fixed foot, and are not rooted up without blood. They do not willingly seek Lavinian shores. A new state of being staggers me.

"Sun and sky, and breeze, and solitary walks, and summer holidays, and the greenness of the fields, and the delicious juices of meats and fishes, and society, and the cheerful glass, and candle-light and fire-side conversations, and innocent vanities, and jests, and irony itself—do these things go out with life?"

As an epistolary writer on common affairs Lamb was unequalled. We may take as a specimen a letter to his friend Hazlitt written in 1806:—"Dear H.—I am surprised at no letter from you. This day week to wit, Saturday, 8th of March, 1806, I book'd off by the Wem coach, Bull and Mouth Inn, directed to you at the Rev. Mr. Hazlitt's, Wem, Shrops., a parcel containing, besides a book, &c., a rare print, which I take to be a Titian; begging the said Mr. H. to acknowledge the receipt thereof; which he not having done, I conclude the said parcel to be lying at the inn, and may be lost; for which reason, lest you may be a Wales-hunting at this instant, I have authorized any of your family, whosoever first gets this to open it; that so precious a thing may not moulder away for want of looking after.

"What do you in Shropshire, when so many fine pictures are a-going a-going every day in London? Monday I visited the Marquis Lansdown's in Berkeley Square—catalogue 2s. 6d.; Leonardos in plenty. Some other day this week I go to see Sir William Young's, in Stafford Place:—Hulse's of Blackheath are also to be sold this month; and in May, the first private collection in Europe, Welbore Ellis Agar's. And there are you, perverting nature in lying landscapes, filched from old rusty Titians, such as I can scrape up here to send you, with an additament from Shropshire nature thrown in, to make the whole look unnatural. I am afraid of your mouth watering when I tell you that Manning and I got into Angerstein's on Wednesday. Mondieu!—such Claudes; four Claudes, bought for more than 10,000*l.*—Those who talk of Wilson being equal to Claude, are either mainly ignorant or stupid. One of these was perfectly miraculous. What colours short of bonâ fide sunbeams it could be painted in I am not earthly colourman enough to say. But I did not think it had been in the possibility of things. Then a music-piece by Titian, a thousand pound picture—five figures standing behind a sixth playing—none of the heads, as M. observed, indicating great men, or affecting it; but so sweetly disposed; all leaning separate ways; so easy, like a flock of some divine shepherd; the colouring, like the economy of the picture, so sweet and harmonious—as good as Shakspeare's 'Twelfth Night,' almost, that is. It will give you a love of order, and cure you of restless fidgety passions for a week after. More musical than the music, it would, but cannot, yet in a manner *does* show—I have no room for the rest. Let me say—Angerstein sits in a room, his study, (only that and the library are shown), when he writes a common letter as I am doing, surrounded with twenty pictures worth 60,000*l.*! What a luxury! Apicius and Heliogabalus, hide your diminished heads.

"Yours, my dear painter,

"C. LAMB."

Mr. Lamb wrote many biographical sketches, and

there is a vein of elegant irony generally perceptible, which would frequently be painful were they not pervaded throughout by the most kind hearted feelings. Speaking of Elliston he says, "My acquaintance with the pleasant creature, whose loss we all deplore, was but slight. The anecdotes which I have to tell of him are trivial, save inasmuch as they may elucidate character. To descant upon his merits as a comedian would be superfluous. With his blended private and professional habits alone I have to do; that harmonious fusion of the manners of the player into those of every-day life, which brought the stage boards into streets and dining-parlours, and kept up the play when the play was ended. 'I like Wrench,' a friend was saying to him one day, 'because he is the same natural, easy creature on the stage, that he is off.' 'My case exactly,' retorted Elliston—with a charming forgetfulness that the converse of a proposition does not always lead to the same conclusion—'I am the same person off the stage that I am on.' The inference at first sight seems identical; but examine it a little, and it confesses only that the one performer was never, and the other always, 'acting.'

"And in truth this was the charm of Elliston's private deportment. You had a spirited performance always going on before your eyes, with nothing to pay. As, where a monarch takes up his casual abode for a night, the poorest hovel which he honours by his sleeping in it becomes *ipso facto* for that time a palace; so, wherever Elliston walked, sat, or stood still, there was the theatre. He carried about with him his pit, box, and galleries, and set up his portable playhouse at corners of streets and in the market-places. Upon flintiest pavements he trod the boards still; and if his theme chanced to be passionate, the green baize carpet of tragedy spontaneously rose beneath his feet. Now this was hearty, and showed a love for his art. So Apelles always painted—in thought. So G. D. always poetises. I hate a lukewarm artist. I have known actors—and some of them of Elliston's own stamp—who shall have agreeably been amusing you in the part of a rake or a coxcomb, through the two or three hours of their dramatic existence; but no sooner does the curtain fall with its leaden clatter, but a spirit of lead seems to seize on all their faculties. They emerge sour, morose persons, intolerable to families, servants, &c. Another shall have been expanding your heart with generous deeds and sentiments, till it even beats with yearnings of universal sympathy; you absolutely long to go home and do some good action. The play seems tedious till you can get fairly out of the house, and realise your laudable intentions. At length the final bell rings, and this cordial representative of all that is amiable in human breasts steps forth—a miser. Elliston was more of a piece. Did he *play* Ranger? and did Ranger fill the general bosom of the town with satisfaction? why should he not *be* Ranger, and diffuse the same cordial satisfaction among his private circles? with his temperament, his animal spirits, his good nature, his follies perchance, could he do better than identify himself with his impersonation? Are we to like a pleasant rake, or coxcomb on the stage, and give ourselves airs of aversion for the identical character presented to us in actual life? or what would the performer have gained by divesting himself of the impersonation? Could the man Elliston have been essentially different from his part, even if he had avoided to reflect to us studiously, in

private circles, the airy briskness, the forwardness, and 'escape-grace trickeries of his prototype?"

One more extract highly illustrative of Mr. Lamb's literary pursuits must close our specimens of his singularly varied styles of writing:—"From the office of the 'Morning Post,' by change of property in the paper, we were transferred (mortifying exchange!) to the office of the 'Albion' newspaper, late Rackstraw's Museum, in Fleet Street. What a transition—from a handsome apartment, from rose-wood desks, and silver ink-stands, to an office—no office, but a den rather, but just redeemed from the occupation of dead monsters, of which it seemed still redolent—from the centre of loyalty and fashion to a focus of vulgarity and sedition! Here in murky closet, inadequate from its square contents to the receipt of the two bodies of editor and humble paragraph-maker, together at one time, sate, in the discharge of his new editorial functions (the 'Bigod' of Elia), the redoubted John Fenwick. Of him, under favour of the public, some things may be told hereafter.—F., without a guinea in his pocket, and having left not many in the pockets of his friends whom he might command, had purchased (on tick doubtless) the whole and sole editorship, proprietorship, with all the rights and titles (such as they were worth), of the 'Albion,' from one Lovell; of whom we know nothing save that he had stood in the pillory for a libel on the prince of Wales. With this hopeless concern, for it had been sinking ever since its commencement, and could now reckon upon not more than a hundred subscribers, F. resolutely determined upon pulling down the government in the first instance, and making both our fortunes by way of corollary. For seven weeks and more did this infatuated democrat go about borrowing seven shilling pieces, and lesser coin, to meet the daily demands of the stamp office, which allowed no credit to publications of that side in politics. An outcast from politer bread, we attached our small talents to the forlorn fortunes of our friend. Our occupation now was to write treason."

"Recollections of feelings—which were all that now remained from our first boyish heats kindled by the French revolution, when, if we were misled, we erred in the company of some, who are accounted very good men now—rather than any tendency at this time to republican doctrines, assisted us in assuming a style of writing, while the paper lasted, consonant in no very under tone to the right earnest fanaticism of F. Our cue was now to insinuate, rather than recommend, possible abdications. Blocks, axes, Whitehall tribunals, were covered with the flowers of so cunning a periphrasis, as Mr. Bayes says, never naming the thing directly—that the keen eye of an attorney-general was insufficient to detect the lurking snake among them. There were times, indeed, when we sighed for our more gentleman-like occupation under Stuart. But with change of masters it is ever change of service. Already one paragraph, and another, as we learned afterwards from a gentleman at the treasury, had begun to be marked at that office, with a view of its being submitted at least to the attention of the proper law officers—when an unlucky, or rather lucky, epigram from our pen, aimed at Sir J——s M——h, who was on the eve of departing for India to reap the fruits of his apostacy, as F. pronounced it (it is hardly worth particularising), happening to offend the nice sense of lord, or, as he then delighted to be called, Citizen Stanhope,

deprived F. at once of the last hopes of a guinea from the last patron that had stuck by us; and, breaking up our establishment, left us to the safe, but somewhat mortifying, neglect of the crown lawyers."

**LAMBALLE, MARIE THERESE LOUISE PRINCESSE DE.**—This unfortunate French lady was born at Turin in 1749, and was married to the duke of Bourbon Penthièvre, whom, however, she soon lost by death. After this event she entered the service of the queen of France, who was strongly attached to her. When the revolution of France broke out the princess Lamballe came to England, but subsequently returned to her royal mistress, with whom she remained till September 1792, when she was murdered by the populace with circumstances of great cruelty.

**LAMBARDE, WILLIAM.**—This learned English lawyer was born in London in 1536, and was early in life called to the bar. He rose to the rank of record keeper in the tower of London, and died in 1601. His principal works are, "A Perambulation of the County of Kent," a treatise on "The Ancient Law of England," and another on "The Duties of a Justice of the Peace." After his death appeared his "Topographical and Historical Dictionary."

**LAMBERT, ANNA THERESA DE MARGUE-NAT DE COURCELLES, MARCHIONESS OF,** an elegant moral writer, who was the only daughter of Stephen Marguenat lord of Courcelles. In 1666 she married Henry de Lambert, who at his death was lieutenant-general of the army; and she afterwards remained a widow with a son and a daughter, whom she educated with great care. Her house was a centre to which persons of distinguished abilities regularly resorted. She died at Paris in 1733. Her works, which are written with much taste, judgment, and delicacy, were printed in two volumes. The advice of a mother to her son and daughter is particularly esteemed.

**LAMBERT, JOHN,** a distinguished parliamentary general in the civil wars of Charles the First. He was descended from a good family, and for some time studied the law in one of the inns of court, but on the breaking out of the rebellion he went into the parliamentary army, where he soon rose to the rank of colonel.

When Cromwell appeared inclined to assume the title of king, Lambert opposed the measure, and even refused to take the oath required by the assembly and council to be faithful to the government; on which Cromwell deprived him of his commission, but granted him a pension of 2000*l.* a-year. Lambert immediately retired to Wimbledon House, where he collected the finest tulips and gillyflowers in the kingdom. On the death of Cromwell he acted so effectually with Fleetwood, Desborough, Vane, Berry, and others, that the new protector was obliged to surrender his authority; and the members of the long parliament, who had continued sitting till the 20th of April, 1653, when Oliver dismissed them, were restored to their seats, and Lambert was immediately appointed one of the council of state, and colonel of a regiment of horse and another of foot. For this service the parliament presented him 1000*l.*, which he distributed among his officers. On this being known to the parliament, they concluded that he intended to secure a party in the army. They therefore courtously invited him to London, but resolved as soon as he should arrive to secure him

from doing any further harm. Lambert, apprehensive of this, delayed his return, and even refused to resign his commission when it was demanded of him and of eight of the other leading officers; and, marching up to London with his army, dislodged the parliament by force in October 1659. He was then appointed, by a council of the officers, major-general of the army, and one of the new council for the management of public affairs, and sent to command the forces in the north. But General Monk marching from Scotland into England to support the parliament, against which Lambert had acted with such violence, the latter, being deserted by his army, was obliged to submit to the parliament, and by their order was committed prisoner to the tower; whence escaping he soon appeared in arms with four troops under his command, but was defeated and taken prisoner by Colonel Ingoldsby. At the restoration he was particularly excepted out of the act of indemnity. Being brought to trial on the 4th of June, 1662, for levying war against the king, this general was by his majesty's favour reprieved at the bar, and confined during his life in the island of Guernsey.

LAMBERT, JOHN HENRY, an eminent mathematician and astronomer, who was born at Muhlhausen in the Sundgau, a town then in alliance with the Swiss cantons, August 29, 1728. His father was a tailor in humble circumstances, who intended him for his own business; but, being sent to a public school, he so far distinguished himself that an attempt was made to provide him with the means of studying theology, which, however, proved unsuccessful, and he was obliged to follow his father's employment. In this situation he spent the greatest part of the night in study, and, obtaining an old mathematical treatise, discovered so much ardour and ingenuity that several learned men were induced to instruct him gratis. He acquired a knowledge of mathematics, philosophy, and the Oriental languages, in his native place. He afterwards became clerk to some iron works, and amanuensis to M. Iselin of Basle, who conducted a newspaper, and became his sincere and constant friend. In 1748 this gentleman recommended him to Baron Salis, president of the Swiss convention, to become tutor to his children; and, aided by the excellent library of his new patron, and the scientific intercourse which he met with in his circle, he enlarged the sphere of his acquirements in an extraordinary degree. After living eight years at Coire, during which period his talents as a philosopher and mechanic were rendered manifest by various scientific compositions and inventions, he repaired in 1756, with his pupils, to Göttingen, and soon after published his first separate work, entitled "*De la Route de la Lumière par les Aïres*." In 1758 he visited Paris with his charge, and became acquainted with D'Alembert and Messier. In 1759 he went to Augsburg, where he published his celebrated work on Perspective, and in the following year appeared his "*Photometry*," by which he added a new branch to the science of mixed mathematics. In the three or four following years he published "*Letters on the Construction of the Universe*;" a treatise on "*The Principal Qualities of the Orbits of the Comets*." Shortly after which he visited Berlin, and was introduced to Frederic the Great, who admitted him a regular member of the academy of that capital, an appointment which enabled him to devote himself wholly to his favourite

studies. He enriched the Transactions of various societies with his papers and treatises, all of which bear the stamp of eminent and original genius. His death took place in September, 1777, in his forty-ninth year, owing to a decline, produced by over-application. Lambert forms one of the most conspicuous examples on record of the mastery which great genius and energy will sometimes exert over untoward circumstances.

LAMBRINI, DENNIS, an eminent classical commentator, who was born at Montreuil-sur-Mer in Picardy, and acquired great skill in polite literature. He lived for a considerable period at Rome, and on his return to Paris was made royal professor of the Greek language. He died, in 1572, of grief at the death of his friend Ramus, who was murdered at the massacre on St. Bartholomew's day. He wrote commentaries on Plautus, Lucretius, Cicero, and Horace, besides other works.

LAMBTON, WILLIAM.—This eminent mathematician was superintendent of the grand trigonometrical survey in India. The "*Annals of the Royal and Asiatic Society*" bear ample testimony to the extent and importance of the labours of Colonel Lambton, in his measurement of an arc of the meridian in that country, extending from Cape Comorin, in lat.  $8^{\circ} 23' 10''$  to a new base line, measured in lat.  $21^{\circ} 6'$  near the village of Takoorkera, 15 miles S.E. from the city of Ellichpore, a distance exceeding that measured by the English and French geometers, between the parallels of Greenwich and Tortmentara in the island of Minorca.

It was the intention of Colonel Lambton to extend the arc to Agra, in which case the meridian line would have passed at short distances from Bhopaul, Serange, Nurwur, Gualior and Dholpore. At his advanced age, he despaired of health and strength remaining for further exertion; otherwise it cannot be doubted that it would have been a grand object of his ambition to have prolonged it through the Dooab, and across the Himalays, to the thirty-second degree of north latitude. If this vast undertaking had been achieved, and that it may yet be completed is not improbable, British India will have to boast of a much larger unbroken meridian line than has been before measured on the surface of the globe.

Though the measurement of the arc of the meridian was the principal object of the labours of Colonel Lambton, he extended his operations to the east and west, and the set of triangles covers great part of the peninsula of India, defining with the utmost precision the situation of a very great number of principal places in latitude, longitude, and elevation; and affording a sure basis for an amended geographical map, which is now under preparation. The triangulation also connects the Coromandel and Malabar coasts in numerous important points, thus supplying the best means of truly laying down the shape of those coasts, and rendering an essential service to navigation.

It was the colonel's intention himself to carry the meridian line as far north as Agra, and he detached his first assistant, Captain Everest, of the Bengal artillery, to extend a series of triangles westward to Bombay, and when that service should be completed eastward, to Point Palmyras, and probably Fort William, by which extensive and arduous operation the three presidencies of India would be connected, and several obvious advantages gained to geography and

navigation. Colonel Lambton died January 20th, 1823.

**LAMETTRIE, JULIEN OFFRAY DE**, a materialist and medical charlatan, who was born at St. Malo in 1709, and studied medicine in Holland under Boerhaave. He then went to Paris, where the duke de Grammont, colonel of the guard, appointed him physician to his regiment. He followed his patron to the siege of Freyburg, and was here taken dangerously ill. He believed that the spiritual power, which is called the soul, perishes with the body, and wrote "*A Histoire Naturelle de l'Âme*." This work, which everywhere breathes the grossest materialism and scepticism, procured him many enemies, and was burned by the executioner at the command of parliament. On the death of his patron he lost his place. He now turned his arms against his Parisian colleagues, and wrote, under the signature Aletheius Demetrius, his satire of "*Pénélope ou Machiavel en Médecine*," on account of which he was obliged to fly to Leyden. Here he published his "*L'Homme Machine*." The philosophy of the author consists in constant assumptions of what he is attempting to prove, imperfect comparisons or analogies instead of proofs, some just observations from which general conclusions are illogically drawn, and assertions instead of doubts. Being persecuted in Holland, where his book was condemned to the flames, he went to Berlin, where he died. His writings, besides the above-mentioned, are "*L'Homme Plante*," "*L'Art de Jouir*," "*Le Discours sur le Bonheur*," and others. In the latter work Lamettrie is, according to Diderot, an author without judgment, one who confounds the ills of the wise and good with the torment of the wicked, and the slight evils of knowledge with the destructive consequence of ignorance—who betrays his frivolity in what he says, and the corruption of his heart in what he dares not speak out—who in one place asserts that man is evil by nature, and elsewhere derives man's duties and his happiness from the nature of his being—who seems to labour to console the criminal in his crimes, the vicious in his vices—and whose gross sophisms, dangerous on account of the jests wherewith he seasons them, betray a man ignorant of the very rudiments of moral philosophy. On his death-bed Lamettrie manifested strong marks of penitence.

**LAMI, BERNARD**, a learned ecclesiastic who was born at Mons in 1640, and studied there under the fathers of the oratory; with whose mode of living he was so pleased that he went to Paris in 1658, and entered into the institution. He entered the priesthood in 1667, and taught philosophy at Saumur and Angiers, which latter place he was obliged to quit by an order procured from court for adopting the new philosophy instead of that of Aristotle. In 1676 he went to Grenoble, where Cardinal Camus was then bishop, who retained him near his person, and derived considerable services from him in the government of his diocese. After continuing many years there, he went to reside at Rouen, where he died in 1715. He wrote a number of scientific works, besides several on theology.

**LAMIA**, the name of an Athenian female, celebrated for the charms of her person and the brilliancy of her wit. She was, by profession, a fluteplayer. Hearing that her favourite instrument was carried to great perfection in Egypt, she travelled into that country, where she became the mistress of

Ptolemy Soter. On the defeat of that prince by Demetrius Poliorcetes, about three centuries before the Christian era, Lamia fell into the hands of the conqueror, over whom, the handsomest man of the age, she soon acquired a complete ascendancy. Her influence procured from Demetrius great concessions in favour of her countrymen, the Athenians, who, in their gratitude, went so far as to raise a temple to her honour, under the denomination of Venus Lamia. Plutarch and Athenæus both bear ample testimony to the qualities of her mind; and, if the antique engraving on an amethyst, in the king of France's collection, give a true portrait of her features, her beauty is still less questionable. The exact time of her decease is uncertain.

**LAMOTTE, VALOIS COUNTESS OF**.—This depraved French woman represented herself as the descendant of the family of Valois by an illegitimate child of Henry II. Until the affair of the "necklace" she had lived in misery and contempt, although she had employed all the arts of immorality and intrigue to procure for herself rank and wealth. Being thus known to a great part of the nobility of Versailles and Paris, she astonished all who were acquainted with the circumstances of her fortune, when, in 1784, she suddenly began to display an extravagance which could only be supported by great wealth. An intrigue soon became notorious, which attracted the attention of all Europe. The prince Louis de Rohan, cardinal bishop of Strasburg, and grand almoner, had fallen into disgrace, of which the reasons were not very satisfactorily known. The countess of Lamotte, informed of the desire of the cardinal to recover favour at court at any price, had falsely represented to him, that the queen, with whom she pretended to have a great, though secret influence, wished to possess a costly necklace, which was offered for sale, but at that time was not able immediately to advance the sum requisite for the purchase. If, therefore, he would purchase the necklace in his own name, and allow the queen to repay him by instalments, he would by so doing regain favour. The cardinal fell into this snare, purchased the necklace, and gave it to the countess of Lamotte, to be delivered by her to the queen. A bond, forged by the countess, was then given him for his security, settling the conditions of payment. In order to deceive the cardinal the more perfectly, the countess had concerted with a woman who was privy to the plot, that she should appear to him under the mask of the queen, in August 1784, in the gardens at Versailles, and present him a box containing a rose and the queen's portrait. The time when the cardinal had promised to pay for the necklace now came, and, as he did not possess money sufficient for the purpose, he informed the jewellers that the necklace was purchased for the queen. The jewellers, after waiting a long time without obtaining their money, applied to the king, and thereby gave a clue for the detection of the fraud. By the sentence of parliament, the deceived cardinal was acquitted, and the countess of Lamotte, convicted of having embezzled and sold the necklace, was sentenced to be branded, scourged, and perpetually imprisoned. After nine months she escaped confinement and fled to England, where, in conjunction with her husband, who had sold the necklace, she published a pamphlet against the court of Versailles, and particularly against the queen. Villette and Cagliostro, who had taken part in the deception,

were banished the kingdom. The countess was found, after a nocturnal revel, precipitated from a third story window upon the pavements of London.

LAMPRIIDIUS, BENEDICT, of Cremona, a celebrated Latin poet of the sixteenth century. He taught Greek and Latin at Rome and at Padua until he was invited to Mantua by Frederic Gonzaga to undertake the tuition of his son. We have epigrams and lyric verses of this writer, both in Greek and Latin, which were printed separately, as well as among the "Deliciæ" of the Italian poets.

LANA, FRANCIS DE, an Italian mathematician, who was born at Brescia in 1637. He published in 1670 a collection of inventions under the title of "Prodromo all Arte Maestra." In this work he gave the first idea of the principle of exploring the regions of the air by means of a balloon. He died at Naples in 1700.

LANCASTER, SIR JAMES, an early English navigator, who made a voyage to America in 1591, and afterwards sailed round the Cape of Good Hope, and visited Ceylon and Pulo Penang. In 1594 he engaged in a predatory expedition to South America; in 1600, went with a fleet to the East Indies, formed a commercial treaty with the king of Achen, and established a friendly correspondence with the state of Bantam in the island of Java. Lancaster, in his last voyage, procured some information relative to a north-west passage to the East Indies, which occasioned the subsequent expeditions of Hudson and others. Baffin gave the name of Lancaster's Sound to an inlet which he discovered in 74° of north latitude.

LANCASTER, JOSEPH, the promulgator of the system of mutual instruction, may be regarded as one of the most useful men of his age. He was born in 1771, and was bred a quaker, and it is a singular fact, that it has been made a subject of dispute whether Dr. Bell or Mr. Lancaster is the inventor of the system of mutual or monitorial instruction. The facts in the case seem to be these: the Rev. Dr. Bell, an English chaplain in the East Indies, practised a system of mutual instruction in Madras, which he found, at least in part, already in existence among the natives. On his return to England in 1797 he published a pamphlet entitled "Education pursued in the Madras Asylum," giving some account of the method and his experience. A few years after Lancaster began to apply the method, and introduced some improvements, enabling him to manage and teach a greater number of children than had previously been attempted. It is evident that neither of these gentlemen can be strictly called the inventor of the system, although both are entitled to great praise for the improvements which they introduced. It has, in fact, been long in use among the oriental nations. Dr. Bell, as we have already mentioned, borrowed it from the natives in Hindostan, and Shaler speaks of it as employed in Algiers. To Lancaster, however, is due the nobler praise of having disinterestedly devoted himself to the task of diffusing a knowledge of this plan of instruction in two worlds. He began his labours in this country in 1803. The object was at first to procure a cheap means of instruction for the poorer classes, who, it is well known, were then unprovided for in most countries of Europe. Lancaster received great encouragement from many persons of the highest rank in Great Britain, which enabled him to

travel over the kingdom, delivering lectures, giving instruction, and forming schools. Flattered by splendid patronage, and by promises of support which were never realized, he was induced to embark in an extensive school establishment at Tooting, to which his own resources proving unequal, he abandoned his establishment, and threw himself on his own talents and on the liberality of the public at large; but being disappointed in his expectations, and unwilling to submit to prescribed terms, which he considered as implying some fault on his part when no fault really existed, he left England in disgust, and about 1820 visited America. He had previously published "Improvements in Education," "A Letter on the Best Means of Educating and Employing the Poor in Ireland," "Outlines of a Plan for the Education of Children," "Account of the Progress of J. Lancaster's Plan for the Education of Children," and a report on the progress of his plan from the year 1793.

LANCISI, JOHN MARCA, an eminent Italian physician, who was born at Rome in 1654. From his earliest years he had a taste for natural history, and studied botany, chemistry, anatomy, and medicine. In 1688 Pope Innocent XI. appointed him his physician and private chamberlain, and Cardinal Alfieri Camerlinga made him his vicar for the installation of doctors of medicine, which Pope Clement XI. gave him as long as he lived, as well as continued to him the appointments conferred on him by his predecessors. He died in 1710, after giving his fine library of more than 20,000 volumes to the hospital of the Holy Ghost for the use of the public. This noble benefaction was opened in 1716, in the presence of the pope and most of the cardinals. He wrote several works, the principal of which were collected and printed at Geneva in 1718.

LANCRET, NICHOLAS, a French painter, born at Paris in 1690. He was the disciple of Watteau and Gillot, and was indefatigable in his profession, in which he executed with great truth after nature. He died in 1743.

LANCRINCK, PROSPER HENRY, a painter of considerable eminence, who was born in 1628, and educated in the school at Antwerp. He studied principally after Titian and Salvator Rosa, and met with encouragement in England suitable to his merit. His landscapes show considerable invention, good colouring, and harmony. He died in 1692.

LANDEN, JOHN, an eminent mathematician born at Peakirk, near Peterborough in Northamptonshire, in January 1719. He was early a proficient in mathematics, for we find him a very respectable contributor to the "Ladies' Diary" in 1744; and he was soon among the foremost of those who then contributed to the support of that small but valuable publication, in which almost every English mathematician, who has arrived at any degree of eminence for the last half-century, has contended for fame at one time of his life or another. It has been frequently observed, that the histories of literary men consist chiefly of a history of their writings, and the observation was never more fully verified than in the life of Mr. Landen. In the forty-eighth volume of the "Philosophical Transactions" for the year 1754, Mr. Landen gave an investigation of some theorems which suggest several very remarkable properties of the circle, and are at the same time of considerable use in resolving fractions, and in

1755 he published a volume entitled "Mathematical Lucubrations." The title to this publication was made choice of as a means of informing the world that the study of mathematics was at that time rather the pursuit of his leisure hours than his principal employment; and indeed it continued to be so the greatest part of his life, for about the year 1762 he was appointed agent to Earl Fitzwilliam, and resigned that employment only two years before his death. About the latter end of the year 1757, or the beginning of 1758, he published proposals for printing by subscription "The Residual Analysis, a new branch of the Algebraic Art;" and in 1758 he published a small tract in quarto, entitled "A Discourse on the Residual Analysis." In the fifty-first volume of the "Philosophical Transactions" for the year 1760 he gave a new method of computing the sums of a great number of infinite series. In 1764 he published the first book of "The Residual Analysis." In this treatise, besides explaining the principles which his new analysis was founded on, he applied it to drawing tangents and finding the properties of curve-lines—to describing their involutes and evolutes, finding the radius of curvature, their greatest and least ordinates, and points of contrary flexure, &c.; and he proposed in a second book to extend the application of this new analysis to a great variety of mechanical and physical subjects. On the 16th of January, 1766, Mr. Landen was elected a fellow of the royal society, and admitted on the 24th of April following. In the fifty-eighth volume of the "Philosophical Transactions" for the year 1768 he gave a specimen of a new method of comparing curvilinear areas, by means of which many areas did not appear to be comparable by any other method—a circumstance of no small importance in that part of natural philosophy which relates to the doctrine of motion. In the sixtieth volume of the same work for the year 1770 he gave some new theorems for computing the whole area of curve lines, where the ordinates are expressed by fractions of a certain form. In the sixty-first volume for 1771 he investigated several new and useful theorems for computing certain fluents, which are assignable by arcs of the conic sections. In the sixty-fifth volume of the "Philosophical Transactions" for 1775 he gave the investigation of a general theorem, which he had promised in 1771, for finding the length of any arc of a conic hyperbola by means of two elliptic arcs; and observes, that by the theorems there investigated, both the elastic curve and the curve of equable recess from a given point may be constructed in those cases where Mr. Maclaurin's elegant method fails. In the sixty-seventh volume for 1777 he gave a new theory of the motion of bodies revolving about an axis in free space, when that motion is disturbed by some extraneous force, either percussive or accelerative. In 1781, 1782, and 1783, he published three tracts on the summation of converging series, in which he explained and showed the extent of some theorems which had been given for that purpose by M. de Moivre, Mr. Sterling, and his old friend Thomas Simpson, in answer to some things which he thought had been written to the disparagement of those excellent mathematicians. It was the opinion of some, that Mr. Landen did not show less mathematical skill in explaining and illustrating these theorems than he has done in his writings on original subjects, and that the authors of them were

as little aware of the extent of their own theorems as the rest of the world were before Mr. Landen's ingenuity made it obvious to all.

About the beginning of the year 1782 Mr. Landen had made such improvements in his theory of rotatory motion as enabled him, he thought, to give a solution of the general problem on rotatory motion; but finding the result of it to differ very materially from the result of the solution which had been given of it by M. D'Alembert, and being not able to see clearly where that gentleman had erred, he did not venture to make his own solution public. In the course of that year, having procured the Memoirs of the Berlin academy for 1757, which contain M. Euler's solution of the problem, he found that this gentleman's solution gave the same result as had been deduced by M. D'Alembert; but the perspicuity of M. Euler's manner of writing enabled him to discover where he had erred, which the obscurity of the other did not do. The agreement, however, of two writers of such established reputation as M. Euler and M. D'Alembert made him long dubious of the truth of his own solution, and induced him to revise the process again and again with the utmost circumspection; and being every time more convinced that his own solution was right and theirs wrong, he at length gave it to the public in the seventy-fifth volume of the "Philosophical Transactions" for 1785.

He had for several years been severely afflicted with an internal disorder, and toward the latter part of his life to such a degree as to be confined to his bed for more than a month at a time; yet even this did not abate his ardour for mathematical studies, for the second volume of his memoirs was written and revised during the intervals of his disorder. This volume, besides a solution of the general problem concerning rotatory motion, contains an investigation of the motion of the equinoxes, and many other important mathematical calculations. He just lived to see this work finished, and received a copy of it the day before his death, which took place on the 15th of January, 1790, at Milton, near Peterborough, in the seventy-first year of his age.

LANDER, RICHARD, one of the modern travellers whose lives have been sacrificed to the extension of knowledge in the pestilential regions of Africa. He accompanied Captain Clapperton in the capacity of servant in his second expedition into the interior of that country. The captain died at Soccato in 1827, and Mr. Lander returned to this country, when his "Journal" was published in conjunction with that of Captain Clapperton. In the spring of 1830 he set out with his brother John on a new expedition. They reached Badagra in the month of March in that year and Boussa in June, but ultimately failed in their attempts to penetrate into the interior, and returned to Portsmouth in 1831. Richard Lander made a new attempt to penetrate the interior for commercial purposes, but lost his life in the attempt.

LANDINUS, CHRISTOPHER, an Italian scholar, philosopher, and poet, born at Florence in 1424, was patronised by Pietro de Medici, and appointed tutor to his son, the afterwards celebrated Lorenzo, with whom an attachment highly honourable to both parties took place. Landinus, in his old age, became secretary to the seignior of Florence, and died in 1504. He left several Latin poems, and his notes on Virgil, Horace, and Dante are much esteemed. His

philosophical opinions appear in his "Disputationes Camaldulenses."

**LANDO, MICHEL**, a wool-comber at Florence, who became, during the revolution of that republic in 1378, gonfaloniere of the republic. Machiavelli, in the third book of his "History of Florence," describes him as one of the wisest and greatest of men, though from the lowest class. By his prudence and firmness he put an end to disorder, deposed the existing magistrates, created a new nobility, and divided the people into three classes. This state of things, however, only lasted until 1381.

**LANFRANC, JOHN**, an eminent Italian historical painter, who was born at Parma in 1581. He was first the disciple of Augustin Caracci, and, after his death, of Hannibal, whose taste in design and colouring he so happily attained that he was entrusted to execute some of his designs in the Farnesian palace at Rome. These he finished in so masterly a style that the difference is not perceptible between his work and that of his master. His genius directed him to grand compositions, which he had a peculiar facility in designing and in painting either in fresco or in oil; and he endeavoured to excel Correggio, but could never arrive at his excellence; his peculiar talent being exhibited in composition and fore-shortening. At the same time he was deficient in correctness and expression; and his colouring, though sometimes admirable, was frequently too dark. By order of Pope Urban VIII. he painted in St. Peter's church at Rome the representation of that saint walking on the water, which gave the pope so much satisfaction that he knighted him. He died in 1647.

**LANGBAINE, GERARD**, a learned English writer, who was born in 1608. He was educated at Queen's college, Oxford, and became keeper of the archives of that university, provost of his college, and doctor of divinity. He stood high in the opinion of Archbishop Usher, Selden, and many other learned men, and died in 1657-8. He published an edition of Longinus in Greek and Latin, with notes, a "Review of the Covenant," besides several other works.

**LANGBAINE, GERARD**.—This talented writer was born in 1656, and, on the death of his eldest brother, was entered a gentleman-commoner of University college, Oxford. During some years spent in retirement he improved his taste for dramatic poetry, and at first wrote some small works without his name, but afterwards published several works which he publicly acknowledged. In 1690 he was elected inferior beadle of arts in the university of Oxford, and in January following was chosen superior beadle of law, but died soon after in 1692. He wrote "The Hunter," a discourse on horsemanship; "A New Catalogue of English Plays, with Remarks on the Originals of most Plays, and on the Plagiaries of Authors;" and "An Account of the English Dramatic Poets," besides several other works.

**LANGDON, JOHN**, an eminent American patriot, who was born at Portsmouth, in the United States, in the year 1739, and educated in his native place. At an early age he entered the counting-house of a merchant, in which he was highly successful. At the opening of the revolution he took a decided part in behalf of the colonies. As early as 1774, when the mother country passed the Boston port bill, and menaced hostilities, Mr. Langdon, with

John Sullivan and Thomas Pickering, raised a troop, proceeded to the fort at Great Island, disarmed the garrison, and conveyed the arms and ammunition to a place of safety. The royal government would have prosecuted him, but was deterred by the resolution of the inhabitants to shield him at all hazards. In 1775 he was a delegate to the general congress of the colonies. In June 1776 he resigned his seat in that body for the place of navy-agent. In 1777 he was speaker of the assembly of New Hampshire, and, when means were wanted to support a regiment, Langdon gave all his money, pledged his plate, and applied to the same purpose the proceeds of seventy hogsheads of tobacco. A brigade was raised with the means which he furnished, and with that brigade General Stark achieved his memorable victory over the Hessians. In 1785 Mr. Langdon was president of New Hampshire, and, in 1787, delegate in the convention that framed the federal constitution. Under this constitution he was one of the first senators from New Hampshire. In 1805 he was elected governor of his state, and again in 1810. In 1811 Jefferson solicited him in vain to accept the post of secretary of the navy at Washington. He died in 1819.

**LANGERON, COUNT DE**, was born in 1764, in France, and served under Rochambeau in America. In 1787 he went to Russia, where he distinguished himself against the Turks, and received the golden sword of honour. In 1792 he organized a corps of French emigrants. In the battle of Austerlitz he commanded, as Russian lieutenant-general, the fourth division. In 1807 he again served against France, then against Turkey. He commanded, under Blücher, in the battle of the Katzbach, and took the division Puthod. In 1815 he again commanded a corps of 35,000 men against Napoleon, but did not arrive in time for the battle, but on his return to Russia he was made governor-general of the Crimea, and in 1829, as general of the infantry, commanded a corps against the Turks.

**LANGELAND, ROBERT**, an old English poet of the fourteenth century, and one of the first disciples of Wicliffe the reformer. He is said to have been born in Shropshire, but we have no account of his family. He wrote "The Visions of Pierce Plowman," a work which abounds with imagination and humour, though it loses much of its advantage from its very uncouth versification and obsolete language. It is written without rhyme, an ornament which the poet has endeavoured to supply by making every verse begin with the same letter. It is believed that this kind of alliterative versification was adopted by Langeland from the practice of the Saxon poets, and that these visions abound with Saxonisms. Hickes styles him "celeberrimus ille satirographus, morum vindex acerrimus," &c. Chaucer and Spencer have attempted imitations of his visions, and the learned Selden mentions him with great praise.

**LANGHORNE, JOHN**, a learned divine, poet, and critic, who was born at Kirkby-Stephen in Westmoreland. His father was the reverend Joseph Langhorne of Winston, who died when his son was young. After entering into holy orders, he became tutor to the sons of Mr. Cracoft, a Lincolnshire gentleman, whose daughter he married. This lady in a short time died, and her husband lamented her fate in a monody; and another poem appeared to her memory, entitled "Constantia." Dr. Langhorne held the

living of Blagden in Somersetshire at the time of his death, which took place on the 1st of April, 1779. He was the author of several literary productions; amongst others, "Effusions of Fancy;" "Theodosius and Constantia;" "Solyman and Alinena;" "Frederic and Pharamond, or the Consolations of Human Life," 1769; "A Dissertation on the Eloquence of the Pulpit," and another on "Religious Retirement;" and he was editor of the "Works of St. Evremond," of the "Poems of Collins," and several other works.

LANGLES, LEWIS MATTHEW, a celebrated oriental scholar, who was born at Peronne, in France, in 1763, and studied Arabic and Persian under M. Silvestre de Sacy, afterwards Mantchou, and published an alphabet of that language in 1787, with a dedication to the academy of inscriptions. This work was followed, in 1788, by a "Dictionnaire Mantchou-Français," after which he printed various works translated from the Arabic and Persian. In 1790 he published "Indian Fables and Tales," newly translated, with a preliminary discourse and notes on the religion, manners, and literature of the Hindoos; and also the second volume of his Mantchou dictionary. He was in 1792 nominated keeper of the oriental MSS. in the royal library; and in 1793 he belonged to a temporary commission of arts, attached to the committee of public instruction.

After the revolution in July 1794 he became keeper of the literary dépôt established in the old convent of the Capuchins, rue St. Honoré; and to his zeal and influence were owing the creation and organisation of a particular school for the oriental living languages, in which he was professor of Persian. He wrote notes for a new edition of the "Travels of Pallas," translated by Lapeyronie, which he published in 1795. He was also the author of valuable additions to the travels of Thunberg, Norden, &c. After the executive directory had suppressed the temporary commission of arts, and dispersed, in various establishments, the objects which had been collected at the Capuchin convent, M. Langlès devoted himself entirely to the duties of his professorship, and to those which devolved on him as conservator of the oriental MSS. in the national library. On the formation of the institute he became a member, and belonged to the commission of literature, to which he presented many memoirs and notices of manuscripts. He also assisted in many periodical works. In 1796, in conjunction with MM. Daumou and Baudin des Ardennes, he made an abortive attempt to re-establish the "Journal des Savans;" and the "Magasin Encyclopédique" contains a great number of notices and dissertations from the pen of M. Langlès. He died in January 1824.

LANGTON, STEPHEN.—This learned ecclesiastic was a cardinal and archbishop in the reign of John, whose disputes with the papal see originated in his rejection of this prelate's appointment to the see of Canterbury. By birth Langton was an Englishman, but he received his education in the French metropolis. In the university of that city he had risen gradually, through various subordinate offices, to the chancellorship, when, on going to Rome, the learning and abilities which had hitherto facilitated his advancement raised him so high in the favour of Innocent III. that the pontiff in 1207 not only elevated him to the purple, but presented him to the vacant primacy of England, respecting the disposal of which the king was then at variance with the

monks of Canterbury. John refused to confirm the nomination, seized on the temporalities of the see, and ordered the monks to depart the kingdom. A sentence of excommunication upon himself and his whole realm was the consequence; nor was it removed till the weak monarch, alarmed by the warlike preparations of France and the general disaffection of his subjects, gave up every point in dispute, and reconciled himself to the church. Langton took possession of his diocese in 1213, and was a strenuous defender of the privileges of the English church. The first division of the chapters of the Bible into verses is attributed to him.

LANJUINAIS, JEAN DENIS, COUNT DE, a distinguished French peer, who was born in March 1753, at Rennes, of respectable parents. In 1771 he became an advocate in Rennes, in 1775 professor of the canon law, in 1779 member of the estates of Brittany, in 1789 member of the third estate in the constituent assembly, which he also held at a later period of the convention. He was the first in the states general who, on the report of the state of things in Brittany, gave a faithful picture of the oppressions committed by the nobility, and declared the following measures to be the general wish of the nation—the abolition of feudal rights, the abolition of the nobility, and the establishment of a representative constitutional government; offering at the same time in the name of his constituency, the *sénéchaussée* of Rennes, to give up its privileges of exemption from several taxes, &c., though enjoyed from ancient times. He opposed with courage and energy the arrogant pretensions of the privileged class and the intrigues of Mirabeau, and at a later period resisted with equal firmness the violence of the Mountain party. The object of his wishes was constitutional liberty, and when the republic was proclaimed and Louis XVI. was denounced, he was as zealous in defence of the rights of his prince, as he had been, and continued to be, for the rights of the nation. Attacked by the Maratists, and even threatened in the convention by a crowd of insurgents, he displayed great courage and dignity. He afterwards retired to Rennes, where, proscribed by the Jacobins, he lived eight months in concealment. He owed his preservation to his faithful wife and the heroic fidelity of his servant, Julie Poirier, whom Legouvè has celebrated in his poem, "Mérite des Femmes."

After the downfall of the terrorists Lanjuinais again took his seat in the convention. Soon after he was chosen president, and opposed the usurpations of Bonaparte. On the 22nd of March, 1800, he was made senator. Though he had opposed the consulate for life, and the elevation of Bonaparte to the throne, the emperor named him commander of the legion of honour and created him count. In 1814 Lanjuinais voted for the deposition of Napoleon and the establishment of the provisory government, and aided in preparing the constitution proposed by the senate. Louis XVIII. made him a peer. During the hundred days he repeatedly refused to take the oath of allegiance to Napoleon, and voted against the *acte additionnel*. Napoleon approved of his election by the city of Paris to the house of representatives, and his elevation by that body to the place of their president. After the second restoration Lanjuinais opposed in the chamber of peers all the extravagant and arrogant pretensions of the clergy, defended the liberty of the press and individual freedom, the law

of election and the charter. He voted against the war with Spain, against the reduction of the *rentes*, and the septennial elections of the chamber. The speeches and writings of Count Lanjuinais are profound and comprehensive. Among the latter are his "Mémoires sur la Religion," which is directed against the extension of the ecclesiastical jurisdiction; his "Constitutions de la Nation Française;" his work on the three Concordates, and some historical essays chiefly in the "Revue Encyclopédique." In 1808 he was elected a member of the institute, in the class of inscriptions and belles-lettres, and in 1816 the king confirmed him in this place. Lanjuinais died on the 15th of January, 1827.

**LANNES, JOHN**, marshal of France.—This nobleman was born in 1769, and in 1792, on the invasion of the French soil, entered the army as sergeant-major. His talents and services had raised him to the rank of *chef de brigade* as early as 1795, and Bonaparte created him colonel after the battle of Millesimo. After distinguishing himself in Italy and Egypt, whence he returned with Bonaparte, and serving under the first consul in Italy, he was made marshal of the empire, and subsequently duke of Montebello. In the campaign against Austria he rendered important services, and at the battle of Austerlitz commanded the left wing of the main army. At Jena, Eylau, Friedland, at Tudela, Saragossa, &c., in Spain, Marshal Lannes obtained a brilliant renown. In the campaign of 1809 against Austria, he lost both his legs by a cannon ball in the battle of Esslingen or Asperne, on the 22nd of May, and died on the 31st of the same month. Napoleon was strongly moved at the sight of the dying Lannes, who was a favourite of the emperor.

**LANSDOWNE, WILLIAM PETTY, MARQUIS OF**, was born in 1737. He succeeded to the Irish title of earl of Shelburne on the death of his father in 1761, and in 1763 obtained the office of president of the board of trade, which he resigned to join the opposition led by Mr. Pitt (Lord Chatham), with whom he returned to office in 1766. When a change of ministry took place in 1768 he was again displaced, and continued to be a parliamentary antagonist of ministers till 1782, when he was nominated secretary of state for the foreign department. On the death of the premier, the marquis of Rockingham, he was succeeded by Lord Shelburne, who was soon obliged to give way to the coalition between Lord North and Mr. Fox. In 1784 he became an English peer, by the titles of marquis of Lansdowne and earl of Wycombe. He now employed himself in the cultivation of science and literature, and collected a valuable library, the MSS. belonging to which were after his death purchased for the British Museum. His death took place in 1805. Lord Lansdowne was twice married. By his second wife, Lady Louisa Fitzpatrick, he became the father of the present marquis.

**LANZI, LUIGI**.—This celebrated archæologist was born at Treia, in the Mark of Ancona, in June 1731, and became a pupil of the Jesuits and a member of the order. He made himself master of the whole field of classical studies, and the ruins of Rome awakened his curiosity to the examination of the remains of ancient art, in treating of which he evinced profound learning and critical acuteness. From Rome Lanzi went to Florence and made himself acquainted with all the masterpieces of art collected there. In 1792 he published a "Guida della

Galleria di Firenze," on which he laboured during the rest of his life. This work not only satisfied the inquirer by its extensive learning, but amused the mere searcher after pleasure by its pleasing descriptions. He was chosen president of the Crusca in 1807, on account of the purity of his language. A patriotic feeling had engaged Lanzi in the study of Etruscan antiquity, which was then little cultivated. Learned Tuscans in the middle of the eighteenth century had attempted to elevate Etruscan civilization by maintaining that the Etruscan religion and mythology were entirely unaffected by Grecian influence. Lanzi's researches led him to form a different opinion. The remains of the Etruscan language and art denoted in his opinion a Grecian origin, and, disclaiming all national vanity, he openly maintained the prevailing influence of Greece on Etruscan civilization. German scholars have adopted his opinion. A critical method and profound erudition render his "Saggio di Lingua Etrusca e di altre antiche d'Italia, per servire alla Storia de' Popoli, delle Lingue e delle Belle Arti" a classical work. Lanzi next undertook a history of the art of painting in Italy, at the suggestion of the grand-duke of Tuscany, and this work is of equal merit with that just mentioned. The charms of his style render this erudite production highly attractive. His "Inquiries respecting the Etruscan Vases," so called, is a work of great learning, the most valuable treasures of which have been still more generally diffused by Millin. He also published Latin Inscriptions, which are much esteemed, a translation of Hesiod's "Works and Days," and some theological productions, the fruit of his last years. His death took place in March 1811.

**LAPEROUSE, JOHN FRANCIS GALOUP DE**, a French navigator, who was distinguished for his talents, and still more remarkable for the mystery attending his fate. He was born at Albi in Languedoc in 1741, and entered at an early age into the naval service of his country. During the American war he had the command of an expedition sent to Hudson's Bay, when he destroyed the trading establishments of the English. After the restoration of peace, the French government having determined on the prosecution of a voyage of discovery, M. de Lapérouse was fixed on to conduct the undertaking. Two vessels, the *Boussole* and the *Astrolabe*, were placed under his command; and leaving France in 1785, he proceeded to the South Sea, and having visited the coast of California, and other places farther north, he crossed the Pacific, to continue his researches on the eastern coasts and islands of Asia.

In April 1787 the ships sailed from Manilla towards the north; and after passing the islands of Formosa, Quelpaert, the coasts of Corea and Japan, they sailed between Chinese Tartary and Saghalien, without being able to determine whether it was an island or a peninsula; returning south, discovered the straits which bear the name of Lapérouse, and sailing north on the eastern coast of Saghalien at length arrived at the harbour of St. Peter and St. Paul, on the coast of Kamtschatka. There they staid to refit the ships, and experienced the greatest hospitality from the Russian local authorities. From St. Peter and St. Paul Lapérouse sent copies of his journals, &c., to France, by M. de Lesseps, who proceeded over land across Siberia to Petersburg. From these papers was drawn up the relation of his

voyage, published at Paris, an English translation of which appeared in 1798. Shortly after the vessels sailed in search of farther discoveries. They crossed the equinoctial line without meeting with any land till the 6th of December, 1798, when they saw the Navigators' Islands, and a few days after they landed at Maoua, one of that group. Here M. de Langle, the captain of the *Astrolabe*, M. Lamonon, the naturalist attached to the expedition, and ten other persons were killed in what appears to have been an unprovoked attack of the natives. After this misfortune Lapérouse visited Oyolava, an island near Maoua, and then steered for the English colony in New South Wales. On the 23rd of January, 1798, they made the coast of New Holland, and on the 26th anchored in Botany Bay. They left Botany Bay in March, and, in a letter which the commodore wrote on the 7th of February, he stated his intention to continue his researches till December, when he expected, after visiting the Friendly Islands, to arrive at the Isle of France. This was the latest intelligence received of the fate of the expedition and M. d'Entrecasteaux, who was despatched by the French government in 1791 in search of Lapérouse, and was unable to trace the course he had taken, or gain any clew to the catastrophe which had befallen him and his companions. In 1825 the attention of the public was excited towards this mysterious affair by a notice published by the French minister of the marine, purporting that an American captain had declared that he had seen in the hands of one of the natives of an island in the tract between Louisiade and New Caledonia, a cross of the order of St. Louis, and some medals, which appeared to have been procured from the shipwreck of Lapérouse. In consequence of this information, the commander of a vessel which sailed from Toulon in April 1826, on a voyage of discovery, received orders to make researches in the quarter specified, in order to restore to their country any of the shipwrecked crew who might yet remain in existence. Other intelligence relative to the wreck of two large vessels, on two different islands of the New Hebrides, was obtained by Captain Dillon, the commander of an English vessel at Tucopia, in his passage from Valparaiso to Pondicherry in May 1826, in consequence of which he was sent back to ascertain the truth of the matter. The facts discovered by him on this mission were, that the two ships struck on a reef at Mallicolo,  $11^{\circ}4'$  S. latitude,  $169^{\circ}20'$  E. longitude; one of them immediately went down, and all on board perished; some of the crew of the other escaped, part of whom were murdered by the savages; the remainder built a small vessel, and set sail from Mallicolo; but what became of them is not known. It is not, indeed, certain that these were the vessels of Lapérouse.

LAPLACE, PIERRE SIMON, MARQUIS DE, a celebrated mathematician and astronomer, who was born in 1749. He was the son of a farmer in Normandy, and went to Paris, where he soon distinguished himself by his knowledge of analysis and the highest branches of geometry, in which, however, Lagrange was superior to him. Laplace was chosen a member of the academy of sciences, one of the forty of the French academy, and member of the *bureau des longitudes*. In 1796 appeared his celebrated work, "*Exposition du Système du Monde*." Laplace did not remain a stranger to politics, and was made minister of the interior by the first consul. But, from

the conversations of Napoleon with Las Cases it is evident that Napoleon was not satisfied with his minister. "A geometrician of the first rank," says the emperor, "he did not reach mediocrity as a statesman. From the first the consuls became sensible that they had made a mistake in his appointment. He never viewed any subject in its true light; he was always occupied with subtleties; his notions were all problematic, and he carried the spirit of the 'infinitely small' into the administration." After six weeks, therefore, Lucien Bonaparte received his portfolio. Napoleon made Laplace a senator, vice-chancellor, and chancellor of the senate, and member of the legion of honour. In a report to the senate in 1805, Laplace proved the necessity of restoring the Gregorian calendar, and abolishing that of the republic. His principal works are his "*Traité de Mécanique Celeste*;" his "*Théorie du Mouvement des Planètes*;" "*Essai sur les Probabilités*;" and "*Théorie Analytique des Probabilités*." In 1814 Laplace voted for the abdication of Napoleon, and the king created him a peer, with the title of marquis. During the hundred days he did not appear at the Tuileries. He died on the 5th of March, 1827.

LAPO, ARNOLPH, a celebrated sculptor and architect, who was born at Florence in 1232. He first introduced a better taste into architecture by his great works, and very happily united solidity and grace. He began the building of the cathedral of Florence (to which Brunelleschi afterwards added the admirable dome), the strong walls of Florence, the convent at Assisi, and several churches and other edifices at Florence. He died in 1300.

LARCHER, PETER HENRY, an eminent French scholar and translator, who was born at Dijon on the 12th of October, 1726. He was early in life distinguished as an intense student of Greek literature, and an assiduous collector of early editions. His first translation was the "*Electra of Euripides*," which attracted little attention; but he became a contributor to several literary journals, and translated from the English the "*Martinus Scriblerus*," from Pope's "*Miscellanies*," and Sir John Pringle's "*Observations on the Diseases of the Army*." He also wrote notes to the French version of "*Hudibras*." He followed with a translation of the Greek "*Romance of Chereas and Callirhoe*," which was reprinted in the "*Bibliothèque des Romans*." In 1767 a difference took place between him and Voltaire, on whose "*Philosophy of History*" he published remarks, under the title of a "*Supplement*;" to which the latter replied in his well-known "*Défense de Mon Oncle*." Larcher rejoined in a "*Réponse à la Défense de Mon Oncle*," with which the controversy ceased on his part; but not so the merciless wit of his opponent. He soon after undertook a translation of Herodotus, and in 1774 published his learned "*Mémoire sur Venus*," to which the academy of inscriptions awarded their prize. His translation of Xenophon led to his being elected into that academy. His Herodotus was published in 1786, of which a new and very improved edition appeared in 1802. He was subsequently received into the institute, and finally appointed professor of Greek in the imperial university, but was too aged for active services. He died on the 22nd of December, 1812.

LARDNER, NATHANIEL, a learned nonconformist divine, who was born on the 6th of July, 1684, at Hawkhurst in Kent. He received the ru-

diments of his education at a dissenting academy in London, but completed his studies at Utrecht. After spending somewhat more than three years at Utrecht, Mr. Lardner removed to Leyden, where he studied about six months, and in 1703 returned to England, and came to reside in or near London. It was not however till the 2nd of August, 1709, that he preached his first sermon at Stoke-Newington.

In 1713 Mr. Lardner was invited to reside in the house of Lady Treby, the widow of Sir George Treby, who had been appointed lord chief justice of the court of common pleas in 1692. The proposal was that he should be domestic chaplain to her ladyship, and tutor to her youngest son. To this proposal he acceded; and after having conducted Mr. Treby's studies three years he accompanied him to France, the Austrian Netherlands, and the United Provinces. How long he sustained the specific character of tutor to young Mr. Treby does not appear; but he continued in Lady Treby's family till her death, which happened in the beginning of the year 1721. By this event he was removed from a situation which seems to have been an agreeable one, and was thrown into circumstances of some perplexity and suspense. His own remarks will show the state of his mind at that time. "I am yet at a loss," says he, "how to dispose of myself. I can say I am desirous of being useful in the world. Without this no external advantages relating to myself will make me happy: and yet I have no prospect of being serviceable in the work of the ministry, having preached many years without being favoured with the approbation and choice of any one congregation." Dr. Kippis remarks that "it reflects no honour upon the dissenters that a man of such merit should so long have been neglected."

Two years after the death of Lady Treby, his former pupil, Brindly Treby, Esq., died. He felt so deeply the loss of his friend that he imputed to it, in part, the increase of a deafness which had been coming upon him for some time before. In the beginning of the year 1724 he writes as follows: "Mr. Cornish preached, but I was not able to hear any thing he said, nor so much as the sound of his voice. I am indeed at present so deaf, that when I sit in the pulpit, and the congregation is singing, I can hardly tell whether they are singing or not."

In 1727 Mr. Lardner published, in two volumes, the first part of "The Credibility of the Gospel History; or, the Facts occasionally mentioned in the New Testament, confirmed by Passages of Ancient Authors, who were contemporary with our Saviour or his Apostles, or lived near their time." An appendix was subjoined respecting the time of Herod's death.

Dr. Kippis observes that "it is scarcely necessary to say how well this work was received by the learned world. Not only was it highly approved by the protestant dissenters, with whom the author was more immediately connected, but by the clergy in general of the established church; and its reputation gradually extended into foreign countries. It is, indeed, an invaluable performance, and hath rendered the most essential service to the cause of Christianity. Whoever peruses this work (and to him that does not peruse it it will be to his own loss) will find it replete with admirable instruction, sound learning, and just and candid criticism. It was not long be-

fore a second edition was called for, and a third was published in 1741."

In the beginning of February 1728 the course of Mr. Lardner's studies was interrupted, and his life threatened, by the attack of a violent fever, which proved of long continuance. For some time his recovery was despaired of, but he was at length restored to health by the attention of a physician named Hulse. Mr. Lardner's own remark upon this occasion was as follows:—"I think God put it into my mind to send for Dr. Hulse, for from that time forwards I mended." His religious feelings after his recovery are thus expressed:—"I thankfully acknowledge the great goodness of God, who raised me up again, and desire that this great mercy may be had in perpetual remembrance by me. May I serve him the remainder of my time in this world with inviolable integrity, unshaken in my steadfastness by all the snares of a vain and uncertain world."

Notwithstanding Mr. Lardner's merit he was forty-five years of age before he obtained a settlement among the dissenters. On the 24th of August, 1729, he preached for the Rev. Dr. William Harris at Crutched Friars; and the consequence was that he was unexpectedly invited by the congregation to be assistant to their minister. After mature deliberation he accepted the offer, which, as he declared in his letter of acceptance, was peculiarly agreeable to him, because it allotted a part of service in the work of the gospel with their honoured pastor, for whom he had entertained, from his early youth, a high regard and esteem. In 1713 Mr. Lardner published the first volume of the second part of his "Credibility of the Gospel History; or, the Principal Facts of the New Testament confirmed by Passages from Ancient Authors, who were contemporary with our Saviour or his Apostles, or lived near their time." It was Mr. Lardner's original intention not to publish a part of the evidence for the principal facts of the New Testament until the whole work was completed; but he thought it expedient to break off sooner, that he might not render the volume of an inconvenient size.

In 1735 he published the second volume of the second part of the "Credibility of the Gospel History." The subjects of this volume were Miltiades, Theophilus of Antioch, Pantænus, St. Clement of Alexandria, Polycrates, Heraclitus, and several other writers near the end of the second century; Hermias, Serapion, Tertullian, a number of authors who required only to be shortly mentioned, and certain supposititious writings of the second century, such as the "Acts of Paul and Thecla," the "Sibylline Oracles," the "Testaments of the Twelve Patriarchs," the "Recognitions," the "Clementine Homilies," and the "Clementine Epitome." Among these different articles those which relate to St. Clement of Alexandria and Tertullian are peculiarly important, and the remarks on the apocryphal works are very curious and useful.

In November 1736 Mr. Lardner was attacked by another severe and dangerous fever. The effects of it were such that he did not recover his health so far as to be able to preach till late in the spring of 1737. In that year he published his "Counsels of Prudence for the Use of Young People; a Discourse on the Wisdom of the Serpent and the Innocence of the Dove, in which are recommended General Rules of Prudence; with Particular Directions relating to

**Business, Conversation, Friendship, and Usefulness**" Dr. Kippis remarks that "this discourse was generally and justly admired. Indeed, it contains most excellent advice to young persons; advice resulting from the union of wisdom, integrity, and knowledge of the world; and which, if followed, would be the best foundation of happiness both here and hereafter." Dr. Secker, then bishop of Oxford, afterwards archbishop of Canterbury, was highly pleased with the "Counsels of Prudence;" and in a letter to Dr. Lardner he says, "I am also in your debt for those excellent 'Counsels of Prudence' which you published some time ago, and would recommend it to you to relieve yourself now and then from your great work, and oblige the world with some of these little pieces. One would hope they might do a great deal of good in it; and I am sure there is great need of doing every thing that can be done to promote seriousness and mildness among men."

In 1738 Mr. Lardner published the third volume of the second part of the "Credibility," and the fourth in the year 1740. In 1743 he published the fifth volume of the second part of his "Credibility." This volume comprehended St. Cornelius and St. Lucius, bishops of Rome; Novatus; Dionysius, bishop of Rome; Commodian, Malchion. Anatolius, and three others, bishops of Laodicea; Theognostus; Theonas, bishop of Alexandria; Pierius, presbyter of the church of the same city; two Doritheuses; Victorinus, Bishop Pettaw; Methodius, bishop of Olympus in Lycia; Lucian, presbyter of Antioch; Hesychius, bishop in Egypt; Pamphilus, presbyter of Cæsaria; Phileas, bishop of Thumis, in Egypt; Philoromus, receiver-general at Alexandria; Peter, bishop of Alexandria and the Miletians. In a preface prefixed to the volume, Dr. Lardner expresses his apprehension that some persons might be ready to charge him with prolixity in the conduct of his undertaking; and among other things he observes, that the particular design of his work was to enable persons of ordinary capacities, who had not an opportunity of reading many authors, to judge for themselves concerning the external evidence of the facts related in the New Testament. "I write," says he, "chiefly for gentlemen, and such others as are not possessed of large libraries; and therefore I produce passages of ancient authors at length, and oftentimes transcribe also the original words at the bottom of the page, that this evidence may at once appear in a clear and satisfactory light." In the same year the world was indebted to Mr. Lardner for another valuable performance, the title of which was, "The Circumstances of the Jewish People an Argument for the Truth of the Christian Religion." In this work the points insisted upon are, that the present state of the Jews was foretold by our Lord; that it is agreeable to many prophecies in the Old Testament; that it affords reason to believe that the Messiah is already come; that it furnishes an argument for the divine authority of the gospel; and that it exhibits an attestation to things upon which the evidences of Christianity depend."

In 1745 he published the sixth volume of the second part of his "Credibility;" and the same year he received a diploma from the Marischal college of Aberdeen, conferring upon him the degree of doctor in divinity. In 1748 he published the seventh volume of the second part of his "Credibility," and the eighth volume two years after. In 1750 he pub-

lished a volume of valuable sermons, the subjects of which are entirely of a practical nature. The following year he resigned the office of morning preacher at Crutched Friars. His reasons for this determination were the increase of his deafness, the smallness of his auditory, and his desire of finding time for the completion of his long work. His "Credibility" was not completed till the year 1755, when the twelfth and last volume appeared. The ninth, tenth, and eleventh volumes were published some time before. As the latter volumes did not sell so readily as the former during Dr. Lardner's own life, he was considerably out of pocket by this great and important work, in which he had employed so many laborious years. He afterwards published a very valuable supplement in three volumes, and "A large Collection of Ancient Jewish and Heathen Testimonies to the Truth of the Christian Religion," in three volumes. He occasionally published some smaller works, particularly one in 1759, without his name, under the following title: "A Letter written in the year 1730 concerning the Question whether the Logos supplied the place of a Human Soul in the Person of Jesus Christ?"

Dr. Kippis remarks that "Providence spared the life of Dr. Lardner to a long term; and, his hearing excepted, he retained to the last the use of his faculties in a remarkably perfect degree. At length, in the summer of 1768, he was seized with a decline, of which he died at Hawkhurst, the place of his nativity, and where he had a small parental estate." It is also observed by the same biographer that there have been few names more truly entitled to be remembered with veneration and applause than that of Dr. Lardner. The sincerity of his piety was manifested on a variety of occasions. "Indeed," says Dr. Kippis, "a regard to God appears to have been ever the governing principle of his actions. His piety too was of the most rational kind, being founded on just and enlarged views concerning the nature of religion."—"Correspondent to our author's piety was his love of truth, as is manifest from the whole of his works. No one seems ever to have preserved a greater impartiality in his inquiries, or to have been more free from an undue bias. He followed truth wherever it led him; and for the attainment of truth he was admirably qualified, both by the turn of his disposition and his understanding. With a mind so calm and unprejudiced, with a judgment so clear and distinct, he could scarcely fail of forming right apprehensions concerning most of the subjects which the course of his studies enabled him to investigate."

"The candour and moderation with which Dr. Lardner maintained his own sentiments constituted a prominent feature in his character. Those he differed from in opinion, he always treated with gentleness and respect; and in the controversies he carries on with them, there is no severity of censure, no harshness of language. This circumstance is the more worthy to be mentioned and applauded, as it is so different from what we often meet with in the present day. Many of our writers seem to be reverting to that abuse of each other which was common among scholars some time after the revival of literature. They are not satisfied without casting illiberal reflections on the persons of the men whose tenets they oppose, and arraigning the motives of their conduct. What renders this disposition the

more ridiculous is, that it is frequently exerted on the most trivial occasions. Apprehended mistakes in philology, or diversities of judgment in matters of mere taste, are treated with as great a bitterness as if they were crimes of the deepest dye. How much more beautiful and more worthy of imitation was the manner of conducting disputable questions which was pursued by Dr. Lardner. Such a method will be found in the end more favourable to the diffusion of truth, and more conducive to a lasting reputation. Circumstances indeed may arise in which a sharpness of chastisement may appear to be justifiable. Uncommon insolence and uncommon bigotry may deserve to be strongly exposed: and yet, even here, a manly neglect and contempt of unmerited censure may be the most honourable and the most useful mode of behaviour.

LARIVE, J. MAUDUNT DE, was born in 1749 at La Rochelle, and became one of the most distinguished tragic actors of France, after Lekain and Talma. Having made his début in Lyons, he appeared in Paris in 1771. He was particularly distinguished in heroic parts. During the reign of terror he was arrested, and saved only by a secretary of the committee of public safety, who destroyed the proofs against him and the other actors. Before new documents could be collected Robespierre was overthrown. Geoffroy's critiques and Talma's rising fame induced him to leave the stage rather early. He bought a country seat in the valley of Montmorency, and was elected mayor of the place. In 1806 he went for a short time to the court of Joseph Bonaparte, then king of Naples, to establish a French theatre in his capital; and in 1816 he appeared once more in the part of Tancred, though sixty-seven years old, for a charitable purpose, with great success. Larive died in 1822. Of his several works the most important is his "*Cours de Déclamation*."

LARREY, DOMINIQUE JEAN, BARON DE, one of the most distinguished surgeons of France, who was born in 1766 at Beaudeau, near Bagnères, in the department of the Upper Pyrenees, and studied at Paris under Sabatier. Larrey first introduced, in 1793, the *ambulances volantes* (flying hospitals) into the French army, and accompanied, in 1798, the Egyptian expedition, where he did great service. In all the other campaigns of Napoleon, Larrey gave proofs of his great zeal, courage, and sagacity. During the passage of the Berezina he performed a dangerous operation on General Zajoncsek, then eighty years old, afterwards viceroy of Poland. In the battle of Waterloo Larrey was wounded and taken prisoner. He published his important observations on Egypt and Syria in 1803, in his "*Relation Historique et Chirurgicale de l'Expédition de l'Armée d'Orient en Egypte et Syrie*." Previously to this had appeared his "*Mémoire sur les Amputations des Membres à la Suite des Coups de Feu, étayé des plusieurs Observations*;" also, "*Mémoire de Chirurgie Militaire et Campagne*." He contributed several articles to the "*Dictionnaire des Sciences Médicales*." Napoleon bequeathed to Larrey a legacy of 100,000 francs, and he calls him, in his testament, the most virtuous man that he ever knew.

LASCARIS.—The name of two noble Greeks of the fifteenth century, who were descendants of the imperial family, and both natives of Constantinople, who, on the taking of that capital by the Turks, in 1453, fled to Italy. Constantine, the elder, settled

first at Milan, where he was received into the grand-duke's household as tutor to his daughter. He afterwards visited Rome and Naples, in which latter city he opened a school of eloquence, and finally took up his abode at Messina, where the fame of his literary attainments, especially in the Greek language, attracted many distinguished disciples, and, among others, the celebrated Pietro Bembo, afterwards known as the cardinal of that name. He was the author of a "*Greek Grammar*," and of some other works in that language and in Latin, which were first printed at Milan in 1476, and again at Venice in 1495, at the Aldine press. He died about the close of the fifteenth century. John, the younger of the two, surnamed Rhyadacenus, took up his residence at Padua, under the protection of Lorenzo de Medici, who distinguished him by his favour, and despatched him into Greece to purchase valuable manuscripts. The sultan's orders gained him access to the libraries, so that he accomplished his mission much to the satisfaction of his employer, and enriched the Florentine collection with the fruits of his researches.

In 1494 he quitted Italy, and entered the service of Louis XII. of France, who made him his envoy to the Venetian senate; but, on the elevation of John de Medici to the popedom, by the title of Leo X., Lascaris went to Rome at the invitation of that pontiff, and, on the foundation of his Greek college there, was appointed its first principal, and superintendent of the Greek press. To promote the ends of this institution, of which the ascertaining and preserving the true pronunciation of the Greek language was one of the chief, Lascaris made a second journey into Greece, and brought back with him some youths of good families, who were to communicate and to receive instruction. The remainder of his life was divided between Paris, where he assisted Francis I. in forming the royal library, and Rome, in which latter city he died of the gout, at the age of ninety, in 1535.

LAS CASES, EMANUEL AUGUSTE DIEUDONNE, COUNT OF, MARQUIS DE LA CAUSSADE.—This nobleman, who was the author of the well-known "*Memorial de Sainte Hélène*," was born in 1763, in the castle Las Cases, near Sorèze, in Languedoc, of an ancient Spanish family, to which the celebrated Bartholomew Las Cases belonged. He received his early education from the priests of the oratory at Vendôme, and afterwards joined the military school at Paris, which he left to enter the navy. He was present at the siege of Gibraltar, and in 1782 he was in the sea-fight off the cape of Cadiz. After the peace he visited America, Africa, the Isle of France, and the Indies, for the purpose of acquiring experience. He then passed his examination in a very honourable manner, and obtained the place of lieutenant. On the breaking out of the revolution he remained attached to the court party; emigrated, in 1791, to Worms, and resided alternately at Coblenz and Aix-la-Chapelle, where the French princes were surrounded by a brilliant train of followers; served as a member of the marine in the campaign of 1792, under the duke of Brunswick; and, after its unhappy termination, came to England destitute of every thing. In these circumstances he supported himself by giving lessons in any branch of knowledge in which he could find pupils. After having been engaged in the fruitless expedition to Vendée, and the affair of Quiberon, where he escaped almost miraculously, he issued the prospectus

of his "Historical Atlas," which met with great encouragement, and was very profitable. He gladly seized on an opportunity to return to France when Bonaparte invited back the emigrants. He lived in Paris in a retired manner, occupied in writing and in bookselling. His "Historical Atlas" he published under the name of *Le Sage*, and while thus occupied enjoyed several years of tranquillity. But his ardent spirit was kindled with admiration of the emperor, and he became desirous to attach himself to him. The attack on Flushing by the English, in 1809, gave him an opportunity to act. Napoleon appointed him chamberlain and master of requests in the council of state. When Holland was united to France, Napoleon sent him to that country to direct all matters connected with the marine; and in 1811 he was employed to liquidate the public debt of the Illyrian provinces. He was afterwards appointed to visit half of the French departments, to examine the poor-houses, prisons, hospitals, &c., &c. This duty was finished just at the time of Napoleon's return from Russia.

A numerous national guard having been raised on account of the entrance of the allies into France, Las Cases entered the tenth legion, which he commanded in the absence of its chief. The abdication of Napoleon and the restoration of Louis followed. Las Cases then came to England, in order to avoid being a witness to the course of affairs at Paris, and after his return lived in retirement. After Napoleon's return from Elba he was appointed counsellor of state and president of the commission of requests; but when the battle of Waterloo made Napoleon's second abdication necessary, Las Cases begged to be permitted to follow him. Separated from his family, and accompanied only by his oldest son, he voluntarily shared the fate of the exile with resignation, independence, and magnanimity. He remained until the end of 1816 with Napoleon at St. Helena, and acted as his secretary in his preparation of the history of his own life. He also instructed him in English. But a letter to Lucien Bonaparte, which he endeavoured to send secretly to Europe, contrary to the commands of the English governor, occasioned the removal of himself and his son from Napoleon on the 27th of November, 1816. After a confinement of six weeks he was sent to the Cape of Good Hope, and was detained in close confinement for eight months, after which he was sent back to Europe. When he arrived in the Thames his papers were taken from him, and he was not permitted to land, but was sent to Ostend. From thence he was carried through the Netherlands, and in December 1817 he first found a secure and quiet residence at Frankfort on the Maine. He then resided for a long time in Belgium, and thence went to Paris, where he lived retired, and arranged his papers which he had recovered from the English ministry.

In 1823 appeared his "*Mémorial de Sainte Hélène*," in eight volumes. This journal described some very severe treatment which Napoleon had received from Sir Hudson Lowe, the governor. Sir Hudson having published an insulting answer to the count, his son came to England, and challenged Sir Hudson, who procured the removal of the young Las Cases from this country. In the eighth book of this Memorial the count relates his own history from the day he left St. Helena; and he paints the severe treatment which he received from the British government

in strong colours. Las Cases applied himself with the greatest zeal to accomplish the object, which, according to his own account, was the cause of his being forced to leave St. Helena. He wrote to the empress Maria Louisa, sent the letter open to Prince Metternich, and then applied to the three allied sovereigns, and described to them Napoleon's painful situation. He also addressed a letter to Lord Bathurst, the English minister, complaining of the treatment of Napoleon. At the same time he wrote to all the members of Napoleon's family. He next applied to the congress of the sovereigns at Aix-la-Chapelle, in favour of the illustrious prisoner, and presented to them a letter from Napoleon's mother. Las Cases also wrote to La Harpe, the tutor of the emperor Alexander, on this subject. To all his requests and memorials he received no answer. He repeated his applications with as little success at the congress of Laybach. At this time Napoleon died.

The "*Mémorial de Sainte Hélène*" is rich in historical materials, but cannot be considered as a safe authority on the subject of Napoleon's history, because the author enlarged it after it had been for a long time out of his hands from memory, and adapted it to the existing state of things. From what Las Cases says it is evident that Napoleon well knew that the work was written for publication, and the notes were taken in his presence and at his request. The work has been translated into English. Napoleon placed many interesting papers in the hands of Las Cases, and among others his will.

LASCY, PETER, COUNT DE, a military officer, who was born in Ireland in 1678. After the conquest of Ireland by William III. he entered the French service, and subsequently the Austrian army. He was next employed by the king of Poland, and then by Peter the Great of Russia. In 1709 he was wounded at Pultowa; and he assisted in the taking of Riga, of which he was made governor. He was made a lieutenant-general in 1720. Catharine I. appointed him governor of Livonia. He died in 1751, having attained the rank of field-marshal. The prince de Ligne published a collection of the works and a journal of the campaigns of Marshal Lascy.

LASCY, JOSEPH FRANCIS MAURICE, COUNT DE, was son of Peter Lascy, and was born at Petersburg in 1725. In 1744 he entered into the Austrian service, and made a campaign in Italy. He gradually rose to the rank of general, after having displayed his military talents at the battles of Lowositz, Breslau, and Hochkirchen; and in 1760 he penetrated to Berlin at the head of 15,000 men; for which bold exploit he was made a commander of the order of Maria Theresa, and in 1762 received the baton of marshal. Under Joseph II. he was a member of the council of war at Vienna, and was the author of the military regulations adopted by that prince. He was employed against the Turks in 1788, and again after the death of Laudohn. He died in 1801.

LA SERNA, JOSE.—This military officer commenced his career in the Spanish artillery, and in 1809 served at Saragossa, under the celebrated Palafox, in the rank of lieutenant-colonel. Upon the appointment of General Pezuela to be viceroy of Peru in 1816, La Serna was commissioned to succeed him in the command of the army of Upper Peru. He arrived at Arica in September 1816, and from that time until December 1824 was prominent in the

military operations of the contending parties. Bred to regular service in the peninsular war, he had no just idea of the system necessary to be followed in America; and therefore, in spite of his proficiency in tactics, he proved no match even for the half-armed *gauchos* of Buenos Ayres. In his first campaign he advanced to Salta, but was compelled to retire in disorder. Finding his plans of conducting the war *en règle* to fail him, La Serna asked and obtained leave to return to Spain. In 1819 he arrived in Lima to embark, and while there was promoted to the rank of lieutenant-general in consequence of an expected invasion from Chile, and prevailed upon to remain. He received accordingly the direction of the military operations against San Martin, and, by means of a junta of his friends appointed to advise the viceroy in the prosecution of the war, he became supreme in military matters. In January 1821 a faction of the Spanish army deposed the viceroy Pezuela, and placed La Serna at the head of the government. La Serna was wounded and taken prisoner at the battle of Ayacucho on the 9th of December, 1824, which put an end to his authority in Peru. On his return to Spain he immediately retired from public life.

LASSO, ORLANDO DI, one of the greatest musicians of the sixteenth century. He was born at Mons, in Hainaut, in 1530. Thuanus relates that he was carried off while a child on account of his fine voice, and that Gonzaga, viceroy of Sicily, took him to Italy and had him instructed in music. Having lost his voice in his eighteenth year, he was occupied three years in Naples as a teacher of music, and he then became chapel-master in the Lateran church in Rome. Here he remained two years, and then returned to his native country to see his parents, whom, however, he did not find living. He then travelled with Julius Cæsar Brancaccio to England and France, and again lived for some years in Antwerp, whence he went to Munich as chapel-master to Albert, duke of Bavaria. Charles IX. of France invited him to Paris; but Lasso learned, on his way to that city, the death of the king, and was immediately re-established in his place by Duke Albert. He remained in this office until his death. Orlando was equally celebrated for his sacred and his secular music. His productions were numerous, but are at present rarely to be met with. His sons published a collection of his *motets*, under the name "*Magnum Opus Musicum*." In the royal library at Munich is the richest collection of his works.

LATIMER, HUGH.—The reformation owed much of its early beauty and Christian purity to this eminent ecclesiastic. He was born in 1470, and his parents were in humble circumstances, so much so indeed that he says that his father's whole household were supported on a farm of four pounds a year. Latimer appears to have been originally destined for the church, as we find him early in life studying divinity at Cambridge. Mr. Gilpin, who has written a very interesting life of this prelate, speaks of him at that time as a warm if not bigotted defender of the doctrines of the church of Rome. Many of the reformed opinions, which were then fermenting in Germany, had just exhibited themselves in England. The legislature had not yet interfered, but the watchful priests had taken the alarm, and the danger of the church was already become the popular cry. Latimer, among others, heard with high indignation these novel teachers.

Zeal wrought the same effect in him that interest did in the many; and, while others were apprehensive that their temporal possessions might be in danger, he was concerned for the souls of men. The last times he thought were now approaching—impiety was gaining ground apace: what lengths might men not be expected to run when they began to question even the infallibility of the pope?

As his well-meant zeal was thus excited he inveighed publicly and privately against the reformers. If any read lectures in the schools suspected of their tenets, Latimer was sure to be there to drive out the scholars; and having an opportunity when he commenced bachelor of divinity to give an open testimony of his dislike to their proceedings, he made an oration against Melancthon, whom he treated with great severity for his impious innovations in religion. His zeal was so much taken notice of in the university that he was elected to the office of cross-bearer in all public processions, an employment which he accepted with reverence and discharged with becoming solemnity.

Among those in Cambridge, who at this time favoured the reformation, the most considerable was Thomas Bilney. He was a man of most holy life, and having long observed the prevailing debauchery of the clergy, he was led to doubt whether their principles might not be as corrupt as their practice, and whether the new opinions, then gaining ground, might not be more than plausible. Time increased his suspicions. He read Luther's writings and approved them. He conversed with protestants, and found them men of temper and learning. In short, he began to see popery in a very disagreeable light, and made no scruple to own it.

It was Mr. Latimer's good fortune to be well acquainted with this religious person. Mr. Bilney had long indeed conceived very favourable sentiments of him. He had known his life in the university, a life strictly moral and devout. He ascribed his failings to the genius of his religion; and, notwithstanding his more than ordinary zeal in the profession of that religion, he could not but observe in him a very candid temper, prejudiced by no sinister views, and an honesty of heart which gave him great

hopes of his reformation. Induced by these favourable appearances, Mr. Bilney failed not, as opportunities offered, to suggest many things to him about the corruptions in religion, and would frequently drop a hint that in the Romish church in particular there were perhaps some things which rather deviated from apostolic plainness. He would instance some of its grosser tenets, and ask whether the scriptural authority alleged for them was wholly sufficient? if not, whether tradition were a safe vehicle for doctrines of such importance? Thus starting cavils and infusing suspicions, he prepared the way for his whole creed, which at length he opened, concluding with an earnest persuasion that Latimer would only endeavour to divest himself of his prejudices, and place the two sides of the questions before him, with an honest heart for his guide.

There appears to be no record of how his pupil first received these free declarations, and by what steps he attained a settlement in his religious opinions; but Latimer no sooner ceased from being a zealous Romanist than he became (such was his constitutional warmth) a zealous protestant. He had nothing of that neutral coolness in his temper which the Athenian lawgiver discouraged in a commonwealth. Accordingly we soon find him very active in supporting and propagating the reformed opinions. He endeavoured with great assiduity to make converts, both in the town and in the university; preaching in public, exhorting in private, and every where pressing the necessity of a holy life, in opposition to those outward performances which were then thought the essentials of religion. A behaviour of this kind was immediately taken notice of. Cambridge was then the seat of ignorance, bigotry, and superstition: every new opinion was watched with the utmost jealousy; and Latimer soon perceived how obnoxious he had already made himself.

The first remarkable opposition he met with from the prevailing party was occasioned by a course of sermons he preached during the holidays of Christmas before the university, in which he spoke his sentiments with great freedom upon many opinions and usages maintained and practised in the Romish church. In these sermons he showed the impiety of indulgences, the uncertainty of tradition, and the vanity of works of supererogation. He inveighed against that multiplicity of ceremonies with which true religion was encumbered, and the pride and usurpation of the Romish hierarchy; but what he most insisted upon was that great abuse of locking up the scriptures in an unknown tongue, giving his reasons without any reserve why they ought to be put in every one's hands.

Few of the tenets of the church of Rome were then questioned in England but such as tended to a relaxation of morals. Transubstantiation, and other points rather speculative, still held their dominion. Mr. Latimer therefore chiefly dwelt upon those of immoral tendency. He showed what true religion was, that it was seated in the heart; and that, in comparison with it, external appointments were of no value. Great was the outcry occasioned by these discourses. Mr. Latimer was then a preacher of some eminence, and began to display a remarkable address in adapting himself to the capacities of the people. The orthodox clergy observing him thus followed, thought it high time to oppose him openly. This task was undertaken by Dr. Buck-

enham, prior of the Black friars, who appeared in the pulpit a few Sundays after, and with great pomp and prolixity showed the dangerous tendency of Mr. Latimer's opinions: particularly he inveighed against his heretical notions of publishing the scriptures in English, laying open the ill effects of such an innovation. "If that heresy," said he, "should prevail we should soon see an end of every thing useful among us. The ploughman reading that if he put his hand to the plough, and should happen to look back, he was unfit for the kingdom of God, would soon lay aside his labour: the baker likewise reading that a little leaven will corrupt his lump, would give us very insipid bread: the simple man likewise finding himself commanded to pluck out his eyes, in a few years we should have the nation full of blind beggars."

Latimer listened with a secret pleasure to this ingenious reasoning. Perhaps he had acted as prudently if he had considered the prior's arguments as unanswerable; but he could not resist the vivacity of his temper, which strongly inclined him to expose this solemn trifler. The whole university met together on the following Sunday, when it was known the reformer would preach. That vein of pleasantry and humour which ran through all his words and actions would have here, it was imagined, full scope; and, to say the truth, the preacher was not a little conscious of his own superiority. To complete the scene, just before the sermon began, Prior Buckenham himself entered the church, with his cowl about his shoulders, and seated himself with an air of importance before the pulpit.

Latimer, with great gravity, recapitulated the learned doctor's arguments, placed them in the strongest light, and then rallied them with such a flow of wit, and at the same time with so much good humour, that, without the appearance of ill-nature, he made his adversary in the highest degree ridiculous. He then with great address appealed to the people, descanted upon the low esteem in which their holy guides had always held their understandings, expressed the utmost offence at their being treated with such contempt, and wished his honest countrymen might only have the use of the scriptures till they showed themselves such absurd interpreters. He concluded his discourse with a few observations upon scripture metaphors. A figurative manner of speech, he said, was common in all languages: representations of this kind were in daily use, and generally understood. "Thus, for instance," said he (addressing himself to that part of the audience where the prior was seated), "when we see a fox painted preaching in a friar's hood, nobody imagines that a fox is meant, but that craft and hypocrisy are described, which are so often found disguised in that garb."

The wit and railery of Latimer placed the prior in the most ridiculous light, and he never after entered the field as a disputant. This advantage increased the credit of the protestant party in Cambridge, of which Bilney and Latimer were at the head. The meekness, gravity, and unaffected piety of the former, and the cheerfulness, good humour, and eloquence of the latter, wrought much upon the junior students. These things greatly alarmed the orthodox clergy. Of this sort were all the heads of colleges, and, indeed, the senior part of the university. Frequent convocations were held; tutors were admonished to have a strict eye over their pupils; and academical censures of all

kinds were inflicted. But academical censures were found insufficient. Latimer continued to preach, and heresy to spread. The true spirit of popery therefore began to exert itself, and to call aloud for the secular arm.

Dr. West was at that time bishop of Ely. To him, as their diocesan, the heads of the popish party applied. But the bishop was not a man for their purpose: he was a papist indeed, but moderate. He came to Cambridge however, examined the state of religion, and at their entreaty preached against heretics; but he would do nothing farther. This however gave no great check to the reformers. There happened at that time to be a protestant prior in Cambridge, Dr. Barnes, of the Austin friars. His monastery was exempt from episcopal jurisdiction, and, being a great admirer of Latimer, he boldly licensed him to preach there. Hither his party followed him; and the late opposition having greatly excited the curiosity of the people, the friar's chapel was soon unable to contain the crowds that attended. Among others, it is remarkable that the bishop of Ely was often one of the hearers, and had the honesty to declare that Latimer was one of the best preachers he had ever heard.

The credit to his cause which Latimer had thus gained by preaching, he maintained by a holy life. Mr. Bilney and he did not satisfy themselves with acting unexceptionably, but were daily giving instances of goodness which malice could not scandalize, nor envy misinterpret. They were always together, and the place where they used to walk was long afterwards known by the name of the Heretics' hill.

But their good lives had no merit with their adversaries. With them it mattered not what a man's life was if his opinions were orthodox. They could make great allowances for the former, but the least mistake in the latter was unpardonable. Such is the true spirit of bigotry and priestcraft—that pharisaical spirit which, inverting the tables of the law, places points of least importance uppermost. More of this spirit never reigned than at this time in Cambridge. The church party, among whom every spark of charity seemed extinguished, were now enflamed to the uttermost. The good actions of their adversaries served only as fuel to increase the heat of persecution. Impotent themselves, and finding their diocesan either unable or unwilling to work their purposes, they determined at length upon an appeal to the higher powers. Here, at least, they expected countenance. Heavy complaints were accordingly carried to court of the increase of heresy, and formal depositions against the principal abettors of it.

But we must now take a rapid glance at the state of affairs abroad, in which Latimer was so soon to be a prominent actor. Protestantism, which was now spreading itself apace in Germany and many other parts of Europe, had yet met with no public countenance in England. Here superstition still held its reign. The regular clergy, encroaching more and more, had at length engrossed one-third of the kingdom. A large share of temporal power was the consequence of this wealth; and the gross ignorance of the times established them as fully in a spiritual dominion. From the days of Wicliff, who flourished in the reign of Richard the Second, many began to speak with some freedom, and to think with more, of the prevailing corruptions of popery. But severe laws,

purchased of needy kings, held these sectaries in awe. The inclinations of the people however, through this whole period of time, ran strong against the clergy; and Luther was greatly obliged to Wicliff for his reception in England.

As soon therefore as the opinions of the reformers were introduced they were warmly espoused; the generality of the people were disposed for them; and protestants in many places began to form parties. But in those intolerant times when kings thought it incumbent upon them to think for their subjects, private opinion and the inclinations of the people were little consulted; reasons of state prevailed; and Henry the Eighth, who then reigned in England, had yet his motives for holding fair with the court of Rome. The great cause which at this time occupied the nation was the king's divorce, a suit of law one of the most famous in history. After living for nearly twenty years with his brother's wife, this tyrannical prince was suddenly seized, upon the appearance of Anne Boleyn at court, with scruples of conscience about the legality of his marriage; and not only schoolmen and canonists, but kings, popes, and emperors were interested in this affair.

At that time one of the most wily prelates held the see of Rome. He had interests to manage with Charles the Fifth, who was averse to the divorce. He had interests likewise to manage with Henry. These cross circumstances called for all his subtlety; and indeed he showed himself a master of address. He amused each in his turn, and meant honestly to neither; perplexing affairs, palliating, explaining, and perplexing again, that he might thoroughly deliberate before he chose his party.

While the king thus expected the conclusion of his divorce in a regular way, which of all things he desired, he was careful in observing all forms of civility with the pope. The poor protestants in many instances felt the effects of his complaisance. He even went so far as to use his own princely pen against them, and, as the courtiers of his time used to say, wrote incomparably well. No new laws indeed were enacted: the old ones against Wicliff's heresy were thought sufficient. These statutes were revived, and the bishops in several parts of the kingdom took very effectual pains to make those under their care acquainted with them.

Such was the situation of affairs when complaints came from Cambridge of the daily increase of heresy. Tunstal, with an air of sanctity, shook his head, declaring it was shameful indeed, very shameful! Warham raged loud, and talked of nothing but fire and extirpation, root and branch; while the cardinal treated the whole as a jest, attributing it to the envy of a few illiterate priests against men of superior merit.

But the complaints from Cambridge increasing daily, and Warham of course growing more importunate, the cardinal was at length obliged to shake off his indifference, and begin to act. He erected a court, therefore, consisting of bishops, divines, and canonists. Tunstal was made president, and Bilney, Latimer, and one or two more were called upon to answer for their conduct. Bilney was considered as the heresiarch, and against him chiefly the rigour of the court was levelled. His examination was accordingly severe: every witness was heard with so much attention, and every deposition enlarged upon with so much bitterness, that Tunstal despaired of mixing

any temper with the proceedings of his colleagues. The process came to an end, and the criminal, declaring himself what they called an obstinate heretic, was found guilty. Here Tunstal had an opportunity to show the goodness of his heart. He could not interfere in Mr. Bilney's favour in a judicial way, but he laboured to save him by all the means in his power. He first induced his friends to persuade him to recant; and when that would not do he joined his entreaties to theirs, had patience with him day after day, and with all the tenderness of humanity begged he would not oblige him, contrary to his inclinations, to treat him with severity. The good bishop in the end prevailed; Bilney could not withstand the winning rhetoric of Tunstal, though he had withstood all the menaces of the inflamed Warham. He recanted, bore his faggot, and was dismissed. As for Latimer and the rest, they had easier terms: Tunstal omitted no opportunities of showing mercy, and was dexterous in finding them; though it was probable that among so many voices he would hardly have prevailed if the cardinal had not countenanced his proceedings.

The heretics, upon their dismissal, returned to Cambridge, where they were received with open arms by their friends. Amidst this mutual joy Bilney alone seemed unaffected; he shunned the sight of his acquaintance, and received their officious congratulations with confusion and blushes. Reflection had now brought him to himself, and remorse of conscience had seized him for what he had done. Restless nights, frightful dreams, and other effects of a mind that preys upon itself, in a short time disturbed his reason; and it was feared he might have committed suicide if those about him had not closely attended him. In the agonies of his despair his pathetic and eager accusations of his friends, of the bishop of London, and, above all, of himself, were very affecting. Thus he continued for some time one of the most shocking spectacles that human nature can exhibit. His passion having had its course, at length subsided, and by degrees gave place to a profound melancholy. In this state he continued about three years, reading much, avoiding company, and in all respects observing the severity of an ascetic. During this time, and especially towards the latter part of it, he would frequently be throwing out obscure hints of his meditating some extraordinary design. He would say that he was now almost prepared—that he would shortly go up to Jerusalem—and that God must be glorified in him. After keeping his friends awhile in suspense by this mysterious language, he told them at last that he was fully determined to expiate his late shameful abjuration by his death. What they could oppose had no weight. He had taken his resolution; and breaking at once from all his attachments in Cambridge, he set out for Norfolk, which was the place of his nativity, and which for that reason he chose to make the scene of his death. When he came there he went about the country, confessing his guilt in abjuring a faith in which he was now determined to die. Popery, he told the people, was a most diabolical religion; and exhorted them to beware of idolatry, and to trust no longer in the cowl of St. Francis, in prayers to saints, in pilgrimages, penances, and indulgences; but rather to believe in Jesus Christ, and to lead good lives, which was all that God required of them.

The report of this very extraordinary preacher soon reached the ears of the bishop of Norwich, who watched over those parts with the zeal of an inquisitor. Mr. Bilney was soon apprehended, and secured in the county-gaol. While he lay there waiting the arrival of the writ for his execution, he gave very surprising instances of a firm and collected mind. He began now to recover from that abject state of melancholy which had for the last three years oppressed him; and, like an honest man who had long lived under a difficult debt, he began to resume his spirits when he thought himself in a situation to discharge it. Some of his friends found him eating a hearty supper the night before his execution, and expressing their surprise, he told them he was but doing what they had daily examples of in common life—he was only keeping his cottage in repair while he continued to inhabit it. The same composure ran through his whole behaviour; and his conversation was that evening more agreeable than his friends almost ever remembered it. He dwelt much upon a passage in Isaiah, which he said gave him much comfort:—"Fear not, for I have redeemed thee; thou art mine. When thou walkest in the fire it shall not burn thee: I am the Lord thy God." With equal constancy he went through his last trial. His death, which Mr. Fox relates at large, was as noble an instance of Christian courage as those times, fruitful of such examples, afforded.

Latimer, speaking of this eminent reformer, says, in a letter to a friend, "I have known Bilney a great while; and to tell you what I have always thought of him, I have known few so ready to do every man good, after his power; noisome wittingly to none, and towards his enemy charitable and reconcilable. To be short, he was a very simple, good soul, nothing meet for this wretched world, whose evil state he would lament and bewail as much as any man that I ever knew. As for his singular learning, as well in the holy scriptures as in other good letters, I will not now speak of it. How he ordered or misordered himself in judgment I cannot tell, nor will I meddle withal; but I cannot but wonder, if a man living so mercifully, so charitably, so patiently, so continently, so studiously, and so virtuously, should die an evil death."

Mr. Bilney's sufferings, instead of checking the reformation at Cambridge, inspired the leaders of it with new courage, and illustrated a common observation, that persecution is always an unadvised measure in opposing religious innovations. Latimer began now to exert himself more than he had yet done, and succeeded to that credit with his party which Mr. Bilney had so long supported. Among other instances of his zeal and resolution in this cause he gave one which was indeed very remarkable. He had the courage to write to the king against a proclamation then just published, forbidding the use of the Bible in English, and other books on religious subjects.

It happened that among other tracts then dispersed, there was one written in a warmer language than ordinary; it was entitled "The Supplication of the Beggars," and contained a very severe invective against the regular clergy, whose exorbitant exactions upon the people were there represented as the chief source of all the poverty in the nation. This piece roused the whole body of the clergy; and the cardinal being at their head, a successful application

was made to the king, who immediately issued out a most severe proclamation against heretical books, commanding that all such books should be delivered up within fifteen days, and empowering the bishops to imprison at pleasure all persons suspected of having them, till the party had purged himself or abjured: it empowered the bishops likewise to set an arbitrary fine upon all persons convicted. It farther forbade all appeals from ecclesiastical courts, and obliged all civil officers by oath to use their utmost endeavours to extirpate heresy and assist the bishops; justices were to enquire at their quarterly sessions into the state of religion in their counties; and sheriffs were to arrest all suspected persons and deliver them to the bishops.

The sword thus put into the hands of the bishops was presently unsheathed. The effects of this proclamation, and in that reign proclamations had the force of law, were indeed very dreadful. "It would surprise the good people of England at this day to hear that many of their forefathers were then burnt for reading the Bible and teaching their children the Ten Commandments, and the Lord's Prayer in English. Such things were then called heresy." On this occasion Latimer took upon him to write to the king. He had preached before him once or twice at Windsor, and had been taken notice of by him in a more affable manner than that monarch usually indulged towards his subjects. But whatever hopes of preferment his sovereign's favour might have raised in him, he chose to put all to the hazard rather than to omit what he thought his duty. He was generally considered as one of the most eminent of those who favoured protestantism, and therefore thought it became him to be one of the most forward in opposing popery. His letter is the picture of an honest, sincere heart. It was chiefly intended to point out to the king the bad intention of the bishops in procuring the proclamation. We can only give the substance of this truly Christian appeal.

Latimer says "St. Augustin, in an epistle to Casulanus, tells us, 'That he who through fear hideth the truth, provoketh the wrath of heaven, as a person who fears man more than God.' And St. Chrysostom, to the same effect, gives it as his opinion, 'That a person may betray the truth, as well by concealing it, as disguising it.' These sentences, great king, occurred to me very lately, and have had such an effect upon me, that I must either open my conscience to your majesty, or rank myself among such persons as these two holy fathers censure.—The latter I cannot think of. But, alas! there are men upon whom such severe censures have no effect: there are men, who, pretending to be guides and teachers in religion, not only conceal the truth, but prohibit others to set it forth: blind guides, who shut up the kingdom of heaven from men, and will neither enter in themselves, neither suffer them that would, to enter. And not content with obstructing the word of God to the utmost of their own authority, they have contrived by their subtle practices to draw in to their assistance the civil power in almost all the states of Christendom. In this nation especially, they have long imposed upon their subjects by their delusions, and kept them in awe by their spiritual censures; and when they saw the truth likely to prevail, and gather strength from their opposition, they have at length obtained your majesty's proclamation in their favour, and have got it declared treason to

read the scripture in English. Hear me, I beseech your majesty, a few words, and let me entreat you to call to mind the example of Christ and his apostles, their manner of life, their preaching, and whole behaviour; that, comparing them with the spiritual guides of these days, your majesty may be the better judge who are the true followers of Christ.

"And first it is evident, that simplicity of manners and hearts sequestered from the world were the striking characteristics of the first preachers of the gospel, and of our blessed Lord himself. Poverty in spirit was then practised as well as preached. Alas! it is since those days that Christian teachers, masking their worldly hearts under a pretence of voluntary poverty, and an exclusion from carnal things, have wormed themselves into more than regal wealth; and have wickedly kept what they have craftily obtained, by fomenting foreign or domestic strife, in all places, as their purposes were best served; and by blasphemously dealing out even the punishments of heaven against all who had resolution enough to make any stand against their corruptions. By what arts they have evaded a late act of parliament against their encroachments, your majesty well knows.—Think not, gracious sovereign, that I exceed the bounds of charity in what I say: I only offer to your majesty's consideration a rule, which was once prescribed by a greater master, 'By their fruits you shall know them.'

"Another mark of the true disciples of Christ is their being at all times exposed to persecution. It would be endless to quote all the passages of scripture in which this burden is universally laid upon good Christians. Contempt and reproach is their common lot, and often the most violent persecutions even to death itself. Wherever, therefore, the word of God is truly preached, you must expect to see persecution in one shape or other. On the contrary, wherever you see ease and luxury, and a quiet possession of worldly pleasures, there the truth cannot possibly be. For the world loveth only such as are worldly; and the favourers of the gospel can expect nothing in it from reason, and are promised nothing in it by scripture, but vexation and trouble. From this distinction again, your majesty, by the assistance of the above-mentioned rule, 'By their fruits you shall know them,' will be able to judge who are the true followers of Christ: wherever you observe persecution, there is more than a probability that the truth lies on the persecuted side. As for a notion which has been infused into your majesty, that the scriptures in the hands of the people might move them to rebellion, your majesty may judge of the falsehood of this likewise by the same rule: 'By their fruit you shall know them.' How is it possible that a book which inculcates obedience to magistrates with the greatest earnestness, can be the cause of sedition? The thing speaks itself, and discovers only how much their malice is at a loss for topics of invective.

"When King David sent ambassadors to the young king of the Ammonites to condole with him upon the death of his father, your majesty may remember what unadvised council was given to that rash prince. His counsellors put into his head, contrary to all reason, that David's messengers came only as spies, and that David certainly meant an invasion. The young king, upon this, without farther ceremony, wantonly shaved the heads of the ambassadors, and treated

them with other instances of contempt. But the following verses inform us how the affair ended. The destruction of the whole land, we read, was the consequence of the king's listening to imprudent counsel. Let not, great king, this fact find its parallel in English story. The ambassadors of a great prince are now making suit to you; the holy evangelists and apostles of Christ. Be upon your guard; and believe not the idle tales of those who would persuade you that these messengers of peace are coming to foment sedition in your land. Would your majesty know the true cause of this confederacy, as I may call it, against the word of God; examine the lives of those who are the leaders of it, and consider whether there may not be some private reasons inducing such persons to keep a book in concealment which cries out loudly against all kinds of vice. And if your majesty wants to know the source of rebellions, I think a much fairer one may be conjectured at than the use of an English Bible. For my own part, I have long been of opinion that a greater encouragement of all kinds of civil disorder could hardly have been invented, than the church-trade of pardons and indulgences: to which may be added the bad examples of the clergy, and the little care they are generally thought to take in the discharge of their duty.

"As for those who are now in question about your majesty's late proclamation, I am credibly informed, there is not one among them who hath not, in every respect, demeaned himself as a peaceable and good subject; excepting only this one case, in which they thought their religion and consciences concerned. In this particular, however, I excuse them not; nor will I take upon me entirely to defend the books for which they suffer; for, indeed, many of them I have never read: only this your majesty must give me leave to say, that it is impossible the many inconveniences can follow from these books, and especially from the scripture, which they would persuade mankind will follow. Accept, gracious sovereign, without displeasure, what I have written. I thought it my duty to mention these things to your majesty. No personal quarrel, as God shall judge me, have I with any man: I wanted only to induce your majesty to consider well what kind of persons you have about you, and the ends for which they counsel: indeed, great prince, many of them, or they are much slandered, have very private ends. God grant your majesty may see through all the designs of evil men, and be in all things equal to the high office with which you are entrusted! Wherefore, gracious king, remember yourself: have pity upon your own soul; and think that the day is at hand when you shall give account of your office, and of the blood that hath been shed by your sword. In the which day, that your grace may stand stedfastly, and not be ashamed, but be clear and ready in your reckoning, and have your pardon sealed with the blood of our Saviour Christ, which only serveth at that day, is my daily prayer to him who suffered death for our sins. The Spirit of God preserve you!"

Among those who especially served Henry in the business of his divorce, was Dr. Butts, his physician; who, from the slender accounts preserved of him in history, appears to have been a person of great honesty, learning, and humanity. Mr. Fox calls him "a singular good man, and a special favourer of good proceedings." This gentleman being sent to Cam-

bridge, began immediately to pay his court to the protestant party, from whom the king expected most unanimity in his favour. Among the first he made his application to Latimer, as a person most likely to serve him; begging that he would collect the opinions of his friends in the case, and do his utmost to bring over those of most eminence who were still inclined to the papacy. Latimer, who was a thorough friend to the cause he was to solicit, undertook it with his usual zeal, and accomplished the business so much to the satisfaction of the doctor, that when that gentleman returned to court, he took Latimer along with him; with a view, no doubt, to procure him some preferment answerable to his merit.

About this time a person was rising into power, who afterwards became Latimer's chief friend and patron—the great Lord Cromwell: a person in all respects so formed for command, that we admire him through his life as one of those great instruments which Providence often raises up and seems to inspire for some grand purpose. In Holland he was a hackney writer; in Italy a foot soldier. After spending a very dissipated youth in this irregular way, he returned home, and was taken into the service of Cardinal Wolsey, who in a short time made him his secretary. Under that minister he began to methodize the large fund of knowledge he had been treasuring up, and was soon valued by the cardinal, who was by no means ill served, as one of the ablest of his servants. The cardinal's fall was his rise: but he rose not, like most favourites, by betraying, but by defending his master. Wolsey had arrived at the full meridian of his glory, that critical point at which human grandeur begins to decline. The distressed minister was now at bay, pressed hard by a parliamentary inquiry. The king had withdrawn his favour from him, and all his dependants (those summer-flies of a great man's sunshine) began to shrink and die away. Cromwell alone, with a generosity almost unparalleled in history, boldly maintained his cause, and pleaded for him so forcibly before the commons, that if his ruin had not been a thing resolved on, he bid fair to avert it. Wolsey fell; but Cromwell's generosity was rewarded. The king was pleased with his behaviour, marked his abilities, from that time favoured, and soon employed him. His great talents quickly recommended him to the highest trusts, and his sovereign used his services almost implicitly.

As this eminent person was a friend to the reformation, he encouraged of course such churchmen as were inclined towards it. Among others, Latimer was one of his favourites, to whom he took all opportunities of showing his regard; and as the reformer had at that time no employment in London, his patron very soon obtained a benefice for him. This benefice was in Wiltshire, whither the conscientious clergyman resolved, as soon as possible, to repair, and keep a constant residence. His friend Dr. Butts, surprised at his resolution, did what he could to persuade him from it. "He was deserting (he told him) the fairest appearances of making his fortune. 'The prime minister,' says he, 'intends this only as an earnest of his future favours, and will certainly, in time, do great things for you. But it is the manner of courts to consider those as provided for who seem to be satisfied; and, take my word for it, an absent claimant stands but a poor chance among rivals who have the advantage of being present.'"

Thus the courtier advised. But Latimer was not a man on whom such arguments had any weight. He had no other notion of making his fortune than that of putting himself in a way of being useful. Great and good, were with him words of the same meaning. And though he knew his friend's advice was well meant, yet he knew at the same time that a man may as easily be deceived by the kindness of his friend as by the guile of his enemy. Besides, he was heartily tired of a court. He had yet seen little of the world, and was shocked to be introduced at once to a place where he saw vice in every shape triumphant, where factions raged, where all the arts of malice were practised, where vanity and folly prevailed, debauchery of manners, dissimulation, and irreligion; where he not only saw these things, but, what most grieved him, where he found himself utterly unable to oppose them; for he had neither authority, nor, as he thought, talents, to reclaim the great. He left the court therefore, and entered immediately upon the duties of his parish; hoping to be of some use in the world by faithfully exerting, in a private station, such abilities as God had given him.

Latimer's behaviour was suitable to his resolutions. He thoroughly considered the office of a clergyman, and discharged it in the most conscientious manner. Nor was he satisfied with discharging it in his own parish, but extended his labours throughout the county, where he observed the pastoral care most neglected; having for this purpose obtained a general license from the university of Cambridge. His preaching, which was in a strain wholly different from the preaching of the times, soon made him acceptable to the people; among whom, in a little time, he established himself in great credit. He was treated likewise very civilly by the neighbouring gentry; and at Bristol, where he often preached, he was countenanced by the magistrates.

The reputation he was thus daily gaining presently alarmed the orthodox clergy in those parts. Their opposition to him was first exhibited when the mayor of Bristol appointed him to preach there on an Easter Sunday. Public notice had been given, and all people were pleased: when suddenly there came out an order from the bishop of Bristol, prohibiting any one to preach there without his license. The clergy of the place waited upon Latimer, informed him of the bishop's order, and, knowing that he had no such license, "were extremely sorry that they were by that means deprived of the pleasure of hearing an excellent discourse from him." Latimer received their civility with a smile; for he had been apprized of the affair, and well knew that these were the very persons who had written to the bishop against him. Their opposition to him became afterwards more public. Some of his enemies, after mature deliberation, drew up articles against him, extracted chiefly from his sermons; in which he was charged with speaking lightly of the worship of saints; with saying that there was no material fire in hell; and that he would rather be in purgatory than in Lollard's tower. These articles, in the form of an accusation, were laid before Stokesley, bishop of London. This prelate immediately cited Latimer to appear before him. But instead of obeying the citation, he appealed to his own ordinary, thinking himself wholly exempt from the jurisdiction of any other bishop. Stokesley, upon this, making a private cause of it,

was determined at any rate to get him in his power. He applied therefore to Archbishop Warham, whose zeal was nearly of a temper with his own malice. The archbishop, being easily persuaded, cited Latimer to appear forthwith in his own court; where the bishop of London and some other bishops were commissioned to examine him. An archiepiscopal citation brought Mr. Latimer at once to a compliance. His friends would have induced him to leave the country; but their persuasions were in vain.

When he arrived in London he found a court of bishops and canonists assembled to receive him; where, instead of being examined, as he expected, about his sermons, the following paper was offered to him, which he was ordered to subscribe:—"I believe that there is a purgatory to purge the souls of the dead after this life—that the souls in purgatory are holpen with the masses, prayers, and alms of the living—that the saints do pray as mediators for us in heaven—that it is profitable for Christians to call upon the saints, that they may pray as mediators for us unto God—that pilgrimages and oblations done to the sepulchres and reliques of saints are meritorious—that they which have vowed perpetual chastity may not break their vow without the dispensation of the pope—that the keys of binding and loosing, delivered to Peter, do still remain with the bishops of Rome his successors, although they live wickedly, and are by no means nor at any time committed to laymen—that men may merit at God's hand by fasting, prayer, and other works of piety—that they which are forbidden of the bishop to preach, as suspected persons, ought to cease until they have purged themselves before the said bishop—that the fast which is used in Lent, and other fasts prescribed by the canons, are to be observed—that God, in every one of the seven sacraments, giveth grace to a man rightly receiving the same—that consecrations, sanctifyings, and blessings, by custom received into the church, are profitable—that it is laudable and profitable that the venerable images of the crucifix, and other saints, should be had in the church as a remembrance, and to the honour and worship of Jesus Christ and his saints—that it is laudable and profitable to deck and clothe those images, and to set up burning lights before them, to the honour of the said saints."

This paper being offered to Latimer, he read it over, and returned it again, refusing to sign it. The archbishop begged he would consider what he did. "We intend not," says he, "Mr. Latimer, to be hard upon you: we dismiss you for the present: take a copy of the articles; examine them carefully; and God grant that at our next meeting we may find each other in better temper."

At the next meeting, and at several succeeding ones, the same scene was acted over again: both sides continued inflexible. The bishops, however, being determined, if possible, to make him comply, began to treat him with more severity. Of one of these examinations he gives us the following account:—

"I was brought out," says he, "to be examined in a chamber where I was wont to be examined; but at this time it was somewhat altered. For whereas before there was a fire in the chimney, now the fire was taken away, and an arras hanged over the chimney; and the table stood near the chimney's end. There was, among these bishops that examined me, one with whom I have been very familiar, and whom

I took for my great friend, an aged man, and he sat next the table-end. Then among other questions he put forth one, a very subtle and crafty one; and when I should make answer, 'I pray you, Mr. Latimer,' said he, 'speak out, I am very thick of hearing, and here be many that sit far off.' I marvelled at this, that I was bidden to speak out, and began to misdeem, and gave an ear to the chimney; and there I heard a pen plainly scratching behind the cloth. They had appointed one there to write all my answers, that I should not start from them. God was my good Lord, and gave me answers, I could never else have escaped them."

The king being informed of the ill usage Latimer met with, most probably by the lord Cromwell's means, interposed in his behalf, and rescued him out of the hands of his enemies. Mr. Fox leaves it in doubt whether he was not at length prevailed upon to subscribe the bishops' articles; but Gilpin thinks it past dispute that he did not.

The unfortunate Anne Boleyn was at that time the favourite wife of Henry. She had imbibed from her youth the principles of the reformation, and continued still inclined to it. Whether she had been acquainted with Latimer before she met with him now at court, does not appear: she was extremely taken, however, with his simplicity and apostolic appearance, and mentioned him to her friends as a person, in her opinion, as well qualified as any she had seen to forward the reformation. One of her friends, and as much her favourite as any, was the lord Cromwell, who failed not, with his usual address, to raise Latimer still higher in her esteem. In short, the queen and the minister agreed in thinking that he was a man endowed with too many public virtues to be suffered to live obscurely in a private station, and joined in an earnest recommendation of him to the king for a bishopric. Such suitors would have carried a harder point: nor indeed did the king want much solicitation in his favour. It happened that the sees of Worcester and Salisbury were at that time vacant by the deprivation of Ghinuccii, and Campeggio, two Italian bishops, who fell under the king's displeasure upon his rupture with Rome. The former of these was offered to Latimer. As he had been at no pains to procure this promotion, he looked upon it as the work of Providence, and accepted it without much persuasion. Indeed he had met with so very rough a check already as a private clergyman, and saw before him so hazardous a prospect in his old station, that he thought it necessary, both for his own safety, and for the sake of being of more service in the world, to shroud himself under a little temporal power.

How he discharged his new office may easily be imagined. An honest conscience, which was his rule of conduct in one station, might be supposed such in another. But we are not left to conjecture, as all the historians of these times mention him as a person remarkably zealous in the discharge of his duty.

While his endeavours to reform were thus confined within his own diocese, he was called upon to exert them in a more public manner, having received a summons to attend the parliament and convocation. This session, which was in the year 1536, was thought a crisis by the protestant party. The renunciation of the pope's authority was a great step: a free inquiry into principles and practices, it was hoped, would follow; and a thorough reformation

could not then, it was thought, be at a great distance.

At the head of the protestant party was the lord Cromwell, whose favour with the king was now in its meridian, and who was the soul of every thing that was done. Next to him in power was Cranmer, archbishop of Canterbury; to which dignity he had been promoted upon the death of Warham, for his services in the matter of the divorce. He was a sincere promoter of reformation, and had abilities admirably adapted to such a work. He was a calm, dispassionate man; had a sound judgment, and a very extensive knowledge; but he had conversed little in the world, was very open to the attacks of malice and knavery, and was unacquainted with any methods but those of gentleness and persuasion, which indeed went a considerable way to promote his ends.

The higher orders of clergy having met together in convocation, their proceedings were opened, in the usual form, by a sermon, or rather an oration, spoken by Latimer. This task was assigned him by the archbishop of Canterbury, who knew no man so well qualified to lay before the clergy the corruptions of their order, and to rouse them, if possible, into a sense of their duty.

"We are met together," observed the bishop, "to consult the settlement of religion. A very important trust is committed to us, and I hope each of us hath brought with him a resolution to discharge it properly. And, indeed, great need is there that something should be done. Superstition hath had a long reign amongst us; nor can I yet believe its tyranny at an end, while I see our clergy still immersed in the corruptions of their forefathers; while I see even mitred advocates—it becomes me to speak plainly—still espousing this cause. What an inundation of folly, to give it the lightest appellation, is daily flowing from our pulpits! Is there an absurdity in the whole popish creed, is there a corruption in their whole ritual, which is not countenanced even at this very day amongst us? Purgatory is still believed; images are still worshipped. And, what is most grievous, when external observances abound, men begin to lay a stress upon them; and of course the necessity of a good life is superseded. Rouse yourselves, my brethren, rouse yourselves at these things. Consider that an amendment of all these evils is looked for at our hands. If the priest is remiss, what can be expected from the people? Imagine you hear, at the last day, the Almighty Judge thus rebuking us:—'A cry against you cometh up into my ears; a cry against your avarice, your exactions, your tyranny. I commanded you with industry and pains-taking to feed my sheep: instead of which, you do nothing but gluttonize from day to day, wallowing in indolence and pleasure. I commanded you to preach my commandments, and seek my glory: instead of which, you preach your own phantasies, and seek your own profit. I commanded that all people should diligently search my word: instead of which, it is your care to shut up the books of knowledge—too much reason have you to fear that, reading, the people may understand; and, understanding, they may learn to rebuke your slothfulness.'

"Since then, my brethren, the corruptions of the clergy are so manifest, and since so strict an account will be demanded of our conduct, let us at this time do something to show that we have the interest of religion at heart. Let us do something to wipe off

prejudices which I know have been conceived against some of us without-doors. And as our stations in life add a dignity to our characters, so let them inspire us with holiness and a zeal for the salvation of souls, in which alone consists the real dignity of a Christian bishop. All men know that we are here assembled, and with ardent looks expect the fruit of our consultation: Oh! my brethren, let us not disappoint their hopes. Lift up your heads therefore, my lords, look around and examine what things want reformation in the church of England. Is it so hard to find out corruption and abuses among us? What is done in the Arches? Is there nothing there that wants amendment? Is business speedily despatched? or are suitors entangled in forms, disappointed, vexed, and rifled? Or if all things be well there, what think you of the bishops' consistories? Is vice sought out and corrected? or is it made a shameful handle for bribery and extortion?

"What think you, my brethren, of the ceremonies of the church? Are they simple and significant? or are they rather calculated to offend weak consciences, and to encourage superstition among the vulgar?"

"Do you see nothing amiss in that multiplicity of holidays with which our calendar abounds? Is true religion, think you, more promoted by them, or idleness and debauchery?—What think you of images and relics, to which so many painful pilgrimages are made from every corner of the kingdom? Do you observe no priestcraft in these things, no gainful frauds, no profitable impositions?—What think you of our liturgy? Is it unexceptionable in all its parts? or if it was, is it defensible by scripture that the offices of the church should be performed in an unknown tongue?—Lastly, my brethren, what think you of masses, and of that beneficial commerce in this commodity which has been carried on for so many years?—Consider these things, I beg of you, my lords; and if there be nothing to be corrected abroad, let each of us make one better. If there be nothing either abroad or at home that wants amendment, be cheerful, my lords, and merry; and as we have nothing else to do, let us at least reason the matter how we may grow richer: let us fall to some pleasant conversation, and then go home with a full resolution to live merrily here, for we have nothing to expect hereafter. Let us not say with St. Peter, 'Our end approacheth:' this is a melancholy note. But let us say with the evil servant, 'My Lord delayeth his coming;' and let us begin to 'beat our fellows, and eat and drink with the drunken.' And what can be interpreted beating our fellows, if not allowing their corruptions? What can be interpreted eating and drinking with the drunken, if not spending our lives in indolence and pleasure? But God will come in a day when we look not for him, and in an hour when we are not aware. He will call us to a severe account, and all our worldly policy will end in despair. Let us then, my brethren, in time be wise: let us be wise, if not for others, at least for ourselves. Let us wean our hearts from worldly things. Let us divest ourselves of each self-interested thought; and let every man in this assembly resolve to aim at nothing in his counsels but the glory of God and the happiness of man."

The forms of their meeting were scarce settled when the two parties began to attack each other with great bitterness, and in the lower house a bill was drawn up, the result of much secret caballing, which

contained a catalogue of sixty-seven heretical opinions. Many of these were the tenets of Wicliffe; the rest of modern reformers. This bill was sent up into the higher house, where it met with many zealous advocates. Here it was agitated with animosity enough on both sides; each party resolving in the first contest to make the other acquainted with its full strength. In the midst of the debate, which had now lasted many days, each growing warmer than the last, the lord Cromwell entered the house, and addressing himself to the bishops, required them in the king's name to put an end to their opposition. This message instantly quenched the flame, and gave the reformers the first intimation of the king's good intentions towards them.

Some time after this, by the instigation of the bishop of Winchester, Latimer was accused before the king of preaching a seditious sermon. The sermon was preached at court, and the preacher, according to his custom, had been unquestionably severe against whatever he observed amiss. The king had called together several of the bishops with a view to consult them upon some points of religion. When they had all given their opinions, and were about to be dismissed, the bishop of Winchester kneeled down before the king, and accused the bishop of Worcester in the above-mentioned manner, showing how his sermon, which he called a libel against the king and his ministers, tended to alienate the people from their prince. The bishop being called upon by the king with some sternness to vindicate himself, was so far from denying or even palliating what he had said, that he boldly justified it; and, turning to the king with that noble unconcern which a good conscience inspires, made this answer:—"I never thought myself worthy, for I never sued to be a preacher before your grace; but I was called to it, and would be willing, if you mislike me, to give place to my betters; for I grant there be a great many more worthy of the room than I am. And if it be your grace's pleasure to allow them for preachers, I could be content to bear their books after them. But if your grace allow me for a preacher, I would desire you to give me leave to discharge my conscience, and to frame my doctrine according to my audience. I had been a very dolt indeed to have preached so at the borders of your realm as I preach before your grace." The greatness of this answer baffled his accusers' malice; the severity of the king's countenance changed into a gracious smile, and the bishop was dismissed with that obliging freedom which this monarch never used but to those whom he esteemed.

The parliament which had been summoned to meet on the 28th of April, having now sat a week, and being ready to enter upon business, the lord chancellor on the 5th of May informed the lords from the king that "his majesty had with extreme uneasiness observed the distracted condition of his subjects with regard to religion; that he had nothing so much at heart as to establish an uniformity of opinion amongst them, and that he therefore desired the lords would immediately appoint a committee to examine the several opinions that prevailed, and to fix upon certain articles for a general agreement." It was the manner, it seems, of those times to use no ceremony in fixing a standard for men to think by, and to vary that standard with as little ceremony as new modes of thinking prevailed. The parliament, therefore, without any difficulty complied; and named for a

committee, the lord Cromwell, the two archbishops, and the bishops of Worcester, Ely, Durham, Bath and Wells, Carlisle, and Bangor.

Men of so opposite a way of thinking were not likely to agree. After eleven days therefore spent in warm debates, nothing was concluded. This was no more than was expected, and made room for the farce which followed; for on the twelfth day the duke of Norfolk, according to the plan which had been without doubt laid down, acquainted the lords that "he found the committee had yet done nothing, that eleven days had been already spent in wrangling, and that he saw no possibility of coming to an agreement in that way. He begged leave, therefore, to offer to their lordships' consideration some articles which he himself had drawn up, and which he desired might be examined by a committee of the whole house." He then read the articles, which were these:

1. That in the sacrament of the altar after the consecration, there remained no substance of bread and wine, but the natural body and blood of Christ. 2. That vows of chastity ought to be observed. 3. That the use of private masses should be continued. 4. That communion in both kinds was not necessary. 5. That priests might not marry. 6. That auricular confession should be retained in the church.

The act of the six articles (for so it was named) was no sooner published than it gave an universal alarm to all the favourers of reformation. The protestants every where cried out, "their prospect of happiness was now over; they could not now expect a toleration, for they plainly saw that a sword was put into the hands of their enemies to destroy them; while both parties joined in exclaiming that it was difficult to say what the king intended, for it was neither safe to be of one profession nor the other: the act of supremacy condemned the papist, and the act of the six articles the protestant." The bishop of Worcester was among those who first took offence at these proceedings; and as he could not give his vote for the act, he thought it wrong to hold any office in a church where such terms of communion were required. He resigned his bishopric therefore, and retired into the country.

Upon Cromwell's fall the persecution against the protestants broke out in earnest. The duke of Norfolk and the bishop of Winchester, who were the principal instruments in the ruin of the late minister, were now at the head of the popish party; and the authority of the former giving credit to the crafty counsels of the latter, together they had the management of all things in their hands. Latimer, among others, felt the loss of his great patron. Gardiner's emissaries soon found him out in his concealment, for he was in London; and something that somebody had somewhere heard him say against the six articles being alleged against him, he was sent to the Tower. It is probable that nothing formal was brought against him. He suffered, however, through one pretence or other, a severe imprisonment during the remainder of King Henry's reign.

In the spring of the year 1547 King Henry died, and was succeeded by his son Edward VI. This prince came a minor to the crown, and was left by his father's will in the hands of sixteen governors. These were at first equal in power, but dividing, as men commonly do in such circumstances, into factions, the earl of Hertford, soon after created duke of Somerset, being the king's uncle, was raised above

the rest, with the title of protector of the kingdom. This revolution was matter of great joy to the protestant party, for the protector was generally known to be a favourer of the reformation. He was besides a wise and an honest man, and his want of spirit and resolution was thought to be amply recompensed by his moderation and extreme popularity.

The protestant interest was still further strengthened by the addition of Archbishop Cranmer's counsels, which had now all that weight which the protector's authority could give them; but on the other hand, Gardiner, Tunstall, and Bonner, who was now bishop of London, set themselves at the head of the opposite party, and opposed the protector as much as they durst: not indeed openly and directly, for they presently observed the turning of the wind, and had shifted their sails with great quickness; but thwarting the means rather than the measures, they opposed him with that plausible dissimulation which men dexterous in business can easily assume. Their common language was, that "however necessary these alterations were, they were certainly at this time highly improper; that a minority was not a season for innovations; that it was enough to keep things quiet till the king came of age, and that abuses might then be enquired into and remedies applied, with all that authority which the full regal power could give."

Their opposition, however, had little effect; and many changes in religion were projected, and some carried into execution, with as much despatch as affairs of such importance would admit. The act of the six articles was repealed, images were removed out of the churches, the liturgy was amended, and all ministers were confined to their parish churches. And what recommended these changes to sober men of all distinctions was, the great moderation and spirit of candour which accompanied them throughout. Two acts of blood indeed stand upon record, a most shameful and indelible stain upon the annals of that administration!

Immediately upon the change of the government, Latimer and all others who were imprisoned in the same cause were set at liberty; and the bishop, whose old friends were now in power, was received by them with every mark of affection.

The parliament having settled every thing of national concern, and applying itself to private business, sent up an address to the protector, begging him to restore Latimer to the bishopric of Worcester. The protector was very well inclined to gratify the commons, and proposed the resumption of his bishopric to Latimer, as a point he had very much at heart; but the other persevered in his negative, alleging his great age and the claim he had from thence to a private life.

Latimer having rid himself entirely of all entreaty on this head, accepted an invitation from his friend Archbishop Cranmer, and took up his residence at Lambeth, where he led a very retired life. His chief employment was to hear the complaints and to redress the injuries of poor people; and his character for services of this kind was so universally known, that strangers from every part of England would resort to him, vexed either by the delays of public courts and offices, which were at that time exceedingly out of order, or harassed by the oppressions of the great. "I cannot go to my book," says he, giving an account of these avocations, "for poor

folks that come unto me, desiring that I will speak that their matters may be heard. Now and then I walk in my lord of Canterbury's garden, looking in my book : but I can do but little good at it ; for I am no sooner in the garden and have read a little while, but by and by cometh some one or other knocking at the gate. Anon cometh my man and saith, ' Sir, there is one at the gate would speak with you.' When I come there, then it is some one or other that desireth me that I will speak that his matter may be heard ; or that telleth me he hath lain this long time at great costs and charges, or that he cannot once have his matter come to an hearing."

In these employments he spent more than two years, interfering as little as possible, during that whole time, in any public transaction ; though no doubt, if he had pleased, he might have had great weight, at least in ecclesiastical affairs. But besides the distrust he had of his own judgment, he was a man of such exactness in his principles and practice, that he could scarce have made those allowances for men and measures which prudent counsellors must make in corrupt times, and was backward therefore in drawing upon himself such engagements as might lead him, more or less, into a deviation from truth. Latimer was at this time engaged in assisting Archbishop Cranmer to compose the homilies, which were set forth by authority in the first year of King Edward.

During the reign of Edward, Latimer was appointed "court preacher." In his first sermon, which is addressed chiefly to the king, he opens his commission :—"The preacher," says he, "cannot correct the king if he be a transgressor, with the temporal sword, but with the spiritual ; fearing no man, setting God only before his eyes, under whom he is a minister to root up vice. Let the preacher, therefore, never fear to declare the message of God. And if the king will not hear, then let the preacher admonish him, pray for him, and so leave him unto God." He then proceeds to point out to the king his duty, in several instances.

In his second sermon he lashes the clergy :—"It is a marvel," says he, "if any mischief be in hand if a priest be not at one end of it. I will be a suitor to your grace, to give your bishops charge ere they go home upon their allegiance to look better to their flock ; and if they be found negligent, out with them. I require it in God's behalf ; make them quondams, all the pack of them. Your majesty hath divers of your chaplains well-learned men and of good knowledge to put in their place ; and yet you have some that are bad enough hangers-on of the court, I mean not these. But if your majesty's chaplains, and my lord protector's, be not able to furnish their places, there is in this realm, thanks be to God, a great sight of laymen, well learned in the scriptures, and of virtuous and godly conversation, better learned than a great sight of us the clergy. This I move of conscience to your grace. And let them not only do the function of bishops, but live of the same ; and not, as in many places, that one should have the name and another the profit. What an enormity is this, for a man to serve in a civility, and have the profit of a provostship, and a deanery, and a parsonage ! But I will tell you what is like to come of it : it will bring the clergy shortly into very slavery. But I fear one thing, that for saving a little money you will put chantry priests into benefices. Christ bought souls

with his blood, and will you sell them for gold and silver ? I would not have you do with chantry priests as was done with abbots ; for when their enormities were first read in the parliament they were so abominable that there was nothing but 'Down with them ;' but within a while after the same abbots were made bishops, as there be some of them yet alive, to save their pensions. O lord ! think you that God is a fool, and seeth not ?"

Afterwards, warning the king against flatterers, he tells him that God says, "If the king shall do his will he shall reign long, he and his children." "Wherefore," says he, "I would have your grace remember this, and when any of these flatterers and flibber-gibbers another day shall come and claw you by the back, and say, 'Sir, trouble not yourself ; what should you study for ? why should you do this or that ?' Your grace may answer them thus, 'What, sirrah ! I perceive you are weary of us. Doth not God say in such a place, that a king should fear God that he may reign long ? I perceive now that thou art a traitor.' Tell him this tale once, and I warrant you he will come no more to you."

He then speaks of the delay of justice and the abuses in the law :—"I hear of many matters," says he, "before my lord protector and my lord chancellor that cannot be heard. I must desire my lord protector's grace to hear me in this matter ; and that your grace would likewise hear poor men's suits yourself. Put them to none other to be heard ; let them not be delayed. The saying is now, that money is heard every where. If a man be rich, he shall soon have an end of his matter. Others are fain to go home with tears, for any help they can obtain at any judge's hand. Hear men's suits yourself, I require you in God's behalf ; and put them not to the hearing of these velvet coats and upskips. Now a man can scarce know them from ancient knights of the country. A gentlewoman came to me, and told me that a certain great man keepeth some lands of hers from her ; and that in a whole year she could but get one day for the hearing of her matter ; and on that day the great man brought on his side a sight of lawyers for his counsel, and that she had but one man of the law, and the great man so shakes him that he cannot tell what to do ; so that, when the matter came to the point, the judge was a mean to the gentlewoman that she would let the great man have a quietness in her land. I beseech your grace that you will look to these matters. Hear them yourself. View your judges, and hear poor men's causes. And you, proud judges, hearken what God saith in his holy book : 'Hear the poor,' saith he, 'as well as the rich.' Mark that saying, thou proud judge. The devil will bring this sentence at the day of doom. Hell will be full of such judges, if they repent not and amend. They are worse than the wicked judge Christ speaketh of ; for they will neither hear men for God's sake, nor fear of the world, nor importunity, nor any thing else. Yea, some of them will command them to ward if they be importunate. I heard say, that when a suitor came to one of them, he said, 'What fellow is it that giveth these folks counsel to be so importunate ? He should be committed to the ward.' Marry, Sir, commit me then ; it is even I that gave them that counsel. And if you amend not I will cause them to cry out upon you still, even as long as I live."

When Mary came to the crown Latimer was in the country, where he continued preaching in his

usual manner, unaffected by the danger of the times; but he did not long enjoy this liberty. The bishop of Winchester, who had proscribed him with the first, sent a messenger to cite him before the council. He had notice of this design some hours before the messenger's arrival; but he made no use of the intelligence. Like other eminent reformers of that time, he chose rather to meet than avoid a question; thinking that he could not give a nobler testimony to the uprightness of his conscience than by showing the world it was a sufficient security to him in whatever dangers it might involve him. The messenger therefore found him equipped for his journey; at which, expressing his surprise, Latimer told him "that he was ready to attend him to London, thus called upon to answer for his faith, as he ever was to take any journey in his life; and that he doubted not but that God, who had already enabled him to stand before two princes, would enable him to stand before a third." The messenger then acquainting him that he had no orders to seize his person, delivered a letter and departed.

Latimer, on opening the letter and finding it to contain a citation from the council, resolved to obey it. He set out, therefore, immediately for London. As he passed through Smithfield, where heretics were usually burnt, he said cheerfully, "This place hath long groaned for me." The next morning he waited upon the council, who, having loaded him with many severe reproaches, sent him to the Tower. This was but a repetition of a former part of his life; only he now met with harsher treatment, and had more frequent occasion to exercise his resignation; which virtue no man possessed in a larger measure. Nay, even the usual cheerfulness of his disposition did not now forsake him; of which we have one instance still remaining.

In the mean time the bishop of Winchester and his friends held frequent councils on public affairs, and endeavoured to impose upon the world by making it believe that reason as well as power was on their side. With this view it was resolved, that when the convocation met the argument between the papists and protestants should be examined. But Gardiner was a better politician than to commit a matter of such consequence to a fair debate. He had provided for the success, therefore, by modelling a convocation to his mind, in which only six protestant divines got admittance. By this junctio points of divinity and articles of faith were settled.

A public disputation was afterwards appointed to be held at Oxford, where Latimer and his companions were closely confined in the common prison, deprived of every comfort. How free the disputation was likely to be, they might easily imagine, when they found themselves denied the use even of books, and pen and ink. Their prison hours, however, were not spent in vain lamentations; their religion raised them above all human sufferings and all mortal fears.

Their chief resource was in prayer, in which exercise they spent great part of every day. Mr. Latimer, particularly, would often continue kneeling till he could not rise without help. The principal subject of his prayers was, that God would enable him to maintain the profession of his religion to the last; that God would again restore his gospel to England, and preserve the princess Elizabeth to be a comfort to this land.

At the meeting Bishop Latimer was brought in like a primitive martyr in his prison attire. He had a cap upon his head buttoned under his chin, a pair of spectacles hanging at his breast, a New Testament under his arm, and a staff in his hand. He was almost spent with pressing through the crowd; and the prolocutor ordering a chair to be brought for him, he walked up to it, and saying he was a very old man, sat down without any ceremony. The articles were then tendered to him, which he denied. The prolocutor, upon this, telling him that he must dispute on the Wednesday following, the old bishop, with as much cheerfulness as he would have shown upon the most ordinary occasion, shaking his palsied head, answered smiling, "Indeed, gentlemen, I am just as well qualified to be made governor of Calais." He then complained that he was very old, and very infirm; and said that he had the use of no book but of that under his arm; which he had read seven times over deliberately, without finding the least mention made of the mass. In this speech he gave great offence, by saying in his humorous way, alluding to transubstantiation, that he could find neither the marrow-bones nor the sinews of the mass in the New Testament. Upon which, the prolocutor cried out with some warmth, that he would make him find both: and when Bishop Latimer, recollecting himself, was going to explain his meaning in that expression, he was not suffered to speak.

Latimer having determined not to dispute in the convocation, was found guilty of the crimes charged against him, and nothing remained but to pass sentence. On the Friday following, therefore, the commissioners, seated in their accustomed form, sent for the three bishops to St. Mary's church, where, after some exhortations to recant, the prolocutor first communicated, and then condemned them. As soon as the sentence was read, Bishop Latimer lifting up his eyes, cried out, "I thank God most heartily that he hath prolonged my life to this end!"

These eminent persons being thus convicted of heresy, and delivered over to the secular arm, various were the opinions of men concerning them. Some thought the queen was inclined to mercy, and it was confidently reported that the three bishops would be removed indeed from interfering publicly with religion; but that, very liberally pensioned, they should in other respects have no cause to complain: while some again as positively affirmed, their measure would be very hard; as the queen, it was well known, would never forgive the hand they had had in her mother's divorce, and the separation from the church of Rome.

The archbishop of Canterbury, and the two bishops, Ridley and Latimer, were in prison, unmolested for nearly three quarters of a year; and they who were acquainted with the bishop of Winchester's maxims, and knew that he had the direction of affairs, were surprised at this lenity, and at a loss for the reason of it.

In answer to this popular inquiry it was given out, "That an oversight had been committed in condemning these bishops, before the statutes, on which they were condemned, had been revived; that a commission therefore from Rome was necessary for a new trial; that this had been sent for; but the delays of that court were notorious."

A new commission for the trial of the protestant bishops was afterwards formed, and great were the preparations in the meantime at Oxford to receive the com-

missioners. The two bishops were called before them. The bishop of London was first questioned. Then Bishop Latimer was brought in, to whom Lincoln, who was a polite and eloquent man, spoke to this effect:—

"This parchment, Mr. Latimer, contains a commission from my lord cardinal, under his holiness, directed to me and these two reverend prelates, by which we are enjoined to examine you upon some points of faith in which your orthodoxy is doubted: we are required to press you to revoke your errors, if you still hold these pernicious opinions; and to cut you off from the church if you persist, and give you up to the civil power.

"Consider, Mr. Latimer, it is not more than twenty years since these novel opinions got footing amongst us. Till then the authority of the church of Rome was universally acknowledged. By what means it was first questioned in England, and on what unjustifiable motives a schism was occasioned, I might easily show at large—but I spare the dead. Let it suffice, that the nation, having long sought rest in a multiplicity of new inventions, and found none, hath again submitted itself to its mother-church; and by one unanimous act, the result of penitence and contrition, hath atoned for its apostacy. Why then should you oppose the unanimity of a whole people? Confess your fault, and unite your penitence with theirs. It hath been a common error, let it be a general humiliation. Among such numbers the shame of each individual will be lost. Come then in peace, for we will kindly receive you into the bosom of that church, whose authority, derived from the first apostle, depends on scriptures, fathers, and councils; that church, within which there can be no error, and without which there can be no salvation.

"Let me then, in the spirit of charity, beseech you to accept this offered mercy. Let me even implore you not to reduce us to the fatal necessity of cutting you off from the church, and leaving you to the vengeance of the civil power. Spare yourself: accelerate not your death: consider the condition of your soul: remember, it is the cause, not the death, that maketh the martyr. Humble yourself: captivate your understanding: subdue your reason: submit yourself to the determination of the church: and for God's sake, force us not to do all we may do; but let us rest in what we have done."

Here the bishop pausing, Latimer stood up, and thanked him for his gentle treatment of him; but at the same time assured him how vain it was to expect from him any acknowledgment of the pope. He did not believe, he said, that any such jurisdiction had been given to the see of Rome, nor had the bishops of Rome behaved as if their power had been from God. He then quoted a popish book, which had lately been written, to show how grossly the church of Rome would misrepresent scripture: and concluded with saying that he thought the clergy had nothing to do with temporal power, nor ought ever to be entrusted with it; and that their commission from their master, in his opinion, extended no farther than to the discharge of their pastoral functions.

The charges now brought against Latimer were much the same as those on which he had been brought to dispute the year before, and he answered them all as he then did; at the same time protesting, which protestation he begged might be registered, that, notwithstanding his answers to the

pope's commissioners, he by no means acknowledged the authority of the pope. The notaries having taken down his answers and protestation, the bishop of Lincoln told him, "That as far as he could, he would show lenity to him; that the answers which he had now given in should not be prejudicial to him; but that he should be called upon the next morning, when he might make what alterations he pleased; and that he hoped in God that he would then find him in a better temper." To this the old bishop answered, "That he begged they would do with him then just what they pleased, and that he might not trouble them, nor they him, another day; that as to his opinions, he was fixed in them; and that any respite would be needless."

Accordingly, the next morning, the commissioners sitting in the same form, he was brought in; and the bishop of Lincoln told him that, although he might justly have proceeded to judgment against him the day before, especially as he himself had required it, yet he could not help postponing it one day longer, "In hopes," said he, "sir, that you might reason yourself into a better way of thinking, and at length embrace, what we all so much desire, that mercy which our holy church now, for the last time, offereth to you."

"Alas! my lord," answered Latimer, "your indulgence is to no purpose. When a man is convinced of a truth, even to deliberate is unlawful. I am fully resolved against the church of Rome; and once for all, my answer is, I never will embrace its communion. If you urge me farther, I will reply as St. Cyprian did on a like occasion. He stood before his judges upon a charge of heresy; and being asked which were more probably of the church of Christ, he and his party, who were every where despised, or they, his judges, who were every where in esteem? he answered resolutely, 'That Christ had decided that point, when he mentioned it as a mark of his disciples, that they should take up their cross and follow him.' If this then, my lords, be one of the characteristics of the Christian church, whether shall we denominate by that name the church of Rome, which hath always been a persecutor, or that small body of Christians which is persecuted by it?"

"You mention, sir," replied Lincoln, "with a bad grace, your cause and St. Cyprian's together: they are wholly different."—"No, my lord," answered the old bishop, "his was the word of God, and so is mine."

The notaries having closed the books, the bishop of Lincoln, who through the whole of the trial had acted with as much humanity as was possible, once more pressed Latimer in a very pathetic manner to retract his opinion; but being answered by a steady negative, he at length passed sentence upon him.

The bishop then asked him whether there laid any appeal from this judgment? "To whom," said the bishop of Lincoln, "would you appeal?" "To the next general council," answered Latimer, "that shall be regularly assembled." "It will be a long time," replied the bishop, "before Europe will see such a council as you mean." Having said this, he committed Latimer to the custody of the mayor and dissolved the assembly. On the same day likewise sentence was passed on the bishop of London.

The 16th of October, about a fortnight from this time, was fixed for their execution. On the north side of the town, near Baliol college, a spot of ground was chosen for the place of execution. Hither on

the 16th the vice-chancellor of Oxford, and other persons of distinction appointed for that purpose, repaired early in the morning, and the lord mayor having drawn his guard round the place, the prisoners were sent for. The bishop of London first entered this dreadful circle accompanied by the mayor; soon after Bishop Latimer was brought in. The former was dressed in his episcopal habit, the latter as usual in his prison attire. This difference in their dress made a moving contrast and augmented the concern of the spectators; the bishop of London showing what they had before been, Bishop Latimer what they were now reduced to.

While they stood before the stake, about to prepare themselves for the fire, they were informed they must first hear a sermon; and soon after Dr. Smith ascended a pulpit prepared for that purpose, and preached from these words of St. Paul, "Though I give my body to be burned, and have not charity, it profiteth me nothing!" In his discourse he treated the two bishops with great inhumanity, aspersing both their characters and tenets.

The sermon being ended, the bishop of London was beginning to say something in defence of himself, when the vice-chancellor, starting up suddenly from his seat, ran towards him, and stopping his mouth with his hand told him, "That if he was going to recant he should have leave; but he should be permitted in nothing farther." The bishop thus checked, looking round with a dignified air, exclaimed, "We commit our cause then to Almighty God." Immediately an officer stepped up and acquainted them, "That at their leisure they might now make ready for the stake."

The great body of the spectators burst into tears when they saw these two venerable men preparing for death. Latimer having thrown off the old gown which was wrapped about him, appeared in a shroud prepared for the purpose; and "whereas before," says Mr. Fox, "he seemed a withered and crooked old man, he now stood bolt upright, as comely a father as one might lightly behold." Being thus ready, he recommended his soul to God, and delivered himself to the executioner, saying to the bishop of London, "We shall this day, my lord, light such a candle in England as shall never be extinguished." But we must draw a veil over the conclusion of this shocking scene, and need only add that he went through his last sufferings with that composure and firmness of mind which nothing but a sound faith and a good conscience could produce. Such was the end of Hugh Latimer, bishop of Worcester, one of the leaders of that glorious army of martyrs who introduced the reformation into England.

LATOUR D'AUVERGNE-CORRET, THEOPHILUS DE, one of the bravest soldiers mentioned in military history. He was born in 1743, at Carhaix, in the department of Finistère, in Brittany, and was aide-de-camp to the duke de Crillon at the siege of Mahon. When the revolution broke out he was among the first to rally round its standard, and distinguished himself among 8000 grenadiers in the army of the Pyrenees. Higher appointments were offered to him, but he always declined, declaring that he was only fit to command a company of grenadiers. His corps generally made the van-guard, and was called the infernal column. After the peace of Basle he fell into the hands of the British, and was prisoner for some time in England. After his exchange he

occupied himself with literary labours, and in 1799 again bore arms instead of a son of his friend Lebrun, fought under Massena in Switzerland, and fell at Newburg in 1800, while attached to the army of the Rhine, having been not long before named first grenadier of France by the first consul. A monument was erected on the spot where he fell, and the inscription on it was: "Died on the field of honour."

LATOUR-MAUBOURG, VICTOR FAY, MARQUIS DE, born at Vivarais. This brave French officer was born in 1756, and was in the body-guard of the king at the breaking out of the revolution, but emigrated in 1792. Having returned in consequence of the amnesty, he entered the service of the republic, and distinguished himself in the campaigns of Egypt, Austria, Prussia, and Spain. His services at Austerlitz, Friedland, and on other occasions, procured him the title of count of the empire, and general of division. In 1812 he was employed against Russia, and at the battle of Leipsic lost a leg. Louis XVIII. created him peer of France in 1814. During the hundred days he remained in retirement, and after the second restoration was appointed commander of the order of St. Louis, and knight of the order of the Holy Ghost. In 1817 the portfolio of the war department was entrusted to him; but his opinions were too liberal to satisfy men who made his *jambe illégitime* a matter of reproach to him, and in 1821 he was obliged to retire from public life.

Charles César Fay, brother of the preceding born in 1758, was a member of the estate of nobles in 1789, and among the first to join the third estate when it declared itself the national assembly. He advocated constitutional doctrines, and served under Lafayette, whose captivity he shared. In 1801 he was a member of the corps législatif, in 1806 of the senate, and after the restoration, in 1814, was created a peer of France. Having sat in the chamber of peers during the hundred days, he lost the peerage on the second restoration, but received it again in 1819.

LATREILLE, PETER ANDREW, a very distinguished and active naturalist, who was born in 1762, at Brives, department Corrèze. From early youth he devoted himself to the study of natural history, and was professor of zoölogy in the museum of natural history at Paris, member of the academy of the legion of honour, &c. Of his works on natural history, the most important are, "Précis des Caractères Génériques des Insectes," "Histoire Nat. des Salamandres de France," "Histoire Nat. des Singes, faisant Partie de celle de Quadrupèdes de Buffon," "Essai sur l'Histoire des Fourmis, &c." "Histoire Nat. des Reptiles, faisant Partie du Buffon de M. Castel," "Genera Crustaceorum et Insectorum," "Considérations Gén. sur l'Ordre Naturel des Animaux, composant les Classes des Crustacées, des Arachnides et des Insectes," "Mémoires sur Divers Sujets de l'Hist. Nat. des Insectes, de Géographie Ancienne et de Chronologie," "Familles Naturelles du Règne Animal." Latreille was also one of the most active contributors to the "Nouv. Dictionnaire d'Histoire Nat.," to the "Annales du Muséum d'Hist. Nat.," and other works.

LATTAIGNANT, GABRIEL CHARLES, ABBE DE, a poet, the memory of whose songs has not yet perished in France, and who rendered himself known by the popular opera of "Fanchon." He was born in Paris towards the end of the seventeenth century. He

was canon at Rheims, and counsellor of the parliament at Paris; but united great gaiety with his serious occupations. After having taken part in all the pleasures of life, he retired to a monastery and died in 1779. His poems were published in four volumes, which were followed after his death by his songs and writings not before printed.

**LATUDE, HENRI MAZERS DE**, born in 1724 at Montagnac, in Languedoc. This French officer was imprisoned in the Bastille in the reign of Louis XV.; because, in order to gain the favour of Madame de Pompadour, he had persuaded her that an attempt was to be made on her life by a box containing the most subtle poison. The box actually arrived, but contained nothing but ashes, sent by Latude himself. His repeated attempts to escape rendered his confinement more rigorous, and he remained in prison thirty-five years. He was delivered from his confinement in 1779. He then wrote his memoirs, which became a formidable weapon in the hands of the revolutionary party. The national assembly decreed him a pension, which was afterwards, however, withdrawn. The heirs of Amelot and Madame de Pompadour were sentenced to make him indemnification. He died in 1804, eighty years old.

**LAUD, WILLIAM**.—This divine was born in 1573, and received his education at St. John's college, Oxford, of which he became a fellow in 1593. He took priest's orders in 1601, and the following year preached a divinity lecture, in which he maintained the continual visibility of the church of Rome until the reformation, which doctrine being disapproved by Doctor Abbot, master of University college, the foundation of that animosity was laid which ever after subsisted between them. In 1608 he was made chaplain to Neile, bishop of Rochester, who gave him the rectory of Cuckstone in Kent; and he soon after preached his first sermon before James I. In 1611 he became president of his college and one of the king's chaplains, and in 1617 accompanied James I. to Scotland, to aid him in his attempt to bring the church of Scotland to a uniformity with that of England. In 1620 he was installed a prebend of Westminster, and the next year nominated to the see of St. David's. About this time James took upon himself to interdict the introduction into the pulpit of the doctrines of predestination, election, the irresistibility of free grace, or of any matter relative to the powers, prerogatives, and sovereignty of foreign princes. These measures being attributed to the counsels of Bishop Laud, the calvinistic or puritanic party were much incensed at his conduct. On the accession of Charles I., Laud's influence, by the countenance of Buckingham, became very great; and he was ordered to furnish the king with a list of all the divines in the kingdom, against whose names he marked O. or P., to signify orthodox or puritan.

In 1626 he was translated to the see of Bath and Wells, and in 1628 to that of London. On the sequestration of Archbishop Abbot, in consequence of having accidentally shot a game-keeper, Laud was appointed one of the commissioners for exercising the archiepiscopal jurisdiction; and being a zealous supporter of the hated administration of Buckingham, became in the highest degree unpopular. On the assassination of that favourite by Felton, Bishop Laud, suspecting that some members of parliament might be privy to the deed, prevailed on the king to send to the judges for their opinion, "whether by law Felton

might not be racked?" Bishop Laud was also the most active member of the high commission court, the arbitrary and severe proceedings of which were so justly odious to the nation. In 1630 he was elected chancellor of the university at Oxford, to which he was a great benefactor, and which he enriched with an invaluable collection of manuscripts, in a great number of languages, ancient, modern, and oriental. In 1633 he attended Charles into Scotland, who went there to be crowned; and on his return he was promoted to the see of Canterbury, become vacant by the death of Archbishop Abbot. On the same day an agent from the court of Rome came to him privately, and offered him a cardinal's hat—a fact which shows how strongly he was suspected of a predilection for the church of Rome. He, however, declined the proposal, feeling, as he expresses himself in his diary, "that something dwelt within him which would not suffer that till Rome were other than it is."

In 1634 he commenced a metropolitan visitation, in which the rigour of his proceedings to produce conformity was exceedingly unpopular. In 1635 he was appointed one of the commissioners of the treasury, in which situation he remained a year. The prosecution of Prynne, Burton, and Bastwick, for libel, took place in 1632, the odium of which and the severe sentences that followed, rested principally upon him. In 1637 he procured a decree of the star chamber, limiting the number of printers, and forbidding the printing of any book not licensed by the bishop of London or archbishop of Canterbury for the time being, or by the chancellor and vice-chancellor of the universities. Catalogues of all books from abroad were also to be furnished to the same authorities; and so arbitrary was the conduct of Charles's ministers at this period, that numbers both of clergy and laity sought to quit the country. A proclamation was issued to restrain them unless certificated to be conformable to the discipline of the church. After a lapse of twelve years, a parliament was convened in April 1640; the commons commenced by appointing committees of religion and grievances, on which it was suddenly dissolved after sitting only three weeks. All sorts of means were then put in force to raise supplies, by loan, benevolence, ship money, &c.; those who refused payment were fined and imprisoned by the star-chamber or council table. A clerical convocation was also authorized by the king to sit independent of the parliament. This body, besides granting subsidies, prepared a collection of constitutions and canons ecclesiastical, which, being approved by the privy council, was made public, and gave such general disgust to the moderate of all parties, and produced so great a number of petitions to the privy council, that Charles was obliged to suspend them. On the calling of the long parliament the new canons were summarily disposed of, as subversive both of the rights of parliament and of the liberties and property of the subject, and the long gathering storm immediately burst over the head of the archbishop. The next day, articles presented against him by the Scottish commissioners were read in the house of lords, which when referred to the commons, a motion was put and carried that he had been guilty of high treason. The celebrated Denzil Holles was immediately sent to the house of lords to impeach him in the name of all the commons of England, and he was delivered into the custody of the black rod. On the 26th of February, 1641, fourteen articles of impeach-

ment were brought up from the commons, and he was committed to the Tower.

Soon after his commitment the house of commons ordered him, jointly with those who had passed sentence against Prynne, Bastwick, and Burton, to make them satisfaction for the damages which they had sustained by their sentence and imprisonment. He was also fined 20,000*l.* for his proceedings in the imposition of the canons, and was otherwise treated with extreme severity. He remained in prison three years before he was brought to trial, which at length, on the production of ten additional articles, took place in March 1643, and lasted twenty days. Many of the charges against him were insignificant and poorly supported; but it appeared that he was guilty of many arbitrary, illegal, and cruel actions. His own defence was acute and able, and his argument that he could not be justly made responsible for the actions of the whole council, if not absolutely a legal, was a strong moral defence. The lords were still more staggered by his counsel showing that, if even guilty of these acts, they amounted not to high treason. A case was made for the judges, who very much questioned if they were so, and the peers deferred giving judgment. On this delay the house of commons passed a bill of attainder, on the 4th of January, 1644, in which the archbishop was declared guilty of high treason, and condemned to suffer death—as unjustifiable a step in a constitutional point of view as any of which he was accused. To stop this attainder he produced the king's pardon, under the great seal; but it was overruled by both houses, and all he could obtain by petitioning was to have his sentence altered from hanging to beheading. He accordingly met his death with great firmness on the 10th of January, 1644, on a scaffold erected on Tower Hill, in the seventy-second year of his age. His warmest admirers admit his extreme rashness, and little is left which can be fairly pleaded for his severity and violence, except the probability that he acted on principles which he deemed correct. Much praise has been bestowed upon his piety, but his diary shows it to have been mingled with much puerility and superstition; his dreams being regularly recorded as well as the hopes and fears which they excited. Speaking of his learning and morals, Hume observes, "that he was virtuous, if severity of manners alone and abstinence from pleasure could deserve that name. He was learned, if polemical knowledge could entitle him to that praise."

LAUDER, WILLIAM, a literary impostor, who in 1747 published, in the "*Gentleman's Magazine*," an essay on Milton's use and imitation of the moderns, the object of which was to prove that Milton had made free with the works of certain Latin poets of modern date, in the composition of his "*Paradise Lost*." Mr. Douglas, afterwards bishop of Salisbury, in a letter entitled "*Milton Vindicated from the Charge of Plagiarism*," showed that the passages which had been cited by Lauder from Massenius, Staphorsius, Taubmannus, and others, had been interpolated by Lauder himself, from Hogg's Latin translation of the "*Paradise Lost*." He subsequently acknowledged his fault, assigning the motives which prompted it.

LAUDERDALE, JAMES MAITLAND, EARL OF.—This nobleman was born in 1759, studied in Glasgow, and was by family interest (being then Lord Maitland) brought into parliament for the Scotch ho-

roughs of Lauder, Jedburg, &c., and immediately joined the opposition, with whom he acted till the death of his father in 1789. On succeeding to the title of Lauderdale, he was chosen one of the sixteen peers of Scotland. He opposed the Russian armament, condemned the measures taken against Tip-poo Saib, and when the revolution in France broke out, hailed it as a most fortunate event. He was a witness of the dreadful massacres which took place in September 1792, and allied himself with the Brissotines, or moderate republicans. With Brissot, their leader, he contracted a warm friendship. On his return he opposed the war with France, and the other measures of the Pitt administration. Having lost his seat as one of the sixteen peers of Scotland he attempted to get into the house of commons by a surrender of his peerage, which he thought was allowable by the Scottish law, that by that means he might become a commoner, and be returned to the house of commons. He became a citizen of London, and was made free of the needlemakers' company; but standing for sheriff, he did not meet with support from the livery, and he then contented himself with writing his sentiments and publishing them. He published several pamphlets on finance, India affairs, and paper currency, among the principal of which is "*An Inquiry into the Nature and Origin of Public Wealth*," which has reached three editions. When the Whigs came into administration in 1806, Lord Lauderdale was created a baron of Great Britain, and received a seat in the privy council, and the custody of the great seal of Scotland. When his friends went out of office he retired with them.

LAURA, Petrarch's mistress. It was long erroneously supposed that this lady, who has been celebrated in the sweetest strains of poetry, was only an allegorical person, or a descendant of the houses of Chabaud and Sade, who remained single, and lived at Vaucluse, where the poet had an opportunity of becoming acquainted with her. According to the investigations of the abbé Sade, Laura was descended from the old provençal family of Noves, which has now been extinct 300 years, and was the daughter of the chevalier Audibert Noves, who lived in Avignon. She was born at the village of Noves, in Avignon, in 1307 or 1308, and after the death of her father, who left her, his oldest daughter, a large fortune, she married the young Hugh de Sade, of a distinguished family in Avignon. Laura was one of the most beautiful women of the city, which, being at that time the residence of the pope, attracted many strangers. Among them was the young Petrarch, whose ancestors had been banished from Tuscany during the quarrels of the Guelphs and Ghibelines. It was on the 6th of April, 1327, on Monday of the passion-week, at six o'clock in the morning, that Petrarch, then twenty-three years old, first saw as he himself says the beautiful Laura, in the church of the nuns of St. Clara; and from that moment he was seized with a passion as violent as it was lasting. His vain efforts to lead her from the path of duty, and his ineffectual attempts to conquer a hopeless passion, plainly show that his love was by no means Platonic. He acknowledges, however, that he never received the smallest favour from her, and bestows the highest praise on her virtue. Laura certainly felt flattered by the devotion of the young poet, and was polite and kind towards him as long as she saw nothing in his attentions to alarm her; but treated him with

severity whenever he endeavoured to express the warmth of his passion. For more than twenty years Petrarch sang the object of his love, and endeavoured to excite a reciprocal passion, or to conquer his own. During this long period, by alternate severity and kindness, Laura succeeded in retaining him a captive to her charms, without ever suffering the least stain on her honour.

After her marriage she always lived at Avignon, in the house of her father-in-law, situated on the Rhone, below the papal palace, and it was from the summit of the rock on which the palace was built that Petrarch delighted to gaze on her, as she walked in her garden. In the same year that Petrarch went to Vaucluse, to recover his peace of mind in that lovely solitude, Laura was attacked by an epidemic disease, which made great ravages; but she recovered, and was dearer than ever to the poet. In 1339 the painter Simon of Sienna, who had been called to Avignon to adorn the papal palace, painted Laura's picture, and gave it to the poet, who repaid him with two sonnets. Whether Laura consented to have her portrait taken for Petrarch, or whether he only obtained a copy, or whether the image of the beautiful lady was so deeply stamped on the mind of the painter that he could afterwards paint her from recollection, cannot now be ascertained; but it is certain that he afterwards introduced Laura into several pictures—as, for instance, those on the ceiling of the cathedral at Avignon. When Petrarch returned to Avignon, after having been crowned with laurel at the capitol, Laura, whether flattered by his fame, or touched by the constancy of a lover whom long absence had rendered more dear to her, received him kindly. Petrarch saw her more frequently, and his visits to Vaucluse became less frequent and long. His poems, which were spread over all Europe, made the beauty of his mistress very celebrated, and all strangers who came to Avignon wished to see Laura. Charles of Luxemburg, afterwards the emperor Charles IV., saw her at a ball which was given by him, and, beckoning to the other ladies to make way, he approached her, and kissed her on the forehead and eyes. But the repeated fatigues of maternity, and the domestic trouble which she suffered from the ill-humour of her husband, and the bad conduct of her eldest daughter, made at length such a change in her appearance, that those who saw her for the first time were disappointed. A pestilence which arose in the east, and spread desolation over Europe for three years, at length reached Avignon in 1348, and on the 6th April, at six o'clock in the morning, the hour which Petrarch has designated in his mournful recollections as that of the birth of his love, Laura fell a victim to this disease, and was buried on the same day, in the church of the convent of the Minorites.

In 1533 some antiquaries obtained permission to open Laura's grave. They found a parchment enclosed in a leaden box, on which was written a sonnet bearing Petrarch's signature. It was not, however, written in the spirit of that celebrated poet, but appeared to be the work of a friend. They also found a medal bearing a female figure, with the inscription "M. L. M. J." perhaps Madonna Laura Morta Jaco. Francis I., who visited Avignon the same year, sought out Laura's grave, wrote an epitaph on her, and ordered a monument to be erected to her; but it was never done. The box and the medal were

purchased of the under-sacristan by some Englishmen; but the sonnet was lost when the castle belonging to the family of Sade was destroyed in 1791. The tomb itself was overturned, together with the church, during the revolution. The prefect of Vaucluse in 1804 caused the tomb-stone, which had been given to the family of Sade, to be placed in the old cathedral of Avignon.

LAURENS, HENRY, a distinguished American statesman, who was born at Charleston, South Carolina, in 1724. His ancestors were French protestant refugees, who had left France about the time of the revocation of the edict of Nantes. After receiving a good education, he was placed in the counting-house of a merchant of Charleston, but was soon afterwards sent to London to fit himself for commercial pursuits, under the eye of a gentleman who had been engaged in business in Charleston. On his return he entered into business, and by his industry and activity acquired an ample fortune. Having retired from business, he went in 1771 to Europe, in order to superintend the education of his sons, and was in London when he received the first accounts of the troubles which were beginning to agitate the colonies. With several other Americans, he endeavoured in 1774, by petition, to dissuade parliament from passing the Boston port bill, and exerted himself to prevent a war; but finding that nothing would be of any avail for that purpose, save dishonourable submission, he hastened home to take part with his countrymen. He arrived in Charleston in December 1774, was chosen president of the council of safety, and soon manifested that he had lost none of his energy and habits of business. In 1776 he was elected a delegate to congress; soon after taking his seat, was made president of that body, and continued such until the close of the year 1778. He then resigned, and in 1779 received the appointment of minister plenipotentiary from the United States to Holland. On his way thither he was captured by the British, carried to London, and committed to the Tower. For the first month of his confinement he was permitted to walk out with an armed guard; but this indulgence was subsequently taken from him for a time, in consequence of Lord George Gordon, then a prisoner also, having met and asked him to walk with him, which, although Mr. Laurens refused to do, and immediately returned to his room, was interpreted into a transgression of orders. His confinement lasted for more than fourteen months, during which various efforts were made by the British government to shake his constancy, but without effect. Soon after his release, he received a commission from congress to be one of their ministers for negotiating a peace with Great Britain, and, having repaired to Paris, he signed, November 30, 1782, with Dr. Franklin and John Jay, the preliminaries of the treaty. On his return home he was received with every mark of esteem, but declined all offices. His health had been broken by his imprisonment, and after passing the last years of his life in agricultural pursuits, he died in December 1792, nearly seventy years of age. According to an injunction contained in his will, his body was burnt, and his bones collected and buried.

LAURENS, JOHN, was the son of Henry Laurens, and, after receiving a liberal education in England, returned to his country, and joined the American army in 1777. His first essay in arms

was at Brandywine. At the battle of Germantown he exhibited prodigies of valour in attempting to expel the British from Chew's house, and was severely wounded. At Coosahatchie, defending the pass with a handful of men against the whole force of Provost, he was again wounded, and was probably indebted for his life to the gallantry of Captain Wigg, who gave him his horse to carry him from the field, when incapable of moving, his own having been shot under him. He headed the light infantry, and was among the first to mount the British lines at Savannah; displayed the greatest activity and courage during the siege of Charlestown; entered with the forlorn hope the British redoubt carried by storm at Yorktown, and received with his own hand the sword of the commander; by indefatigable activity thwarted every effort of the British garrison in Charleston, confining them for months to the narrow limits of the city and neck, except when under the protection of their shipping they indulged in predatory expeditions; and, unhappily, at the very close of the war, too carelessly exposing himself in a trifling skirmish near Combahee, sealed his devotion to his country in death. It is related that the greater part of the night in which the fatal skirmish took place was spent by Laurens at a party of ladies; that the expected rencounter was the subject of the gayest badinage; and that the company did not separate until two hours before the time when the colonel was in motion with his detachment. The sorrow at the news of his death was deep and universal. Washington, into whose family and affection he had won admission, mourned him as a lost son. Such a combination as was found in him of chivalrous gallantry, patriotism, ardour, elevation and rectitude of soul, with unaffected modesty, information, frankness, vivacity and polish of manners, has rarely been seen. He was the delight of every social circle, and the admiration of his companions in arms. There is one act of his life which, perhaps, more than any other, entitled him to the gratitude of his country. In the autumn of 1780 he was sent as a special minister to France, in order to negotiate a loan from the French government, and, on his arrival in Paris, immediately entered upon the business of his mission; but, after a delay of more than two months on the part of the government to return a definite answer to his application, he determined, contrary to all the rules of etiquette, to present a memorial himself to the king at the levee. He first made the minister, Count de Vergennes, as well as Doctor Franklin, the American envoy, aware of his intention, and, notwithstanding the urgent entreaties of the latter, carried it into effect. The king, however, received the memorial graciously, and matters were soon arranged in a satisfactory manner. The consequences of his successful boldness in this affair were all-important for the American cause, which would have been, perhaps, irretrievably ruined by any further procrastination.

LAURISTON, JAMES ALEXANDER BERNARD LAW, COUNT DE, was born in 1768, and was the grandson of the celebrated projector Law. He embraced the military profession at an early age, and served in the artillery, in which he obtained a rapid promotion, owing to his own activity, and to the friendship of General Bonaparte, whose aide-de-camp he was, and who employed him on several important missions. He commanded in 1800, in quality of brigadier-general, the fourth regiment of flying ar-

tillery at La Fère. In 1801 he was chosen to convey to England the ratification of the preliminaries of peace, and was received with enthusiasm by the people of London, who took the horses from his carriage, and conducted him in triumph to Downing Street. He served in every campaign of importance in Spain, Germany, and Russia. In 1809 he penetrated into Hungary, and took the fortress of Raab, after a bombardment of eight days. July 6, he decided the victory in favour of the French, at the battle of Wagram, by coming up to the charge, at full trot, with one hundred pieces of artillery.

In 1811 he was appointed ambassador to Petersburg. The object of his mission was to obtain the occupation of the ports of Riga and Revel, and to exclude English ships from the Baltic. This mission having failed, M. de Lauriston was employed in the Russian campaign, and, after the taking of Moscow, was sent with proposals for an armistice to the emperor Alexander, which was rejected. After the disastrous retreat from Moscow, he commanded the army of observation on the banks of the Elbe, and, during three months, defended that river with a small force, preventing the enemy from penetrating into Hanover. He fought with great valour at the battle of Leipsic, but, being taken prisoner, was conducted to Berlin, where he was treated with favour and distinction. After the conclusion of the general peace, Louis XVIII. created him a knight of St. Louis, grand cordon of the legion of honour, and captain-lieutenant of the gray musketeers. After March 20, 1815, he followed the king's household to the frontiers of France, and then retired to his estate of Richecourt, near La Fère, without mingling in any of the transactions of the hundred days. On the return of Louis, he was nominated president of the electoral college of the department of L'Aisne, lieutenant-general of the first division of royal footguards, and member of the commission appointed to examine into the conduct of such officers as had served from the 20th of March to July 1815. He was created a commander of St. Louis in 1816, and presided in the course of the same year at the trial of Admiral Linois, Count Delaborde, &c. In 1823 he was appointed marshal, and commanded the second corps de réserve of the army in Spain. He died in 1828.

LVALETTE, MARIE CHAMANS, COUNT DE, was born at Paris in 1769. His mother was a nurse, often employed by the celebrated accoucheur Baudelocque, who, perceiving the promising talents of the youth, furnished her with the means of giving him an education far superior to his birth. Young Lavalette was destined for the clerical profession, and wore the habit of an abbé for some time, but afterwards commenced the study of the law. The revolution in 1789 gave another direction to his ambition. He became an officer in the national guards, and in August 1792 defended the Tuileries. He afterwards served in the army of the Rhine and that of Italy, with such distinction that he rose rapidly. Bonaparte made him his aid-de-camp, entrusted him with his secret correspondence, and gave him in marriage Mlle. Beauharnais, the niece of Joséphine. He accompanied Bonaparte to Egypt, and, soon after the establishment of the consular government, was made count, and a commander of the legion of honour. In 1814 he was removed from the post-office; but when Louis quitted Paris in 1815, he repaired to the office

in company with General Sebastiani, and summoned his successor, M. Ferrand, to surrender his place, only allowing him a few minutes to collect his papers, but, at the same time, treating him with great politeness. He then took measures to accelerate the progress of Napoleon, and conducted himself with extraordinary vigilance and activity. For these services he was created a peer of France, and continued in his office till the return of the king. In the month of November following he was brought to trial, and condemned to death as an accomplice of Napoleon. His appeal and application for pardon having failed, preparations for his execution were making, when his wife, having obtained permission to visit him, came in a sedan chair, and dined with him, attended by her daughter and the governess. About seven in the evening, the two latter appeared at the keeper's lodge, apparently supporting Madame Lavalette, who was closely muffled up, held a handkerchief before her eyes, and exhibited every symptom of the profoundest distress. After a few minutes the keeper of the prison repaired to Lavalette's apartment, where he found Madame Lavalette in his place. He set his turnkeys and keepers in motion, but, in spite of their activity, nothing was found but the sedan chair, in which the young daughter had taken the place of her father, who had suddenly disappeared at the Quai des Orfèvres. The jailer was then removed and confined, the barriers were closed, and expresses were sent in every direction, with the description of Lavalette's person, who contrived to lie closely concealed for a fortnight, in spite of the vigilance of the police, during which time he meditated on the most effectual method of completing his escape. He had recourse, for that purpose, to three Englishmen—Messrs. Bruce and Hutchinson, and Sir Robert Wilson, who were already known for their zeal in support of the principles of liberty, and for their hostility to the tyranny exercised by the Bourbons. By means of these gentlemen he procured the uniform of a general officer in the British service, and repaired on the 7th of January, at half-past nine at night, to the apartments of Captain Hutchinson. The next morning at seven o'clock he got into a cabriolet with Sir Robert Wilson, passed the barriers without being recognised, and arrived the following day at Mons, where his guide took leave of him. He then took the road to Munich, where he found an asylum among powerful friends and connexions. Irritated by his escape, the government had the cruelty to retain his wife for some time in prison, because she had been accessory to the escape of her husband; a treatment which disordered her senses, and she became a confirmed lunatic. Lavalette was pardoned, and returned to France in 1821.

LAVATER, JOHN GASPAR, was born in 1741, at Zurich, in Switzerland, where his father enjoyed the reputation of a skilful physician and good citizen. The severity of his mother somewhat depressed the mind of the boy, who was endowed with a lively imagination, and he early gave himself up to solitary reveries. While yet at school, he was persuaded that he had received direct answers to his prayers. His imagination, even at that early period, appears to have been so actively employed, that he never acquired much knowledge of philology or classical antiquity. In 1763 he travelled with Fuseli—afterwards a distinguished painter in London—to Leipzig and Berlin, and became acquainted with the scho-

lars and theologians of northern Germany. In 1764 he returned to his native city, and in 1767 appeared as a poet in his "*Schweizerlieder*," which, as well as his "*Aussichten in die Ewigkeit*," gained him many admirers. In 1769 he was appointed one of the ministers at the orphan church at Zurich, where his sermons were rendered attractive by their pleasing style, his enthusiastic zeal, and a certain mysticism which always characterized him. They were printed in 1772, and were admired even in foreign countries. All his activity was, in fact, devoted to the service of religion, until he undertook his work on physiognomy. Lavater had become acquainted with a great number of persons, and his lively imagination had led him to the conclusion that there exists a much greater connexion between the internal man and the external expression in the face than is generally supposed. He reduced his expression of disposition and character to a system, and considered the lines of the countenance as sure indications of the temper. He had adopted this idea in 1769, and collected the features of distinguished people from all parts of the world. His great work, in four volumes quarto, entitled "*Physiognomical Fragments*," made him known all over Europe. It was rendered valuable by the numerous portraits it contains, mostly well executed by some of the first engravers of Germany. Lavater had added explanations, in a poetical style, full of enthusiastic exclamations.

As may easily be imagined, a theory so novel found many warm admirers, whose zeal often rendered it ridiculous, and Litchtenberg satirized it in his "*Essay on Cues and Tails*"—one of his most successful compositions. Litchtenberg's exclamations on the contour of a pig's tail, or a happily-adjusted cue, equal the raptures of Lavater viewing the physiognomy of an Alexander. According to *Laws Cases*, Napoleon declared himself convinced, by long experience, that no reliance was to be placed on the expression of the face, an opinion which is perhaps true to a greater extent in respect to talents than disposition. Lavater himself seems to have ultimately given up his theory in a great degree. He published several other works, including poems and works of religious instruction, and his reputation became so great that his journeys resembled triumphs. He refused better appointments in foreign countries, and became minister at St. Peter's church in Zurich. During the revolution he spoke with boldness against the new order of things, the Swiss directory, &c., and was finally transported to Basle in 1796. He was again set at liberty, but, on the capture of Zurich in September 1799, by Massena, while occupied in the street, assisting the distressed, and giving refreshment to exhausted soldiers, he received a shot in his side. He lingered for many months, during which he wrote several works, and died on the 2nd January, 1801. Lavater was one of the most virtuous of men, so that a biographer says of him, "Had he lived in earlier times, he would now be adored as a saint, because every thing which the church requires from a saint he had in perfection—charity, love of mankind, and unrelaxing zeal in the cause of Christ."

LAVOISIER, ANTHONY LAWRENCE, a celebrated French chemist, whose name is connected with the antiphlogistic theory of chemistry, to the reception of which he contributed by his writings and discoveries. He was born at Paris in August

1743, and was the son of opulent parents who gave him a good education. He acquired an intimate knowledge of the physical sciences, and first distinguished himself by a prize memoir on the best method of lighting the streets. Two years after, in 1768, he was chosen a member of the academy. About this time he published several tracts in periodical works, on the analysis of gypsum, the crystallization of salt, the congelation of water, on thunder, the aurora borealis, &c. Journeys to different parts of France furnished him materials for a mineralogical chart of the kingdom, intended as the basis of a work on the revolutions of the globe, and the formation of the strata of the earth, outlines of which appeared in the *Memoirs of the academy* for 1772 and 1787. The discoveries of Black, Cavendish, Macbride, and Priestley, relative to the nature of elastic fluids or gases, attracted the notice of Lavoisier, who entered on the same field of inquiry with all his characteristic ardour in the cause of science; and, possessing the advantage of a considerable fortune, he conducted his experiments on a large scale, and obtained highly interesting results. In 1774 appeared his "*Opuscles Chymiques*," comprising a general view of what was then known relative to gaseous bodies, with several new experiments remarkable for their ingenuity and accuracy.

Doctor Priestley's discovery of what he called dephlogisticated air, afterwards generally termed oxygen gas, furnished Lavoisier with a fresh subject of research; and in 1778 he published an essay on this substance and its influence in the production of acids, developing the principle of a new chemical theory. This was further illustrated by his experiments on the composition of water, by burning together the oxygen and hydrogen gases, and by its analysis affording the same principles; and the system was completed by his theories of combustion and oxidation, the decomposition of atmospheric air, his doctrine of caloric, and its influence in causing the solid, liquid, and gaseous states of bodies; and the whole theory was laid before the public in his "*Elements of Chemistry*," which appeared in 1789, and was speedily translated into English and other languages. M. Lavoisier rendered many services to the arts and sciences both in a public and private capacity. When the new system of weights and measures was brought forward, he contributed to its improvement by some novel experiments on the expansion of metals. He was consulted by the national convention as to the best method of manufacturing assignats, and securing them from being forged. In 1791 the committee of the constituent assembly applied to him for information preparatory to the adoption of an improved system of taxation, in consequence of which he drew up a work which was published under the title of "*Richesses Territoriales de la France*," relating to the production and consumption of the country. About the same period he was appointed one of the commissioners of the national treasury, an office which afforded him an opportunity of exercising his spirit of systematic arrangement. His house became a vast laboratory; the most skilful artists were employed to construct the necessary instruments and apparatus for his philosophical researches. He had conversazioni at his house twice a week, at which were discussed the theories, opinions and discoveries of learned contemporaries. With other farmers-general, he was con-

demned to death by the revolutionary tribunal of Paris, on the charge of being a conspirator and of having adulterated the tobacco with ingredients obnoxious to the health of the citizens, and on this frivolous pretext was beheaded by the guillotine on the 8th of May, 1794. When he found his fate inevitable, he petitioned for a few days' respite in order to make some interesting and important experiments which he had in view; but this favour was denied him. M. Lavoisier married in 1771 the daughter of a farmer-general, a lady of agreeable manners and considerable talents, who not only participated in her husband's philosophical researches, but also cultivated the arts with great success, and engraved with her own hand the plates for one of his publications.

LAW, JOHN, a celebrated financial projector, the son of a goldsmith of Edinburgh, in which city he was born in 1681. He was bred to no profession, but became versed in accounts and was employed in those of the revenue. For the purpose of remedying the deficiency of a circulating medium, he projected the establishment of a bank with paper issues to the amount of the value of all the lands in the kingdom; but this scheme was rejected. In consequence of a duel he fled from his country, and visited Venice and Genoa, from which cities he was banished as a designing adventurer; but at length secured the patronage of the regent duke of Orleans, and established his bank in 1716 by royal authority. It was at first composed of 1200 shares of 3000 livres each, which soon bore a premium. This bank became the office for all public receipts, and there was annexed to it a Mississippi company which had grants of land in Louisiana, and was expected to realize immense sums by planting and commerce. In 1718 it was declared a royal bank, and the shares rose to twenty times their original value. In 1720 Law was made comptroller-general of the finances; but the shares sunk in value as rapidly as they had risen. He was obliged to resign his post after he had held it only five months, and to retire first to a seat in the country, and then for personal safety to quit the kingdom. He carried with him a small portion only of a vast fortune he at one time possessed, and lived afterwards in great obscurity. After visiting England, Holland, Germany, and other countries, he finally settled at Venice, where he died in 1729, still occupied in vast schemes, and fully convinced of the solidity of his system, the failure of which he attributed entirely to enmity and panic. Various opinions have been entertained of the merit of his project; and by some it has been thought to have possessed feasibility had it been carried more moderately into practice.

LAW, WILLIAM, a divine of the church of England, born at Kingcliffe, in Northamptonshire, in 1686, and educated at Emanuel college, Cambridge, where he was elected fellow. On the accession of George I., refusing to take the oaths, he vacated his fellowship, and left the university. He then officiated as a curate in London and as tutor to Edward Gibbon, father to the historian. Mrs. Hester Gibbon, aunt of the same eminent individual, and Mrs. Elizabeth Hutchinson, formed a joint establishment of which he became a member, at his native village of Kingcliffe, where he died in 1761. The writings of Mr. Law, although in many respects excellent, partake of a gloominess and severity tinged with a mysticism and enthusiasm that the study of the writ-

ings of Jacob Böhme did not fail to increase. The "Serious Call to a Devout and Holy Life" is deemed both by Doctor Johnson and Mr. Gibbon, one of the most powerful works of devotion in the English language, as is also his "Practical Treatise on Christianity," which abounds with satire, spirit, and knowledge of life. He also wrote some other works, and published translations of his favourite Böhme.

**LAWRENCE, SIR THOMAS.**—This distinguished English portrait painter was born at Bristol in 1769. His father was an innkeeper, and the young artist very early displayed his peculiar talent for portraiture, a department of art which, insignificant as it had sunk in the general estimate, he invested with new importance and distinction. Indeed he may be said to have restored it to its ancient dignity, reviving the remembrance and the respect in which it was held by the ablest artists and the most intelligent patrons in former ages. But not to professional power alone is his unparalleled success mainly attributable; much of it must be assigned to the felicitous union of circumstances—to extraordinary opportunities and extraordinary encouragements, to early distinction, to personal attraction, to suavity of manner, to tact in society, to fashionable favour. He was a marvellous child—born, all but literally, with a bent and impulse towards forms as decided as ever was that of poet or musician to visions and melodies. Evidence exists of his early talent and execution of a more irrefragable kind than can be ascertained in the case of any other precocious child within the pages of credible records. From his eighth till his eighteenth year his celebrity, constantly realizing the promise of his childhood, was confined to the west of England, and Bath was the seat and centre of his renown; but Bath was then frequented by the great and eminent; and he was thus brought into contact with those who, in the metropolis, must finally be the awarders of fame. Every body knew him and employed him; but still as a boy,—a little wonder, a miracle,—not as an artist to compare with or to eclipse the great men in his profession. Luckily for Lawrence, not only was he a painter, but he was handsome in face and figure; he was attractive in manner, and cheerful and amus-

ing in company. These advantages, coupled with his facilities for communicating pleasure by the pencil, secured him a welcome reception within the walls of private families; he was admitted on terms of familiarity and fondness, where without them no professional talent would have introduced him.

When he came to London in 1787, still but a lad of eighteen, he had no ordinary names to compete with, nor were his own powers of execution such as to command success by a mere comparison of productions. Reynolds, Barry, Opie, Hoppner, Romney, Beechey, were in the fulness of their celebrity. He was unknown to painters; the circles of art knew nothing about him; the schools of London were strangers to him, except that a prize-medal had been conferred upon him by the society of arts. He was not forced into premature notice by any grand patron, nor seized upon by any faction; he was not puffed into notoriety, nor pitted for spite or interest against any particular favourite or rival candidate for fame. But though none of these ordinary advantages attended his entrance into London, he had an extensive acquaintance in private life. His early friends, who had admired him as a child and a boy, and had admitted him within the privacies of domestic life, adhered to him; and it was now that they did him good service by silently paving the way for his publicity and general distinction. From 1787 to 1791, the first four years of his residence in London, the gradations of proficiency and the steps of his career are comparatively obscure. The admirable portrait of Miss Farren, notwithstanding some incongruities, must have done much for him; but in 1791 he was sent to the royal academy at the desire of the queen, and by the direct command of the king. Now this appointment is not referrible to any general acknowledgment of superiority in Lawrence, and must therefore be ascribed to the influence of personal friends in influential quarters. The very next year the same interest, on the death of Reynolds, appointed him painter in ordinary to the king. The same year again he received a command to paint the king and queen for the embassy to China, a fortunate circumstance which, coupled with a general sensation occasioned by the expedition itself, did more to bring Lawrence into public notice as a rising artist, than the whole of his own previous exertions together. From that time the tide of business set strongly in, and one happy hit led to another till he left all competitors behind him. The death of Hoppner, the prince's favourite painter, cleared the way for a new source of patronage, and one which eventually proved of far more importance to Lawrence's professional reputation than that of any other royal patron discoverable within the annals of modern art. At the peace of 1814, when the continental sovereigns visited England, the regent selected Lawrence to paint those conspicuous personages. The engagements of some of them precluded the accomplishment of the regent's commands; but in 1818, on the assembling of the congress at Aix-la-Chapelle, where were congregated emperors, kings, ministers, and commanders, the commission was given to Lawrence to paint them all. To complete his commission, from Aix-la-Chapelle he was obliged to proceed to Vienna, and from Vienna he was commanded to go to Rome to include the pope and Gonsalvi in the brilliant circle of his figures. His success was every where splendid, and he had the further gratification of

spreading in continental palaces, and among continental artists, respect for British talents. On his return, after an absence of eighteen months, the first intelligence that greeted him was the death of West and his own appointment to the vacant presidency. From this period to the close of his life his career was one of uninterrupted and unparalleled success. He monopolised the fashionable world; he had prices which Reynolds never dreamed of; and he died prematurely as to years, but happily for his fame, for he might have survived his powers and his celebrity—the most annoying and humiliating event that can befall a man of genius and sensibility, and especially one like Sir Thomas Lawrence, petted and indulged even to fastidiousness.

Sir Thomas was now known familiarly to the cultivated world. His character and his circumstances were matters of public property; they had long excited wonderment and discussion, and could not with propriety be entirely passed over in silence. He had reached his sixty-first year, had from boyhood been in considerable practice, for half his life had been in receipt of large prices, and for ten years at least of prices beyond all predecessors and contemporaries; yet he lived always embarrassed and died poor. His estate, we believe, finally barely covered the demands upon it. He was not distinguished for parade, for profuse hospitality, or personal expense; he was not known nor believed to indulge in gaming, in intemperance, or vicious pursuits; but the fact, pretty well known to all his friends, of constant embarrassment led, even with the most disposed to charitable construction, to unfavourable surmises. Sir Thomas was himself not unaware of the misconstructions to which he rendered himself liable, and in his correspondence more than once we observe recurs to them, and attempts to account for the fact, but still in a way that showed he himself was almost as much puzzled to explain the cause as others were. His parents from his eighth or tenth year were wholly supported by his young exertions, but they both died before he completed his twenty-eighth year; and the last half of his life was of course the most profitable; nor can it be supposed that he had run *greatly* into debt at the time. It is stated in one place that the whole of what he had engaged to supply them with had not been demanded. Though ever open-handed to his other relatives, it does not seem that any serious demands were made upon his purse by them; but he was obviously what is called careless in money matters; and that is a fact which will account for any result. Where this is the case, where a man does not balance affairs, where he goes on at random without comparing his expenses with his revenues, and above all when he gets a taste for *collecting*, no wonder need ever be raised at pecuniary embarrassments. Such a man, with the best desires and designs, with the purest wishes and sentiments in the world, is sure to get plunged into difficulties; and the real subject for surprise is, that he is not driven to pull suddenly up by the necessity perpetually recurring of *solicitation*—of making excuses to his friends—of framing and fabricating them; for the simple fact seems scarcely ever sufficient to warrant the demand.

Sir Thomas was never married, lady's man as he confessedly was, soft, obliging, complimentary, attentive, courteous, and ever on the brink or in the midst of serious adoration, even to the decline of life.

With regard to the history of his remaining unmarried during a long life, we believe the following circumstance to have been the cause of that event. He was intimate with the members of a family in which there were two sisters, to one of whom Sir Thomas made love, and then turned his attentions to the other; and when he had won her consent to a marriage, at last, by some strange fatality, reverted to the first, whose affections he had equally trifled with. The doors were very properly closed for ever against him. The melancholy conclusion was, that one of them sunk into a premature grave.

From the peculiarity of circumstances in his early childhood he was deprived almost wholly of the advantages of education. A year's schooling, before he was eight years old, was all the direct instruction he received, except what he gained from his father, not an uninformed man, and from his mother, a woman who had been well brought up and was of lady-like habits; the rest was all self-acquired. He had no knowledge of languages, either ancient or modern, except French, and that imperfectly; but he read much, and had a general acquaintance with modern literature, poetry, novels, reviews, &c. His conversation was agreeable and easy, never contentious, and seldom discussive; his chief aim in society was to make himself acceptable, and he succeeded to the top of his bent. His large acquaintance and professional facilities furnished him with ample subjects for talk on the circumstances and pursuits of his friends, his sitters, and of persons engaged in public life. He detailed very pleasantly, never prompted by ill-nature, nor ever suspected of exaggeration. His address was exceedingly prepossessing; and to be regarded as a well-bred man, we suspect, was as gratifying to him as his professional reputation. The king was said to have described him as the most gentlemanly man in his dominions. This has been denied, and, true or not, is not very material. A well-bred man, in the respectable sense of the term, implies something more than mere manner and knowledge of etiquette, which is all the king can be supposed to have referred to. Judging by his correspondence, the term is not pre-eminently applicable; he was too elaborate in his courtesies, too *recherché* in his compliments, and far too ceremonious and deferential for ease.

Sir Thomas Lawrence wrote much, and his epistolary correspondence is well worth preserving; we give a brief specimen. It occurs in a letter to a lady, written after finishing his portrait of Mirza, the Persian ambassador: he gives expression to his own feelings and views on his paintings, in a manner to make us regret he has not more frequently entered into similar details:—

"If it be proof of a just claim to the character of a great painter that he is master of his art, that proof is denied to me, for I am perpetually mastered by it; and am as much the slave of the picture I am painting, as if it had living, personal existence, and chained me to it. How often in the progress of a picture have I said, 'Well, I'll do no more,'—and after laying down my palette and pencils, and washing my hands, whilst wiping them dry I have seen the 'little more' that has made me instantly take them up again.

"It is pleasant that, though all is difficulty (though governed by whatever general principles), each picture has its *own laws*, and in that copy of nature

partakes of its infinite variety. Still there is no vague uncertainty about it; the truth exists, and it is our business to find it out. A really fine critic should, on looking at a picture, be able to assign a cause and motive for every form and hue that compose it, since nothing in it is matter of accident but with the ignorant and presumptuous. There is a sort of calculated, foreseen accident, that is often happy. I select a brush, a pencil of loose form, whose touch may be irregular, and is therefore chosen by me for the particular quality of the object; but this is intention, not chance, or chance selected by it.

"I have a peculiar pleasure and pride in the pictures I send to remote countries, which are unacquainted with the higher works and principles of art. They might with security be deceived and slighted by me. The judgment, the difficulty (if I may say it), the science of the picture will be lost upon them; but after they have perhaps for years liked and admired it as a resemblance, and been satisfied that it is a fair specimen of my talent, some great artist or true connoisseur may come among them, and then they will learn that, in every part, it is one of my most finished productions; that even for the monarch of my own country I could not have laboured with more skill and vigilance than I have done for strangers, whom I shall never see, and from whom neither praise might be expected *nor censure feared*."

The portrait of Mirza to which Sir Thomas alludes, was painted for Sir Gore Ouseley, who on his embassy to Persia took it with him. The Persians are not much accustomed to pictorial illusion, and the prime minister of the king of Persia bore the same sort of testimony to Sir Thomas's executive powers as the birds to Zeuxis's grapes:—

"His excellency Mirza Shefi, prime minister of the king of Persia, called on me one morning at Tehran so unexpectedly that I had not time to remove the Persian ambassador's portrait from the sofa, on which I had placed it the moment before, from out of its packing-case. I hastened to the door of the drawing-room to receive the minister, and, taking him by the hand, was leading him to the sofa, when he unaccountably drew back. It is necessary to premise that in Persian houses (and I was then living in a palace lent me by the king whilst my own was building) the apartments have frequently open windows as well as doors of communication to other rooms on the same floor, and that Mirza Shefi may have possibly mistaken the frame of the picture, erect against the wall, for that of a window. At all events it did not injure the illusion.

"On looking back to learn the cause of his hesitation, I perceived the old minister's countenance inflamed with anger, which, before I could inquire the cause of it, burst forth in an apostrophe to the portrait. 'I think,' said he, 'that when the representative of the king of England does me the honour of standing up to receive me, in due respect to him you should not be seated.' I could not resist laughing at this delightful mistake, and before I could explain he said to me, 'Yes, it is your excellency's kindness to that impertinent fellow that encourages such disrespect, but with your permission I'll soon teach him to know his distance.' Shaking his cane at the picture he uttered a volley of abuse at poor Mirza Abul Hassan, and said that if he had forgotten all proper respect to Sir Gore Ouseley, he must at least show it to the representative of his own sovereign. His

rage was most violent, and I was obliged to bring him close to the picture before he was undeceived. In the course of my life I think I never met with such a flattering, natural, and unsophisticated tribute to superior talents. On approaching the picture he passed his hand over the canvas, and, with a look of unaffected surprise, exclaimed, 'Why, it has a flat surface! Yet at a little distance I could have sworn by the Koran that it was a projecting substance—in truth that it was Abul Hassan Khan himself.'

"It will give you a melancholy pleasure, my dear sir, to know, that in relating the above proof of his wonderful talent to himself, in a large company, the tears of gratified feeling started to his eyes. He then admitted that the Mirza's portrait was one of the best pictures he had ever painted; and with modest delicacy added, that the subject, the beard, the fur, and the dress, were all great accessories to a good painting."

The above striking illustration of Sir Thomas's skill as an artist occurs in a letter from Sir Gore Ouseley. Sir Thomas died on the 7th of January, 1830, in consequence of an internal inflammation occasioned by ossification of the heart. His remains were laid in St. Paul's cathedral, and were followed by the whole of the members of the royal academy, and the society of water colours and British artists, besides many persons of rank and eminence.

LAWRENCE, JAMES, a distinguished American naval commander, who was born at Burlington, New Jersey, in 1781. He early manifested a strong predilection for the sea, but his father, who was a lawyer, was anxious that he should pursue his own profession; and when only thirteen years of age he commenced the study of the law, but after the death of his father he entered the navy as a midshipman in 1798. In 1801, the Tripoli war having commenced, he was promoted, and in 1803 was sent out to the Mediterranean as the first lieutenant of the schooner *Enterprise*. While there he performed a conspicuous part in the destruction of the frigate *Philadelphia*, which had been captured by the *Tripolitans*. In the same year he was invested with the temporary command of the *Enterprise* during the bombardment of Tripoli by Commodore Preble, all the ships of the squadron being employed to cover the boats during the attack; and so well did he execute his duty that the commodore could not restrain the expression of his thanks. He remained in the Mediterranean three years, and then returned with Preble to the United States, having previously been transferred to the frigate *John Adams*, as first lieutenant. In June 1812 war was declared between Great Britain and the United States, and Lawrence, at the time in command of the *Hornet*, a few days afterwards sailed with a squadron under the orders of Commodore Rogers, for the purpose of intercepting the Jamaica fleet. They returned, however, at the end of the following month to Boston, without having been able to accomplish their object. Lawrence then accompanied Commodore Bainbridge on a cruise to the East Indies; but they separated near St. Salvador on the coast of Brazil, the *Hornet* remaining there to blockade a British ship of war laden with specie, till compelled to retire by the arrival of a seventy-four. In February 1813 the *Hornet* fell in with the brig *Peacock*, Captain Peake, which she took after a furious action. This vessel was deemed one of the finest of her class in the British navy. In the num-

ber of her men and guns she was somewhat inferior to the *Hornet*. She sunk before all the prisoners could be removed. The latter was considerably damaged in the rigging and sails, but her hull was scarcely hurt. Lawrence returned to the United States, where he was welcomed with the applause due to his conduct; but the most honourable eulogy bestowed upon it was contained in a letter published by the officers of the *Peacock*, expressing their gratitude for the consideration and kindness with which they had been treated. Shortly after his return he was ordered to repair to Boston, and take command of the frigate *Chesapeake*. This he did with great regret, as the *Chesapeake* was one of the worst sailing ships in the navy. He had been but a short time at Boston when the British frigate *Shannon*, Captain Brooke, appeared before the harbour and defied the *Chesapeake* to combat. Lawrence did not refuse the challenge, although his ship was far from being in a condition for action; and on the 1st of June, 1813, he sailed out of the harbour and engaged his opponent. After the ships had exchanged several broadsides, and Lawrence had been wounded in the leg, he called his boarders, when he received a musket-ball in his body. At the same time the British boarded, and after a desperate resistance succeeded in taking possession of the ship. Almost all the officers of the *Chesapeake* were either killed or wounded. The last exclamation of Lawrence as they were carrying him below, after the fatal wound, was, "Don't give up the ship." He lingered for four days in intense pain, and expired on the 5th of June. He was buried at Halifax with every mark of honour.

LAWRENCE, ST., a Roman deacon and martyr, who, when his bishop (Sixtus) was led to death, cried out, "Whither dost thou go, father, without thy son?" The bishop ordered him to remain and to take care of the treasures of the church; but he was arrested and ordered to give up these treasures. He asked for three days' respite, during which he called together all the poor and sick, whom he showed to the satellites of the emperor as those whose support secured treasure in heaven. The instrument of his martyrdom was a gridiron, on which he was burned to death A. D. 254.

LAYNEZ, JAMES.—This Spanish ecclesiastic may be considered as the real founder of the policy and organization of the society of Jesuits. He was born at Almaricario, near Sigüenza in Castile, in 1512. The fame of Ignatius Loyola's religious zeal and the desire of becoming acquainted with him, and at the same time of pursuing his own studies, led Laynez to Paris, where Loyola was then residing in order to escape the persecution of the inquisition. An intimacy was soon formed between these two zealots, and they determined to go to Turkey and preach the gospel to the infidels. A war with the porte defeated this plan, and while at Venice in 1536 they formed the project of establishing a society, the principal aim of which should be the education of the people in the doctrines of the catholic church, and the prevention of the spread of the new opinions. Laynez, more prudent, learned, refined, and dexterous than Loyola, had the principal share in the formation of this plan; and his disinterestedness, his zeal and activity, were the principal causes of the success of the new institution. After the order had been confirmed by Paul III. in 1540, and

Loyola at the request of Laynez had been appointed the first general, he made many journeys for the purpose of extending the society of the Jesuits, and exerted himself with great activity in the cause of the pope at the council of Trent. He refused the cardinal's hat which was offered him by Paul IV. In 1558 he succeeded Loyola as general of the order, and in 1561 he went to France with the cardinal Ferrara, to assist him in extirpating heresy. Still we must do him the justice to say that he was the only one at the notorious conference of Poissy who listened at all to the voice of reason and mercy. The establishment of the Jesuits in France, although with some restrictions, was the result of this journey. After Laynez had assisted in establishing, at the third council of Trent, the supremacy of the bishop of Rome over the other bishops, he returned to Rome, where he devoted himself to the direction and extension of his order. He died there in January 1565.

LEAKE, STEPHEN MARTIN, a writer on numismatics, who in 1727 was made Lancaster herald, and, successively, norroy, clarenceux, and, finally, in 1754, garter king-at-arms. His principal works are, "An Historical Account of English Money," and "The Statutes of the Order of the Garter." He died in 1773.

LEAKE, JOHN, a physician and medical writer of the last century, who was born at Ainstable, in Cumberland. After completing his education he came to London, intending to enter the military profession; but finding his hopes disappointed in that quarter, he turned his attention to medicine. After attending the hospitals, and being admitted a member of the corporation of surgeons, an opportunity presented itself of improving himself in foreign schools; he therefore embarked for Lisbon, and afterwards visited Italy. On his return he established himself as a surgeon and accoucheur in the neighbourhood of Piccadilly; and about the same period published "A Dissertation on the Properties and Efficacy of the Lisbon Diet Drink," which he professed to administer with success in many violent cases of scrofula, scurvy, &c.

In 1765 he purchased a piece of ground on a building lease, and afterwards published the plan for the institution of the Westminster Lying-in Hospital; and as soon as the building was raised he voluntarily, and without any consideration, assigned over to the governors all his right in the premises in favour of the hospital. He enjoyed a considerable share of reputation and practice as an accoucheur and as a lecturer, and was esteemed a very accomplished man. He added nothing, however, in the way of improvement, to his profession, and his writings are not characterized by any extraordinary acuteness or depth of research; but are plain, correct, and practical. He was attacked, in the summer of 1792, with a disorder of the chest, with which he had been previously affected, and was found dead in his bed on the 8th of August of that year. He published, in 1773, a volume of "Practical Observations on Child-bed Fever;" and, in 1774, "A Lecture introductory to the Theory and Practice of Midwifery, including the History, Nature, and Tendency of that Science," &c. This was afterwards considerably altered and enlarged, and published under the title of "Medical Instructions towards the Prevention and Cure of various Diseases incident to Women," &c. A short time previous to his death he published "A Practical

*Essay on the Diseases of the Viscera, particularly those of the Stomach and Bowels.*"

**LEBRUN, CHARLES.**—This artist was born at Paris in 1618. He studied with Vouet, and soon surpassed, not only all his fellow-pupils, but also his master. After his return from Rome, where, under Poussin, he had studied principally the works of Raphael and the remains of ancient art, he received the order of St. Michael; and in 1648 was made president of the new royal academy of painting and sculpture. He was also named head of the academy of St. Luke, in Rome. From 1661 he was principally employed in embellishing the residences of Louis XIV. and his nobles with works of art, and in superintending the brilliant spectacles of the court. He embellished Versailles, in particular, and was also director of the royal Gobelin manufactory; but on the death of Colbert his influence declined. He died in 1690. Lebrun possessed a comprehensive genius, which was cultivated by the incessant study of history and national customs. Few painters have so well understood the human character and the expression of the passions. This appears from his treatises "*Sur la Physionomie*," and "*Sur les Caractères des Passions*." In invention he equalled the greatest artists who had preceded him. He combined a correct judgment with a lively imagination and facility in execution.

**LEBRUN, CHARLES FRANCOIS, DUKE OF PLACENTIA.**—This French nobleman was descended from an humble family in the vicinity of Coutances, and went at an early age to Paris, where he obtained the protection of M. de Maupeou, whose secretary he became, after having been tutor to his children. He is said to have composed in 1770 the speech which that gentleman delivered during his dispute with the parliaments. Being nominated deputy to the states-general in 1789, he occupied himself during the session with affairs of police, finance, and domestic administration. When the question of the church property was discussed he maintained that it would be an act of injustice to divest the ecclesiastical bodies of their possessions, though he admitted that some reform was necessary and expedient. In August 1790 he voted for the preservation of the French academy, and in September he appeared at the tribune to deliver an opinion against the emission of assignats; but he could not procure a hearing.

In 1795 he was elected to the council of elders, and became secretary to that body in January 1796, and president in the February following. In November 1799 he approved of the new system of government, and was appointed third consul in December. In 1803 the third class of the institute, of which he had continued to be a member from its first formation, chose him their president. He was nominated arch-treasurer of the empire in 1804, and in 1805 governor-general of Liguria, and created duke of Placentia. On the retreat of Louis Bonaparte from the throne of Holland Napoleon confided to M. Lebrun, under the title of governor-general, the administration of that country, from which the events of 1813 obliged him to retire. On his return to France he signed the constitution that recalled the house of Bourbon to the throne, and was sent to Caen in the quality of commissioner extraordinary. On the 4th of June following he was created a peer of France by the king, and in the beginning of July was appointed president of the first bureau of the chamber of peers.

After the return of Napoleon he accepted the peerage from him, and likewise the place of grand master of the university. By this proceeding M. Lebrun rendered himself incapable of sitting in the new chamber of peers formed in August 1815. In the early part of his life he published, in prose, a translation of Tasso's *Jerusalem*, more remarkable for its elegance than its fidelity. He also made a prose translation of Homer's *Iliad*, which has frequently been reprinted. He died in 1824.

**LEBRUN, PONCE DENIS ECOUCHARD**, a celebrated poet, who during his life received the appellation of the French Pindar. He was born in 1729, and became secretary to the prince of Conti. At the age of twenty-six he had taken his place in the first rank of lyric poets. At the revolution he celebrated the birth of freedom in odes and epigrams; but as the prospect darkened he changed his tone, and in 1793 deplored in harmonious verses the fate of his country, oppressed by tyrants and anarchists. When the academical establishments were re-organized Lebrun became a member of the institute. He received from Bonaparte, when consul, a pension of 6000 francs, and died in September 1807.

**LE DRAN, HENRY FRANCIS**, an eminent French surgeon, who was born at Paris in 1685, and received his education under his father, who had acquired considerable reputation as an operator, particularly in cancers of the breast. Under his auspices our young surgeon turned his thoughts principally to the operation of lithotomy, which he performed in the lateral method, as practised by Cheselden, and was enabled to make some valuable improvements in the art. These he communicated to the public in his "*Paralele des Differentes Manieres de tirer la Pierre hors de la Vessie*." He published also, amongst other works, "*Observations de Chirurgie, auxquelles on a joint Plusieurs Reflexions en Faveur des Etudiens*;" "*Traité des Operations de Chirurgie*;" and to the translation of this work into English by Gataker, Cheselden made some valuable additions. Le Dran died in 1770.

**LEDWICH, EDWARD.**—This learned antiquary and topographer was born in Ireland in 1739, and received his education at Trinity college, Dublin. Having entered holy orders, he obtained the vicarage of Aghaboe, in Queen's county, and immediately devoted himself to his favourite study of antiquities. Of his numerous publications we may enumerate his "*Essay on the Government of Ireland from the Earliest Times to the Latest Revolution in it*;" the "*Antiquities of Ireland*;" and a "*Continuation of Grose's Antiquities of England, Scotland, and Wales*." Dr. Ledwich died in 1823.

**LEDYARD, JOHN.**—This adventurous but unfortunate traveller was born in 1751 at Groton, in the United States of America. Having lost his father while very young, he was successively consigned to the care of his grandfather and uncle, under the latter of whom he studied the law. Soon, however, disgusted with this pursuit, he was left at the age of nineteen without employment or profession. It was subsequently decided that he should enter the missionary institution of Doctor Wheelock, which that excellent man had recently formed at Hanover, on the banks of the Connecticut. He commenced his studies there accordingly, but it was not long before his adventurous spirit evinced itself in a variety of undertakings, and his determination

was soon taken of abandoning the confinement of his college.

The memoirs of this traveller have been written by a distinguished American, and we give the following extract to show how strong even in early life were the peculiarities of disposition which afterwards led him to visit nearly every part of the habitable globe.

"On the margin of the Connecticut river, which runs near the college, stood many majestic forest trees, nourished by a rich soil. One of these Ledyard contrived to cut down; he then set himself at work to fashion its trunk into a canoe, and in this labour he was assisted by some of his fellow-students. As this canoe was fifty feet long and three wide, and was to be dug out and constructed by these unskilful workmen, the task was not a trifling one, nor such as could be speedily executed. Operations were carried on with spirit, however, till Ledyard wounded himself with an axe, and was disabled for several days. When recovered, he applied himself anew to his work; the canoe was finished, launched into the stream, and, by the further aid of his companions, equipped and prepared for a voyage. His wishes were now at their consummation, and, bidding adieu to these haunts of the Muses where he had gained a dubious fame, he set off alone with a light heart to explore a river with the navigation of which he had not the slightest acquaintance. The distance to Hartford was not less than one hundred and forty miles, much of the way was through a wilderness, and in several places there were dangerous falls and rapids. With a bear-skin for a covering, and his canoe well stocked with provisions, he yielded himself to the current, and floated leisurely down the stream, seldom using his paddle, and stopping only in the night for sleep. He told Mr. Jefferson in Paris, fourteen years afterwards, that he took only two books with him, a Greek Testament and Ovid, one of which he was deeply engaged in reading when his canoe approached Bellow's Falls, where he was suddenly roused by the noise of the waters rushing among the rocks through the narrow passage. The danger was imminent, as no boat could go down that fall without being instantly dashed in pieces. With difficulty he gained the shore in time to escape such a catastrophe, and through the kind assistance of the people in the neighbourhood, who were astonished at the novelty of such a voyage down the Connecticut, his canoe was drawn by oxen around the fall and committed again to the water below. From that time till he arrived at his place of destination we hear of no accident, although he was carried through several dangerous passes in the river. On a bright spring morning, just as the sun was rising, some of Mr. Seymour's family were standing near his house on the high bank of the small river that runs through the city of Hartford, and empties itself into the Connecticut river, when they espied at some distance an object of unusual appearance moving slowly up the stream. Others were attracted by the singularity of the sight, and all were conjecturing what it could be till its questionable shape assumed the true and obvious form of a canoe; but by what impulse it was moved forward, none could determine. Something was seen in the stern, but apparently without life or motion. At length the canoe touched the shore directly in front of the house; a person sprang from

the stern to a rock on the edge of the water, threw off a bear-skin in which he had been enveloped, and behold John Ledyard stood in the presence of his uncle and connexions, who were filled with wonder at this sudden apparition, for they had received no intelligence of his intention to leave Dartmouth, but supposed him still there diligently pursuing his studies, and fitting himself to be a missionary among the Indians. However unimportant this whimsical adventure may have been in its results, or even its objects, it was one of no ordinary peril, and illustrated in a forcible manner the character of the navigator. The voyage was performed in the last part of April or first of May, and, of course, the river was raised by the recent melting of the snow upon the mountains. This circumstance probably rendered the rapids less dangerous; but it may be questioned whether there are many persons at the present day who would willingly run the same hazard, even if guided by a pilot skilled in the navigation of the river."

Subsequently to this event he made several ineffectual attempts at obtaining admittance into the ministry, which, after having occasioned nothing but disappointment, ended in his going as a common sailor on board a vessel bound for Gibraltar. After a year spent in this voyage, and having no prospect of employment, he determined on setting out in quest of some unknown relations in England, where he arrived, without money, or the chance of getting any, except by begging. He had the good fortune to discover his friends; but his idea of the respect due to him made him repulse every attempt on their part to do him good. His word had been doubted when he first made himself known, and it was enough for John Ledyard. It happened, however, that while he was in London, Captain Cook was about to set sail on his last voyage. Our hero enlisted in the marines, made application in person to the great navigator, and was permitted to accompany him.

Ledyard remained in the navy two years after his return from this voyage, and then returned to America. While at Hartford, the dwelling-place of his uncle, and where he continued four months, he wrote a journal of Cook's voyage, and formed some of those schemes the execution of which so constantly occupied his mind. After his temporary rest, he proceeded first to New York, and next to Philadelphia, in search of some one who might be inclined to send him out on an experimental trading voyage to the north-west coast. First a Mr. Morris, then the merchants of New London, of L'Orient, and of Paris, and lastly the celebrated Paul Jones, held out promises of engaging in the scheme; but all, from some cause or other, were called off, and poor Ledyard was left in Paris without money and without hope. Not, however, to be deterred by disappointment, he again returned to England, where he was actually embarked on his desired expedition, when, according to his usual fortune, the vessel was prevented proceeding on her course. Still unsubdued, his next determination was, to make the tour of the globe from London, east, on foot! On this journey he set out, aided by a subscription commenced by Sir Joseph Banks, Dr. Hunter, &c.; and, after having proceeded through Sweden, Lapland, and Finland, round the Gulf of Bothnia, into the arctic circle, on foot, arrived at Petersburg. From thence he set out for Siberia, in company with a Scotch physician,

of the name of Brown, and after a journey of prodigious extent arrived at Yakutsk.

After having proceeded thus far on his expedition, and having overcome difficulties which would have filled any other man with dismay, our traveller might well hope that he should meet with no other opposition to his course but that of the elements. This, however, it will be seen, was aided by another and more formidable power. It had been his intention to proceed immediately from Yakutsk to Okotsk, in order to pass over to the American continent at the earliest approach of the spring. But, to his consternation, he was informed that it was impossible for him to pass the roads at that season, and he was compelled, however unwillingly, to determine on remaining at the former place till May. From this resolution he found some opportunity of deviating a little, and he returned with Captain Billing up the Lena to Irkutsk. But while at this place an order came from the empress to arrest Ledyard, and send him to the private inquisition at Moscow. Well might the free American, while he was whirled over the frozen and almost interminable wilds of Catherine's dominions, exclaim, "It would be excellently qualifying, if every man who is called to preside over the liberties of a people should once—it would be enough—actually be deprived of his liberty unjustly." After having been carried before the tribunal at Moscow, where it does not appear that any accusation was preferred against him, he was sent to the frontiers of Poland, where he was set at liberty, and left to make his way in the best manner he could to England.

Ledyard arrived in London in May, and, as if something should always occur to keep hope alive, however often overcome, Sir Joseph Banks introduced him to the African association, as a person in every way calculated for prosecuting the discoveries they desired to make in Central Africa. Ledyard's services were accepted; he was fitted out for his departure, and, with more of confidence than he had ever yet been able to indulge in, he set sail for Egypt. He arrived at Cairo on the 19th of August, 1788, and there, while hope was at its height, all the enthusiasm of his mind in action, and his foot upon the desert, his career ended in death, as he died six days afterwards.

LEE, CHARLES, a major-general in the American revolutionary war, who was a native of North Wales. He served early in America, where he commanded a company of grenadiers at the unsuccessful assault of Ticonderoga, by General Abercrombie, and was wounded. He distinguished himself in 1762, under General Burgoyne, in Portugal. He afterwards wrote on the side of the American colonies in a contest between them and the ministry, and then entered the Polish service. During his absence the stamp act passed, and the hostility to it manifested by General Lee rendered him obnoxious to the royalists of the court of Vienna. In the course of two or three years he wandered all over Europe, until a duel with an Italian officer, in which his antagonist was killed, obliged him to flee; and in 1773 he sailed from London for New York. The quarrel between Great Britain and her colonies had now assumed a serious aspect, and Lee formed the resolution to espouse the cause of the latter. Travelling through the colonies he became acquainted with the most conspicuous friends of colonial emancipation,

and, though yet a British officer on half-pay, was active in encouraging the Americans to resistance and in censuring the measures of the ministry.

In 1776 Lee received a commission from congress, and immediately resigned the one he held in the British service; at the same time declaring to the secretary of war his readiness to engage in any honourable service for the king, but reprobating the present measures as inconsistent with the liberty of the subject. In the quality of major-general in the continental service, Lee accompanied General Washington to the camp before Boston. In 1776 he was directed by the commander-in-chief to occupy New York, and to defend that city and the north river against the enemy. On his arrival there, Lee set about strengthening the defences of the city, disarming and securing those who were inimical to the American cause, and checking the intercourse subsisting between the British and the townsmen. He was afterwards invested with the chief command in the southern department. His presence in the south inspired a happy ardour and confidence in both soldiers and people, while his conduct on the memorable attack of the British on Sullivan Island raised his military reputation. After the discomfiture of the enemy at this fortress, Lee passed into Georgia, where he remained some weeks, employing himself in fortifying the colony, and chastising the frontier Indians. Congress anticipating a concentration of the British forces, for the purpose of making a powerful effort at New York, Lee was ordered to Philadelphia, and was despatched to the camp at Haarllem, with permission to visit the posts in New Jersey. He reached the army just in time to recommend its extrication from a situation where, had the enemy used proper diligence in his operations, it would have been completely destroyed. The opinion of Lee induced the council of war to make a precipitate movement during the night, by which they escaped the toils into which they would otherwise have fallen.

While marching through the Jerseys to join General Washington, Lee was made prisoner by the English as he lay carelessly guarded at a considerable distance from the main body, and carried to New York. Washington proposed to exchange for him six field-officers; but General Howe considered Lee as a deserter from the British army, and refused to release him on those terms. Several British officers were confined and held answerable for the treatment of General Lee. The latter was detained until the surrender of Burgoyne in October 1787. After that event he was exchanged. The battle of Monmouth concluded the military course of General Lee. Being directed by General Washington to advance and attack the enemy's rear, he approached very near, but, instead of obeying his instructions, suffered his troops to make a disorderly retreat. The commander-in-chief met him in the flight and reprimanded him for his conduct. Lee replied in improper language, but executed the subsequent orders of General Washington with courage and ability. Stung with the indignity which he conceived to have been offered him, he wrote two letters to the commander-in-chief after the action of a disrespectful tenour, challenging him to substantiate the charge implied in his expressions on the field. General Lee was arrested and arraigned before a court-martial for disobedience of orders, misbehaviour before

the enemy, and disrespect to the commander-in-chief. On the 12th of August, 1778, he was found guilty of the charges, and sentenced to be suspended from any commission in the armies of the United States for the period of one year. The concurrence of congress in this sentence was thought necessary; and, while yet in suspense as to their determination, he published a defence of his conduct. His abuse of General Washington's character in this pamphlet led to a duel with Colonel Laurens, one of the staff of the commander-in-chief, in which Lee was wounded. Congress confirmed the sentence of the court-martial in his case, though not without previous discussion. Lee retired to an estate he had purchased in Virginia, where he lived secluded in a small hovel, destitute of glass windows or plastering, amusing himself with his books and dogs. While in this situation he composed a set of political and military queries, in which his bitter feelings were freely vented, and which were afterwards published in Baltimore, where they created considerable disturbance.

In 1782 he went to Philadelphia, where he engaged lodgings in a tavern, and, a few days after his arrival, was seized with a fever, of which he died in obscurity on the 2nd of October, 1782. His thoughts would appear to have been employed to the end in the profession which had engaged the best portion of his life, for the last words he was heard to utter were, "Stand by me, my brave grenadiers." From respect to his former services, a large concourse of the people, including many public characters, both French and American, joined in the funeral solemnities. General Lee was brave in action, of a sound judgment in military affairs, and possessed of the affection of his officers and men. Sensible of his military talents, and insatiably ambitious, he aspired to the chief command, and was little scrupulous about the means to be employed to attain that dignity. Whatever might have been his motives for engaging in the American cause, he sacrificed much for it, and was useful in its advancement. He was a classical scholar, and possessed an excellent memory and a brilliant fancy. Though a gentleman in his manners when he chose to appear such, he was often coarse, and, towards the latter part of his life particularly, became very negligent of his personal appearance. With all his faults, however, he was distinguished for sincerity, veracity, and adherence to his friends. He published some essays on military, political, and literary subjects, which, together with his extensive correspondence, were collected in a volume in 1792. A pamphlet which he wrote on American affairs in the earlier part of his life was much approved of by the friends of America and particularly commended by Dr. Franklin. It was his earnest desire, expressed in his will, that he should not be buried in any church or church-yard, or within a mile of any presbyterian or anabaptist meeting-house; and he assigned as his reason, that since his residence in America he had kept so much bad company while living, that he wished to avoid it when dead.

LEE, NATHANIEL, a dramatic poet, who was educated at Cambridge, whither he went in 1668, and afterwards went to London, misled, it is said, by the promises of Villiers, duke of Buckingham. Neglected by his patron, he turned his attention to the drama, and in 1675 produced his tragedy of

"Nero," and from that time to 1681 produced a tragedy yearly. He also tried his abilities as an actor, but failed in the attempt. In 1684 insanity rendered his confinement necessary, and he was taken into Bethlehem hospital, where he remained until 1688, when he was discharged, and wrote two more tragedies,—*"The Princess of Cleves,"* and *"The Massacre of Paris,"* which appeared in 1689 and 1690. He died in 1691 or 1692, in consequence of some injury received in a drunken night frolic. He is the author of eleven plays, all of which were acted with applause; but his natural fire and pathos were buried in a torrent of words, and clouded by a tendency to turgid and bombastic eloquence.

LEE, RICHARD HENRY.—This American was born in the year 1732, at Stratford, Westmoreland county, Virginia, and, after a course of private tuition in his father's house, was sent to the academy of Wakefield, in Yorkshire, where he became distinguished for his proficiency in the classics. He returned to his native country when about in his nineteenth year, and his fortune rendering it unnecessary for him to devote himself to any profession, his time was most usefully spent in the improvement of his mind. The first endeavour which he made to serve his country was in the capacity of captain of the volunteer companies which were raised in 1755, for the purpose of aiding the expedition under General Braddock. He was disappointed, however, in his patriotic desires, Braddock having refused to accept any more assistance from the provincials than he was obliged to. In his twenty-fifth year Lee was appointed a justice of the peace for his native county—an office then given only to persons of the highest character, and generally but to persons of considerable experience. Not long afterwards he was chosen a delegate to the house of burgesses from Westmoreland county, and thus commenced the career of politics for which he was peculiarly fitted both by his natural disposition and talents and the studies in which he was versed. Works of civil and political morality, history, the principles of the civil law, and the laws of his own country, had occupied the principal share of his time, whilst he had not neglected the more elegant departments of polite literature; and he soon obtained distinction in debate. His voice was always raised in support of those principles which were advocated by the republican or anti-aristocratic portion of the legislature; and when in 1764 the declaratory act was passed in the British parliament, in pursuance of the right claimed by that body of taxing America, he was the first to bring forward the subject to the notice of the assembly of which he was a member. A special committee having in consequence been appointed to draught an address to the king, a memorial to the house of lords, and a remonstrance to the house of commons, Mr. Lee was placed on it and selected to prepare the two first papers. These accordingly proceeded from his pen, and, in the words of his biographer and grandson, "contain the genuine principles of the revolution, and abound in the firm and eloquent sentiments of freemen." In 1765 Patrick Henry introduced in the Virginia legislature his celebrated resolutions against the stamp act, which had just been passed by the British parliament. Mr. Lee lent Mr. Henry's motion his powerful and most zealous assistance. Not long after it had been carried in spite of the efforts of the influential party, who advocated the measures of the mo-

ther country, Mr. Lee, amongst other methods which he took to prevent the operation of the stamp act, planned and effected an association "for the purpose of deterring all persons from accepting the office of vender of stamp paper, and for awing into silence and inactivity those who might still be attached to the supremacy of the mother country, and disposed to advocate the right of colony taxation." The association bound themselves to exert every faculty to accomplish the end for which they had united together, "at every hazard, and paying no regard to danger or to death." In consequence of the opposition the stamp act encountered in the colonies, the British ministry were forced to repeal it; but they did so with a reservation of the right of the mother country "to bind the colonies in all cases whatever."

In 1767, parliament having passed two acts, one laying a tax on tea and the other requiring the legislature of the colony "to make provision for quartering a part of the regular army," Mr. Lee exerted himself in every way to excite a spirit of hostility to them, perceiving as he did their despotic tendency, and feeling even then that a struggle for freedom must eventually take place. It would be impossible for us, consistently with our limits, to enter into a minute detail of the unceasing efforts of Mr. Lee's patriotism between this period and the assembling of the first congress in Philadelphia; we can only mention that the celebrated plan which was adopted in 1773 by the house of burgesses, for the formation of corresponding committees to be organized by the legislatures of the several colonies, and also that of corresponding clubs or societies, throughout the provinces, for the purpose of diffusing amongst the people a correct knowledge of their rights, of keeping them informed of every attempt to infringe them, and of rousing a spirit of resistance to arbitrary measures,—both originated with him.

In 1774 the first general congress assembled at Philadelphia, and Mr. Lee attended it as one of the Virginia delegation. His labours during this session, as throughout his whole congressional career, until his zeal and activity were partially arrested by bodily infirmities, were unremitting. Of all the leading committees, those to prepare an address to the king, to the people of Britain, and to the colonies, and to carry into effect the resolution of non-intercourse with Great Britain,—he was a member; and from his pen proceeded the memorial of congress to the people of British America. In the following year he was unanimously elected by the people of Westmoreland county to the assembly of Virginia, by which he was sent to the second congress. At this period hostilities were in full operation between the two countries, and one of the first acts of the new congress was to invest George Washington with the command of its armies. His commission and instructions were furnished by Mr. Lee, as chairman of the committee appointed for that purpose. The other committees on which he served in this session were those named to prepare munitions of war, to encourage the manufacture of saltpetre and arms, and to devise a plan for the more rapid diffusion of intelligence throughout the colonies. The second address of congress to the people of Great Britain (a composition unsurpassed by any of the state papers of the time) was written by him this session. But the most important of his services in this second congressional term was his motion on the 7th of June, 1776, "That these united

colonies are, and of right ought to be, free and independent states; that they are absolved from all allegiance to the British crown; and that all political connexion between them and the state of Great Britain is, and ought to be, totally dissolved." His speech on introducing this bold measure was one of the most brilliant displays of eloquence ever heard. After a protracted debate it was determined to postpone the consideration of this resolution until the first Monday of the ensuing month of July; but a committee was ordered to be immediately appointed to prepare a declaration of independence. Of this committee he would have been the chairman, according to parliamentary regulations with regard to the original mover of an approved resolution; but he was obliged on the same day to leave congress and hasten to Virginia, in consequence of the dangerous illness of some of the members of his family. Mr. Jefferson was substituted for him, and drew up the declaration. In August following Mr. Lee returned to his seat in congress, which he continued to occupy until June 1777, pursuing with unabated ardour the path which was to lead to the freedom and happiness of his country. In that month he solicited leave of absence, and returned to Virginia. This step was taken on account of the delicate state of his health, and also for the purpose of clearing his reputation from certain stains which malice had thrown upon it, which he effectually did by demanding an enquiry into the allegations against him, from the assembly of his native state. The result of this enquiry was a most honourable acquittal, accompanied by a vote of thanks to him for the fidelity and zeal of his patriotic services, which the speaker of the house, the venerable George Wythe, in communicating it to him, prefaced by a warm and flattering eulogy.

In August 1778 he was again elected to congress, but was forced by his declining health to withdraw, in a great degree, from the arduous labours to which he had hitherto devoted himself. In 1780 he retired from his seat, and declined returning to it until 1784. In the interval he served in the assembly of Virginia, and, at the head of the militia of his county, protected it from the incursions of the British. In 1784 he was chosen president of congress by a unanimous vote, but retired at the end of the year, and in 1786 was re-elected to the Virginia assembly. In 1792 his health forced him to retire from public life, when he was again honoured by the Virginia legislature with a vote of thanks. He died June 19, 1794.

LEE, SOPHIA.—This lady was born in London, in the year 1750, and received from her father, who was an actor of considerable merit, an excellent education. At a very early age Miss Lee commenced writer, and in 1780 appeared a very diverting comedy, from her pen, entitled "The Chapter of Accidents," which was produced at the Haymarket theatre, and met with great success. This work was followed by "The Recess, or Tales of Other Times."

The success of this work far surpassed her expectation: its interest was increased by her publishing only the first volume, in order to feel her ground. Popular applause, and urgent enquiries even from individuals wholly strangers to her, encouraged her to produce the remainder. Among the testimonies of approbation none touched her so sensibly as a letter from the admired author of "Anticipation," the late Mr. Tickell; for his was the voice of taste

and judgment, sanctioned by that circle in London most distinguished for both. After warmly expressing his own sentiments, he adds, "I have the greatest pleasure in acquainting you that every person admires this beautiful work with more concurrence of opinion than I almost ever remember on any literary subject. Mr. and Mrs. Sheridan have particularly commissioned me to bear witness to the delight which they have felt in reading 'The Recess.' The new interest which this species of historical romance creates in favour of characters we all have heard of so often, yet never before so intimately regarded, gives the most useful embellishment to fact, and supports memory by the charm of imagination."

Her next publication was a ballad, called "A Hermit's Tale, found in his Cell." Border warfare was the ground-work of this little poem, and she frequently regretted that she had not, by withholding it longer, acquired that more exact knowledge which would have enabled her considerably to improve a pleasing outline; but her imagination was busy with a subject of more length.

The madness, or rather the unsettled intellect, of Ellinor, in "The Recess," had been greatly admired, and seemed to afford situations so interesting, that it had been often suggested to her as particularly calculated for the drama. She therefore presented the same character under another form, in the tragedy of "Almeyda, Queen of Grenada," when Mrs. Siddons displayed that pathos and dignity in which she stood unrivalled. Great and deserved encomiums were lavished on the poetical beauties of this play, though, in print, they were disfigured by gross errors, the consequence of its hasty publication during the absence of the author from town.

In the succeeding year her sister Harriet published the first volume of "Canterbury Tales." Detached stories, placed in various countries, abrupt in their commencement, and breaking continually into the dramatic form of dialogue, were, at that time, a novelty in English literature, both as to style and title, although tales innumerable have abounded since. The work had, therefore, very considerable success; and it was agreed between the sisters, that, as neither could wholly command her time, the subjects should be taken up alternately, as leisure and inclination served, each keeping her own story wholly distinct from the other. To the five volumes, however, Miss Lee contributed only "The Young Lady's Tale, or the Two Emilys," and "The Clergyman's Tale." In the first of these we evidently find the author of "The Recess;" the characteristics of the second approach nearer to "The Chapter of Accidents;" but both show the same fertility of invention which marks her other works.

It was some time before Miss Lee again published. The interval was spent occasionally in writing, but for the most part in domestic occupation and social intercourse; for, though strictly attentive to their avocations, the lives of herself and sisters were not reclusive. They had a numerous and agreeable circle of acquaintance among the residents of Bath, and few persons who had a taste for literature, whether English or foreigners, visited that city without becoming more or less known to them.

In the year 1803, Miss Lee, who in conjunction with her sisters had been employed in tuition, retired from the duties of a responsible, and therefore anxious situation, to enjoy the independence ob-

tained by that and the exercise of her talents, in domestic privacy. She soon after published "The Life of a Lover," and in 1807, a comedy from her pen, called "The Assassination," was performed at Drury Lane theatre, which was not successful.

On retiring from Bath, Miss Lee, together with her sister Harriet, resided for some time in Monmouthshire, within reach of Tintern Abbey, as well as many other celebrated spots, and in a neighbourhood of polished and agreeable, though, as it afterwards appeared, of fluctuating society. Circumstances of health and convenience induced them, however, to purchase a house at Clifton, which, from that period, became her permanent home. Here she enjoyed for twelve years good, though not robust, health, and that flow of spirits which was natural to her at all times. In the summer of 1823 it became evident to her friends that her strength was declining; yet nothing occurred that alarmed them till the month of October, when she was seized with spasms on the chest. Though subdued, they were the precursors of a lingering illness, which she bore throughout with religious fortitude, often with cheerfulness, till nature was exhausted, and she expired in March 1824.

LEE, ARTHUR, a distinguished American revolutionary patriot, who was born in Westmoreland county, Virginia, in December 1740. He was sent to Eton, in England, and, upon the completion of his course here, entered the university of Edinburgh, where he commenced the study of medicine, and took his degree of M.D. with great distinction, winning a medal for the best botanical treatise, which was published by order of the university. Having travelled through Holland, Germany, Italy, and France, Dr. Lee returned to Virginia, and commenced the practice of his profession at Williamsburg, then the metropolis. His success was great; but the bent of his mind to politics determined him to return to England and study law, in order that he might acquire familiarity with the science of politics and government, and fit himself for taking a part in public affairs, which were then beginning to wear a serious aspect. Before his return he had heard the parliamentary debate on the stamp act, and when the duty bill was passed he wrote a series of anonymous papers in relation to it. In 1776 he came again to London, which he found the strong hold of popular opposition, and the society of the supporters of the bill of rights the most active in conducting it. Of this society he became a member, with the design of connecting the grievances of the two nations, and purchased the freedom of the city, which qualified him to vote in municipal affairs. The complaints of America were introduced into the celebrated Middlesex petition by Mr. Lee, associated with Wilkes; and he also successfully proposed a resolution, that the members of the club would support no candidate for parliament who would not pledge himself to promote the granting of the power of self-taxation to America. The celebrated Junius was an adviser of this body, and with him Mr. Lee had a literary discussion on some points of American policy, about which they happened to differ. His political publications at this period, in which he adopted the signature of Junius Americanus, were numerous, and procured for him the acquaintance of Burke, Dr. Price, and others of the popular leaders.

In 1770 he was admitted to the bar, and began

the practice of his new profession under the most favourable auspices; and such success attended his exertions as to enable him to lay the foundations of an ample fortune. In the same year the assembly of Massachusetts appointed him their agent in case of the absence or death of Dr. Franklin; and before either of the contingencies occurred he assisted the venerable sage with his hearty co-operation. As a testimony of the sense of his services that state subsequently, in 1784, presented him with a tract of land containing 4000 acres. In the spring of 1774 he set out on a tour to France and Italy, and when at Paris published "An Appeal to the People of Great Britain." Hearing, however, of the dissolution of parliament before he had completed his journey, he hastily returned from Turin to London. On the return of Dr. Franklin to America in the same year, he became the sole agent of Massachusetts. The secret committee of congress appointed Mr. Lee their London correspondent. The principal object of this regulation was, to learn what was to be hoped from the European powers. Mr. Lee directed his inquiries particularly to the French ambassador at the British court, through whom he obtained assurances from the count de Vergennes that his government would secretly furnish to the colonies 200,000*l.* worth of arms and ammunition, to be transported from Holland to the West Indies. He was afterwards appointed by congress one of the commissioners to the court of France in conjunction with Silas Deane, to whom Dr. Franklin was afterwards added, and continued to labour unceasingly for the cause of his country by his writings, negotiations, and never-failing vigilance in detecting whatever might prove injurious to its interests. At the same time he also acted as agent for Virginia, and had the address to procure, under circumstances of special favour, from the royal arsenal, warlike stores to the amount of nearly 260,000*l.*

In December 1777 congress appointed him sole commissioner to Spain, still retaining him on the commission to France. The British ambassador remonstrated against his reception, in consequence of which he was detained at Burgos on his way to Madrid; but upon sending a spirited reply to the remonstrance, no further interruption was attempted, and he proceeded to the capital. He there pursued the same policy which he had practised in London and Paris, ingratiating himself and his cause with the men of influence, and appealing boldly and directly to the government, from which he finally procured a large pecuniary loan. Having accomplished all that seemed practicable he returned to Paris, when the commissioners having determined on the expediency of conciliating Frederic of Prussia, and prevailing with him to withhold his assistance from England, Mr. Lee was selected for that duty and repaired to Berlin, where he was allowed to reside in a private character, and to correspond secretly with the court.

He succeeded in obtaining from Frederic an assurance that he would afford no facilities to Great Britain in procuring additional German auxiliaries, and that he would prohibit the passage through any part of his dominions, of any troops which our court should thenceforward engage in Germany. He obtained also permission for the citizens of the United States to carry on a direct commerce with the subjects of Prussia, and for himself to purchase, for the use of

the United States, arms from the armouries from which the king supplied his forces. While in Berlin his papers were stolen from his chamber; but upon an order from the king to investigate the affair, they were secretly returned. When Mr. Lee left Berlin, it was with an understanding that a correspondence should be carried on between Baron Schulenburg and himself on the affairs of the United States, and that he should keep the king constantly informed of the events of the war with Great Britain, which he did during his residence in Paris. He was also assured that Prussia "would not be the last power to acknowledge the independence of his country." In forming the commercial treaty with France Mr. Lee objected to two articles, in which it was stipulated that no duties should be charged by the respective governments on any merchandise exported to the French West Indies, which yielded molasses, or on the molasses exported thence to the United States; and on the suggestion of France the decision was left to congress, who directed that they should be expunged. Upon the recall of Mr. Deane, between whom and Mr. Lee there had been some misunderstanding, John Adams was appointed in his place. Their services, however, were soon afterwards superseded by the appointment of Dr. Franklin as minister plenipotentiary. During the period of his commission, the peculations of the subordinate agents who were employed to conduct the commercial details of the public business, had excited the vigilant inspection and unsparing reprehension of Mr. Lee. This interference created a multitude of complaints and insinuations, which were artfully disseminated at home. These rumours were in a measure successful in exciting the suspicions of some members of congress; and when in 1779 it was determined to send a minister to Spain, and Mr. Lee was certainly so prominent a character as to be at once suggested as the fittest candidate, he was not appointed, although nominated.

Upon learning this virtual censure, he resigned his appointments and returned to America in 1780. He prepared an elaborate report of his official proceedings, and answers to all the charges which had been circulated to his prejudice; but upon requesting leave to vindicate himself with these in congress, that body expressed their full confidence in his patriotism, asserting that they had no accusations to make, and requested him to communicate his views and information acquired during his residence abroad. In 1781 he was elected to the assembly of Virginia, and by it returned to congress, where he continued to represent the state until 1785. In 1784 he was sent on a delegation to make treaties with the Indians on the northern frontier. He was next called to the board of treasury, with Samuel Osgood and Walter Livingston, in which he continued from 1784 to 1789. Within that period he also served in a legislative committee to revise the laws of Virginia. On the dissolution of the treasury board he once more sought the shades of retirement, and established himself on a farm on the Rappahannock, where he died December 12, 1792.

LEECHMAN, WILLIAM, a Scottish divine, who was born in Lanarkshire in 1706, and received his education at the university of Edinburgh. He was licensed as a preacher in 1731, and was ordained minister of Beith in 1736. In 1746 he was elected moderator of the synod of Glasgow, which he opened

M

with a sermon to the clergy on the temper, character, and duty, of a minister of the gospel.

In 1743 Mr. Leechman published a discourse on the nature, reasonableness, and advantages of prayer, with an attempt to answer the objections against it. This added much to his reputation, and has been frequently reprinted. He was shortly after elected to the professorship of theology at the university of Glasgow. Soon after he had been established in the professorship, he took the degree of doctor in divinity, and continued in the theological chair seventeen years, vindicating and establishing the grand truths of natural and revealed religion in answer to the principal objections made to them by Mr. Hume, Lord Bolingbroke, and other sceptical writers. He had in his lectures a remarkable talent of selecting what was most important and striking on every subject that he treated on: his arguments were solid, founded on indisputable facts; and they were urged with a degree of warmth which carried his auditors along with him; for they were addressed equally to the judgment and the heart. Dr. Leechman's fame extended far and wide, the divinity-hall at Glasgow was crowded in his time with a greater number of scholars than any other in Scotland; and his numerous scholars, however they might differ in their sentiments on speculative theology and church government, were all cordially united in their affection and veneration for their master. In 1761 Dr. Leechman was raised to the office of principal of the university of Glasgow by a presentation from the king. He had previously to this been in a very bad state of health, and this change in his avocations was probably the means of prolonging his life; yet, though released from the more fatiguing part of his duties, he gave a lecture for some time, once a week, to the students in divinity, and weekly lectures to the whole university. Dr. Leechman's faculties remained in full vigour amidst the increasing infirmities of old age, but in 1785 he experienced two violent paralytic strokes, from which he partially recovered; but a third attack carried him off on the 3rd of December in that year, when he was almost eighty years of age.

**LEFEVRE, FRANCOIS JOSEPH**, duke of Dantzic.—This French nobleman was born at Rufack, in the department of the Upper Rhine, in 1755, and he entered the military service in the guards, in which, at the beginning of the revolution, he was sergeant. Having warmly embraced the new principles and distinguished himself by his prudence and firmness, his promotion was rapid, for in 1794 he was made general of division, and in the succeeding campaigns continued to render himself conspicuous by his courage and military skill. He espoused the cause of Bonaparte, whose designs he was able to forward. His services on this occasion were rewarded by the dignities of senator, marshal of the empire, and grand cross of the legion of honour. He bore an important part in the victory of Jena, distinguished himself at Eylau, and received the chief command at the siege of Dantzic, at which he gave the most brilliant proofs of genius and humanity. In 1808 he served in Spain, in 1809 again in Germany, and in the Russian campaign commanded the imperial guard. After the abdication of the emperor the king created him a peer, and during the hundred days Napoleon included him in his upper chamber. His name was consequently erased after the second restoration, but in 1819 he was again summoned to take his seat. He died in 1820.

**LEFEVRE, SHAW CHARLES**, was born in Yorkshire in 1759, and educated at Trinity college, Cambridge. In 1789 Mr. Lefevre married and settled at Reading, of which borough he subsequently became member of parliament. It was in 1802 that his political connexion with Reading commenced. At that period the inhabitants of Reading conceiving that the old interest which had long preponderated there might be overturned, looked out for a man of character and opulence that would come forward as their champion and assert their independence. In this critical conjuncture all eyes were turned towards their neighbour Mr. Lefevre as the fittest person for this purpose. A few friends accordingly waited on him with a tender of their services, and he answered nobly to their call. A contest ensued of the most severe nature, but under such a leader, and so supported, the conflict was not long doubtful, and it ended in the return of Mr. Lefevre by a decided and triumphant majority. Once seated for the borough, he was afterwards so firmly supported by his friends that he maintained his post through four successive elections, against all opposition. At the general election in 1820, in consequence of his declining health, which had obliged him to seek a milder climate, he with great reluctance withdrew from public life, and resigned into the hands of his constituents the trust which he had held so long, so honourably to himself, and so advantageously to the borough of Reading. He closed a long and useful life in April 1823.

**LEFEVRE, ROBERT**, a French portrait painter, who produced historical pieces of great merit, which, with those of David, Girodet, Guerin, and Gerard, belong to the best of the modern French school. Several portraits of Napoleon by Lefevre are among the best. He died in 1831.

**LEFORT, FRANCIS JAMES**.—This celebrated favourite of Peter the Great was born at Geneva in 1656. His father, a merchant in that place, sent him to Hamburgh to become acquainted with commerce; but having an inclination for a military life, he went secretly to Marseilles in his fourteenth year, and entered first the French and afterwards the Dutch service, which he left to go to Moscow by the way of Archangel in 1675. Here he became secretary to the Danish ambassador, and a fortunate accident gave him an opportunity to gain the favour of the young czar, Peter Alexiewitch, which he retained till his death. In both was the germ of greatness, which was gradually developed. Peter felt that he needed an instructor and assistant, and Lefort possessed talents fitted for both offices. The first great service which he rendered the czar was in a rebellion of the Strelitz. Lefort quelled the insurrection, and saved the prince from the danger which threatened his life. This service gained for him the unbounded confidence of the czar, who was now become the absolute master of Russia. Lefort's influence increased daily. He established the military system of Russia, and laid the foundation of her navy, which Peter afterwards carried to such a degree of perfection. When Peter travelled into foreign lands in 1697 Lefort was the principal of the embassy, in the train of which the czar remained incognito. In the mean time the nobles, jealous of the favour shown to a foreigner, saw a favourable opportunity to revenge themselves in the long absence of Lefort and the czar. The Strelitz rebelled; but Peter darted on them with the rapidity of an eagle, and took a bloody revenge. The

czar, Lefort, and Menzikoff, executed the guilty with their own hands. Lefort died in 1699. He had a comprehensive and cultivated mind, a penetrating judgment, much presence of mind, great dexterity in sounding those of whom he wished to make use, and an uncommon knowledge of the resources of the Russian empire.

LEGENBRE, ADRIAN MARIE, a celebrated French professor of mathematics, whose scientific attainments entitle him to be placed amongst the highest mathematicians of the age. Among his numerous scientific publications we may mention his "*Memoire sur les Transcendentes Elliptiques*," and the "*Elemens de Geometrie*," the last of which has passed through nearly twenty editions. In addition to the works already mentioned, M. Legendre published "*Nouvelles Theorie des Paralleles*," and was for several years a contributor to the *Memoirs of the academy of sciences*. M. Legendre died in 1832.

LEIBNITZ, GODFREY WILLIAM. — This learned mathematician and philosopher was born at Leipsic in 1646, and educated at the university in that city. He afterwards went to Jena, where he heard the lectures of Professor Bohnius upon polite learning and history, and those of Falcknerius in the law. At his return to Leipsic in 1663 he maintained, under Thomasius, a thesis "*De Principiis Individuationis*." In 1664 he was admitted M.A., and observing how useful philosophy might be in illustrating the law, he maintained several philosophical questions taken out of the "*Corpus Juris*." At the same time he applied himself particularly to the study of the Greek philosophers, and engaged in the task of reconciling Plato with Aristotle, as he afterwards attempted a like reconciliation between Aristotle and Des Cartes. He was so intent on these studies that he spent whole days in meditating upon them in a forest near Leipsic.

About this period he became acquainted with Baron Boinebourg, who formed so high an opinion of his learning that he advised him to apply himself to law and history; giving him at the same time the strongest assurances that he would engage the elector, John Philip of Schonborn, to send for him to his court. Leibnitz accepted the kindness, promising to do his utmost to render himself worthy of such a patronage; and, to be more within reach of its happy effects, he repaired to Frankfort upon the Maine, in the neighbourhood of Mentz. In 1668 John Casimer, king of Poland, resigning his crown, the elector palatine, among others, became a competitor for that dignity; and, while Baron Boinebourg went into Poland to manage the elector's interests, Leibnitz wrote a treatise to show that the Polonois could not make choice of a better person for their king. With this work the elector palatine was extremely pleased, and invited the author to his court. But Baron Boinebourg would not suffer him to accept this last offer from the palatine, and immediately obtained for him the post of counsellor of the chamber of review to the elector of Mentz. Baron Boinebourg had a political connexion with the French court, of which Leibnitz undertook the charge. Leibnitz immediately set out for Paris, and on his arrival became acquainted with all the literati in that metropolis.

In 1673 he lost his patron, M. de Boinebourg; and, being at liberty by his death, came to England, where he became acquainted with Oldenburg, the secretary, and John Collins, fellow of the royal

society, from whom he received some hints of the invention of the method of fluxions, which had been discovered in 1664 or 1665, by Mr., afterwards Sir Isaac Newton.

While he was in England he received an account of the death of the elector of Mentz, by which he lost his pension. He then returned to France, whence he wrote to the duke of Brunswick Lunenburg to inform him of his circumstances. That prince sent him a very gracious answer, assuring him of his favour, and, for the present, appointed him counsellor of his court, with a salary; but gave him leave to stay at Paris, in order to complete his arithmetical machine, which, however, was not completed until after his death. In 1674 he came again to England, whence he passed, through Holland, to Hanover, and from his first arrival there made it his business to enrich the library of that capital with the best books of all kinds. The elector dying in 1679, his successor, Ernest Augustus, then bishop of Osnaburg, afterwards George I., extended the same patronage to Leibnitz, and directed him to write the history of the house of Brunswick. Leibnitz undertook the task; and, travelling through Germany and Italy to collect materials, returned to Hanover in 1690 with an ample store.

He immediately employed himself in arranging the materials which he had collected for his historical undertaking, and after having published an essay on the connexion between the houses of Brunswick and Este, which procured him the appointments of privy counsellor of justice, and historiographer, he gave to the world "*Scriptores Rerum Brunsvicensium*;" but this important work was only a preparatory step. The history itself was never published: the outline only was found among his papers after his death, and published in the "*Acta Eruditorum*" for 1717. According to this plan, we should have had a general account of the primitive condition, not only of Germany, but of the whole world, in conformity with the views given by Leibnitz in his "*Protogea*." The "*Accessiones Historicae*," and the "*Disquisitio de Origine Francorum*," were published at Hanover in 1715. As Leibnitz displayed a profound knowledge of history in the above-mentioned works, so he showed a no less intimate acquaintance with theology in his attempts at forming a plan for reuniting the protestants and catholics, in which he displayed much fruitless labour, in conjunction with Molanus and Bossuet. Among his plans for the good of mankind, may be mentioned his exertions to invent a universal character, and a common philosophical language. His labours in another scientific undertaking were better rewarded. The elector of Brandenburg (afterwards Frederick I. king of Prussia) requested his advice in the establishment of the royal academy of sciences at Berlin, and, when the institution was completed according to his plan, the elector made him president of the academy in 1700.

Leibnitz furnished a great part of the papers in the "*Miscellanea Berolinensia*," which the new academy published in 1710. On the death of the king, three years after, his successor having little taste for the sciences, Leibnitz foresaw the fall of the society, and therefore hastened to Vienna to obtain for it the protection of the emperor Charles VI. His efforts were unsuccessful, although he received a most flattering reception from the emperor, who had already conferred on him the dignities of baron and of aulic

counsellor, with a pension of 2000 florins. He also had an interview with the czar Peter at Torgau, who, in return for his advice concerning the civilization of his vast empire, conferred on him the title of privy counsellor, with a pension of 1000 rubles. Loaded with honours, he crowned his literary fame by his celebrated "*Essai de Théodicée*," in which he maintained the doctrines of pre-established harmony and optimism, and which was followed in 1715 by his "*Essai sur l'Entendement Humain*." The life of this individual, so highly favoured by fortune, was not entirely free from calamity. His unfortunate controversy with Newton, concerning the discovery of the differential calculus, and the pains of the gout, embittered the close of his active life. He died in his seventieth year, in November 1716. His monument, constructed in the form of a temple, bears the simple inscription *Ossa Leibnitii*.

Leibnitz was of the middle size, thin, but of firm health, with an habitual stoop. His hair was black in his youth, but labour early rendered it white; and his eyes, which were short-sighted, were strong even in his old age. He had a pleasing countenance, a warm temperament, and as much animation in his delivery as he had in his labours. He studied during nearly the whole night, and often took his sleep in his chair, which is preserved in the library at Hanover. Reading every thing, without distinction, he contented himself with making short extracts on little pieces of paper which he kept in different compartments, though his memory was so excellent that he had little need to refer to them. His correspondence, which extended even to China, together with the other relations which he maintained with different classes of men, took up a great part of his time. The spirit of the age, the study of the older systems of philosophy, among which the Grecian had occupied much of his attention, and, above all, the mathematical turn of his mind, combined to produce his peculiar system of philosophy. He expected to reform philosophy by giving it this direction, and he hoped to establish its principles in such a manner that the strife between different parties would cease of itself. On this account he was in favour of rationalism in the sense in which it was maintained by Plato, and the system of demonstration, which prevented him from entirely rejecting the scholastic philosophy. There are in philosophy, as in mathematics, necessary truths which cannot be learned from experience, but must be grounded in the soul itself, as they rest on principles the proof of which is independent of the evidence of the senses. This forms the basis of the Leibnitzian rationalism, the principal characteristics of which are, a peculiar theory of knowledge, the doctrine of Monadology, and the *Theodicea*, or doctrine of optimism. With regard to knowledge according to this system—1. The necessary truths are innate in the soul, not, indeed, actually forming objects of knowledge, but capable of being called forth by circumstances. Whatever is derived from the senses is confused, and distinct knowledge is possessed only by the understanding. These views are opposed to the empiricism of Locke. In order to attain truth, it is necessary to use the rules of logic, as mathematicians also use them, by unfolding analytically the simple truths contained in a subject, until the fundamental truth is attained. The Cartesian criterion—clearness and distinctness—is not sufficient. "Our conclusions," says Leibnitz, "rest

on two great principles—the principle of contradiction (according to which we deem that false which involves a contradiction, and that true which is opposed to falsehood), and the principle of the sufficient reason (which teaches no assertion is true if no sufficient reason can be given why it is true rather than false), which leads to an absolute final reason, independent of accidental circumstances. But the final reason of the certainty of innate necessary truths is in God, as the source of all necessary and eternal truth. 2. Monadology forms the central point of the system, and Leibnitz believed that in this he had discovered the fundamental basis of actual knowledge. All experience teaches us that there are compound substances; consequently there must be simple ones. The senses give us only confused, the understanding distinct, knowledge; and the simple, which cannot be recognised by the senses, is the ground of the compound. These simple substances, from which the compound are formed, and each of which differs in its qualities from all others, since there are no two things exactly alike, Leibnitz calls *monads*, of which he assumes four sorts—pure monads (or living beings), the souls of beasts, the souls of men, and God, who, as the origin of all knowledge, of reality, and of the existence of things, the eternal, original Monad, he calls the *Monas monadum*. All created monads are united with bodies, or, rather, all finite beings are aggregates of monads, some having a central and governing monad. The different classes of monads conceive of the universe with different degrees of distinctness; God alone conceives it perfectly. There is no actual influence of one thing on another, but only an ideal connexion;—i. e. the internal changes of each monad are so arranged as to agree with the changes in the monads immediately connected with it. The cause of this agreement is the infinite wisdom and almighty power of the Deity. The divine understanding is the prototype of all truth, beauty, and absolute good, and by it all the interior changes in the monads were so predetermined that there is a perfect harmony in their succession. This predetermination or established harmony was arranged by the Godhead when the plan of the world was formed. 3. The *Theodicea* is the defence of the supreme wisdom of the Creator of the world, which had been impugned on account of the existence of evil. Such a *Theodicea* Leibnitz attempted, particularly on account of the contrary views brought forward by Bayle. According to the Leibnitzian system, an infinite number of worlds are possible in the divine understanding; but, of all possible ones, God has chosen and formed the best. Every thing which really is, is best in connexion, even if by itself it is imperfect. This system is therefore denominated *optimism*. Each being is intended to attain the highest degree of happiness of which it is capable, and is to contribute, as a part, to the perfection of the whole. The existence of evil is no argument against this system, because metaphysical evil is merely a necessary imperfection in the nature of finite things, from which imperfection, physical evil, and moral evil (sin), necessarily proceed. Moral evil is founded in the freedom of finite spirits, which consists in choosing, according to grounds of preference, one among many physically possible actions: for, although every thing in the world is necessarily determined, still man, being ignorant of the future, must act from the convictions of his reason.

Leibnitz nowhere makes a complete connected exposition of this philosophical system, but has only proposed it in his writings by piecemeal, and it is therefore difficult to follow his course of thought. This is not the place to enter into a more critical examination of the value of these hypotheses; it is sufficient to observe, that they have been of the greatest service in promoting the progress of reason, as they have given that impulse to the philosophical world which his mathematical discoveries, to an account of which we now proceed, gave to the mathematicians of his time. His attention was early directed to mathematical researches, and in a letter to the countess of Kielmannsegge he relates, that even in his sixteenth year he was occupied in considering the differences of those numbers whose succession forms a regular series. He thus arrived at the law of constant magnitudes, which is always found exactly, or by approximation, if the members of the series, and then their first, second, &c., differences are subtracted from each other; but when he was in England, wishing to publish his supposed discovery, he found himself anticipated by a French mathematician, Regnault. A second similar affair induced him to study Mercator's "*Logarithmotechnica*," which he carried with him to France, where he surprised Huygens by communicating to him his discovery of an infinite series for the surface of the circle, similar to that of Mercator for the hyperbola. This was made known by Oldenburg to Newton, who congratulated Leibnitz on his discovery. Animated by this result, Leibnitz resumed his researches into the difference of numbers, and in this way he was led to the discovery of the differential calculus. In a letter he communicated this discovery to Oldenburg, for Newton's examination. In comparing the whole course of reasoning which he pursues in his calculations with the views which lie at the foundation of Newton's method of fluxions, not the least similarity can be discovered between the two methods; which is the best proof that each of these great men, in reality, attained the same result for himself, entirely independent of the other. Leibnitz, however, received no answer from Newton to this remarkable letter, and things remained in this state till 1682, when the "*Acta Eruditorum*" was commenced.

Leibnitz was from the beginning one of its most active contributors, and in the October number of 1684 he published a complete account of his differential calculus, exactly as he had communicated it to Newton. It is worthy of remark that at this time no one questioned the claims of Leibnitz to the discovery of this new mode of calculation. On the contrary, Newton publicly acknowledged the merit of the German, and made the most honourable mention of him in his "*Principia*." Leibnitz continued with untiring activity to make improvements in his method. The differential calculus, together with its converse, which Leibnitz called summatory, but to which John Bernoulli gave the name of integral calculus, was in high esteem on the continent, and had been much used and extended both by Bernoulli and the Marquis de l'Hospital, when in 1699, twenty-two years after the letter of Leibnitz to Newton, which was dated June 21, 1677, and fifteen years after the publication of the theory in the manner already mentioned, in the October of 1684 number of the "*Acta Eruditorum*," it was contended for the first time, by Fatio de Duillier, that Newton was the dis-

coverer of this mode of reckoning. This article was written in an offensive tone, and Leibnitz answered it in the "*Acta Eruditorum*." His reply for a time put an end to the dispute; but five years afterwards, Newton having published his "*Optics*," at the close of which he appended an exposition of his method of fluxions, which he claimed to have invented as early as 1666, the "*Acta Eruditorum*" gave an extract from this work in the next year, and by making a comparison between the method of fluxions and the system of differential calculus, to the disadvantage of the former, awakened anew the dispute between the parties. Keill, professor of astronomy at Oxford, declared in the "*Philosophical Transactions*" for 1708, not only that Newton was the original inventor of the new system, but that Leibnitz had formed his upon Newton's merely by changing the expressions and the signs. Leibnitz, therefore, wrote to Hans Sloane, secretary to the royal society, to request the society to decide between him and Keill. The society immediately named a committee, who came to the following conclusion;—that, in reality, there was no difference between the differential calculus and fluxions, and that the question did not turn on the invention of the one or the other, but on priority, with respect to which there was strong proof that Newton had possessed the system fifteen years before the publication of Leibnitz's article in the "*Acta Eruditorum*," and that therefore Keill's assertion concerning Leibnitz could not be considered as a calumny. This decision of the society only rendered the schism between the parties wider, and Leibnitz rendered the quarrel irreconcilable by sending a letter to the abbé Conti, who was then in England, and acted the part of a mediator between the parties. In this letter, which was intended to be shown to Newton, among other offensive expressions, he gave him to understand that it was impossible that he should have invented the algorithm of infinitely small magnitudes before himself. Newton replied through Conti, and the dispute continued till the death of Leibnitz.

LEICESTER, SIR PETER, a learned antiquary, who was born at Tabley in Cheshire in 1613, and was educated at Brazen-nose college, Oxford. His principal publication, entitled "*Historical Antiquities*," is a work of great labour and research. Sir Peter Leicester died in 1673.

LEIGH, CHARLES, a naturalist and antiquary, born about the middle of the seventeenth century. He is best known for his "*Natural History of Lancashire*." He appears to have died about 1720.

LEIGH, EDWARD, an eminent biblical critic, who was born in 1602. He was educated at Oxford, and afterwards studied law in the Middle Temple. During the violence of the plague in 1625 he took that opportunity to visit France; and, on his return to the Temple, added to his law studies those of divinity and history, in both which he attained a great stock of knowledge. He was, in fact, a sort of lay divine, and superior to many of the profession. About 1636 we find him representing the borough of Stafford in parliament, when some of the members of that which was called the long parliament had withdrawn to the king at Oxford. Mr. Leigh's sentiments inclining him to remain and to support the measures of the party in opposition to the court, he was afterwards appointed to a seat in the assembly of divines, and certainly sat with no little propriety in

one respect, being as ably skilled in matters of divinity and ecclesiastical history as most of them. He was also a colonel of a regiment in the parliamentary service, and *custos rotulorum* for the county of Stafford. He was not, however, prepared to approve of all the proceedings of the parliament and army; and having, in December 1648, voted that his majesty's concessions were satisfactory, he and some others, who held the same opinion, were expelled from parliament. He died in 1671. His most important work is entitled "*Critica Sacra*."

LEIGHTON, ROBERT, a distinguished prelate, who was born in London in 1613, and educated at the university of Edinburgh. He was subsequently sent to France, and on his return obtained presbyterian ordination, and was settled at Newbottle, near Edinburgh. Disapproved of by his presbyterian brethren as not sufficiently polemical in his discourses, he resigned his living, and was soon after chosen principal of the university of Edinburgh. When Charles II. resolved to re-establish episcopacy in Scotland, Dr. Leighton was induced to accept a bishopric, but chose the humblest of the whole, Dumblain, and would not join in the pompous entry of his brethren into Edinburgh. He nevertheless became archbishop of Glasgow, chiefly impelled, it is believed, by a hope of furthering a scheme of reconciliation between the presbyterians and episcopalians. Disappointed in this hope, as also in his wishes to moderate the acrimonious feelings of both parties, he went to London, and requested leave to resign his see; but his resignation was not accepted. He never, however, returned to Scotland, and died in London on the 5th of February, 1684. Archbishop Leighton was celebrated for his gentleness, moderation, and disinterestedness; for although his bishopric produced only 200*l.* and his archbishopric barely 400*l.* per annum, he founded exhibitions both in the colleges of Edinburgh and Glasgow.

LEIGHTON, SIR BALDWIN, a distinguished military officer, who was born at Wallisborough in Shropshire. After completing his education he entered the army, and in March 1761 sailed for the East Indies, where after doing garrison duty for some time in Fort St. George, he took the field, and was at the siege of Madura and two small forts. After an active campaign his majesty's troops were ordered home in consequence of the peace in the year 1763, and in 1765 this officer arrived in England and was placed on half-pay.

In 1768 he purchased a commission in the 46th regiment, in 1770 a captain-lieutenancy, and in 1772 a company. In 1775 he was appointed captain of grenadiers, and in October sailed with the regiment for North America, and was in the action of Brooklyn on Long Island, the taking of New York, the action on York Island and the White Plains, the storming of Fort Washington, the taking of Rhode Island, the action of Brandywine, and the action near Monmouth Court House, where he was severely wounded. In November 1778 his health was much impaired from the fatigue and hardships incident to active service, and he was therefore ordered to England to the command of a recruiting company. In 1782 he obtained the rank of major in the army, and in 1787 he purchased the majority of the regiment, in the command of which he went in 1792 to Gibraltar; and in the following year he obtained the rank of lieutenant-colonel in the army. In November

1794 he sailed in command of the regiment to the West Indies; in March following succeeded to the lieutenant-colonelcy of the 46th; and in the beginning of the year 1795 he was ordered in command of that regiment from Martinico to St. Vincent's, in which island he was senior officer. He was there actively employed against the French and Caribs, who carried on a cruel and savage war; the 46th regiment was engaged with them together and in detachments thirteen times, and in the short period of eight months suffered a loss of 400 men out of 520. In 1716 the few remaining men of the regiment were drafted, and the officers and non-commissioned officers came to England in October.

In 1809 he attained the rank of lieutenant-general, and was placed in command of Jersey during the absence of General Don, who was ordered to Walcheren. He was relieved by General Don in May 1810, and on quitting the island received a very handsome letter from the adjutant-general, notifying the commander-in-chief's approbation of his conduct during his command. After the last-named period this officer was not employed. He received the brevet of general in August 1819, having succeeded to the family baronetcy on the death of his first cousin, Sir Robert Leighton, the fifth baronet. Sir Baldwin died, after a short illness, on the 13th of November, 1828.

LEISEWITZ, JOHN ANTHONY, a German writer, whose tragedy, entitled "*Julius of Tarentum*," is esteemed by the Germans one of their best productions, and is still performed. Leisewitz was born in 1752 at Hanover, and, at the university, was a friend of Voss, Hölty, and Bürger. He died in 1806 at Brunswick.

LEKAIN, HENRY LOUIS, a tragic actor, who was born at Paris in 1728. It was the intention of his father, a goldsmith, to bring him up in the same avocation, in which the boy made such progress that his work was in request even in his sixteenth year. He enjoyed, at the same time, the benefit of instruction in the *collège de Mazarin*, where the scholars performed a dramatic piece at the close of the academic year. The means of Lekain were inadequate to the expense required of the performers, and he therefore undertook the office of prompter. He rarely had occasion to make use of the book, so deeply were the plays impressed on his memory as soon as he had heard them a few times. His greatest recreation consisted in attending the French theatre on Sundays. Social amusement having acquired new life in Paris after the peace of 1748, several private theatres were formed, and Lekain joined with a number of young persons in establishing one, which soon surpassed all the others. Lekain was distinguished for his acting, and Arnaud Baculard's comedy "*Le Mauvais Riche*" was first performed by this company.

Voltaire, Arnaud's patron, was present at the representation, and invited Lekain, who played the part of the lover, to his house. The young actor was embarrassed before this celebrated man, who encouraged him with the words, "Heaven be thanked, I have at last found a person who has moved and touched me, even when reciting bad verses." Voltaire advised him, however, not to become an actor; and, in order to induce him not to abandon the trade of his father, offered to advance him 10,000 francs, in order to place him in a more convenient situation.

Lekain hesitated, but his propensity for the stage predominated. When Voltaire perceived that the resolution of the young man was invincible he offered to spare him, at least, the expense of apprenticeship, and to build him a theatre in his own house, where Lekain could play with his young friends. Lekain now lived with Voltaire, whose two nieces played with him, and the poet himself sometimes undertook a part. The most distinguished men aspired to the honour of attending these performances. The part of Cicero in the "Rome Preserved" was here seen represented by Voltaire with an energy and truth of which tradition still preserves the memory; and, inspired by such a model, Lekain shone in the character of Titus. During the six months which he spent in the society of Voltaire his dramatic skill was vastly improved; and in his "*Mémoires de H. Lekain*," published by his son, he says, that at that time he studied most profoundly the principles of his art. Before departing for Berlin in 1750 Voltaire obtained for his protégé permission to appear on the *théâtre Française*. One of his most splendid parts was Mahomet in Voltaire's play of the same name. His last performance, in the character of Vendôme in Voltaire's "*Adélaïde*," was admired above all; and the exertions which he made on this occasion were the cause of his speedy death in 1778.

LELAND, JOHN, an English antiquary, born in London about the end of the reign of Henry VII. He was educated at St. Paul's school and Christ's college, Cambridge; whence he removed to Oxford, and then to Paris, for further improvement. Returning home, he took holy orders. Henry VIII. made him his chaplain and librarian, and gave him the title of royal antiquary. In 1533 he was empowered, by a commission under the great seal, to search for objects of antiquity in the archives and libraries of all cathedrals, abbeys, priories, &c.; in consequence of which he spent six years in travelling over the kingdom, visiting the remains of ancient buildings and monuments, and collecting materials for the illustration of the history and archæology of England and Wales. He retired to his house in London, to arrange and methodize the stores of intelligence which he had collected, but after two years died insane in 1552, without having completed his undertaking. The great bulk of his collections, after passing through various hands, was placed in the Bodleian library, in an undigested state. Hearne printed a considerable part, forming the "*Itinerary of John Ieland*," and "*Lelandi Antiquarii de Rebus Britannicis Commentaria*."

LELAND, THOMAS, a learned divine, who was born in the city of Dublin in 1722, and educated in the university of that city. In 1748 he entered into holy orders, and was soon after, in conjunction with Dr. Stokes, induced to undertake an edition of the "*Orations of Demosthenes*," and shortly after an English translation of Demosthenes. These were followed by some classical works of minor importance; but in 1773 he published his "*History of Ireland from the Invasion of Henry the II.*" He died in 1785.

LELY, SIR PETER, a celebrated portrait painter, who was born at Soest, in Westphalia, in 1617. He received the rudiments of his professional education from Peter Grebber, at Haerlem; and having acquired a very considerable degree of skill in execution, he came to England in 1641, and commenced

portrait painter. After the restoration he was appointed state painter to Charles II., and continued to hold that office with great reputation till his death, which happened in 1680. He was seized by an apoplexy while painting a portrait of the duchess of Somerset, and died instantly, at the age of sixty-three.

Though Lely's talents as an artist do not entitle him to hold a rank equal to that filled by his great predecessor Vandyke, yet they justly claim both respect and admiration. He fell short of Vandyke in two very essential parts of portraiture, namely, taste and expression. It is in parts only that he wrought with taste,—in the ringlets of the hair, for instance—seldom in the actions of his figures, and scarcely ever in the tout-ensemble of his pictures. Lely possessed the art of flattery more than most artists; and no doubt by that secured the approbation of his contemporaries, and consequently great practice. He acquired a very considerable fortune, of which he employed a large portion to furnish himself with a collection of pictures and drawings. These, at his death, were sold by auction, and were so numerous that forty days were consumed in the sale; and the product amounted to 26,000*l.*; besides which he left an estate he had purchased of 900*l.* per annum. Among his more celebrated pictures in this country are the series of beauties at Windsor, a remarkable picture of Charles I., and heads of the duke of York and Lady Elizabeth.

LEMERY, NICHOLAS, a celebrated chemist, born at Rouen, in Normandy, in 1645. After having made the tour of France, he in 1762 became acquainted with M. Martin, apothecary to Monsieur the prince, and went through several courses of chemistry in the laboratory of this chemist at the Hotel de Conde. The true principles of chemistry at that period were but ill understood, and this practical chemist was the first who abolished the jargon of barbarous terms, and reduced the science to clear and simple ideas. In 1681 he was disturbed on account of his religion, and came to England, where he was well received by Charles II.; but he shortly after returned to France, and on the revocation of the edict of Nantz he became a convert to the catholic faith to avoid persecution. He was then appointed associate chemist and pensionary in the royal academy of sciences, and died in 1715. He wrote "*A Course of Chemistry*;" "*An Universal Pharmacopœia*;" "*An Universal Treatise of Drugs*;" and "*A Treatise on Antimony*."

LEMPRIERE, JOHN, D.D., this learned divine was graduated at Oxford as A.M. in 1792. In the same year he became head-master of Abingdon grammar-school, and afterwards master of the free grammar-school at Exeter. In 1811 he was presented to the rectory of Meeth, in Devonshire, which living, together with that of Newton Petrock, in the same county, he held until his death. Dr. Lempriere was an excellent classical scholar, and published a "*Bibliotheca Classica*" as an assistant in the study of antiquities and mythology. His other writings are, the first volume of a translation of Herodotus, with notes, which appeared in 1792: an entire and elegant translation of that historian being given to the world by Mr. Beloe, Dr. Lempriere desisted from prosecuting his design. A compilation of "*Universal Biography*," first printed in quarto, with an abridgment of the same in octavo, both in 1808 was

his last work. He died of apoplexy in February 1824.

LENCLOS, ANNE, called *Ninon de*, was born at Paris in 1616, of noble parents. The early death of her parents having left her to follow her inclinations, her character was formed by the bent of her own feelings, and by the study of the works of Montaigne and Charron. Even at an early age she was distinguished for her wit and acuteness. She played the harpsichord and several other instruments in a masterly style, sang with taste, and danced with grace. With such attractions, she had no want of suitors; but her love of independence prevented her from forming a serious connexion. To render herself entirely free, she invested her property in an annuity, on which she lived frugally, but in good style. Her income amounted to 8,000 or 10,000 livres. Notwithstanding her reputation for gallantry, the most respectable ladies of the time, such as La Fayette, La Sablière, and Maintenon, cultivated her friendship. Of Madame de Maintenon she used to say, that she wished to employ her to drive away the tedium of rank and age at Versailles. Even in her old age her house was the rendezvous of the most agreeable personages of the city and court, and of the most distinguished men. Scarron consulted her on his romances, St. Evremond on his poems, Molière on his comedies, Fontenelle on his dialogues, and La Rochefoucault on his maxims. At her death, in 1705, she bequeathed to Voltaire, then a young man, whose renown she had foreseen, a considerable sum, which he was to expend in books. Ninon's second son died a tragic death. Ninon confessed herself that she was not happy, and often said that, if she had foreseen her course of life, she would rather have undergone a voluntary death than have submitted to such a destiny.

LENFANT, JAMES, a learned French writer, born in 1661. After studying at Saumur he went to Heidelberg, where he became chaplain of the electress dowager palatine, and pastor in ordinary to the French church. The descent of the French into the palatinate obliged him, however, to leave Heidelberg in 1688. He went to Berlin, where the elector Frederic, afterwards king of Prussia, appointed him one of the ministers. There he continued nearly forty years, distinguishing himself by his writings. He was preacher to the queen of Prussia, Charlotta Sophia; and after her death to the king of Prussia. In 1707 he took a journey to England and Holland, where he had the honour to preach before Queen Anne; and might have settled in London, with the title of chaplain to her majesty. In 1712 he went to Helmstadt, in 1715 to Leipsic, and in 1725 to Breslaw, to search for rare books and MSS. It is not certain whether it was he that first formed the design of the "Bibliothèque Germanique," which began in 1720; or whether it was suggested to him by one of the society of learned men, which took the name of Anonymous, and who ordinarily met at his house. He died in 1728. His principal works are, "The History of the Council of Constance," "A History of the Council of Pisa," "The New Testament translated from the Greek into the French, with Notes by Beausobre and Lenfant," and "The History of Pope Joan, from Spanheim's Latin Dissertation."

LENOIR, ALEXANDER.—This French artist was born at Paris in 1762, and rendered the greatest

services to the fine arts by the preservation of the monuments of French art, while director of the French museum of antiquities. He received his education in the collège Mazarin, and afterwards in the academy of arts at Paris. He subsequently devoted himself to painting till 1790, under the guidance of the painter-royal Doyen. In the beginning of the revolution, when the finest works of art, preserved in monasteries and palaces, were destroyed from hatred of the former despotism in church and state, Lenoir determined to save all that he could. He made a proposal, through Bailly, then mayor of Paris, to collect all the treasures from the monasteries, &c., in a grand national museum. Entrusted with the execution of the project, Lenoir engaged in the matter with so much zeal, that his life was several times endangered by his exertions to rescue these treasures from the fury of the new iconoclasts. As he travelled through all France for this purpose, he succeeded in preserving for posterity a great part of those monuments which afford the artist an opportunity to compare the progress of art in different periods. By the union of these remains was formed the celebrated museum of French antiquities, in the Rue des Petits Augustins, which Lenoir superintended for almost thirty years with uninterrupted industry, so that it may justly be said that to him France is indebted for whatever of this kind it now possesses.

LENTULUS, the name of one of the most illustrious families in Rome, several individuals of which distinguished themselves by their virtues and services; others were conspicuous in other ways. Publius Lentulus Sura, an accomplice of Catiline, was strangled in prison. Lentulus Spinther, one of the most luxurious and ostentatious men of his age, was a partisan of Pompey. Having been pardoned by Cæsar, who had made him prisoner, he again joined the former, and was present at the battle of Pharsalia. Cneius Lentulus was put to death in the reign of Caligula, in consequence of being detected in forming a conspiracy against that monster.

LEO, the name of several distinguished ecclesiastics, who have at various periods filled the papal chair. Of these we can only notice those most celebrated in history.

Leo I., the Great, was born, according to some writers, in Rome, and according to others in Tuscany. The popes Celestine I. and Sixtus III. employed him in important ecclesiastical affairs while he was only deacon. On the death of Sixtus III. in 440 Leo was elevated to the papal chair. The Romans were gratified with this choice, but the beginning of his pontificate was marked by an intolerant and impolitic act. He caused processes to be instituted against the Manicheans who were concealed in Rome, and gave up those who persisted in their heresy to the secular arm. In the same manner he proceeded against the Pelagians, Priscillianists, and Eutycheans, whom he exterminated. During the session of the council of Chalcedon in 451, to which Leo had sent four legates, Attila laid waste the western empire, and threatened Rome. The emperor Valentinian employed Leo to intercede with that formidable warrior in order to obtain peace. Leo addressed the barbarian with mildness, and at the same time with impressiveness; and Attila, induced probably however by other motives, left Italy and retired beyond the Danube; but in the year 455

the Vandal Genseric took Rome, which was exposed to pillage for fourteen days. All the favour that Leo could obtain from him was to forbid the murder of the citizens, the burning of the city, and the plunder of the three principal churches in Rome, which contained the rich offerings of Constantine. Leo is the first pope whose writings have been preserved. They consist of ninety-six sermons, 141 letters, and some other works. A work "On the Calling of the Gentiles," and "The Epistle to Demetriades," have also been ascribed to him. His style is finished and rhetorical, and his periods have a measured rhythm which is not unpleasant. There have been several editions of his works.

Leo X., Giovanni de' Medici, was the second son of Lorenzo the Magnificent, and was born at Florence in 1475, received the tonsure in his seventh year, and was loaded with benefices. The election of Innocent VIII. to the papal chair favoured the ambitious views of his father, and in 1488 Giovanni, then only thirteen years old, was made a cardinal. Lorenzo entrusted his education to the Greek Chalcondylas and the learned Angelo Poliziano. Giovanni, naturally grave, took a greater interest in the writings of the ancient philosophers than in those of the fathers of the church; it was therefore made a condition of his nomination that, before he should be invested with the purple, he should study theology three years at Pisa. In 1492 Giovanni took his seat in Rome as a member of the holy college. His father died soon after, and was succeeded by his son Pietro at Florence. As the young cardinal had opposed the election of Alexander VI. to the papal see, he exchanged Rome for Florence, where he lived in high estimation until the banishment of his family forced him to fly to Bologna. In 1499 he went to Venice, Germany, and France, remained some time in Genoa, and then returned to Rome, where he lived in the enjoyment of a select society, and devoted to the arts, particularly music and literature.

In 1505 he first took part in public affairs. Pope Julius II. made him governor of Perugia, and in 1511 placed him, with the title of legate of Bologna, at the head of his forces in the holy league against France. As his suggestions, however, were little

regarded by the Spanish generals of the allied armies, his influence was limited to preserving order in his camp. He was made prisoner by the French at the battle of Ravenna in 1512, but soon after regained his freedom, on the dispersion of the victorious army, and returned to Bologna, where he conducted the government as legate, and, after contributing to the re-establishment of the Medici, remained at Florence until the death of Julius II. recalled him to Rome. The choice very unexpectedly fell upon him, and he ascended the papal chair in 1513, in the thirty-eighth year of his age, under the name of Leo X. He immediately appointed two of the principal writers of his time, Bembo and Sadoleto, his secretaries. In foreign politics he followed the system of his predecessors, opposing the domination of foreigners in Italy as much as possible. He succeeded in driving out the French, put an end to the divisions in the church, and forced Louis XII. to a formal submission.

Having thus restored the public tranquillity in the first year of his government, he gave all his attention to the promotion of literature and the arts, which had been neglected by his predecessors. The university at Rome was restored and endowed, privileges were granted it, and the most distinguished men selected as instructors. He also established a particular society for the publication of Greek authors, under the supervision of John Lascaris. That scholar, whom he had invited from Venice, and Marcus Musurus, brought over a number of young linguists whose influence assisted in promoting a taste for classical literature. He requested the possessors of ancient manuscripts in all countries to make them known to him; and the publication of the five first books of the "Annals of Tacitus" was one of the finest fruits of his efforts. Several private individuals followed the example of the pope, among whom Chigi, a merchant, was distinguished, who established a collection of works of art, and published an edition of Pindar and Theocritus. To prevent a union of Spain, France, and Austria, Leo favoured a reconciliation between the kings of England and France, and even pretended to favour Louis's plans on Milan. His design of obtaining the kingdom of Naples for one branch of his family, and the duchies of Ferrara and Urbino for other branches, made the friendship of this monarch necessary, and produced a secret alliance between them; but, when a French army appeared on the frontiers, he was not satisfied with increasing his power by the purchase of Modena from the emperor Maximilian, but also sent Bembo to Venice to detach the republic from the French alliance, in which however he did not succeed. This artful varying policy was at that time universal, and Leo cannot be especially blamed for it.

After the death of Louis XII., Francis I. having ascended the throne and war appearing unavoidable, Leo joined the alliance of the emperor, the king of Arragon, the states of Florence, Milan, and Switzerland; but after the battle of Marignano he withdrew, and in 1515 he had an interview with Francis at Bologna, and formed with him a concordate advantageous to both, but warmly censured by the French nation. In order to increase the power and splendour of his family, after the death of his brother Giuliano, he deposed the duke of Urbino in 1516, and gave the duchy to his nephew Lorenzo. Leo

saw with regret the reconciliation of the belligerent powers, which was effected in the same year. In 1517 the duke of Urbino, who had been deprived of his estates, recovered them by force of arms. Leo however collected a powerful army against him, and forced him to renounce his claims on honourable terms. In the same year a conspiracy against the pope was discovered, and Cardinal Petrucci, who was suspected of being the principal, was hanged, notwithstanding the passport which had been given him. Others, whose guilt was not sufficiently proved, were tortured, deprived of their dignities, and banished. The conduct of the pope in this instance was neither magnanimous nor merciful. Leo's magnificence had exhausted his finances, and to procure money, particularly for the completion of St. Peter's, he put all Christendom under contribution by the sale of letters of indulgence. This abuse roused the zeal of Luther, and produced the reformation. Leo at first paid little regard to the attacks of Luther, and, when he could no longer keep silence, was inclined to lenient measures. In compliance with the wishes of Maximilian he assumed more rigour, and summoned Luther to appear in Rome, but finally agreed that he should defend himself at Augsburg before the cardinal Caietan. Nothing being decided by that measure, he issued, in November 1518, the well-known bull in which he defended the papal authority of dispensing indulgences, and threatened all who maintained contrary doctrines with excommunication, on which Luther appealed to a general council.

While open war had thus broken out in the church Leo endeavoured to unite all Christian monarchs in a crusade against the Turkish emperor Selim, who had made himself master of Egypt, but their mutual jealousies prevented the execution of his plan, and besides these public chagrins Leo had great domestic misfortunes to suffer. Lorenzo, who had connected himself with the French court by marriage, having died and left only a daughter, Leo annexed Urbino to the states of the church, and the cardinal Giulio de' Medici was placed in the government of Florence. Though in Germany the reformation continued to gain ground, Italy was not disturbed by foreign wars. This state of things permitted Leo to indulge his taste for splendour, to promote the arts and sciences, and at the same time to increase the power of his family. Although in alliance with France he did not give up his plan of preventing the aggrandizement of that power in Italy. With this view he united with the emperor in 1521 for the re-establishment of the family of Sforza in Milan, and took Swiss troops into pay. The war was begun successfully, Parma and Piacenza were taken by the papal troops, and annexed to the states of the church. The allies entered Milan without resistance, and occupied the territory of the duke of Ferrara, whom Leo had excommunicated as an ally of France. While engaged in celebrating his successes Leo died suddenly in December 1521. Pope, in his "Essay on Criticism," describes the encouragement which Leo the Tenth gave to men of letters and artists in the following lines:—

"But see! each muse in Leo's golden days,  
Starts from her trance, and trims her wither'd bays;  
Rome's ancient genius o'er its ruins spread,  
Shakes off the dust, and rears his rev'rend head.

Then sculpture and her sister arts revive:  
Stones leap to form, and rocks begin to live;  
With sweeter notes each rising temple rung;  
A Raphael painted, and a Vida sung."

Leo XII., Annibale Della Genga.—This ecclesiastic was born at Genoa on the 2nd of August, 1760, became cardinal in March 1816, and succeeded Pius VII. in the papal chair on the 28th September, 1823. He early served the interests of the catholic court as a nuncio in Switzerland, at Dresden, and at other German courts, went on an embassy to Louis XVIII. from Pope Pius VII., and was finally created vicar-general of Rome. As pope he made himself beloved by the people, by the remission of many taxes, by his benevolence, by personally inspecting the public institutions for the poor, the hospitals and the prisons. His firm maintenance of the rights of the court of Rome involved him in disputes with the French and Austrian governments in 1824. On Ascension-day, 1824, he announced the next year as the year of jubilee. His circular epistle to the nations of Christendom, on that occasion, contains a warm attack on Bible societies. In May 1824 he gave to the Jesuits and their general, Louis Fortis, the Roman college, which they had possessed until 1773, together with the church of the holy Ignatius, the oratorium, the museum, the library and the observatory, in order that they might devote themselves entirely to the education of the young. Leo XII. also strengthened the connexion of the apostolic see with the Spanish American republics, particularly with Chile, and in 1828 with Columbia, by recognizing Bolivar's bishops. He endeavoured to free the states of the church from robbers and banditti, as well as to suppress the remains of Carbonarism. In 1825 he restored the prisons of the inquisition. His attention was particularly directed to the remedy of numerous abuses in the departments of the government of the catholic church, for instance, in the camera apostolica. Leo died in February 1829, and was succeeded by Cardinal Castiglione, who took the name of Pius VIII.

LEO VI., emperor of the East, surnamed the Philosopher, was the son of Basil I., whom he succeeded in 886. His reign was not prosperous, and the ill success of his generals against the Bulgarians obliged him to submit to such terms of peace as the barbarians pleased to propose. A total defeat of his fleet by the Saracens also took place a short time before his death, which happened in 911, after a reign of twenty-five years. He gave his name to several works, the principal of which are, "A Treatise on Tactics," "Novellæ Constitutiones," and "Opus Basilicon," a collection of laws begun by his father. He also addressed a letter to the caliph Omar on the truth of Christianity.

LEO, LEONARDO, a musical composer, who was born in 1694 at Naples, and studied under Scarlatti. To him, to Pergolesi, and some other composers of that period, is to be attributed the reputation which the Neapolitan school acquired all over Europe. Among his scholars, Piccini, Sacchini, Pergolesi, and Traetta, are distinguished. He surpassed all his predecessors, and, as he became equally perfect in all the departments of composition, he may be esteemed one of the greatest masters of Italy. All his works were studied with veneration by the Italian musicians. Although Leo was very successful in passionate, grand,

and elevated compositions, he was not less so in simple, tender, and comic, as his comic opera "*Il Cioè*" proves. Leo is, besides, the first composer who availed himself of the form of rondos in his comic operas. He died in 1742. His best operas are, "*Sofonisba*," "*Olimpiade*," "*La Clemenza di Tito*," "*Achille in Sciro*." He composed two oratorios—"Santa Elena al Calvario" (to the words of Metastasio), and "*La Morte d'Abele*." Of his church-music, his "*Ave Maria*," and a "*Miserere alla Capella*," are the most remarkable.

LEO, JOHN, surnamed Africanus, a celebrated traveller and geographer of the sixteenth century, who was born of Moorish parents at Grenada in Spain, and when that city was taken by the Spaniards in 1492, retired to Africa. He studied at Fez, and afterwards travelled through various parts of the north of Africa. Having been captured by pirates he was taken to Italy, and presented to Pope Leo X, who persuaded him to embrace Christianity, and gave him his own name on his being baptized. At Rome he acquired a knowledge of the Italian language, into which he translated his "*Description of Africa*," originally written in Arabic. This is a very curious and interesting work, comprising accounts of several countries rarely visited by Europeans. Leo also composed a treatise on the lives of the Arabian philosophers. He is supposed to have died soon after 1526.

LEONIDAS, a celebrated Spartan king, who ascended the throne 491 years before Christ. When Xerxes, king of Persia, invaded Greece with an immense army, Athens and Sparta were the only great cities which resolved to resist him. The Spartans gave the chief command of the military force to Leonidas, who marched to Thermopylæ with 300 men. Small as his army was, amounting to but 7000 men, including the allies, he stationed it so skilfully that the Persians on coming to the narrow pass became aware of the difficulty of carrying it by force. Xerxes therefore attempted to bribe Leonidas, offering him the dominion of all Greece. This proposal being rejected with scorn, the despot sent a herald to order the Greeks to surrender their arms: "Let him come and take them was the reply of the Spartan king." Thrice did the Persians advance against the pass in great force; thrice were they repelled with great loss. Meanwhile, a traitorous Greek, named Ephialtes, led a select troop of 10,000 Persians by a secret path over the mountain, who, after compelling the few opposing Phocians to take to flight, appeared in the rear of Leonidas. He now saw that all was lost, but resolved to show by a memorable example what the Greeks could perform in the cause of their country. He is said also to have been influenced by an oracle which declared that Sparta could be saved only by the death of one of its kings. To avoid useless bloodshed Leonidas dismissed the greater part of his troops, and retained but 300 Spartans, 700 Thespians, and 400 Thebans; the last, in some measure, as pledges of the fidelity of their countrymen, and the Thespians, because they could not be induced to leave their Spartan allies. As soon as Xerxes had learned the successful passage of the troops led by Ephialtes, he threw himself, with his whole force, into the entrance of the pass. But Leonidas before day-break penetrated into the Persian camp. After a long contest the hero fell, surrounded by fallen enemies. His men defended his body till

they sunk beneath countless assailants. This defence of Thermopylæ is one of the most remarkable exploits of antiquity. The Greeks erected a splendid monument to the fallen, and celebrated, annually, warlike games over their sepulchres.

LEONTIUM, LEONTIA, the scholar and mistress or wife of Epicurus. She is said to have possessed distinguished talents, and to have composed an essay, replete with acuteness and learning, in a beautiful Attic style, in defence of the doctrines of Epicurus against Theophrastus.

LEOPOLD I.—This German emperor was the second son of the emperor Ferdinand III. and Mary Anne of Spain. He was born in 1640, was chosen in 1655 king of Hungary, in 1658 king of Bohemia, and in 1659 emperor of Germany. On ascending the throne he was obliged to promise to afford Spain no assistance against France. The Turks had then defeated the imperial army, and desolated Moravia, because the emperor had aided the prince of Transylvania, Ragotsky, who had ceased to pay an annual tribute to the Ottoman Porte. Montecuculi, Leopold's general, supported by 6000 select French troops, under Coligny and Feuillade, defeated the Turks at St. Gothard; but, instead of improving this victory, the cabinet of Vienna concluded a truce for twenty years, and Ragotsky remained tributary to the Porte. Hungary was to be totally subjugated; but the nobles of that country attempted to throw off the Austrian supremacy, and to choose a king from their own nation. This undertaking cost Zrini, Frangipani, Nadasti, and other Hungarians, their lives. Tekeli now placed himself at the head of the malcontents, and was chosen king of Hungary by the Turks, for an annual tribute of 40,000 zechins. Tekeli called the Turks into the German empire; with an army of 200,000 men, they captured the island of Schütt, and laid siege to Vienna in 1683. Just as the city was on the point of surrendering, John Sobiesky hastened to its relief. The Turks were attacked in their intrenchments, and suffered a total defeat. A panic terror seized the grand vizier, Kara Mustapha: he fled, and left his camp to the victor. This defeat was followed by others, and the imperialists recovered all the lost cities. Leopold caused the Hungarian insurgents, whom he looked upon as the cause of all the dangers which menaced Germany, to be severely punished.

Hungary, which had been an elective monarchy, was declared, at the diet of Presburg in 1687, hereditary in the Austrian male line, and Joseph, the eldest son of the emperor, was crowned as king of Hungary, without any previous election. Transylvania submitted, without reserve, to the Austrian house. Leopold waged three wars with France, which he declared wars of the empire. The first, in 1672, in connexion with Spain and Brandenburg, to assist the Dutch, attacked by the French and English, was unsuccessful on the part of the emperor and empire, and was terminated by the peace of Nimeguen in 1679. The second war had its origin in the league formed at Augsburg in 1686, with Holland and Spain, against France. In this war the palatinate was terribly devastated by the French. The German arms were generally successful, and by the peace of Ryswick in 1697 France restored all that it had torn from Germany since 1680, besides relinquishing to Germany, Brisach, Friburg, Kehl, Philippsburg, and several smaller fortresses.

The duke of Lorraine, a near relation of the king, recovered his territories, from which his family had been expelled in 1670 by Louis XIV. The third war was undertaken by Leopold in 1702, in order to procure the succession to the throne of Spain for his second son, Charles; but he died in the course of this war. His eldest son, Joseph, already crowned Roman king in 1690, prosecuted the war with great vigour. As the youngest son of Ferdinand III., Leopold had been educated for the church, and his reign was marked by attachment to the clergy, irresolution, and indulgence towards his ministers, to whom he entrusted the whole management of the government. He was passionately fond of music, and was himself a composer. After he had uttered his last prayer on his death-bed, he caused his musicians to enter, and departed to the sound of instruments. He was thrice married. Two sons survived him—Joseph I., born in 1678, his successor, and Charles, archduke of Austria, born 1685, who became emperor in 1711.

LERMA, FRANCIS DE ROXAS DE SAN-DOVAL, DUKE DE, first minister of Philip III. of Spain. He was marquis of Denia, when he was appointed equerry to the infant Don Philip, over whom he acquired such influence that when the prince ascended the throne in 1598 he made him his favourite and prime minister. He concluded peace with England and Holland, and endeavoured to relieve the embarrassed state of the finances by encouraging agriculture, but his measures were ill-contrived. After the death of his wife he took the ecclesiastical habit, and obtained a cardinal's hat, which he conceived would protect him in the possession of his power. But he was deceived, for his own son, the Duke d'Uzeda, contrived to supplant him in the king's favour, and succeeded to his post on his being dismissed in 1618. He was accused, without any probability, of having employed his secretary, Roderic Calderon, to poison the queen. For this imaginary crime Calderon was executed in the next reign. The duke of Lerma died in retirement in 1625.

LESAGE, ALAIN RENE, a celebrated French novelist and dramatic writer. He was born on the 8th of May, 1668, at Sarzeau, a small town in Brittany, and was the son of a lawyer, who held an office in the royal court of Rhuy. He studied at the college of the Jesuits at Vannes, after which he appears to have been employed in his native province for five or six years. In 1692 he went to Paris to study philosophy, and also to solicit some employment. His talents and manners procured him admission into the best society, where his wit and taste for elegant literature rendered his company very acceptable. His first literary undertaking was a translation from the Greek of the letters of Aristenæus. Established as a resident in the capital, he was admitted an advocate of parliament, and the abbé De Lyonne gave him a pension of 600 livres. He studied the Spanish language, and produced a multitude of translations or imitations of Castilian dramas and romances. Two of his comedies were published in 1703, and a third was acted in 1702; but it was not till 1707, when his "*Crispin, Rival de son Maître*," appeared, that he established his reputation as a theatrical writer. His success as a novelist has most contributed to make him known to foreigners. "*Le Diable Boiteux*," the title of which has been oddly

translated "*The Devil upon Two Sticks*," became extremely popular; and "*Gil Blas de Santillane*" has furnished a model for numberless imitations in various countries and languages. Lesage projected a translation of the Orlando of Ariosto, and published, "*Roland L'Amoureux*," from Boiardo, as an introduction to the former, which was never executed. In 1732 he published "*Les Aventures de Guzman D'Alfarache*," and, the following year, "*Les Aventures de Robert, dit le Chevalier de Beauchesne*," containing the real history of a freebooter, from papers furnished by his widow. In 1734 appeared "*L'Historie D'Estevanille Gonzales*;" and in 1735 an amusing dialogue, entitled "*Une Journée des Parques*." The last of his novels was "*Le Bachelier de Salamanque*," which La Harpe considers as inferior to all the preceding. He did not cease writing, but in 1740 produced a collection of satirical letters, under the title of "*La Valise Trouvée*," and in 1743 a volume of anecdotes. He then retired to Boulogne, where he died on the 17th of November, 1747. Lesage produced a great number of comic pieces for the theatre, seven of which he published in his "*Théâtre Française*," including "*Crispin, Rival de son Maître*," and "*Turcaret*," intended as a satire on the farmers-general.

We cannot better illustrate the writings of this amusing and popular author than by selecting his picture of an archbishop in the most bigotted period of the Spanish church:—

"In the very zenith of my favour, we had a hot alarm in the episcopal palace; the archbishop was seized with a fit of the apoplexy; he was, however, succoured immediately, and such salutary medicines administered, that in a few days his health was re-established; but his understanding had received a rude shock, which I plainly perceived in the very next discourse which he composed. I did not, however, find the difference between this and the rest so sensible as to make me conclude that the orator began to flag, and waited for another homily to fix my resolution. This indeed was quite decisive; sometimes the good old prelate repeated the same thing over and over; sometimes rose too high, or sunk too low; it was a vague discourse, the rhetoric of an old professor, a mere capucinade. I was not the only person who took notice of this; the greatest part of the audience, when he pronounced it, as if they had been also hired to examine it, said softly to one another, '*This sermon smells strong of the apoplexy*.' Come, master homily-critic (said I then to myself), prepare to do your office; you see that his grace begins to fail; it is your duty to give him notice of it, not only as the depositary of his thoughts, but likewise, lest some one of his friends should be free enough with him to prevent you; in that case you know what would happen; your name would be erased from his last will, in which there is, doubtless, a better legacy provided for you than the library of the licentiate Sedillo. After these reflections, I made others of a quite contrary nature. To give the notice in question, seemed a delicate point; I imagined that it might be ill received by an author like him, conceived of his own works; but rejecting this suggestion, I represented to myself that he could not possibly take it amiss, after having exacted it of me in so pressing a manner. Add to this, that I depended upon my being able to mention it with address, and make him swallow the pill without reluctance. In a

word, finding that I ran a greater risk in keeping silence than in breaking it, I determined to speak. The only thing that embarrassed me now was how to break the ice. Luckily the orator himself extricated me from that difficulty, by asking what people said of him, and if they were satisfied with his last discourse. I answered that his homilies were always admired, but, in my opinion, the last had not succeeded so well as the rest, in affecting the audience. 'How, friend!' replied he, with astonishment, 'has it met with any Aristarchus?'—'No, Sir,' said I, 'by no means; such works as yours are not to be criticised; every body is charmed with them. Nevertheless, since you have laid your injunctions upon me to be free and sincere, I will take the liberty to tell you, that your last discourse, in my judgment, has not altogether the energy of your other performances. Are not you of the same opinion?'

"My master grew pale at these words; and said, with a forced smile, 'So then, Mr. Gil Blas, this piece is not to your taste?'—'I don't say so, Sir,' cried I, quite disconcerted; 'I think it excellent, although a little inferior to your other works.'—'I understand you,' he replied, 'you think I flag, don't you? Come, be plain; you believe it is time for me to think of retiring.'—'I should not have been so bold,' said I, 'as to speak so freely, if your grace had not commanded me; I do no more, therefore, than obey you; and I most humbly beg that you will not be offended at my freedom.'—'God forbid,' cried he, with precipitation, 'God forbid that I should find fault with it. In so doing I should be very unjust. I don't at all take it ill that you speak your sentiment; it is your sentiment only that I find bad. I have been most egregiously deceived in your narrow understanding.' Though I was disconcerted, I endeavoured to find some mitigation, in order to set things to rights again; but how is it possible to appease an incensed author, one especially who has been accustomed to hear himself praised?" 'Say no more, my child,' said he; 'you are yet too raw to make proper distinctions. Know, that I never composed a better homily than that which you disapprove; for my genius, (thank Heaven,) hath, as yet, lost nothing of its vigour. Henceforth I will make a better choice of a confidant, and keep one of greater ability than you. Go,' added he, pushing me by the shoulders out of his closet, 'go tell my treasurer to give you a hundred ducats, and may Heaven conduct you with that sum. Adieu, Mr. Gil Blas, I wish you all manner of prosperity, with a little more taste.'"

Notwithstanding his talents, and the success of his numerous compositions, the author of "Gil Blas" was by no means rich, owing to a carelessness and liberality of disposition, which prevented him from soliciting the great for employments or from steadily accumulating the products of his literary industry.

LESLIE, CHARLES.—This divine was born in Ireland, but, being attached to the house of Stuart, he left Ireland, and went to the pretender at Bar le Duc, and resided with him till near the time of his death, constantly endeavouring to convert him to the protestant faith, but without effect. He died in 1722. His principal works are entitled, "A Short and Easy Method with the Deists;" "A Short and Easy Method with the Jews;" "The Snake in the Grass;" "Hereditary Right to the Crown of England Asserted;" "The Socinian Controversy Discussed;" and "The

Charge of Socinianism against Dr. Tillotson Considered."

LESLIE, CHARLES ROBERT, was born in London in October 1794, of American parents, both of whom were natives of Maryland, to which province his great-grandfather, Robert Leslie, had emigrated from Scotland soon after the rebellion in 1745. The family returned to Philadelphia when Charles Leslie was about five years old, and long before that period he had given extraordinary indications of a talent for painting. His first attempts were on the slate, and were generally representations of horses and soldiers, rude of course, but strikingly spirited and characteristic; and at six years of age he could sketch, from recollection and with great accuracy, the likeness of any person whom he was in the habit of seeing. At the age of thirteen he was taken from school, and placed as an apprentice with Mr. Bradford of Philadelphia, bookseller; but, though he scrupulously fulfilled the duties of his situation, his heart was with his pencil, and almost every leisure moment was indefatigably devoted to his favourite pursuit. It was his practice, after seeing a play, to make little water-colour drawings of the principal performers in their respective characters. He was much struck with Cooke's personation of Richard, and, leaving the house as soon as the tragedy was over, he commenced a small sketch of the gifted and eccentric actor in this his most celebrated part; and when the family came home (having staid to see the farce) they found the drawing nearly completed. All these drawings of the performers were entirely from memory. The fortunate little sketch of Cooke in Richard was much admired and talked of. The juvenile artist became immediately an object of notice, and he was consequently enabled to accomplish his ardent desire of adopting a profession which he preferred to all others, and of seeking in Europe those opportunities of improvement which were not to be found in America. Shortly after his arrival in London he sent to Philadelphia his first original oil-picture, William of Deloraine, from the "Lay of the Last Minstrel." From that time he took up his residence constantly in Europe, his engagements never allowing him to pay even a transient visit to the country of which he always considered himself a citizen, notwithstanding the circumstance of his birth having taken place in England. Among the most distinguished productions of his pencil are May Day in the reign of Elizabeth, Slender courting Anne Page, Lady Jane Grey prevailed on to accept the crown, Sancho relating his adventures to the duchess, and Falstaff dining at Page's house. The picture which, according to custom, he presented to the royal academy on being elected a member, is Catharine of Arragon, after her divorce from Henry VIII.

LESLIE, JOHN, bishop of Ross, in Scotland, the son of Gavin Leslie, an eminent lawyer. This ecclesiastic was born in the year 1526, and educated at the university of Aberdeen; of which diocese he was made official when but a youth. He was soon after created doctor of civil and canon law, but from a natural love of theology he took orders and became minister of Ume. When the reformation began to spread in Scotland, and disputes about religion ran high, Dr. Leslie in 1560 distinguished himself at Edinburgh as a principal advocate for the catholic church, and was afterwards deputed by the nobility of that religion to condole with Queen Mary on the

death of her husband the king of France, and to invite her to return to her native dominions. Accordingly, after a short residence with her majesty, they embarked together at Calais in 1561, and landed at Leith. She immediately made him one of her privy council, and a senator of the college of justice. In 1564 he was made abbot of Lundores, and on the death of Sinclair was promoted to the bishopric of Ross. It is to him that Scotland is indebted for the publication of its laws, commonly called "The Black Acts of Parliament," from the Saxon character in which they were printed. At his most earnest desire the revision and collection of them were committed to the great officers of the crown. In 1568, Queen Mary having fled to England for refuge, and being there detained a prisoner, Queen Elizabeth appointed certain commissioners at York to examine into the cause of the dispute between Mary and her subjects. These commissioners were met by others from the queen of Scots. The bishop of Ross was of the number, and pleaded the cause of his royal mistress with great energy, though without success. Elizabeth had no intention to release her. Mary, disappointed in her expectations from the conference at York, sent the bishop of Ross ambassador to Elizabeth, who paid little attention to his complaints. He then commenced a negotiation between his royal mistress and the duke of Norfolk; which negotiation, it is well known, proved fatal to the duke, and was the cause of Leslie's being sent to the Tower. In 1573 he was banished the kingdom, and retired to Holland. The two following years he spent in fruitless endeavours to engage the powers of Europe to espouse the cause of his queen. His last application was to the pope; but the power of the heretic Elizabeth had no less weight with his holiness than with the other catholic princes of Europe. Finding all personal applications ineffectual he had recourse to his pen in Queen Mary's vindication; but Elizabeth's *ultima ratio regum* was too potent for all his arguments. Bishop Leslie, during his exile, was made coadjutor to the archbishop of Rouen. He was at Brussels when they received the account of Queen Mary's execution, and immediately retired to the convent of Guirtemberg, near that city, where he died in the year 1596. It was during the long and unfortunate captivity of Mary that he amused himself in writing the "History of Scotland," and several of his other works. His principal works are, "Afflicti Animi Consolationes," composed for the consolation of the captive queen, and "De Origine, Moribus, et Gestis Scotorum."

LESLIE, SIR JOHN, a distinguished Scotch chemist, mathematician, and natural philosopher, professor of natural philosophy in the university of Edinburgh. Among his numerous scientific works are his "Inquiry into the Nature and Propagation of Heat," "Elements of Geometry, Geometrical Analysis, and Plane Trigonometry," "Account of Experiments and Instruments depending on the Relation of Air to Heat and Moisture," "Philosophy of Arithmetic," and various papers in scientific journals. He likewise invented several curious and valuable philosophical instruments. His differential thermometer is an important acquisition to physics. His election to the professorship, for which he was a candidate, did not succeed without a violent altercation between the members of the university and some of the divines of the church of Scotland, who opposed

Mr. Leslie on account, as they alleged, of his being a sceptic in religious matters. Mr. Leslie was one of the contributors to the "Edinburgh Review," and the "Supplement to the Encyclopædia Britannica." The author of "Peter's Letters" says of Mr. Leslie, "He is a very fat, heavy figure of a man, without much more appearance of strength than of activity; and yet by no means a slothful-looking person. His face is one which, at first sight, you would pronounce to be merely a coarse one, but in which, once informed to whom it belongs, you are at no loss to discover a thousand marks of vigorous intellect, and fancy too. Of this last quality, indeed, his eyes are at times full to overflowing. In the midst of the sombre gravity of his usual look there are always little flashes of enthusiasm breaking through the cloud; and, in this respect, he forms a striking contrast to the calm, tranquil uniformity of Mr. Playfair's physiognomy and deportment." His last and certainly his best work was "A Discourse on the History of Mathematical and Physical Science during the Eighteenth Century." Professor Leslie received the honour of knighthood in 1832, and died in the month of November of that year.

LESSEPS, JOHN BAPTISTE BARTHELEMI, BARON OF, the fellow traveller of the unfortunate Lapérouse. He was born at Cette in 1765, and devoted himself to the diplomatic career. For five years he was vice-consul in Petersburg, where his father had previously performed the functions of French consul-general. In consequence of the recommendation of the minister of war, the duke of Castries, the king of France appointed him interpreter to the expedition of Lapérouse. On his arrival on the coast of Kamtschatka, he received orders in September 1787 to leave the frigate *L'Astrolabe*, Lapérouse's vessel, in order to convey to France by land the accounts and journals of the thus far successful voyage of the navigator. Under great difficulties Lesseps travelled, in the roughest season of the year, from Kamtschatka to Petersburg, where he gave his papers to the French ambassador, Count Ségur, and hastened to Paris to render to the king more minute verbal information. Appearing, in compliance with the desire of Louis XVI., in the Kamtschatkan dress which he had brought home, Lesseps was for some time the object of curiosity to the whole court. The monarch subsequently appointed him consul in Cronstadt, after which he discharged the same office in Petersburg, where he remained till 1812, when Napoleon made him intendant at Moscow. After the change of government in 1814, he was sent by Louis XVIII. as *chargé d'affaires* to Lisbon.

LESSEPS, JOHN BAPTISTE DE, born 1774. He was sub-prefect of Lambéz. This Frenchman was remarkable for his adventures. In consequence of the amnesty afforded by Bonaparte to emigrants, he returned and followed a relation to Egypt, became French consul in Alexandria, and acquired many friends by his humanity and benevolence, both among the natives and his countrymen. Being taken prisoner soon after by the Arnauts, he was dragged to the market to be murdered, when a native, to whom he had once rendered a service, took him from his assailants on pretence of a wish to sacrifice him more slowly and cruelly. Lesseps thus escaped the sword, returned to France, and after the union of Tuscany with the empire was appointed sub-prefect in Sienna,

where he remained till the restoration, when he was removed in the same capacity to L'Etoile.

LESSING, GOTTHOLD EPHRAIM, a learned German writer, who was born in Pomerania in 1729. From his earliest youth he was distinguished for his love of the drama, although his connection with this department of literature did not at first improve either his morals or his pecuniary affairs. He was in 1746 sent to the university of Leipzig, but could never be induced to devote himself to a strict routine of prescribed study. Here he became acquainted with several young men, afterwards distinguished in literature; and, in connection with a friend named Weisse, he translated the "Hannibal" of Marivaux, and prepared for the stage a dramatic performance begun while he was at school. This was brought forward by a stage directress named Neuber, with whom he was acquainted. Actors were at that time considered as vagabonds, and his father, much distressed at his son's mode of life, ordered him to return home. In 1750 Lessing went to Berlin, where he contributed to several periodicals, and attracted some attention by his correspondence with Voltaire, occasioned by Richter, Voltaire's amanuensis, having shown him a copy of Voltaire's "Vie de Charles XII." before it was published. In compliance with the anxious wishes of his parents, he then went to Wittenberg, and applied himself with his younger brother very diligently to his studies. At this time he translated Huarte's "Trial of Wits," and wrote a critique on Klopstock's "Messiah." In 1753 he returned to Berlin, and wrote the learned articles in Voos's Gazette. In 1755 he wrote his tragedy of "Sarah Sampson" at Potsdam. In the same year he set out on a tour with Mr. Winkler, a merchant, but in consequence of the breaking out of the seven years' war they only proceeded to Holland. In 1757, in connection with Nicolai and Mendelssohn, he edited the "Library of Belles-Lettres." He also began his "Virginia," which was subsequently completed under the name of "Emilia Galeotti," and is much the most elaborately finished of his works. In 1760 Lessing became a member of the royal academy of sciences at Berlin, and soon after became secretary to General Tauenzien in Breslau, wrote "Minna von Barnhelm," a military comedy, and his "Laocoon, or the Limits of Poetry and Painting," and began deeper researches into philosophical and theological subjects, though, at the same time, he followed his inclination for games of hazard more than previously.

In 1765 he once more returned to Berlin to devote himself solely to the sciences; but, unaccustomed to so sedentary a life, he is said to have formed the plan of putting himself at the head of a company of strolling players. We shall not therefore be surprised to find him in 1767 in Hamburgh, whither the proprietors of the theatre had invited him on very favourable terms. While there he wrote his "Dramaturgie," but a misunderstanding with his employers, and the indocility of the actors, rendered his residence at Hamburgh disagreeable. At the same time began his dispute, or it may more properly be called quarrel, with Klotz.

Dissatisfied with his situation, he now determined to go to Italy, when an advantageous offer of the place of librarian at Wolfenbüttel changed his intention. The little court of Brunswick was then almost the only one in Germany which fostered German literature; the others confined their atten-

tion to the French. In the library of Wolfenbüttel he discovered the MSS. of the exsubstantiator Berengarius of Tours, in which he refutes the work of the transubstantiator Lanfrancus. He also published some theological treatises, under the title of "Wolfenbüttel Fragments of an Unknown Author," which involved him in a theological war. In 1775 he went to Vienna, having received an invitation to that city, and accompanied Prince Leopold of Brunswick to Italy, which he had long desired to see. He left Germany in April, but returned the same year; and the theological disputes in which he was involved now became so acrimonious that it was proposed, at Wolfenbüttel, to subject his writings to a strict censorship. "His Nathan the Wise," from its supposed irreligious tendency, added to the fierceness of the controversy. As a poem, it is, in our opinion, much the finest that he has written. The persecutions which he encountered destroyed his peace, and he died in February 1781.

LESTOCQ, JOHN HERMANN, a favourite of the Russian empress Elizabeth, who was twice elevated by fortune to be twice precipitated from his high honours. Lestocq was born in Hanover, in 1692, of French parents, who had fled from the religious persecutions of Louis XIV. He studied surgery under his father, went to Russia, then a good field for men of talents, and entered the service of Peter the Great as surgeon, and enjoyed his entire confidence. A sudden change in the emperor's dispositions towards him took place, and Lestocq, without knowing the cause, was banished to Kasan. Catherine I. recalled him after the death of Peter, and gave him the place of surgeon at the court of her daughter Elizabeth. Entirely devoted to the interests of his mistress, he offered her his assistance in gaining possession of the crown after the death of Peter II.; but his daring plans were then rejected. Eleven years later, when the youth of Ivan, and the regency of his mother Anne, again presented an opportunity, his advice was adopted. The active and politic Lestocq guided the daring enterprise, never, even in moments of the greatest danger, losing his presence of mind, and, on the 24th of November, 1741, Elizabeth ascended the throne. The new empress made him her privy counsellor, and chief physician, and director-general of medical institutions. The king of Poland created him count, and sent him his miniature to be worn in his button-hole, like an order.

In compliance with the wishes of the empress, Lestocq was obliged to interfere in affairs foreign to his province. This circumstance, and the frankness of his character, increased the number of his enemies, who succeeded in exciting the suspicions of the empress. Lestocq was arrested in 1748, and confined in the fortress of St. Petersburg for trial. At first, he bore this change of circumstances with cheerfulness and calmness, but when he was to be subjected to the rack he confessed himself guilty. He was deprived of all his honours and estates and banished to Uglitsch, where he remained three years, and then to Ustjug-Veliki, where he was in prison nine years. His third wife, Maria Aurora, shared the fate of her husband with an exemplary firmness. When Peter III. ascended the throne, Lestocq was restored to his honours. Catharine II. continued his pension without his offices. He died in 1767.

LESTRANGE, SIR ROGER, a political partisan

and controversialist, was the youngest son of Sir Hammond Lestrange, knt., of Hunstanton Hall, Norfolk, where he was born in 1616. His father, being a zealous royalist, brought up his son in the same principles. At the age of twenty-two he attended Charles I. in his expedition into Scotland, and laid a plan for surprising Lynn, but being detected with the king's commission in his pocket, he was tried by a court-martial as a spy, and condemned. He was, however, respited from time to time, until he had lain in prison four years, when, by the connivance of his gaoler, he made his escape to the continent. On the dissolution of the long parliament he returned home. On the restoration he was made licenser of the press—a profitable post. In 1663 he set up the "Public Intelligencer," which he discontinued on the design, then concerted, of publishing a "London Gazette," the first number of which appeared in February 1665. In 1679 he commenced a paper called "The Observer," in defence of the measures of the court. In 1687 he was obliged to give up the "Observer," because he could not agree with James who had knighted him, in the doctrine of toleration, although he had written in favour of the dispensing power. His death took place in 1704, his faculties having become impaired some years before. He was the author of a great number of political tracts, full of coarse and virulent abuse, and in a style so rude and vulgar that he was regarded by Granger as one of the great corruptors of the English language.

LESUEUR, EUSTACHE, a distinguished French painter, who was born at Paris in 1617. He was instructed in drawing by his father, a statuary, and was afterwards placed at the school of Simon Vouet, the founder of the French school of painting. He soon distinguished himself by several pieces in the true Italian style, but his reputation was not completely established till he had executed his paintings for the Carthusian monastery in Paris. In twenty-two pictures he delineated the principal scenes in the life of St. Bruno, the founder of the order. In 1650 he painted for the corporation of goldsmiths, the Preaching of the Apostle Paul at Ephesus. This painting was presented to the church of Notre-Dame, and was exhibited annually on the 1st of May. His next works were a Magdalen and a St. Lawrence, and in 1651 two scenes from the life of St. Martin, &c. Among the most distinguished of his later works are some mythological scenes in the hotel Lambert relating to Cupid and the Muses with Apollo. After completing this work he died, in the thirty-eighth year of his age. Incessant toil, and the jealousy of his companions in art, brought him to his grave. His countrymen call him the French Raphael, and it is not to be denied that he had great merit. His conceptions are noble and elevated; his composition is simple, careful, and well arranged; the drawing is correct, in good taste, and proves his diligent study of the antique and of the great Italian masters, particularly of Raphael; his drapery is artfully disposed, and executed with great truth. His figures are full of animation and character, the positions are various and free from manner. He displays great boldness and freedom of pencil; his colouring is delicate and simple, but deficient in truth and vigour, which sometimes renders his pictures too uniform, and occasionally they have too much ornament. That Lesueur should

have reached so great excellence, is the more remarkable as he had never been out of France, hardly even out of Paris, and had consequently formed himself after the few models of the ancient art and the Italian school to be found there. He had studied Raphael chiefly through the engravings of Mark Antony. Lesueur, from his education, may be considered as the true representative of the French school; for Poussin, who was a superior artist, belongs more to the Italians than to the French. His mild and ingenious character made him generally esteemed, although the jealousy of his competitor Lebrun, who tyrannized over the taste and opinions of the day, prevented him from enjoying the reputation which was justly due to him in his lifetime.

LESUEUR, JEAN BAPTISTE, a musical composer of great talent, who was a descendant of the great painter Lesueur. He was born in 1763, and was placed in the musical school of the cathedral of Amiens, and, after completing his musical studies, was made director of music in the cathedrals at Sees and Dijon, and in 1784 in the church of the Innocents at Paris. In 1786, in opposition to several candidates, he received the place of master in the cathedral of Paris, and his elevated and impressive compositions, no less than the excellent manner in which he led the orchestra, made him a universal favourite. His own inclinations, and the advice of Sacchini, induced him to compose for the theatre. "Telemachus" was his first opera, which was brought forward with great success in the theatre Feydeau. In 1788 Lesueur resigned his place at Notre-Dame that he might devote his time to theatrical music, and lived till 1793 with his friend and patron Bochart de Champagny, in whose house he applied himself so laboriously that his host, anxious for his health, would not allow him lights for more than half the night. Lesueur was at that time engaged in writing his opera "La Caverne." One night his light went out, and, unable to endure any interruption, he lay on the floor before the fire and continued to write by the feeble light afforded by a few pieces of wood until he was found in that situation the next morning by Mr. Champagny.

After various disappointments he finally succeeded, in 1793, in introducing this opera on the stage, which met with the most brilliant applause. On Chenier's proposition, he was made professor of music in the national institute, and wrote several pieces of music for festivals during the time of the republic; was afterwards displaced by intrigue, but again restored by Bonaparte. In 1793 he composed "Paul et Virginie," "The Death of Adam," and "The Bards." This last and finest work, in which the composer appears to have called up the very spirit of Ossian, delighted Napoleon to such a degree, that he made him chapel-master at the Tuileries, conferred on him the order of the legion of honour, and presented him a gold snuff-box, with the inscription "The emperor of the French to the author of the 'Bards.'"

LETTSON, JOHN COAKLEY.—This distinguished physician and writer was born in the West Indies in December 1744, and at an early age was sent to England to be educated. He was immediately placed under the tuition of a Mr. Thompson near Warrington, where Dr. Fothergill, who resided in the neighbourhood, superintended his studies. He was subsequently apprenticed to an apothecary at

Settle in Yorkshire, after which he attended for two years at St. Thomas's hospital to complete his medical education. After Mr. Lettsom came of age, he resolved to return to the West Indies, with the twofold object of obtaining possession of the property that had devolved entirely on him, by the death of an elder brother, and of following his professional avocations. In respect to the first of these, he found that the lands were but of little value, and that his sole wealth consisted of a portion of his fellow-creatures who were employed as slaves. Without hesitating a single moment between his interest and his duty, he instantly emancipated them all; and this, too, at a moment when the great question of negro slavery had never been agitated, and in a place where such conduct must have been deemed odious. Thus finding himself, at the age of twenty-three, not only destitute of fortune, but actually 500*l.* in debt, he settled at Tortola, where he appears to have enjoyed an extensive and lucrative practice. By means of this, while still a young man, he was enabled to realize all the objects of a laudable ambition which was then solely circumscribed by a passion for professional excellence. He accordingly returned once more to Europe for the express purpose of visiting all its great medical schools. After staying some time in London, he repaired in the spring of 1768 to Edinburgh, in consequence of the talents and exertions of its physicians. He afterwards went to Paris, and in June 1769 Mr. Lettsom obtained the degree of M. D. at Leyden. His thesis on this occasion, entitled "*Observationes ad Vires Therapeutice*," was inscribed to his two protectors, Mr. Samuel and Dr. John Fothergill, together with his old master Dr. Sutcliff, who had, like himself, become a physician. He afterwards visited Spa and Aix-la-Chapelle, both more celebrated at that period than the present on account of their mineral waters; and having been introduced to, and established a correspondence with, Macquer, le Roi, and other public characters, he returned once more to England. In 1769 we find the name of Dr. Lettsom placed in the list as a licentiate of the royal college of physicians, and he soon after became a member of the royal society. He now devoted the whole of his time to the kindred pursuits of medicine and botany; and while a knowledge of the discoveries made in the former was more generally diffused through his means and exertions, a number of new plants, particularly those indigenous to the tropical regions, were introduced into Great Britain expressly for his collection. His house was always open to men of talents; and to him ingenious foreigners, from all parts of the globe, applied for information and instruction. About the same period he became possessed of a very elegant residence near Camberwell, called Grove Hill. Attached to the house were conservatories for his plants, together with a botanical garden; within was a library of rare books, and a museum of natural history. A friend of Dr. Lettsom published a descriptive poem for the express purpose of celebrating the beauties of his villa. The garden, the library, the landscape, are all noticed with enthusiastic applause; after which he concludes with the following lines:—

"Such are the soft enchanting scenes display'd  
In all the blended charms of light and shade,  
At Camberwell's fair grove and verdant brow,  
The loveliest Surrey's lofty hills can show:

BIOGRAPHY.—VOL. II.

And long may he, whose bold excursive mind  
This sweet terrestrial paradise design'd,  
Long may he view the favourite bow'r he plann'd,  
In towering foliage o'er his race expand:  
Behold them flourish in its graceful shade,  
And in their father's steps delight to tread:  
Then full of years, and crown'd with well-earn'd fame,  
Retire in peace, his bright reward to claim."

Dr. Lettsom was always distinguished for the kindness of his disposition; he was ever a great advocate for the extension of medical aid to servants, and to persons in distressed circumstances. In consequence of this, Dr. Lettsom not only subscribed to, but greatly promoted the General, the Finsbury, and Surrey dispensaries; but being of opinion that physic was of little service where food was wanting, he did every thing within the scope of his fortune and ability to supply the latter as well as the former. He inserted his name at an early period as one of the members of the philanthropic society in St. George's Fields. Here regular work is obtained for a number of persons who might otherwise be employed in disorderly practices, while good morals are both encouraged and cultivated among children, who but for this humane establishment would have devoted their lives to, and probably forfeited them also by, a course of public plunder and private infamy. The society for the discharge of persons imprisoned for small debts in him experienced a bountiful and a steady supporter. This, we believe, originated with the late Mr. Nield of Chelsea, who has given a public testimony of the succour and assistance derived from our amiable quaker on that and a variety of other occasions. The asylum for the support and education of the indigent deaf and dumb, as well as the institution for the relief and employment of the indigent blind, in him found a strenuous patron and a liberal contributor. He was also one of thirty-two gentlemen, consisting of Mr. Alderman Bull, Dr. Oliver Goldsmith, the Rev. Dr. Towers, Dr. Hawes, &c., &c., with whom originated the royal humane society, for the recovery of the apparently drowned or dead.

But Dr. Lettsom did not confine either his beneficence or his exertions to public institutions. In consequence of an extensive practice in the metropolis, many pressing opportunities occurred for the exercise of his humanity. He constantly endeavoured to act as the physician of the mind as well as of the body; for to assuage "the numerous ills that man is heir to," appears to have been an object that occupied not a small portion of his time and attention. The abodes of misery were very familiar to him. The obscure alley was entered; the garret was ascended to; the curtain of want, beggary, and despair, was gently withdrawn by his hand; and when he discovered that sustenance rather than pharmacy was wanting, he not unfrequently prescribed the necessary remedy from the shop of the butcher and baker, instead of that of the apothecary. To patients of a different description, whose hearts were ill at ease, he freely and liberally communicated such mental consolations as they stood in need of. By these means he formed a numerous and respectable acquaintance, and drew a circle of opulent persons around him, who contributed their aid both frequently and freely to those benevolent pursuits which occupied his constant attention.

The following anecdote is from his own pen, and it admirably illustrates the great kindness of his dis-

N

position. He says, "About the beginning of December 1780, on going out of my house, I was accosted by a tall thin man, whose countenance exhibited such a picture of distress and poverty as fixed my attention, and induced me to enquire into his situation. He informed me that he was a day-labourer, just recovering from sickness, and that, feeble as he then was, in order to procure sustenance for a sick family at home, he was compelled to seek for work, and to exert himself much beyond his strength; and he added, that he lived in a court called Little Greenwich, in Aldersgate Street. This poor object seemed to feel distress too deeply to be an impostor, and I could not avoid bestowing some means of obviating his present want, for which he retired bowing, with tears in his eyes; but when he got out of sight, his image was present with me: I was then sorry that my generosity had not been equal to my sensibility, and this induced me to attempt finding out his family. He had mentioned that his name was Foy, and by the information he gave me I discovered his miserable habitation. With difficulty I found my way up a dark passage and staircase to a little chamber, furnished with one bedstead; an old box was the only article that answered the purpose of a chair, the furniture of the bed consisted in a piece of old ticken, and a worn-out blanket, which constituted the only couch, except the floor, whereon this afflicted family could recline their heads to rest: and what a scene did they present!

"Near the centre of the bed lay the mother with half a shift, and covered as high as the middle with the blanket. She was incapable of telling her complaints. The spittle, for want of some fluid to moisten her mouth, had dried upon her lips, which were black, as were likewise the gums, the concomitants of a putrid fever, the disorder under which she laboured. At another end of the blanket was extended a girl of about five years old; it had rolled from under this covering and was totally naked, except its back, on which a blister plaster was tied by a piece of packthread crossed over its breast; and, though labouring under this dreadful fever, the poor creature was asleep. On one side of its mother lay a naked boy about two years old; this little innocent was likewise sleeping. On the other side of the mother on the floor, or rather on an old box, lay a girl about twelve years old; she was in part covered with her gown and petticoat, but she had no shift. The fever had not bereaved her of her senses, and she was perpetually moaning out, 'I shall die of thirst; pray give me some water to drink.' Near her stood another girl about four years old, barefooted: her whole covering was a loose piece of petticoat thrown over her shoulders; and to this infant it was that her sister was crying for water.

"I now experienced how greatly the sight of real misery exceeds the description of it. What a contrast did this scene exhibit to the plenty and elegance which reigned within the extent of a few yards only, for this miserable receptacle was opposite to the stately edifice of an honourable alderman, and still nearer were many spacious houses and shops. I have observed that the daughter who was stretched on the floor was still able to speak. She told me that something was the matter with the mother's side, and asked me to look at it. I turned up an edge of the blanket, and found that a very large mortification had taken place, extending from the

middle of the body to the middle of the thigh, and of a hand's breadth; the length was upwards of half a yard, and to stop its progress nothing had been applied. It was a painful sight to behold, and many not less painful exist in this metropolis. I procured medical assistance immediately, and for a trifling gratuity got a neighbour to nurse the family. The churchwarden, to whom I made application, heard their history with concern, and added his humane aid to rescue from death a poor and almost expiring family. I have, however, the pleasure to conclude this relation of their unspeakable distress by communicating their total deliverance from it; which I think may be justly attributed to the timely assistance administered."

But in the midst of a career hitherto distinguished by invariable worth and unbounded prosperity, the domestic happiness of this gentleman received a deadly wound, in consequence of the sudden demise of his eldest son in 1800. Dr. John Miers Lettsom had received an excellent education in his native country, under the auspices of his father, who spared no expense in rendering him both learned and accomplished. Being destined for the medical profession, every opportunity was afforded of obtaining a critical knowledge of this science; and to improve himself still more, he visited several parts of Europe in company with Dr. Sims. He afterwards married, settled in London, and died at his father's house in Sambrook Court, Basinghall Street, in the twenty-eighth year of his age.

Dr. Lettsom in his character of an author may be fairly deemed a voluminous writer, having occasionally connected himself with the English press during a period of nearly half a century. He contributed largely to several periodical works, in which will be found a number of his essays, letters, hints, and remarks. He also introduced the plans and opinions of the late Mr. Nield through the same medium to public notice; and, but for his kindness upon this occasion, the benevolent labours, journeys, and enquiries of that gentleman would have been entirely lost to the public.

He also presented engraved portraits of Mr. Peter Collison, Mr. Cumming, and Dr. Fothergill, to the ninth volume of Mr. Nicholls's "Literary Anecdotes," who terms him "his skilful and invaluable friend." This same gentleman published a memoir of his life, annexed to a collection of his smaller pieces. Prefixed to this is a portrait by Ridley, together with a scene in Yorkshire, a plan of his favourite country seat at Camberwell, &c. Here are also to be found his "Hints respecting the Distresses of the Poor in the years 1794, 1795." He himself took an active part both in visiting and relieving them, during that season of unexampled scarcity, when the expenses of every article of human sustenance were so enhanced as to put it out of the power of a large portion of the community to obtain the necessary degree of subsistence. On this occasion he justly lashes the unfeeling avarice of those who withhold relief by sheltering themselves under the trite remark of "the improvidence of the poor."

In 1787 appeared the first edition of the "Account of the Culture and Use of the Mangel Wurzel, or Root of Scarcity," which the doctor had translated from the French of the Abbé de Commereil. During the preceding year he had obtained a few seeds of the *racine de disette*, beta hebræda, from France,

by means of Sir Richard Jebb. After trying them in his own garden, he calculated that "a square yard of ground will yield fifty pounds in weight of salutary food." He accordingly recommended it to general use, and particularly pointed it out as peculiarly advantageous to such poor persons as had not land sufficient to feed a cow:—"The whole," he observed, "was edible and salutary, affording a supply for the table both in winter and summer. The leaves exceed spinach in the pleasantness of their taste. The stalks and ribs of the large ones, divested of the leafy part and peeled, eat like asparagus, and may be used in soups, which they greatly improve. The leaves tied up in a bag or net, with slices of meat interlaid, and boiled, also make a dish both pleasant and salutary." The public expectation was raised to a high pitch by this description, and no fewer than two thousand four hundred applications were made for the plants and seeds. Disappointment, in respect to many who cultivated the mangel wurzel on improper soils, however, was the consequence; but it is fair to add, that its virtues are now fully ascertained and allowed by irrefragable testimony.

It is extremely painful here to be obliged to remark, that the expenditure of this gentleman at length so far exceeded his income as to encroach on the capital, and render it absolutely necessary, for the sake of his creditors, to sacrifice almost every thing which it had been the ambition of the early portion of his life to obtain, cherish, and preserve. Accordingly his charming villa, his coins, his medals, his books, were all disposed of, either by public sale or private agreement!

At length, surrounded by the wreck of his former fortunes, and little better than a wreck of his former self, he was seized with a mortal disease in the seventy-second year of his life. For some time previous to this event he had been attending a patient whose case proved fatal. Being desirous that the body should be opened and examined, he himself performed the chief part of the operation on the 22nd of October 1815, and is supposed to have received a sudden chill from the coldness of the apartment. On his return he became worse, and was then visited by Dr. Babington, together with Mr. Norris. His disease now began to assume an alarming appearance, notwithstanding which he prevailed on a gentleman to attend daily at the miserable house just alluded to; and seemed greatly affected lest he should not be able to appear at the anniversary of the philosophical society of London, in the success of which institution he took the most lively interest. On the 30th he appeared in an improved state; but on the succeeding day great debility, accompanied by delirium, ensued, which terminated his existence on the 1st of November, 1815.

We cannot close the life of this benevolent gentleman without giving an extract from one of his most popular works, entitled "An Essay on Religious Persecution." He says, "In the great and important truths of religion, as they respect the moral government and infinite goodness of a supreme being, and the adorable and humble relation between the Creator and the creature, mankind seem generally united. It is in its subordinate points that the greatest asperity has been maintained, as if they were solely essential to the happiness of mankind; whereas a just consideration of the universality of the Almighty's goodness, who permits all sects to exist

peaceably under his moral agency, would dispel prejudice, and substitute forbearance and concord. For which sect dares to arrogate to itself the only true religion, and thus exclude the judgment and principles of 2999 other societies? By whose agency and permission do all these societies exist, and find happiness in their respective tenets?—By the wisdom of the Creator. Well, indeed, might it be applied to the narrowness or bitterness of a sectary, 'Thou canst see the mote in thy brother's eye, but wilt not contemplate the beam in thy own.'

"The more we scrutinize into natural objects, and reflect upon their existence and formation, the more forcibly are we compelled to conclude that Infinite Wisdom has been pleased to create and constitute such an incalculable variety around us that no two things were ever made alike. In vain would be the labour of that man who should attempt to find two seeds, or two leaves, exactly similar; like the plodding individual who, with the point of his pen, made a million of dots on paper, in hope, but a vain hope it proved, of finding two of equal form and dimensions; hence, if the finger of the Supreme Architect has been pleased to impress on his own works an endless variety, not only in the outward creation, but likewise in the sentient principle, is it not impious to persecute for difference of opinion or modes of adoring him, whose ways are said to be past finding out?

"If any act of his intellectual creatures could add to his felicity, perhaps no combined operation of ours could afford a more acceptable oblation than his diversified creation, moving in different paths to the altar of praise and thanksgiving, and ultimately uniting in one centre of adoration. Of his intellectual creatures, on this globe alone, fifty thousand die every day; immense as this number is, how diminutive must it appear were contemplation to carry the mind to regions without number in the expanse of the heavens! And what sectaries then dare to limit the infinity of his love, and presumptuously arrogate the title of a chosen few to themselves! What idea have they of that Being who is equally good as powerful! If fifty thousand souls of this globe, this grain of sand in the visible creation, daily pass from time to eternity, are there not mansions prepared in our Father's house sufficient for their reception?"

LEUCIPPUS, the founder of the atomic school in Greek philosophy, and teacher of Democritus. By some he is said to be a native of Abdera; by others, of Elea; and by others, of the island Melos. To settle a contest between reason and sensible experience, which had been mainly excited by the Eleatic school, he invented his system, which he opposed to that of the Eleatics. The more ancient Eleatics denied the reality of motion, vacuity of space, and plurality of matter, reducing all that exists to a single, eternal, and immutable substance. Leucippus, on the contrary, assumed the infinity of space. In this space there are, according to his views, an infinite quantity of particles of matter, too minute to be perceptible to the senses. In themselves they are indivisible, thence the name atoms; for, if an infinite divisibility were ascribed to them, they would at last disappear into nothing. Now, these atoms move from eternity in infinite space, and, by their union and separation, form the origin and end of things. Since unity can never become plurality, nor plurality become unity, the atoms cannot, by their

connexion, produce a true unity, but mere aggregations. In substance all the atoms are similar, but of an infinite variety of shapes, by which is explained the variety of bodies formed by them. Atoms are moreover distinguished by their local situation and the order in which they are compounded. Situation and order are the fundamental properties of the atoms; from their union and separation arise properties of the second order, such as hardness, softness, colour, sound, smell, &c. As far as can be deduced from the imperfect notices which we have, Leucippus explained the origin of the world by the motion of atoms in the following manner:—From the infinity of atoms, some broke loose, and, becoming confused, produced a rotary motion, by means of which similar particles were associated with similar particles, while the dissimilar were repelled. From the necessary inequality of the velocity of the bodies, the smaller were driven to the outside, and formed, as it were, an envelope around a kernel. The grosser bodies of this envelope sunk downwards, and, by their mutual collisions, attenuated the envelope. The bodies that sunk downwards compose the earth; the envelope itself was finally inflamed, and gave rise to the stars. To fire he ascribed round atoms. The atoms composing the other elements—water, air, and earth—were distinguished merely by magnitude. Fire, as the most subtile, the lightest and most fluid element, he made the soul of the world, the principle of life, sensation, and thought. These last modifications, however, according to Leucippus, were not always founded in the nature of atoms, but merely in the mode of their aggregation. The intellectual substance (consisting of particles of fire) is diffused through the whole body. Men and animals inhale it with the atmosphere, and hence life ceases with the end of respiration. There is nothing said in his system respecting the soul of the universe, a providence, or a Deity.

LEUWENHOEK, ANTHONY, a celebrated natural philosopher, born at Delft, in Holland, in 1632. His skill in grinding optical glasses led the way to the making of microscopical observations, which procured him no small degree of fame. In 1680 he was chosen a fellow of the royal society, and in 1698 he entertained the czar Peter the Great, then at Delft, with an exhibition of his experiments. He appears to have passed the whole of his life at his native place, devoting his time to microscopical researches, chiefly relating to anatomy. He died in 1723. A Latin translation of his works in the Dutch language was published between 1695 and 1719, under the title of "*Arcana Naturæ Detecta*," and reprinted at Leyden in 1722. His industry was great, but preconceived opinions sometimes led him to erroneous conclusions.

LEVAILLANT, FRANCIS, a celebrated traveller, born at Paramaribo, in the Dutch colony of Guiana (Surinam), who from childhood displayed a passion for the study of natural history, particularly for ornithology. His desire for extending his knowledge by travelling in the most distant lands was increased in Europe. In Amsterdam he found a patron in the person of Temmink, the great ornithologist, who warmly encouraged his plans, in the hope of obtaining through him great accessions to his excellent collections in natural history, particularly ornithology—a hope which was not disappointed. Levaillant first proceeded to the Cape of Good Hope, whence he advanced into the interior of Africa. The speci-

mens which he collected on this occasion were entirely lost. The ship in which they were embarked for Holland was attacked by the English, and burned in the course of the action. Supported by Temmink, Levaillant renewed his labours, and, with a tolerably large caravan, directed his course to the countries on the north of the colony. Insurmountable obstacles prevented him from pursuing his adventurous researches so far into the interior as he wished. The fruits of his labours were, however, important. He was not less fortunate in a second excursion. Levaillant died at Paris, in November 1824. It has been objected to his accounts, that they are often improbable, though this cannot be satisfactorily shown. His readers are interested by his lively descriptions, and by an attractive philosophical originality. His accounts of his first and second excursions were published in French in 1789 and 1796. He also left some works on natural history, and some separate treatises.

LEWIS, JOHN, a learned antiquary and historian, who was born at Bristol in 1675, and educated at Exeter college, Oxford, but received the degree of M. A. at Cambridge. He afterwards entered holy orders, and obtained several valuable benefices. His principal works are, "*The History and Antiquities of Feversham Abbey*," an "*Exposition of the Catechism of the Church of England*," and a "*History of the Isle of Thanet*;" in addition to which he published several minor works. Mr. Lewis died in 1746.

LEWIS, MATTHEW GREGORY.—This talented English writer was born in 1773. He was the son of a gentleman of good property, who held the lucrative office of under-secretary of war. He was sent to Westminster school for his education; on quitting which foundation he went abroad. During his travels he visited Germany, and while there composed his celebrated romance of "*The Monk*," a work by which he himself was ever afterwards designated. For the story on which it is founded, he was, however, indebted to his native country; it having originated in a tale in "*The Guardian*." This publication, which appeared soon after his return to England, attracted no small degree of attention. The pruriency of several of the passages was greatly condemned by some, while others, overlooking this defect in the first production of a very young man, praised him on account of his early genius. It was deemed prudent, however, to call in all the copies possible to be obtained; as many parts of the story did not comport with our manners, were not deemed proper for the youth of either sex, and seem but little adapted to the pen of a legislator.

Nearly at the same time Mr. Lewis determined to obtain a seat in parliament, and he was accordingly returned for the borough of Hindon, where he was utterly unknown. But if his mind was fired with ambition on this occasion, he experienced nothing but disappointment; for he had not been formed by nature or education to exhibit that popular species of eloquence which finds admirers either on one side or another of the house of commons. He accordingly sat during a whole parliament without attracting public notice, or even endeavouring to render himself distinguished. At the dissolution, therefore, he retired from a situation in which the expense proved both great and certain, while no possible advantage could be expected.

Mr. Lewis had no sooner retired from his political duties than he applied himself to those of a far different but more congenial kind. Having, as has already been observed, failed in the house of commons, he now courted applause in the theatre, and the ex-member for Hindon, in 1797, obtained great success in Drury Lane by his "Castle Spectre," a musical drama, which drew crowded and applauding houses. He afterwards composed several tragedies and comedies, and on the loss of the gallant Sir John Moore, published a poetical tribute to his memory. On the death of his father, Mr. Lewis came into the possession of very considerable plantations in the West Indies, besides a large sum of money. The former of these bequests imposed a duty upon him, and he accordingly determined to fulfil it in a manner highly honourable to himself. On this occasion, perhaps, the ardour of his imagination proved highly favourable to the best interests of humanity. He was now the master of several hundred slaves, daily subjugated to the whips of their black drivers, who were urged, perhaps by the cruelty, the caprice, or the malevolence of a white task-master insensible to pity, and hardened by long residence under a scorching sun, and the contagion of example, in the grossest insensibility. Was he to remain a co-partner with these men in guilt? Was he to trust a "gang," as it was called, of negroes entirely to their management and discretion? Was he to be a participator, although both a distant and unconscious one, in their crimes? Actuated by these generous ideas, he determined to trust no longer to the interested reports of others. Instigated by the noblest feelings, he resolved to encounter all the inconveniencies of a long voyage, and all the dangers of an unhealthy season, in compliance with what he deemed an imperative duty! Mr. Lewis accordingly embarked in 1817 for Jamaica, and, after a residence of some time there, took his passage for England. But the climate had already inflicted a mortal disease, and he died in the spring of 1818, while passing through the Gulf of Florida.

Of the writings of this gentleman, besides "The Monk," we may enumerate "The Bravo of Venice," "The Castle Spectre," "Tales of Wonder," "Romantic Tales," "Feudal Tyrants," and a tragedy entitled "Venoni." In addition to which he published several other popular works.

LEWIS, MERIWETHER, a celebrated American explorer, who was born near the town of Charlottesville, in Virginia, in August 1774. His father, a man of independent fortune, died when he was yet a child. He very early gave proofs of that bold and enterprising disposition for which he was subsequently so distinguished; and at the age of eighteen he relinquished academic studies, and engaged in the pursuits of a farmer, with which he continued to occupy himself until he was twenty. General Washington called out a body of militia in consequence of the disturbances in the western parts of the country, produced by discontent at the excise taxes, when young Lewis enrolled himself in it as a volunteer, and from that situation was removed into the regular service. In 1803 President Jefferson proposed to congress to send some competent person on an exploring expedition to the western part of our northern continent, who might ascend the Missouri, cross the Stony mountains, and descend the nearest river to the Pacific. Congress having approved the proposition,

and voted a sum of money for carrying it into execution, Captain Lewis, who had then been nearly two years with Mr. Jefferson as his private secretary, was chosen for that purpose. The following testimony of Mr. Jefferson gives an idea of his fitness for that task:—"Of courage undaunted; possessing a firmness and perseverance of purpose which nothing but impossibilities could divert from its direction; careful as a father of those committed to his charge, yet steady in the maintenance of order and discipline; intimate with the Indian character, customs, and principles; habituated to the hunting life; guarded, by exact observation of the vegetables and animals of his own country, against losing time in the description of objects already possessed; honest, disinterested, liberal, of sound understanding, and fidelity to truth so scrupulous, that whatever he should report would be as certain as if seen by ourselves;—with all these qualifications, as if selected and implanted by nature in one body for this express purpose, I could have no hesitation in confiding the enterprise to him." That there might be some person with him to assume the conduct of the expedition in case of accident to himself, William Clarke was appointed, at Lewis's request, to accompany him, and received a commission as captain. It was highly successful, and occupied three years, the party engaged in it having set out in the summer of 1803, and returned in the autumn of 1806. Lewis was soon afterwards made governor of the territory of Louisiana, and Clarke a general of its militia, and agent of the United States for Indian affairs. On the new governor's arrival at St. Louis, the seat of administration, he found the country torn by dissensions; but his moderation, impartiality, and firmness, soon brought matters into a regular train. He was subject to constitutional hypochondria, and, while under the influence of a severe attack of this disorder, put an end to his life in 1809.

LEWIS, FRANCIS, a patriotic merchant, who was born in 1715, in South Wales, and educated at Westminster school. He chose, however, mercantile pursuits; converted his patrimony into merchandise at the age of twenty-one, and sailed for New York, whence he proceeded to Philadelphia. Here he remained for two years, and then returned to New York. In the disputes between the mother country and the colonies he sided zealously with the latter. In 1775 he was unanimously elected to the continental congress from New York. His commercial knowledge and habits rendered him particularly serviceable to that body. He suffered much, in the course of the revolutionary war, by the devastation of his estate, and by personal imprisonment, having fallen into the hands of the British. Through the influence of Washington, he was exchanged before the end of the contest. Mr. Lewis died in 1803, in his eighty-ninth year. His latter days were passed in comparative poverty, the fortune which he had acquired by trade having been, in a great part, sacrificed on the altar of patriotism.

LEWIS, WILLIAM, a physician and writer, who was for many years a member of the royal society. He had the honour of delivering several courses of lectures before the members of the royal family, and died after a long illness at Kingston in Surrey, on the 21st of January, 1781. His principal works were, "An Experimental History of the Materia Medica," and "The Philosophical Commerce of the Arts."

LEYDEN, JOHN, a poet, antiquary, and orientalist, who was born at Denholm, Scotland, in 1775, of parents in humble circumstances, and bred up to such country labour as suited his condition. In his earliest youth he displayed the greatest eagerness for the acquisition of knowledge, but enjoyed few opportunities of gratifying it. His predominant desire for learning, however, determined his parents to prepare him for the church, and he was entered at the college of Edinburgh in 1790 for the purpose of commencing his professional studies. Here, besides attending to theology, he cultivated medical studies, and, in addition to the learned languages, acquired French, Spanish, Italian, German, the ancient Icelandic, Arabic, and Persian. After remaining five or six years in Edinburgh, he became private tutor to two young gentlemen, whom he accompanied to St. Andrew's, and in 1799 published his history of African discoveries, which has since been continued and enlarged by Hugh Murray. At this time he was also the author of many poetical effusions in different departments, which appeared in the "Edinburgh Magazine," and which, by rendering him known to the lovers of literature, introduced him into the best society in the Scottish capital. In company he displayed the rudeness and independence which his early life and education were fitted to produce in a man of strong feelings and vigorous genius, united with personal boldness and much bodily power and activity. In 1800 he began to preach, and although popular as a pulpit orator he was not satisfied with his own discourses. In 1801 and 1802 he assisted Walter Scott in procuring materials and illustrations for his "Minstrelsy of the Scottish Border," and republished the "Complaynt of Scotland," with a learned preliminary dissertation, notes, and a glossary. Having manifested a strong desire to set out on an expedition to explore the unknown regions of Africa, his friends, to prevent the execution of this project, procured him an appointment in India, which, however, could only be held by a person who had taken a surgical degree, and this he actually obtained after six months' unremitting application. While in India, he devoted himself to the study of oriental literature, but did not long survive the influence of the climate and his over-exertions in his studies. He died in 1806.

LHUYD, EDWARD, a native of South Wales. He was educated at Jesus college, Oxford, where he took the degree of M.A. in 1701. He was a friend of Dr. Plot, whom he succeeded as keeper of the Ashmolean museum, and had the use of all Vaughan's collections. With incessant labour he employed a considerable part of his life in searching into Welsh antiquities; collected a great deal of ancient and valuable matter from their manuscripts; transcribed all the old characters of the monasteries that he could meet with; travelled several times over Wales, Cornwall, Scotland, Ireland, Armoric Bretagne; compared their antiquities, and made observations on the whole; but died in July 1709, before he had digested them in the form he intended. The death of this antiquary prevented the completing of many excellent plans. He communicated many observations to Bishop Gibson, whose edition of the "Britannia" he revised, and published "Archæologia Britannica," giving a valuable account of the languages, and customs, and original inhabitants of Great Britain, from collections and observations in his travels through

Wales, Cornwall, Bas Bretagne, Ireland, and Scotland. Lhuyd, at the end of his preface to the *Archæologia*, promises an historical dictionary of British persons and places mentioned in ancient records. It appears to have been ready for press, though he could not name the time of publication. His collections for a second volume, which was to give an account of the antiquities, monuments, &c., in the principality of Wales, were numerous and well chosen; but, on account of a quarrel between him and Dr. Wynne, then fellow, afterwards principal of the college, and bishop of St. Asaph, he refused to buy them, and they were purchased by Sir Thomas Seabright of Beachwood in Hertfordshire.

LHUYD, HUMPHREY, a learned antiquary of the sixteenth century, who was born at Denbigh, devoted himself to the study of medicine. He passed nearly all his days within the walls of Denbigh castle, practised there as a physician, and died in 1570. He wrote and translated several works relative to history and antiquities; in particular, the history of Wales, from Caradoc of Langarvan, &c., but died before it was finished. Sir Henry Sidney, lord president of Wales, employed Dr. David Powel to finish it, who published it in 1584.

LICHTENBERG, GEORGE CHRISTOPHER, one of the greatest natural philosophers and wittiest writers that Germany has produced. He was born in 1742 at Ober-Ramstadt near Darmstadt, and received from his father instruction in physics, but went after his death to the academy at Darmstadt. He was strong and well formed till eight years of age, but at this time the effects of the carelessness of his nurse became visible in a distortion of the spine. In 1763 he went to Göttingen, where he applied himself to astronomical observations. He made observations upon the earthquake of 1767, and observed, with Kästner, the transit of Venus over the sun's disk, June 19, 1769, as also the comets of 1770, 1771, and 1773, the orbit of which last he described and presented to the academy of sciences of Göttingen. He also constructed lunar charts, in which the spots are indicated in the order in which they are successively covered by the earth's shadow.

In 1770 he was offered a professorship at Göttingen, which he entered upon in his twenty-eighth year. In this year he went to London. Lichtenberg ascertained by observation, in 1772 and 1773, the situations of Hanover, Osnabrück, and Stade. He afterwards undertook to publish, with illustrations, the papers left by Tobias Mayer, and added a lunar chart with a description of lunar spots, but only one volume appeared. He visited England again in 1774, and wrote upon Garrick and the English stage. He subsequently published an excellent commentary upon Hogarth's engravings. In 1778 he returned to Göttingen. From this period he lectured upon experimental philosophy. His lectures were of great value, and he was ranked as a discoverer in physics, from his observations upon the figures developed upon electrified substances, which he learned to reproduce and exhibit, and which still retain his name. He also attacked with much wit, in several publications, the system of physiognomy to which Lavater had given such currency, but he was subsequently reconciled to Lavater. Other productions which he thought censurable felt the lash of his wit. His taste for drawings illustrative of character made him a great admirer of Hogarth, and he for a long time

supplied the Göttingen "Souvenir" with miniature drawings of the heads of Hogarth, accompanied by very witty and ingenious observations. The favourable reception of these led to the publication of a minute explanation of Hogarth's plates, with perfect miniature copies of them by Riepenhausen, of which he published four numbers himself: the seven next to the eleventh were published by Böttiger, and the last by Bouterwek. In the last years of his life Lichtenberg became hypochondriac and misanthropic, so much so indeed that he shut himself up in his chamber, and would see no one. He died of a pulmonary inflammation in 1799. He was an original thinker, to whom no subject of a scientific character was uninteresting. Scientific spirit and poetic talent were united in him in a singular degree, and produced the most peculiar and striking results; but the highest principle of the human mind—faith in something divine—was in his speculative moments disregarded, and a superstitious belief in dreams, predictions, and presentiments, was admitted in its stead.

**LICHTENSTEIN, MARTIN HENRY CHARLES**, a linguist and natural philosopher, who was born at Hamburgh in 1780. At the age of twenty-two he received from the Dutch general Janssen, who was appointed governor of the Cape of Good Hope, the situation of instructor and physician to his son. He arrived at the Cape at the end of the year 1802, and spent seven months in exploring the interior of the colony. Upon the breaking out of the war he received in 1804 the post of surgeon-major to a battalion of Hottentot light infantry, and after a few expeditions was named in 1805 as one of a commission to visit the distant tribe of Bushwanas. Two months after his return the colony was conquered by the British, and he returned to Europe with General Janssen, and to Germany in 1806. In 1810 he went to Berlin, and published there his journal, of which the first two volumes appeared in 1811. In the same year he also became a professor in the newly erected university. In 1819 he travelled through England, Holland, Switzerland, and France, studied their most celebrated scientific institutions for natural history, and formed connexions which enabled him to augment greatly the museum of the university with which he was connected.

**LIDDEL, DR. DUNCAN**, a learned professor of mathematics, who was born at Aberdeen in 1561, and received the rudiments of his education at the university of that city. He afterwards went to Frankfort, where he remained three years, and then went to Helmstadt, and soon after his arrival was appointed under professor of mathematics; and shortly after was promoted to the principal and more dignified mathematical chair, which he occupied for nine years. In 1596 he obtained the degree of M.D., and was admitted a member of that faculty. By his teaching and his writings he became the principal support of the medical school at Helmstadt, and was employed as first physician at the court of Brunswick. Having been several times elected dean of the faculties both of philosophy and physic, he was in the year 1604 selected pro-rector of the university. But neither academical honours, nor the profits of an extensive practice abroad, could make Dr. Liddel forget his native country. In the year 1600 he took a final leave of the Academia; and, after travelling for some time through Germany and Italy, he at

length settled in Scotland. He died in the year 1613, in the fifty-second year of his age. By his last will he bestowed certain lands purchased by him near Aberdeen upon the university in that city, for the education and support of six poor scholars. Among a variety of regulations and injunctions for the management of this charity he appoints the magistrates of Aberdeen his trustees, and solemnly denounces the curse of God on any person who shall abuse or misapply it. Dr. Liddel published a work to refute a ridiculous story then current of a poor boy in Silesia, who, at seven years of age, having lost some of his teeth, brought forth, to the astonishment of his parents, a new tooth of pure gold. Jacobus Horstius, doctor and professor of medicine in the Academia Julia, at the same time with Dr. Liddel, had published a work which he dedicated to the emperor Rodolphus II., to prove that this wonderful tooth was a prodigy sent from heaven to encourage the Germans then at war with the Turks, and foretelling from this golden tooth the future victories of the Christians, with the final destruction of the Turkish empire and Mahometan faith, and a return of the golden age in 1700, preparatory to the end of the world. The imposture was soon after discovered to be a thin plate of gold, skilfully drawn over the natural tooth by an artist of that country, with a view to excite charity. Dr. Liddel was the author of several valuable works on medical science.

**LIGHTFOOT, JOHN**, a learned English divine, who was born in March 1602, at Stoke-upon-Trent, in Staffordshire. After having finished his studies at a school on Morton Green, near Congleton, in Cheshire, he was removed in 1617 to Cambridge. Shortly after he had taken the degree of B.A. he left the university, and, entering into holy orders, became curate of Norton-under-Hales, in Shropshire. Sir Rowland Cotton, who was his constant hearer, made him his chaplain, and took him into his house. This gentleman, being a perfect master of the Hebrew language, engaged Lightfoot in that study, who soon became sensible that without that knowledge it was impossible to attain an accurate knowledge of the scriptures. He therefore applied himself to the study of it, and in a short time made a great progress. He subsequently married, and settled at Hornsey, where he published his "Miscellanies, Christian and Judaical." These first fruits of his studies were dedicated to Sir Rowland Cotton, who in 1631 presented him to the rectory of Ashley, in Staffordshire, where he remained till he was nominated a member of the assembly of divines for settling a new form of ecclesiastical polity. The non-residence which this would necessarily occasion induced him to resign his rectory, and, having obtained the presentation for a younger brother, he came to London in 1642. He was almost immediately made the master of Catharine Hall, in Cambridge, and also presented to the living of Much-Munden, in Hertfordshire. He also had the honour of preaching before the house of commons. In 1655 he entered upon the office of vice-chancellor of Cambridge, to which he was chosen that year, having taken the degree of doctor of divinity in 1652. At the restoration he offered to resign the mastership of Catharine Hall, but a confirmation was granted him from the crown, both of the place and of his living. He closed his long and useful life on the 6th of December, 1675.

**LIEVENS, JOHN**, a painter, who was born at

Leyden in 1607. He displayed an early inclination for the arts, but excelled principally in portrait painting. He came over to England, where he resided three years, and painted the portraits of Charles I., the queen, the prince of Wales, and several of the nobility; after which he returned to Antwerp, where he met with full employment. The sketches by this master are in a slight but masterly style of art; it bears some resemblance to that of Rembrandt, but it is coarser in general and less finished.

LILBURNE, JOHN, a remarkable character in the republican party during the reign of Charles I., who was tyrannically punished by the star chamber court; being put in the pillory, whipped, fined, and imprisoned, for importing and publishing seditious pamphlets, which he had printed in Holland. He suffered in 1637, and in prison was doubly loaded with irons. In 1641 he was released by the long parliament, and from this time he had the address to make himself formidable to all parties. He signalized himself in the parliament army, and was at one time the secret friend and confidant of Cromwell, and at another his avowed enemy and accuser; so that in 1650 Cromwell found it advisable to silence him by a grant of some forfeited estates. He was twice tried for high treason, but acquitted. The last was for returning from exile (having been banished by the parliament) without permission. He died in 1657.

LILLO, GEORGE, a clever dramatic writer, who was born at London in 1693. He was a jeweller by profession, but at the same time strongly attached to the Muses, yet seemed to have laid it down as a maxim, that the devotion paid to them ought always to tend to the promotion of virtue, morality, and religion. In pursuance of this aim Lillo was remarkable for the selection of his subjects. His "George Barnwell," "Fatal Curiosity," and "Arden of Faversham," are all planned on well-known stories; yet they have perhaps more frequently drawn tears from an audience than the more splendid tragedies of the ancient dramatists. In the prologue to "Elmeric," which was not acted till after the author's death, it is said that when he wrote that play he was "depressed by want," and afflicted by disease; but in the former particular there appears to be evidently a mistake, as he died possessed of a considerable estate, besides other effects to a considerable value. His death took place in 1739, in the forty-seventh year of his age.

LILLY, JOHN, a dramatic poet, who was born in Kent about the year 1553, and educated in Magdalen college, Oxford, where he took the degree of bachelor of arts in 1573, and that of master in 1575. From Oxford he removed to Cambridge, but how long he continued there is uncertain. On his arrival in London he became acquainted with some of Queen Elizabeth's courtiers, by whom he was admired as a poet and a wit; and her majesty, on particular festivals, honoured his dramatic pieces with her presence. His first publication was a romance called "Euphuus," which was universally read and admired. This romance introduced a new language, especially among the ladies of the period, who held it in such high estimation, that Whalley, the editor of Ben Johnson's works, says they had all the phrases by heart; and those who did not speak Euphuism were as little regarded at court as if they could not speak French. "Lilly was," says Oldys, "a man of great reading, good memory, ready faculty of application, and un-

common eloquence; but he ran into a vast excess of allusion." When or where he died is not known. Anthony Wood says he was living in 1597, when his last comedy was published. After attending the court of Queen Elizabeth for several years, notwithstanding his reputation as an author, he was under a necessity of petitioning the queen for a small stipend to support him in his old age. His two letters or petitions to her majesty on this subject are preserved in manuscript.

LILLY, WILLIAM, a celebrated English astrologer, who was born in Leicestershire in 1602, where his father not being able to give him any property, he resolved to seek his fortune in London. He arrived in 1620, and lived four years as a servant to a man-tua-maker in the parish of St. Clements Danes; but then moved a step higher, to the service of Mr. Wright, master of the salters' company in the Strand, who not being able to write, Lilly among other offices kept his books. In 1627, when his master died, he

paid his addresses to the widow, whom he married with a fortune of 1000*l*. Being now his own master, he followed the puritanical preachers, and turned his mind to judicial astrology. He was the author of the "Merlinus Anglicus Junior," "The Supernatural Sight," and "The White King's Prophecy." In him we have an instance of the general superstition and ignorance that prevailed in the time of the civil war between Charles I. and his parliament, for the king consulted this astrologer to know in what quarter he should conceal himself if he could escape from Hampton Court; and General Fairfax, on the other side, sent for him to his army to ask him if he could tell by his art whether God was with them and their cause. Lilly, who made his fortune by favourable predictions to both parties, assured the general that God would be with him and his army. In 1648 he published his "Treatise of the Three Suns" seen the preceding winter; and also an astrological judgment upon a conjunction of Saturn and Mars. This year the council of state gave him in money 50*l*. and a pension of 100*l*. per annum. In June 1660 he was taken into custody by order of the parliament, by whom he was examined respecting the person who cut off the head of King Charles I.

When the plague broke out in London he removed with his family to his estate at Hersham, and in October 1666 was examined before a committee of the house of commons respecting the fire of London, which happened in September in that year. After his retirement to Hersham he applied himself to the study of physic, and, by means of his friend Mr. Ashmole, obtained from Archbishop Sheldon a license for the practice of it. He died in 1681 of palsy. His "Observations on the Life and Death of Charles, late King of England," is a work of some merit, Lilly being not only very well informed, but strictly impartial. This work, with the lives of Lilly and Ashmole, written by themselves, were subsequently published in one volume.

LILY, WILLIAM, a learned grammarian, who was born in 1468, at Odiham, in the county of Hants. He was sent early in life to Oxford, where he remained for a considerable period; but after he had taken the degree of B.A. he quitted the university, and went to Jerusalem for the purpose of acquiring a knowledge of the Greek language. At Rhodes he found several learned men who had taken refuge there, under the protection of the knights, after the taking of Constantinople; and here he became acquainted with the domestic life and familiar conversation of the Greeks. He went thence to Rome, and improved himself farther in the Latin and Greek tongues under John Sulpitius and Pomponius Sabinus. On his arrival in England, in 1509, he settled in London, and taught in a private grammar-school, being the first teacher of Greek in the metropolis. In this he had so much success that he was appointed first master of St. Paul's school by the founder, Dr. Colet, in 1510. This laborious and useful employment he filled for the space of twelve years; among his pupils were Thomas Lupset, Sir Anthony Denny, Sir William Paget, Sir Edward North, John Leland, &c. He died of the plague at London in February 1523, and was buried in the north yard of St. Paul's. He was the author of several valuable works.

LINACRE, THOMAS, a learned physician, who was born at Canterbury in 1484, and educated at All Souls' college, Oxford. He then went to Italy, and remained some time at the court of Rome. On his return he was appointed by Henry VII. physician to the young prince Arthur. He was afterwards appointed physician to the king, and, after his death, to his successor Henry VIII. Dr. Linacre founded two medical lectures at Oxford, and one at Cambridge; but that which rendered him most celebrated was his being the founder of the college of physicians in London. He, by an application to Cardinal Wolsey, obtained a patent in 1518, by which the physicians of London were incorporated. Dr. Linacre was the first president, and held the office till his death. Their meetings were in his own house in Knight-rider Street, which house he bequeathed to the college. It is, however, rather a singular fact that Dr. Linacre, at the age of fifty, commenced the study of divinity, entered into orders, and was collated in 1509 to the rectory of Mersham. In the same year he was installed prebendary of Wells, in 1518 prebendary of York, and in the following year was admitted precentor of that cathedral. He died in October 1524, and was buried in St. Paul's. Thirty-three years after his death Dr. John Caius had a monument erected to his memory, with a Latin inscription, which contains the outlines of his life and

character. Erasmus, in his epistles, speaks highly of his translations from Galen, preferring them even to the original Greek. His principal works are, "The Rudiments of Grammar, for the Use of the Princess Mary;" "Buchanan Translated into Latin;" and a translation of several of Galen's works.

LINDSAY, JAMES, an eminent dissenting minister, long known in London for his pastoral labours in Monkwell Street, London. Dr. Lindsay was a native of Scotland, and was educated at Aberdeen. He succeeded Dr. James Fordyce, about the year 1782, as pastor of the congregation at Monkwell Street; in which chapel he preached a sermon on the occasion of Dr. Fordyce's death in 1796, which was printed. He also published "A Sermon on the Influence of Religious Knowledge, as tending to produce a gradual Improvement in the Social State," preached at Monkwell Street, and "A Sermon at Salters' Hall Meeting-house on the Death of the Rev. Hugh Worthington." A most impressive funeral sermon was preached on the occasion of Dr. Lindsay's death, by Dr. Rees, at Monkwell Street chapel.

LINDSAY, SIR DAVID, a celebrated Scotch poet, who was born in the reign of King James IV., at his father's seat, called the Mount, near Cupar in Fife-shire. He was educated at the university of St. Andrew's, and, after making the tour of Europe, returned to Scotland in the year 1514. Soon after his arrival he was appointed gentleman of the bed-chamber to the king, and tutor to the young prince, afterwards James V. From the verses prefixed to his "Dream" we learn that he enjoyed several other honourable employments at court, but in 1533 he was deprived of all his places except that of lion king at arms, which he held to the time of his death. His disgrace was owing to his invectives against the clergy, which are frequent in all his writings. After the decease of King James V. Sir David became a favourite of the earl of Arran, regent of Scotland; but the abbot of Paisley did not suffer him to continue long in favour with the earl. He then retired to his paternal estate, and spent the remainder of his days in rural tranquillity. He died in the year 1553. His poetical talents, considering the age in which he wrote, were not contemptible; but he treats the catholic clergy with great severity, and writes with some humour; but, whatever merit might be formerly attributed to him, he takes such liberties with words, in order to make them rhyme together, that his countrymen have a proverb, when they hear an unusual expression, that "There is nae sic a word in a' Davie Lindsay." Mackenzie states that his comedies were so facetious, "that they afforded abundance of mirth." He is said to have also written several tragedies, and to have first introduced dramatic poetry into Scotland.

LINDSEY, THEOPHILUS, a learned unitarian divine, who was born at Middlewich, in Cheshire, in 1723. Having completed his education, he entered holy orders, and obtained several livings; but as his opinions respecting the Trinity altered as he advanced in life, he resigned his livings and came to London, where, in conjunction with Dr. Disney, he built a chapel in Essex Street. In that edifice he preached for some years. He afterwards resigned the pulpit, but continued writing till a very advanced period of life. His principal works are his "Apology," his "Considerations on the Divine Government," and "On Praying to Christ." In addition to

which he was the author of several other valuable theological works. Mr. Lindsey died in 1802.

LINGUET, SIMON NICHOLAS HENRY, was born in 1736 at Rheims, where his father, who had been professor at the college of Beauvais, was living in a kind of exile, having been banished by a *lettre de cachet*, on account of his participation in the Jansenistic controversy. This circumstance was the origin of Linguet's saying "that he was born under the auspices of a *lettre de cachet*." Having studied law at Paris, in the same college in which his father had been professor, and having obtained the three first prizes of the university in 1751, he attracted the notice of the duke of Deux-Ponts, who was at that time in Paris, whom he accompanied on a journey to Poland. Linguet soon returned to his own country, and, on the breaking out of the war between France and Portugal, went to Spain as secretary to the prince of Beauvais. He there made himself acquainted with the Spanish language and literature, and, during his stay at Madrid, he published translations of some of the works of Calderon and Lope de Vega. His first historical attempt, "*Histoire du Siècle d'Alexandre*," which was dedicated to the King Stanislaus Leszczinski, was published immediately after his return to Paris. His brilliant oratorical powers, and his thorough acquaintance with the law, gave him a great reputation at the bar; but, at the same time, his severe remarks and bold ideas created him many enemies. His controversy with D'Alembert, who at that time had almost the entire control of the academy, prevented him from becoming a member of that body. His fame as an author and lawyer, however, increased, and several cases, conducted with great ability, such as that of the duke d'Aiguillon against the government and the criminal cause of the count de Morangiés, on which he wrote an excellent treatise, raised him to high consideration, but at the same time excited the jealousy of his colleagues, whom he incensed to such a degree, by some of his diatribes, that they formed a sort of conspiracy against him, binding themselves not to plead with him. Even the parliament became engaged in these disputes, and Linguet, whose replies and remarks increased in bitterness, was struck from the list of parliamentary advocates. As a political writer he succeeded no better. His "*Journal Politique*" commenced in 1777, offended the prime minister Maurepas, and was suppressed. Linguet, thinking his personal freedom endangered, went to Switzerland, Holland, and England. He afterwards resided at Brussels, until M. de Vergennes procured him permission to return to France; but, his adversaries finding some new cause of complaint, he was thrown into the Bastille by means of a *lettre de cachet*, where he remained above two years, and was then banished to Rethel for a short time in 1782. He came again to London, and here published a work against arbitrary power, to which he had fallen a sacrifice, but which he had himself defended in an earlier work, "*Théorie des Lois*." He afterwards continued his "*Annales Politiques*" at Brussels, and flattered, with so much address, the emperor Joseph II., who had been pleased with his memoir on the navigation of the Scheldt, that the emperor gave him 1000 ducats, with letters of nobility. But having taken the part of Van der Noot and of the Brabant insurgents, he was ordered by Joseph to leave the Netherlands. In 1791 he again appeared in Paris, and pleaded for the negroes of St. Domingo

at the bar of the convention. At a later period he became an object of suspicion to the terrorists, and, his attempt to escape having failed, he was arrested in June 1794, and condemned to death by the revolutionary tribunal, for having, according to the sentence, flattered the despots of Vienna and London.

LINK, DR. HENRY FREDERIC, professor and director of the botanical garden at Berlin, who was born at Hildesheim in 1769, and educated there. In 1786 he went to Göttingen to study medicine, and in 1788 obtained the prize proposed for the medical students. In 1799 he became ordinary professor of natural history, chemistry and botany, at Rostock. Shortly after which he left Rostock, and became professor in the university at Breslau, and finally went to Berlin as professor of medicine and director of the botanical garden. Among the writings of this naturalist are his "*Observations upon a Journey through France, Spain, and especially Portugal*;" and his work, "*The Primitive World and Antiquity Illustrated by Natural Science*," which contains the result of many years' deep study. All the writings of this ingenious man are equally distinguished by correctness of language and clearness of description.

LINLEY, THOMAS, a distinguished vocal composer, who received the rudiments of his musical education from Thomas Chillcott, organist to the abbey church at Bath; and it was completed afterwards by the celebrated Venetian, Paradisi, a composer whose twelve admirable sonatas would have alone immortalized him had he written nothing else. Linley was for many years the conductor of the oratorios and concerts then regularly performed at Bath, and might with great truth be considered as having restored the music of Handel, and the performance of it, to the notice and patronage of the public, as Garrick restored the plays of Shakespeare. Through his taste and ability as a manager, assisted greatly by the exquisite singing of his two eldest daughters, afterwards Mrs. Sheridan and Mrs. Tickell, music was cultivated generally at Bath and its vicinity, and concerts and oratorios were successfully performed, not only there, but in the metropolis, beyond all former precedent since the death of the illustrious Handel himself. As a singing-master and a composer, Linley possessed a taste and style peculiarly his own, but still modelled on the principles of that pure English school, which, however overshadowed at present by the foreign structure that has been opposed to it, can never be totally eclipsed while there are any feelings of nature and good sense remaining among us.

Linley left Bath to reside with his family in London in consequence of becoming joint patentee with his son-in-law, Mr. Sheridan, of Drury Lane theatre. Here he conducted for many years the musical department, and gratified the public from time to time with many beautiful operas. "*The Duenna*" had been previously brought out at Covent Garden theatre, and was the joint production of Linley and his eldest son. The operas and musical entertainments which Linley set for Drury Lane were "*The Carnival of Venice*," "*Selima and the Royal Merchant*," "*The Camp*," "*The Spanish Maid*," "*The Stranger at Home*," "*Love in the East*," and many minor pieces. They all, particularly "*The Duenna*," "*The Carnival of Venice*," and "*Selima and Azor*," possess proofs of a rich and cultivated fancy, a sound judgment, and scientific construction. Among those

which may be considered as the minor pieces, the music in the first act of the pantomime of "Robinson Crusoe" must not be passed over in silence; it is strikingly original and characteristic. Linley's six elegies were composed at Bath, in the meridian of his life, and it would be difficult to place any compositions of the same description in competition with them, for originality of conception, elegance, and tenderness.

Mr. Sheridan's monody on the death of Garrick was originally recited by Mrs. Yates, the actress at Drury Lane theatre, in the month of March 1679, parts of it having been previously set to music by Linley, and introduced in songs, duets, and choruses, at occasional pauses of the recitation. The style of these, though necessarily funereal, is at the same time tenderly melodious and pathetic in the highest degree. It is greatly to be regretted that this beautiful composition was never published. The posthumous works of Linley and T. Linley were presented to the public not many years after the father's death. The two volumes contain a rich variety of madrigals, elegies, and cantatas, which are unknown, and consequently neglected, only because English music is no longer fashionable, nor compositions indeed of any kind sought after but Italian, or such as are close imitations of the Italian and German schools. Linley died at his residence in Southampton Street, Covent Garden, in 1795, and was buried in Wells cathedral, in the same vault with his beloved daughters, Mrs. Sheridan and Mrs. Tickell. A monument was soon after erected to their memory, near the spot, by William Linley, Mr. Linley's youngest son.

LINLEY, THOMAS, was an accomplished musician, both practical and theoretical. If he was inferior to his father, Thomas Linley, in the purity and pathos of his melodies, he was perhaps superior to him in his knowledge of orchestral effect, and instrumental compositions generally. He was born at Bath in the year 1756, and displayed, at a very early age, extraordinary powers on the violin. When he was eight years old only he performed a concerto on that instrument in public, and at seventeen composed an anthem in full score to the words, "Let God arise," which was sung in Worcester cathedral, at the meeting of the three choirs, on the 8th of September, 1773.

His father soon discovered the extraordinary genius of his son; and with the view, in consequence, of instructing him for the profession, sent him to London to complete his theoretical knowledge under the able tuition of Dr. Boyce. He was in due time sent to Florence, principally to make himself master of his favourite instrument, under the celebrated Nardini. This distinguished instructor, who had been himself a scholar of Tartini's, proud of his pupil, and desirous of his receiving every aid by his associating with the rising genius of the age, introduced him to the great Mozart, then a youth himself, and a warm friendship immediately commenced between them.

On Linley's return from the continent he repaired to Bath to lead his father's concerts and oratorios. In the masterly style of his performance of the concertos of Handel and Geminiani, no English violin player had ever excelled him, and in the neatness and delicacy of his execution he stood unrivalled. His own solos and concertos, which he occasionally introduced, also gave evident tokens of his continental studies, being full of imagination and spirit,

but requiring in almost every bar the touch of the finished master to do justice to their merit. The comic opera of "The Duenna" was brought out at Covent Garden theatre in the year 1776, the music to which was composed and selected by Linley sen. chiefly, but his son contributed also. On the revival of "The Tempest" at Drury Lane theatre he introduced the chorus of spirits that raise the storm, one of the most effective, as well as scientific, compositions in this or any other country; but his best production was "An Ode on the Witches and Fairies of Shakspeare," written by the late Dr. Laurence. It was performed at Drury Lane theatre in 1776, when he led the band himself, and his two sisters, Mary (afterwards Mrs. Tickell) and Maria, sustained the principal soprano parts. This young gentleman was accidentally drowned on the 7th of August, 1778.

LINNÆUS, SIR CHARLES, a celebrated botanist and natural historian, who was born in May 1707, in a village called Roeskull in Smaland, where his father, Nicolas Linnæus, was then vicar. It is said that on the farm where Linnæus was born there yet stands a large lime-tree, from which his ancestors took the surnames of Tillander, Lindelius, and Linnæus; and that this origin of surnames, taken from natural objects, is not uncommon in Sweden. Linnæus, very early in life, obtained some of the highest honours that await the most successful proficient in medical science, for he was made professor of physic and botany in the university of Upsal at the age of thirty-four, and six years afterwards, physician to his sovereign the king Adolphus, who, in the year 1753, created him knight of the order of the Polar Star. His honours did not terminate here, for in 1757 he was ennobled, and in 1776 the king of Sweden accepted the resignation of his office, and rewarded his declining years by doubling his pension, with an addition of landed property settled on him and his family.

The first part of his academical education Linnæus received under Professor Stobæus, at Lund, who favoured his inclinations to the study of natural history. After a residence of about a year he removed in 1728 to Upsal. Here he soon formed a friendship with Artedi, a native of the province of Angermania, who had already been four years a student in

that university, and, like himself, had a strong bent to the study of natural history in general, but particularly to ichthyology. In the year 1731, the royal academy of sciences at Upsal having for some time formed the design of improving the natural history of Sweden, deputed Linnæus to make the tour of Lapland, with the view of exploring the natural history of that arctic region; to which undertaking his reputation, already high as a naturalist, and the strength of his constitution, equally recommended him. He left Upsal the 13th of May, and took his route to Gevalia or Gevels, the principal town of Gesticia. Hence he travelled through Helsingland into Medalpadia, where he ascended a remarkable mountain before he reached Hodwickswald, the chief town of Helsingland. He then proceeded to Lapland, and, after encountering great hardships, returned into West Bothnia. He next visited Pitha and Lula, upon the Gulf of Bothnia; from which latter place he took again a western route, by proceeding up the river of that name, and visited the ruins of the temple of Jockmuck in Lula Lapland or Lap Mark; thence he traversed what is called the Lapland Desert. In this district he ascended a celebrated mountain called Wallevári, in speaking of which he has given an account of his finding a singular and beautiful new plant, *Andromeda tetragona*, when travelling within the arctic circle, with the sun in his view at midnight, in search of a Lapland hut. From hence he crossed the Lapland Alps into Finmark, and traversed the shores of the North Sea as far as Sallero. These journeys from Lula and Pitha on the Bothnian Gulf, to the north shore, were made on foot; and he was only attended by two Laplanders, one his interpreter and the other his guide. He states that the vigour and strength of those two men, both old, and sufficiently loaded with his baggage, excited his admiration; since they appeared quite unhurt by their labour, while he himself, although young and robust, was frequently quite exhausted. In this journey he was wont to sleep under the boat with which they crossed the rivers, as a defence against rain, and the gnats, which in the Lapland summer are not less annoying than in the torrid zones.

Linnæus spent the greater part of the summer in examining this arctic region, and returned to Tornöa in September. He did not take the same route from Tornöa as when he entered Lapland, having determined to visit and examine the country on the eastern side of the Bothnian Gulf: his first stage therefore was to Ula in East Bothnia, from thence to Old and New Carleby. He continued his route through Wasa, Christianstadt, and Biorneburgh, to Abo, a small university in Finland. Winter was now setting in, he therefore crossed the gulf by the island of Åland, and arrived at Upsal in November. In 1733 he visited and examined the several mines in Sweden, and made himself well acquainted with mineralogy, on which subject he gave lectures on his return to the university. The outlines of his system of mineralogy appeared in the early editions of the "*Systema Naturæ*," but he did not exemplify the whole until the year 1768. In the year 1734 Linnæus was sent by Baron Reuterholm, governor of Dalecarlia, with several other naturalists in that province, to investigate the natural productions of that part of the Swedish dominions; and it was in this journey that he first laid the plan of an institution, which was afterwards executed, in a certain degree at least, by himself,

with the assistance of his pupils, and the result published under the title of "*Pan Suecus*," in the second volume of the "*Amœnitates Academicæ*." After the completion of this expedition, Linnæus resided for a time at Fahlun, the principal town in Dalecarlia, where he taught mineralogy, and finally married a lady who resided there. In this journey he extended his travels across the Dalecarlian Alps into Norway, but we have no particular account of his discoveries in that kingdom. In 1735 Linnæus travelled over many other parts of Sweden, some parts of Denmark and Germany, and settled in Holland, where he chiefly resided until his return to Stockholm, about the year 1739. In 1735 he took the degree of M.D., and then published the first sketch of his "*Systema Naturæ*."

In 1736 Linnæus came into England, and visited Dr. Dillenius, a learned professor at Oxford, whom he justly considered as one of the first botanists in Europe. He was introduced to Sir Hans Sloane, by a Latin letter from Boerhave, which is in the British Museum, and has the following complimentary passage:—"Linnæus, who will deliver to you this letter, ought especially to see you, and to be seen by you. They who see you both together, will behold two men whom the world can scarcely equal." "This encomium," says Dr. Pulteney, "however quaintly expressed, yet was in some measure prophetic of Linnæus's future fame and greatness, and proves how intimately Boerhave had penetrated into his genius and ability." This letter procured for Linnæus but a cool reception, which Dr. Pulteney attributes to "the opening of the sexual system, so different from Ray's, by which Sir Hans Sloane had always known plants; and particularly the innovations, as they were then called, which Linnæus had made in altering the names of so many genera." Thus was he prevented from obtaining, what he is supposed to have desired, an establishment in England; "a situation," as Dr. Pulteney remarks, "more favourable to his design than those arctic regions where he spent the remainder of his days."

It is remarkable that Dr. Burton, in his "*Life of Boerhave*," has not mentioned his patronage of Linnæus, though so honourable to both. The only place where he mentions the Swedish naturalist is where he says of Boerhave, "Linnæus confessed him to have formed his genera plantarum in the most accurate manner, being the first and only botanist who took to his assistance all the parts of plants concurring to fructification, and gave so clear a verbal description of them as to render the engraver's art needless."

One of the most agreeable circumstances that occurred to Linnæus during his residence in Holland arose from the patronage of Mr. Clifford, in whose house he lived a considerable part of his time. Among his friends and patrons of that period we may mention Dr. Burman, professor of botany at Amsterdam, to whom he dedicated his "*Bibliotheca Botanica*;" Gronovius of Leyden, the editor of Clayton's "*Flora Virginica*," and who very early adopted Linnæus's system; Baron Van Swieten, physician to the empress queen; Isaac Lawson, one of the physicians to the British army. To these may be added also the names of Albinus and Gaubius.

Early in the year 1738 Linnæus went to Paris, where he was entertained by the Jussieus, at that time the first botanists in France.

On his return he published his "*Systema Naturæ*," "*Fundamenta Botanica*," "*Bibliotheca Botanica*," and "*Genera Plantarum*;" the last of which is justly considered as the most valuable of all his works. The amount of application which had been bestowed upon it, the reader may easily conceive, on being informed that before the publication of the first edition the author had examined the characters of 8000 flowers. The next book Linnæus published during his stay in Holland, was the "*Classes Plantarum*," which is a copious illustration of the second part of the "*Fundamenta*."

About the latter end of the year 1738, or the beginning of the next, he settled as a physician at Stockholm, where he seems to have met with considerable opposition, and many difficulties; but these he at length overcame, and got into extensive practice. By the interest of Count Tessin, who was afterwards his patron, he obtained the rank of physician to the fleet, and a stipend from the citizens for giving lectures on botany. And what at that time was highly favourable to the advancement of his character and fame, was the establishment of the royal academy of sciences at Stockholm; of which Linnæus was constituted the first president, and to which establishment the king granted several privileges.

Linnæus was constituted joint professor of physic and physician to the king with Rosen, who had been appointed in the preceding year on the death of Rudbeck. The two professors agreed to divide the medical departments between them, and their choice was confirmed by the university. Rosen took anatomy, physiology, pathology, and the therapeutic part; Linnæus, natural history, botany, materia medica, the dietetic part, and the diagnosis morborum. During the interval of his removal from Stockholm to Upsal, in consequence of this appointment, Linnæus was deputed by the states of the kingdom to make a tour to the islands of Oeland and Gothland in the Baltic, attended by six of the pupils, commissioned to make such enquiries as might tend to improve agriculture and arts in the kingdom, to which the Swedish nation had for some time directed their attention. The result of this journey was very successful. On his return he entered upon the professorship, and pronounced before the university his oration in October 1741; in which he forcibly displays the usefulness of such excursions, by pointing out to the students that vast field of objects which their country held out to their cultivation, whether in geography, physics, mineralogy, botany, zoology, or economics, and by showing the benefit that must accrue to themselves and their country as rewards to their diligence.

Linnæus was now fixed in a situation which was best adapted to his character, his taste, and abilities, and which seems to have been the object of his ambition. Soon after his establishment he obtained the academical garden which had been founded in 1657. At the time Linnæus was appointed professor of botany, the garden did not contain above fifty plants that were exotic. His correspondence with the first botanists in Europe soon supplied him with a great variety. He received Indian plants from Jussieu of Paris, and from Van Royan of Leyden; European plants from Haller and Ludwig; American plants from the late Mr. Collinson, Mr. Catesby, and others; and a variety of annuals from Dillenius; in short, how much the garden owed to his diligence

and care in a few years may be seen by the catalogue which he subsequently published, in which it appears that the professor introduced 1100 species, exclusively of all the Swedish plants and of varieties, which latter in ordinary gardens amount not unfrequently to one-third of the whole number. The preface contains a curious history of the climate at Upsal, and the progress of the seasons through the whole year.

The celebrity which Linnæus had acquired by his "*Systema Naturæ*," of which a sixth edition, much enlarged, had been published at Stockholm in 1748, had brought a conflux of every thing rare and valuable in every branch of nature from all parts of the globe into Sweden. The king and queen of Sweden had their separate collections of rarities; the former at Ulricksdahl, the latter very rich in exotic insects and shells, at the palace of Drottingholm, both of which Linnæus was employed in arranging and describing.

In the year 1755 the royal academy of sciences at Stockholm honoured Linnæus with one of the first premiums, agreeably to the will of Count Sparree; who had decreed two gold medals to be annually given by the academy to the authors of such papers in the preceding year's "*Stockholm Acts*" as should be adjudged most useful in promoting agriculture particularly, and all branches of rural economy. It appears that Linnæus during a long life enjoyed a good constitution; but about the close of 1776 he was seized with an apoplexy, which left him paralytic; and at the beginning of the year 1777 he suffered another stroke, which very much impaired his mental powers, and after a tedious indisposition he died in January 1778, in the seventy-first year of his age. On his death a general mourning took place at Upsal, and his funeral procession was attended by the whole university, as well professors as students, and the pall supported by sixteen doctors of physic, all of whom had been his pupils. The king of Sweden, after the death of Linnæus, ordered a medal to be struck, of which one side exhibits Linnæus's bust and name, and the other Cybele in a dejected attitude, holding in her left hand a key, and surrounded with animals and growing plants. The same monarch not only honoured the royal academy of sciences with his presence, when Linnæus's commemoration was held at Stockholm, but, as a still higher tribute, in his speech from the throne to the assembly of the states he lamented Sweden's loss by his death. Nor was Linnæus honoured only in his own country; the professor of botany at Edinburgh, Dr. Hope, not only pronounced an eulogium in honour of him before his students at the opening of his lectures in the spring of 1778, but also laid the foundation-stone of a monument, which he afterwards erected to his memory in the botanic garden; which, while it perpetuates the name and merits of Linnæus, does honour to the founder.

The ardour of Linnæus's inclinations for the study of nature appeared from his earliest years, and that application which he bestowed upon it gave him a comprehensive view both of its pleasures and usefulness, at the same time that it opened to him a wide field hitherto but little cultivated, especially in his own country. Hence he was early led to regret that the study of natural history, as a public institution, had not made its way into the universities; in many of which logical disputations and metaphysical the-

ories had too long prevailed, to the exclusion of more useful science. "Availing himself therefore of the advantages which he derived from a large share of eloquence and an animated style, he never failed to display, in a lively and convincing manner, the relation this study has to the public good, to incite the great to countenance and protect it, to encourage and allure youth into its pursuits by opening its sources of pleasure to their view, and showing them how much its agreeable employment would add, in a variety of instances, both to their comfort and emolument;—not to add that the mutual communication and enlargement of this kind of knowledge among people of equal rank in a country situation must prove one of the strongest bonds of union and friendship, and contribute in a much higher degree than the usual perishing amusements of the age to the pleasures and advantages of society."

Linnaeus lived to enjoy the fruit of his own labour, as natural history raised itself in Sweden under his culture to a state of perfection unknown in other countries, and was from thence disseminated through all Europe. His pupils dispersed themselves all over the globe, and with their master's fame extended both botanical science and their own. More than this, he lived to see the sovereigns of Europe establish public institutions in favour of this study, and professorships established in universities for the same purpose; which do honour to their founders and patrons, and which have excited a love for the science, and a sense of its worth, that cannot fail to further its progress, and in time raise it to that rank which it is entitled to hold among the pursuits of mankind.

LINN, JOHN BLAIR, an American poet, was born in March 1777, at Phippenburgh, Pennsylvania. His poetical talents displayed themselves while he was yet a youth at Columbia college, New York, and, before he had reached his seventeenth year, a volume of his effusions, both in prose and verse, was published. After finishing his collegiate course, he commenced the study of law with General Hamilton, but continued in his office only about a year, during which time he brought a tragedy called "Bourville Castle" upon the stage with success. Having removed to Schenectady, and received strong religious impressions, to which he had always been inclined, he entered upon the study of theology, and in 1798 he was licensed to preach, and soon became distinguished for pulpit eloquence. He was installed pastor of the first presbyterian church in Philadelphia in June 1799. The duties of this situation he discharged for the two subsequent years in a manner consistent with the fervour of his piety and the excellence of his mind. He continued however, to cultivate his poetical talents. His "Powers of Genius," a dramatic poem of considerable length, experienced the most flattering success, and in a few months reached a second edition. In the same volume with it were printed various minor pieces. A controversy in which he became engaged with Dr. Priestley was engendered by a publication of the latter on the merits of Socrates, which were placed parallel with those of Jesus Christ. The religious feelings of Mr. Linn prompted him to answer the doctor's pamphlet, which he did in a manner worthy of his cause. The last work on which Mr. Linn employed his leisure hours was a narrative poem, published by his friends under the title of "Valerian" after his death, which took place in August 1804.

LINUS, a celebrated musician of antiquity. The traditions respecting Linus are so contradictory that some have supposed there must have been three distinct persons of that name; one of them the son of Urania and Amphimarus, the son of Neptune; another the son of Apollo and Psamathe daughter of Crotopus king of Argos; and a third the son of Ismenius a Theban. According to Diogenes, Linus the poet was the son of Mercury and Urania. All these accounts are evidently fabulous. The age of Linus is fixed by Archbishop Usher 1280 years before the Christian era. Eusebius speaks of him as having flourished before Moses. Herodotus represents him as being celebrated among the Egyptians from still more remote periods. He is mentioned by Homer in the eighteenth book of the *Iliad*, or at least is understood to be commemorated by a bard introduced among the pictures on the shield of Achilles, and is said to have added the string *lichanos* to the Mercurian lyre. Diodorus Siculus represents him as being the inventor of music and of poetry, or at least as having first introduced these arts into Greece. He is said also to have written treatises on religious rites, and to have composed a work in honour of Bacchus. The most common report of his death is that he taught Hercules to play upon the lyre, and was so enraged at the dulness or inattention of his pupil that he struck him, which so incensed the youthful hero that he seized the lyre and beat out the brains of his master. According to Diogenes Laertius, however, he was killed by Apollo for presuming to boast of equal merit with that deity. It is not for us to decide these nice and unimportant controversies.

Festivals called *Linia* were observed in many parts of Greece in honour of this early musician and bard. Plutarch speaks of dirges as having been performed to his memory, but no authentic account of them remains. It is indeed, as we have seen, a matter of considerable doubt whether the name Linus designates one individual or several; and in the latter case, which seems most probable, it is impossible to distinguish between the incidents to be ascribed to each person to whom the appellation belongs.

LIPPI, LORENZO, a portrait painter, who was born in 1606, and learned the principles of painting from Matteo Roselli. He had also a taste for music and poetry, as well as for painting; and in the latter his proficiency was so great that many of his works were frequently mistaken for those of Roselli. However, growing dissatisfied with the style of that master, he selected that of Santi di Titi, who appeared to have more of simple nature and truth in his compositions than any other artist of the period. At Florence Lippi painted several designs for the chapels and convents, and at the court of Innspruck he painted a great number of portraits which were deservedly admired for the graceful air of the heads, and correctness of outline. He died in 1664.

LIPSIUS, JUSTUS, a learned critic, who was born at Isch, a small village near Brussels, in 1547. After having distinguished himself for his acquirements in literature he became secretary to Cardinal de Granvellan at Rome, where the best libraries were open to him, and he spent much time in collating the MSS. of ancient authors. He lived several years at Leyden, during which period he composed and published what he considered his best works. He was remarkable for unsteadiness in religion, fluctuat-

ing often between the protestants and catholics, but he became finally a bigotted catholic. He died at Louvain in 1606.

LIS, JOHN VANDER, a celebrated painter of landscapes, who was born at Oldenburgh in 1570, but went to Haerlem to become a pupil of Henry Goltzius; and as he possessed great natural talents, he soon distinguished himself in that school, and imitated the style of his master with great success. He adhered to the same style till he went to Italy, where, having visited Venice and Rome, he studied the works of Titian, Tintoretto, Paolo Veronese, and Domenico Fetti. His works soon became admired for their expression, colouring, and the delicacy of his pencil; although it must be acknowledged that he never totally divested himself of the peculiarities to the Flemings. His subjects usually were taken from the sacred writings, or the representations of rural sports, marriages, balls, and villagers dancing, dressed in Venetian habits, all which subjects he painted with great success. His painting of Adam and Eve lamenting the death of Abel, is much admired, not only for the expression, but also for the beauty of the landscape. In the church of St. Nicholas at Venice is another of his paintings, representing St. Jerome in the desert, with a pen in his hand, and his head turned to look at an angel, who is supposed to be sounding the last trumpet. He died in 1629.

LIS, JOHN VANDER, an historical painter, who was born at Breda about the year 1601, and became a disciple of Cornelius Polemburg, whose style he imitated with extraordinary success in the colouring, pencilling, and the choice of his subjects. At Rotterdam there is a painting representing Diana in the bath attended by her nymphs, which is considered his best performance.

LISLE, CLAUDIUS DE, a learned French historiographer, who was born at Vaucouleurs in 1644. He studied in a Jesuits' college at Pontamousson, took his degree in law, and afterwards applied himself entirely to the study of history and geography. To increase his knowledge on those subjects he went to Paris, where the principal lords of the court became his scholars, and among the rest the duke of Orleans, afterwards regent of the kingdom. He wrote, "An Historical Account of the Kingdom of Siam," "A Genealogical and Historical Atlas," "An Abridgement of Universal History," and died at Paris in 1720.

LISLE, SIR JOHN, a brave loyalist in the time of the civil wars, who was the son of a bookseller in London, and received his education in the Netherlands. He signalized himself upon many occasions in the civil war, particularly in the last battle of Newbury; in the dusk of the evening he led his men to the charge in a white dress, that his person might be more conspicuous. The king, who was an eye-witness of his bravery, knighted him on the field of battle. In 1648 he rose for his majesty in Essex, and was one of the royalists who so obstinately defended Colchester, and died defending it. This brave man, having embraced the corps of Sir Charles Lucas, his departed friend, immediately presented himself to the soldiers who stood ready for his execution. Thinking that they stood at too great a distance, he desired them to come nearer; one of them said, "I warrant you, sir, we shall hit you." He replied with a smile, "Friends, I have been

nearer you when you have missed me." He was executed on the 28th of August, 1648.

LISLE, JOHN BAPTIST ISOIRD DE, a voluminous French writer, who was born at Lyons in 1743. He was but little noticed till the publication of his work entitled "*La Philosophie de la Nature*," which, although it procured both imprisonment and fine from its immoral tendency, yet it obtained for its author what he most desired—literary celebrity. He subsequently published several other works, and died at a very advanced age in 1816.

LISLE, WILLIAM DE, a learned French geographer, who was born at Paris in 1675. He became first geographer to the king, royal censor, and member of the academy of sciences. He died in 1726. He published a great number of excellent maps, and wrote many treatises in the memoirs of the academy of sciences.

LISTER, DR. MARTIN, an eminent English physician and naturalist, who was born in 1638 and educated at Cambridge. He afterwards travelled into France, and at his return practised his profession at York and afterwards in London. In 1683 he was created M.D., and became fellow of the college of physicians in London. In 1698 he attended the earl of Portland in his embassy from King William III. to the court of France; of which journey he published an account at his return, and was afterwards physician to Queen Anne. He also published "*Historia Animalium Angliæ*," "*Conchyliorum Synopsis*," and "*Cochlearum et Limachum Exercitatio Anatomica*." Many of his papers appeared in the "*Philosophical Transactions*" and other works.

LITHGOW, WILLIAM, a Scottish traveller, whose sufferings from imprisonment and torture at Malaga, and whose travels on foot over Europe, Asia, and Africa, would, if true, raise him almost to the rank of a martyr. He published an account of his adventures, in which the author deals much in the marvellous, especially with regard to the cruelties which he suffered. By the king's command he applied to Gondamer, the Spanish ambassador, for the recovery of the money and other things of value which the governor of Malaga had taken from him, and for 1000*l.* for his support. He was promised a full reparation for the damage he had sustained; but the minister never performed his promise. At the conclusion of the octavo edition of his *Travels* he informs us that, in his three voyages, "his painful feet have traced over (besides passages of seas and rivers) 36,000 and odd miles, which draweth near to twice the circumference of the whole earth."

LITTLE, WILLIAM, an ancient English historian, who is also known by the name of Gulielmus Neubrigensis. He was born at Bridlington in Yorkshire, in the year 1136, and educated in the abbey of Newborough in the same county, where he became a monk. In his advanced years he composed a history of England, in five books, from the Norman conquest to A. D. 1197, which for veracity and purity of language is one of the most valuable productions of this period.

LITTLETON, ADAM, a descendant of an ancient family in Shropshire, who was born in 1627, and received the rudiments of his education at Westminster school; he then went to Oxford, whence he was ejected by the parliamentary visitors in 1648. Soon after he became usher of Westminster school, and in 1658 was made second master of Westminster

school. After the restoration he taught in a school at Chelsea, of which church he was admitted rector in the year 1664. In 1670 he took the degree of D. D., being then chaplain in ordinary to his majesty. In 1674 he became prebendary of Westminster, of which church he was afterwards sub-dean. Beside his well-known "Latin and English Dictionary," he published several other works. He died in 1694, and was interred at Chelsea.

**LITTLETON, or LYTTLETON, THOMAS**, a celebrated English judge and law authority, born at the beginning of the fifteenth century, at Frankley. Having been educated at one of the universities, he was removed to the Inner Temple, where he studied the law and became very eminent in his profession. In edies; and we mention him merely as a model of bad 1445 he went the northern circuit as judge of assize, and was continued in the same post by Edward IV., the common pleas. In 1475 he was created a knight of the Bath, and continued to enjoy the esteem of his sovereign and the nation until his death, at an advanced age in 1481. The memory of Judge Littleton is preserved by his work on "Tenures," which has passed through a very great number of editions, those from 1539 to 1639 alone amounting to twenty-four. This work is esteemed the principal authority for the law of real property in England, while the commentary of Sir E. Coke is the repository of his learning on the subjects treated.

**LITTLETON, or LYTTLETON, LORD GEORGE**, an elegant English historian and writer, who was born at Hagley in Worcestershire, in 1709. This pleasing spot is represented beneath

He received the rudiments of his education at Eton, but subsequently removed to the university at Oxford, where he distinguished himself both by his classical and poetical acquirements. In his nineteenth year he commenced his continental tour, and on his arrival at Paris he became acquainted with the hon. Mr. Poyntz, then the British minister at the court of Versailles, who employed him in several political negotiations, which he executed with great skill.

The high estimation in which he was held by that gentleman is best shown from the following letter addressed to his father.

"Sir,—I received your two kind letters, in which you are pleased very much to over-value the small civilities it has lain in my power to show Mr. Little-

ton. I have more reason to thank you, Sir, for giving me so convincing a mark of your regard, as to interrupt the course of his travels on my account, which will lay me under a double obligation to do all I can towards making his stay agreeable and useful to him; though I shall still remain the greater gainer by the pleasure of his company, which no services of mine can sufficiently requite. He is now in the same house with me, and, by that means, more constantly under my eye than even at Soissons; but I should be very unjust to him if I left you under the imagination that his inclinations stand in the least need of any such ungenerous restraint: depend upon it, Sir, from the observation of one who would abhor to deceive a father in so tender a point, that he retains the same virtuous and studious dispositions which nature and your care planted in him, only strengthened and improved by age and experience; so that, I dare promise you, the bad examples of Paris, or any other place, will never have any other effect upon him but to confirm him in the right choice he has made. Under these happy circumstances he can have little occasion for any other advice but that of sustaining the character he has so early got, and of supporting the hopes he has raised. I wish it were in my power to do him any part of the service you suppose me capable of. I shall not be wanting to employ him as occasion offers, and to assist him with my advice where it may be necessary, though your cares (which he never mentions but with the greatest gratitude) have made this task very easy. He cannot fail of making you and himself happy, and of being a great ornament to our country, if, with that refined taste and delicacy of genius, he can but recall his mind, at a proper age, from the pleasures of learning, and gay scenes of imagination, to the dull road and fatigue of business. This I have sometimes taken the liberty to hint to him, though his own good judgment made it very unnecessary. Though I have only the happiness of knowing you, Sir, by your reputation, and by this common object of our friendship and affection, your son, I beg you will be persuaded that I am, with the most particular respect,

"Yours, &c.

"S. POYNTZ."

Mr. Littleton during his residence abroad did not enter into the fashionable follies and vices of France and Italy; his time was passed alternately in his library and in the society of men of rank and literature. In this early part of his life he wrote a poetical epistle to Dr. Ayscough, and another to Mr. Pope, which show singular taste and correctness. After continuing a considerable time at Paris, he proceeded to Lyons and Geneva, and from thence to Turin, where he was honoured with great marks of friendship by his Sardinian majesty. He then visited Milan, Venice, Genoa, and Rome, where he applied himself closely to the study of the fine arts, and was, even in that celebrated metropolis, considered a perfect judge of painting, sculpture, and architecture. He soon after returned to his native country, and was elected representative for the borough of Okehampton, in Devonshire; and about the same period he received great marks of friendship from Frederic prince of Wales; and was, in the year 1737, appointed principal secretary to his royal highness, and continued in the strictest intimacy with him till the time of his death. His attention to the public

business did not, however, prevent him from exercising his poetical talent. One evening, while in company with Lord Cobham and several of the nobility at Stowe, his lordship mentioned his intention of putting up a bust of Lady Suffolk in his beautiful gardens, and requested Mr. Littleton to furnish a motto for it. Mr. Littleton directly composed the following couplet:—

"Her wit and beauty for a court were made,  
But truth and goodness fit her for a shade."

When Mr. Pitt, the great earl of Chatham, lost his commission in the guards, Mr. Littleton was in waiting at Leicester House; and, on hearing the circumstance, immediately wrote the following lines:—

"Long had thy virtue mark'd thee out for fame,  
Far, far, superior to a cornet's name;  
This generous Walpole saw, and griev'd to find  
So mean a post disgrace that noble mind;  
The servile standard from thy free-born hand  
He took, and bade thee lead the patriot band."

In the year 1742 he married Lucy, the daughter of Hugh Fortescue, of Filleigh, in the county of Devon, Esq., whose exemplary conduct, and uniform practice of religion and virtue, was a great source of happiness to him. In 1744 he was appointed one of the lords commissioners of the treasury, and during his continuance in that station constantly exerted his influence in rewarding merit and ability. He was the friend and patron of Fielding, Thomson, author of "The Seasons;" Mallet, Dr. Young, Hammond, West, Pope, and Voltaire. On the death of Thomson, who left his affairs in a very embarrassed condition, Littleton took the poet's sister under his protection, and revised the tragedy of "Coriolanus," which that writer had not put the last hand to, and brought it out at the theatre royal in Covent Garden, with a prologue of his own writing. In the beginning of the year 1746 he lost his wife, who died in the twenty-ninth year of her age, leaving him one son and a daughter. The remains of his lady were deposited at Over Arley in Worcestershire; and a monument was erected to her memory in the church at Hagley, which bears the following inscription, written by her husband:—

"Made to engage all hearts, and charm all eyes;  
Though meek, magnanimous; tho' witty, wise:  
Polite, as all her life in courts had been;  
Yet good, as she the world had never seen;  
The noble fire of an exalted mind  
With gentlest female tenderness combin'd,  
Her speech was the melodious voice of love,  
Her song the warbling of the vernal grove;  
Her eloquence was sweeter than her song,  
Soft as her heart, and as her reason strong,  
Her form each beauty of her mind express'd;  
Her mind was virtue by the graces dress'd."

Besides these beautiful lines, Mr. Littleton wrote a monody on the death of his lady, which will be remembered whilst conjugal affection and a taste for poetry exists in this country.

His masterly observations on the conversion and apostleship of St. Paul were written at the desire of Gilbert West, in consequence of Mr. Littleton asserting that, beside all the proofs of the Christian religion, which might be drawn from the prophecies of the Old Testament, from the necessary connexion it has with the whole system of the Jewish religion, from the miracles of Christ, and from the evidence given of his resurrection by all the other apostles, he thought the conversion of St. Paul alone, duly

BIOGRAPHY.—VOL. II.

considered, was of itself a demonstration sufficient to prove Christianity to be a divine revelation. Mr. West was struck with the thought, and assured his friend, that so compendious a proof would be of great use to convince those unbelievers that will not attend to a longer series of arguments: and time has shown he was not out in his conjecture, as the tract is esteemed one of the best defences of Christianity which has hitherto been published.

In 1754 he resigned his office of lord of the treasury, and was made cofferer to his majesty's household, and sworn of the privy council: previous to which he married, a second time, Elizabeth, daughter of Field-marshal Sir Robert Rich, whose indiscreet conduct gave him great uneasiness, and from whom he was separated by mutual consent a few years after his marriage. After filling the offices of chancellor and under-treasurer of the court of exchequer, he was by letters patent, dated the 19th of November, 1757, in the thirty-first of George II., created a peer of Great Britain, by the style and title of Lord Littleton, baron of Frankley, in the county of Worcester.

Lord Littleton's speeches in both houses of parliament exhibit strong proofs of a genius superior to the generality of mankind, of sound judgment, of incorruptible integrity, of great goodness of heart, and of masterly elocution. But, above all, his oration in the house of commons on the motion for the repeal of the Jew bill, in the session of parliament of 1753, which is well entitled to a place in this work. Lord Littleton commenced his speech with the following words:—

"I see no occasion to enter at present into the merits of the bill we passed the last session for the naturalization of the Jews; because I am convinced, that, in the present temper of the nation, not a single foreign Jew will think it expedient to take any benefit of that act; and therefore the repealing of it is giving up nothing. I assented to it last year in hopes it might induce some wealthy Jews to come and settle among us: in that light I saw enough of utility in it to make me incline rather to approve than dislike it; but that any man alive could be zealous either for or against it, I confess I had no idea. What affects our religion is indeed of the highest and most serious importance. God forbid we should be ever indifferent about that! but, I thought this had no more to do with religion than any turnpike-act we passed in that session; and, after all the divinity that has been preached on the subject, I think so still.

"Resolution and steadiness are excellent qualities; but it is the application of them upon which their value depends. A wise government, Mr. Speaker, will know where to yield as well as where to resist; and there is no surer mark of littleness of mind in an administration than obstinacy in trifles. Public wisdom, on some occasions, must give way to popular folly, especially in a free country where the humour of the people must be considered as attentively as the humour of a king in an absolute monarchy. Under both forms of government, a prudent and honest ministry will indulge a small folly, and will resist a great one. Not to vouchsafe now and then a kind of indulgence to the former, would discover an ignorance of human nature; not to resist the latter at all times, would be meanness and servility.

"Sir, I look on the bill we are at present debating, not as a sacrifice made to popularity for it sacrifices

nothing but as a prudent regard to some consequences arising from the nature of the clamour raised against the late act for naturalizing Jews, which seem to require a particular consideration. It has been hitherto the rare and envied felicity of his majesty's reign, that his subjects have enjoyed such a settled tranquillity, such a freedom from angry religious disputes, as is not to be paralleled in any former times. The true Christian spirit of moderation, of charity, of universal benevolence, has prevailed in the people, has prevailed in the clergy of all ranks and degrees, instead of those narrow principles, those bigotted prejudices, that furious, that implacable, that ignorant zeal, which had often done so much hurt to the church and the state. But from the ill-understood, insignificant, act of parliament you are now moved to repeal, occasion has been taken to deprive us of this inestimable advantage. It is a pretence to disturb the peace of the church, to infuse idle fears into the minds of the people, and to make religion itself an engine of sedition. It behoves the piety as well as the wisdom of parliament to disappoint those endeavours. Sir, the very worst mischief that can be done to religion, is to pervert it to the purposes of faction. Heaven and hell are not more distant than the benevolent spirit of the gospel and the malignant spirit of party. The most impious wars ever made were those called holy wars. He who hates another man for not being a Christian, is himself not a Christian. Christianity, Sir, breathes love, and peace, and good-will to man. A temper conformable to the dictates of that holy religion has lately distinguished this nation; and a glorious distinction it was. But there is latent, at all times, in the minds of the vulgar, a spark of enthusiasm, which, if blown by the breath, a party may, even when it seems quite extinguished, be suddenly revived and raised to a flame. The act of last session for naturalizing Jews has very unexpectedly administered fuel to feed that flame. To what a height it may rise, if it should continue much longer, one cannot easily tell; but take away the fuel, and it will die of itself. It is the misfortune of all the Roman catholic countries, that there the church and the state, the civil power and the hierarchy, have separate interests, and are continually at variance one with the other. It is our happiness that here they form but one system. While this harmony lasts, whatever hurts the church hurts the state; whatever weakens the credit of the governors of the church, takes away from the civil power a part of its strength, and shakes the whole constitution. I trust and believe that, by speedily passing the bill, we shall silence that obloquy which has been so unjustly cast upon our reverend prelates (some of the most respectable that ever adorned our church) for the part they took in the act which this repeals. And it greatly concerns the whole community, that they should not lose that respect which is so justly due to them by a popular clamour kept up in opposition to a measure of no importance in itself. But if the departing from that measure should not remove the prejudice so maliciously raised, I am certain that no further step you can take will be able to remove it; and therefore I hope you will stop here. This appears to be a reasonable and safe condescension, by which nobody will be hurt; but all beyond this would be dangerous weakness in government. It might open a door to the wildest enthusiasm, and to the most mischievous

attacks of political disaffection working upon that enthusiasm. If you encourage and authorize it to fall on the synagogue, it will go from thence to the meeting-house, and, in the end, to the palace. But let us be careful to check its further progress. The more zealous we are to support Christianity, the more vigilant should we be in maintaining toleration. If we bring back persecution, we bring back the anti-christian spirit of popery; and when the spirit is here the whole system will soon follow. Toleration is the basis of all public quiet. It is a character of freedom given to the mind, more valuable, I think, than that which secures our person and estates. Indeed they are inseparably connected together; for where the mind is not free, where the conscience is enthralled, there is no freedom. Spiritual tyranny puts on the galling chains; but civil tyranny is called in to rivet and fix them. We see it in Spain, and many other countries; we have formerly both seen and felt it in England. By the blessing of God we are now delivered from all kinds of oppression. Let us take care that they may never return."

The last speech which added to his reputation, as a senator and an orator, was delivered in the session of 1763, upon a debate concerning the privileges of parliament, in which he supported the dignity of the peerage with a depth of knowledge that surprised the oldest peers present. From this period to that of his death his lordship courted retirement, and in the enjoyment of a select number of friends he had an opportunity of exercising those literary talents for which he was so eminent. He now found leisure to correspond with many of his learned friends, and to finish his "Dialogues of the Dead," a performance containing lessons of the purest morality, conveyed in a style and manner the best calculated at once to charm and instruct the mind. In the month of July 1773 Lord Littleton was suddenly seized with an inflammation in his bowels, which turned to a mortification, and in a few days caused his death. His last moments exhibited a pleasing, though an affecting scene; it was such as the exit of the great and good man alone can present; unimpaired understanding, unaffected greatness of mind, calm resignation, and humble, but confident hopes in the mercy of God, graced the dying accents of the Christian philosopher. A complete collection of all his lordship's miscellaneous works have been published since his death in three volumes, by his nephew, George Ayscough. His "History of Henry the Second" is a very impartial work.

**LIVERPOOL, ROBERT BANKS JENKINSON, EARL OF.**—The administration of this distinguished statesman extended through so long a period of the most stirring portion of English history that it becomes necessary to trace the steps of his political life somewhat in detail, and though the measures pursued by this nobleman and his colleagues were not those which would be sanctioned by public support in the present day, yet even his political enemies concede to him the credit of good intention.

Mr. Jenkinson was born June 7th, 1770, and sent to the Charter House to receive the rudiments of a classical education, from whence he proceeded to Christ Church, Oxford. Mr. Jenkinson paid a visit to the metropolis of France about the period of the breaking out of the revolution. He was at Paris when the bastille was demolished by the mob, and, it is said, was an eye-witness to many of the worst ex-

cesses which the streets of the city exhibited at that time. Nor was he an idle spectator of what was then going forward. He could not but foresee the effect which the atrocities of Paris must have on the peace of his own country; nor could he be unacquainted with the industrious efforts of the revolutionists of France to excite a similar flame in England, as well as all through Europe.

On his return to England he was introduced to parliament as one of the representatives of Rye, and under the avowed patronage of the minister. His election, it is remarkable, took place full twelve months before his age allowed him to sit in the house, and he returned to pass the intervening time in acquiring fresh continental information. In the year 1791, having reached his twenty-first year, he took his seat in the house, and on the 27th of February, 1792, he made his first speech, in opposition to the resolutions of Mr. Whitbread on the question of the empress Catherine persisting in her claim to Ochzakow and the adjoining district. His address manifested a sound knowledge, not only of the subject in dispute between Russia and Turkey at that juncture, but also of the general affairs and prospects of Europe, and the proper duty of England in relation to the continental nations. No doubt was entertained, from this first effort, that Mr. Jenkinson would rise to be a distinguished parliamentary speaker, and an efficient member of the British cabinet.

It is painful to be obliged to admit that, in the debates which soon after took place respecting the slave trade, we find Mr. Jenkinson opposing the abolitionists. His father was one of the chief opponents of the abolition in the house of lords, and that probably influenced the early decision of Mr. Jenkinson on the subject. The nature of his opposition, however, has been much exaggerated, for he never defended the principle of this enormous iniquity.

On the deposition of the king of France, to whom he had been accredited, the British ambassador, Lord Gower, was recalled from Paris; when, on the 15th of December following (1792), Mr. Fox moved an address to the king, praying, "that his majesty would be graciously pleased to give directions that a

minister might be sent to Paris, to treat with those persons who exercised provisionally the functions of the executive government of France, touching such points as might be in discussion between his majesty and his allies and the French nation." Mr. Jenkinson, in the temporary absence of Mr. Pitt (who had vacated his seat in the house of commons by accepting the wardenship of the Cinque Ports), replied to Mr. Fox in a speech of great animation and power:—"On this very day," he exclaimed, "on this very day, while we are here debating about sending an ambassador to the French republic—on this very day is the king of France to receive sentence; and, in all probability, it is the day of his murder. What is it, then, that gentlemen would propose to their sovereign? To bow his neck to a band of sanguinary ruffians, and address an ambassador to a set of murderous regicides, whose hands were still reeking with the blood of a slaughtered monarch, and who, he had previously declared, should find no refuge in this country? No, Sir, the British character is too noble to run a race for infamy; nor will we be the first to compliment a set of monsters who, while we are agitating this subject, are probably bearing through the streets of Paris—horrid spectacle!—the unhappy victim of their fury." Mr. Fox's motion was rejected without a division. The talents and efforts of Mr. Jenkinson on this occasion were warmly complimented, especially by Mr. Burke. From that time he rapidly rose in the consideration of all parties, and began commonly to take a prominent part in combating the arguments of the opposition.

We now approach the period of Lord Liverpool's introduction into the cabinet, and of his first possession of that important share in the public councils which, with the exception of a very short interval, he retained for above a quarter of a century. It will be convenient, therefore, to exhibit in this place a sketch of the general state of the public affairs of this country at the commencement of the year 1801.

Great Britain was still at war with her ancient foe, France. For the direction of this contest, and assisting occasionally in her public counsels, even when opposing them, she possessed, perhaps, as able statesmen as ever appeared in her history; and in no war had more brilliant isolated triumphs attended her arms. But every plan of combining the powers of Europe against the enemy had failed: too many of her parliamentary leaders were determinately the chiefs of a party, and to accomplish its triumphs, not the triumph of the country, they toiled—while the resources, the patient endurance of the people, and characteristic attachment to their political institutions, were never so severely tried. The resources of the enemy, on the other hand, were combined and directed by her ablest modern chieftain, Napoleon Bonaparte, now in the youth and energy of his ambition. If afterwards that energy assumed the character of an unnatural and maniac strength, there was a method in it at this time sufficiently fearful. He had already prostrated before him all the parties of the revolution, and every enemy of revolutionary France but England.

Austria, humbled by the decisive victories of the French at Marengo and Hohenlinden, only attempted a feeble renewal of hostilities at the opening of the year, to be compelled to sign in February the treaty of Lunéville, by which she abandoned to the French almost the whole of Italy; and acknow-

ledged the left bank of the Rhine for the boundary of the republic.

Russia and the northern powers, in the interim, had been urged by the agents of France to renew the principles of the armed neutrality of 1780, that free and neutral ships make free and neutral goods, and denying the right of any belligerent to search neutral vessels. This question, however, always of the first importance to this country, had become now deeply tinged, not only with the general policy of the Russian government towards England, but with the personal character and capricious partialities of the emperor Paul. He had at this time fixed his heart on obtaining Malta; and, in his former alliances with England and Austria, seems at least to have been allowed to entertain hopes of possessing it. He had assumed, therefore, the title of grand master of Malta, and in August 1800 a Russian fleet with troops had sailed from the Black Sea, for the express purpose of taking possession of the island when it should surrender.

In March 1794 Mr. Grey moved an address to the king, expressive of the concern of the house that his majesty should have formed a union with powers whose apparent aim was to regulate a country wherein they had no right to interfere. Mr. Jenkinson, in reply, rapidly sketched the real views of the combined powers, whose object, he insisted, was both real and practicable. On the 10th of April, Major Maitland having proposed to the house of commons to resolve itself into a committee to take into consideration the causes which had led to the failure of the army commanded by his royal highness the duke of York at Dunkirk, and having entered into an elaborate examination and condemnation of the measures of ministers throughout the whole of the preceding year, Mr. Jenkinson contended, in opposition to the major, that no exertions had been wanting on the part of the ministry. It was on this occasion that Mr. Jenkinson observed, "he had no difficulty in saying, that the marching to Paris was attainable and practicable; and that he, for one, would recommend such an expedition." It will be remembered that our young statesman was long twitted in parliament and elsewhere with this memorable suggestion, but it is even less likely to be forgotten that he lived to see the idea realized by the measures of himself and his colleagues.

It is impossible for us closely to follow Mr. Jenkinson through all his laborious exertions in parliament at this, which was one of the most active periods of his life. His reply to Mr. Fox's motion, on the 30th of May, 1794, for putting an end to the war with France, was one of the most powerful of these efforts. In the next session Mr. Jenkinson was absent from his place in parliament, urging a debate of a more interesting character than any in which he had previously engaged; and on the 25th of March, 1795, he married the daughter of the bishop of Derry. In 1796 Mr. Jenkinson participated in the honours of his family so far as to exchange that surname for the second title of his father, Lord Hawkesbury, his venerable parent being at that time created earl of Liverpool.

When the great measure of a legislative union with Ireland was proposed, it received Lord Hawkesbury's entire concurrence. The subject was introduced on the 22nd of January, 1799, by a message from the crown; and in the discussion which

ensued, his lordship expressed his warm approbation of the intentions of government respecting it. We now approach the period of his lordship's introduction into the cabinet, and of his first possession of that important share in the public councils, which, as we have already stated, he retained for above a quarter of a century. The circumstances which attended the temporary retirement of Mr. Pitt from power early in 1801, are too well known to render it necessary for us to say any thing respecting them. In the new ministry, the formation of which was announced on the 14th of March of that year, and at the head of which was Mr. Addington, Lord Hawkesbury was appointed to the important office of secretary of state for the foreign department, and actively engaged in the debates, which ensued on the changes. In one of those debates Mr. Pitt took an opportunity of warmly eulogizing him; and asked the gentlemen on the opposite side of the house, "if they knew any one among them superior to the noble secretary—saving, indeed, one person, unnecessary to name, whose transcendent talents made him an exception to almost any rule."

The great business of the succeeding summer and autumn, however, was the adjustment of preliminaries of peace with France. Of course Lord Hawkesbury, as foreign secretary, was entrusted with the interests of Great Britain in the negotiation which was opened on the subject; a statement of the particulars of which is the province of the historian, not of the biographer; suffice it to say, that on the 28th of March, 1802, the definitive treaty of peace was at length signed at Amiens, between the French republic, the king of Spain, and the Batavian republic, on the one hand, and the king of Great Britain and Ireland on the other.

In the memorable debate on this peace, which occurred on the 13th of May, 1802, Lord Hawkesbury defended the treaty in a speech of great length; and which was considered, at the time, to be much the ablest that had been delivered on the subject in either house of parliament. While France was every month adding to her influence or actual domination over the states of the continent, the first consul endeavoured to divert the attention of the British ministers from his plans, by complaints of the British press. He sent instructions to his ambassador to remonstrate with government upon the remarks of the public writers on his character and conduct, affecting to be totally ignorant of the little redress any ministers of this country could obtain for him in such a case. Lord Hawkesbury is admitted by all parties to have nobly vindicated the public character and liberties of his country in the correspondence that ensued.

The death of Mr. Pitt in 1806 afforded Lord Hawkesbury, who had continued, with distinguished zeal and ability, to manage the duties of his own office, and materially to assist Mr. Pitt in the general concerns of that changing time, the first opportunity that was afforded him of having supreme control in the national councils. His late majesty, in the first instance, honoured him with his confidence and commands with respect to the formation of a new ministry; but Lord Hawkesbury, well knowing the situation and relative strength of public parties, with that sound good sense which always distinguished him, declined the flattering offer. He received, however, a decided proof of the king's at-

tachment, by being appointed to the vacant situation of warden of the Cinque Ports. On the return of Mr. Pitt's friends to power in the following year Lord Hawkesbury resumed his station in the cabinet as secretary of state for the home department; still declining any higher, and especially avoiding the highest office. In the defence of all the great measures of government,—more especially the expedition to Copenhagen and the celebrated orders in council,—he, however, took a prominent and most efficient part.

In 1808 the orders in council and the attack on Copenhagen became the leading topics of discussion in the house of commons. Lord Grenville, in an elaborate speech, attacked the policy of ministers on those points, and called upon them to produce the various data necessary to justify the latter measure. In reply, Lord Hawkesbury contended "that ministers could not be expected to point out the precise quarter and channel from which they had received their information respecting the arrangements at Tilsit; and said, that even if ministers entertained any doubt of their information respecting what passed at that place, it must long since have vanished. The information received through the channel alluded to was corroborated by a variety of other channels wholly unconnected with each other. It was corroborated by the testimony of the government of Portugal, to whom it was proposed to make common cause with the continent against England, and to unite their fleet with that of Spain, of France, and of Denmark, to enable the confederacy to make a general attack on these islands. It was corroborated by the testimony of different persons in Ireland, where all the designs and projects of the enemy were most speedily known, and where it was promised that the combined fleets of Spain, Portugal, and Denmark, should make a descent on both Ireland and Britain, but the principal one on Ireland. A wish had been expressed that we had proceeded to Cronstadt and seized the Russian fleet, leaving the Danish fleet of sixteen sail of the line behind us. Besides, the Russian fleet was not so ready for sea, nor so well calculated in any respect as the Danish fleet to carry the designs of the enemy into execution. Farther, there were many circumstances in the treaty of Tilsit which indisposed the people of Russia against that treaty; and even at the time the seizure of the Danish fleet was known at Petersburg, the emperor Alexander seemed more inclined than before to renew his relations with this country. As to all that was urged against the orders in council, and against the treatment of America, while a negotiation with America was on foot, it was doubtless better to abstain from a discussion that would tend only farther to inflame the minds of the two countries. He lamented the uncalled-for mention of the state of Ireland. The concessions alluded to by the noble baron could not now be thought of. Indeed, even if these concessions were made, still more would be called for, and there would be no end to such demands."

In the latter end of this year Lord Hawkesbury succeeded to his father's title by the death of that nobleman. Lord Liverpool had now been in parliament twenty years, taking in each house successively a leading part in every debate of national importance; and he had been, during more than half that period, in the confidential service of the crown. In

the prime and vigour of his life he had enjoyed, in the unprecedented changes, external and internal, to which the affairs of the country were, during that momentous period, exposed, an unequalled opportunity for experience; had been trained in the practice of the constitution, and had fought some of its hardest battles with each variety of its foes; above all, he had imbibed that spirit of patient confidence in a righteous providence, and in his country's good cause, which peculiarly fitted him to take the helm in her present exigency. On the 8th of June, 1812, his lordship rose in his place in the house of lords, and stated to their lordships that the prince regent had on that day been pleased to appoint him first commissioner of the treasury, and had given him authority for completing the other arrangements for the administration as soon as possible. The only additions to the ministry on the occasion were Lord Sidmouth and Mr. Vansittart, afterwards Lord Bexley.

When Lord Castlereagh resigned his seat in the administration, Mr. Perceval united in name, as he had already done in effect, the two offices of first lord of the treasury and chancellor of the exchequer, and Lord Liverpool consented in this new arrangement to become secretary of state for the war department. In this capacity he nobly exhorted parliament and the country to an energetic perseverance in the vigorous efforts which were then making. On the 13th of June, in particular, after Lord Grey had submitted to the house of lords a motion on the state of the nation, Lord Liverpool, in contrast to the gloomy picture which had been exhibited by the noble earl, insisted that a favourable change was taking place in the posture of our affairs. The result, although not immediate, proved how well founded were his anticipations.

The lamented illness of his majesty George III., the introduction of a regency bill, the insuperable difficulties which beset the prince regent in his endeavours to form a new administration, and his ultimate determination to repose in Mr. Perceval the confidence which his royal father had placed in him, are all too well known to require detail. Nor, although the exertions of Lord Liverpool in the discharge of his parliamentary duties for the two succeeding sessions were unremitting, did any thing occur requiring marked notice. At length an event as unexpected as it was calamitous, the assassination of Mr. Perceval on the 11th of May, 1812, left the ministry in so disjointed a state, that Lord Liverpool yielded to the request of the prince regent to place himself at its head.

Towards the close of the session of parliament, Marquis Wellesley proposed in the house of lords a resolution, to the effect that the house would, early in the next session of parliament, take into consideration the state of the laws respecting the catholics. The previous question was carried by a large majority. In stating his reasons for opposing the original motion, the premier was very explicit. "He would never," he observed, "meet a great question with little shifts and expedients. It ought to be met upon great and general principles. But if, when taken upon great and general principles, he could not see his way to a safe conclusion, he should not be acting justly and manfully if he did not avow that sentiment and act accordingly. Were the religious opinions of the catholics the only obstacle, it would be another affair. But the oath of supremacy,

so far as it included an abjuration of all foreign jurisdiction, spiritual as well as temporal, he considered to be a fundamental part of the settlement of the government at the revolution. It was at that period laid down as an essential principle, that the protestant government was to be firmly established in these realms. He conceived this to mean that the power of the state was to be protestant, and to be so maintained for the benefit of all descriptions of its subjects. If any one political principle were more firmly established than another, he took it to be this:—that the subject of a state should own no allegiance out of that state. He could see no beneficial results from the motion of his noble friend. It was a maxim of his political life,—a maxim confirmed by all he had ever heard, read, or observed,—that, with respect to a great constitutional question, if a stand were to be made, it should be made in limine. Therefore, as he could not clearly see any prospect of a practical conclusion from the present proposition, he thought the true way, in point of principle, and the most manly way, was to resist it in the first instance. He would even go further, and say, that if he were disposed to make concession, he would still oppose the motion, because he would never pledge himself to make any great change in the laws without knowing exactly what that change was to be." An unsolicited concession to the dissenters marked this era of Lord Liverpool's government. Some difference of construction having arisen respecting the right of their teachers to qualify under the existing acts of parliament, a bill was introduced and passed, removing the discretion of magistrates with regard to granting certificates of qualification, and requiring no other oath to be taken than that of allegiance.

The military campaign of 1813 was one of extraordinary activity. Lord Wellington, after repulsing Suchet, gaining the victory of Vittoria, and taking Pampeluna and St. Sebastian, entered France as a conqueror, beat the French with great loss on their own ground, crossed the Nive, and fully established himself in France. The campaign in the north of Europe also opened propitiously, and the subsequent loss of the battle of Leipsic threatened Bonaparte with utter ruin. Administration, and indeed the whole country, now felt the importance of the crisis, and of every possible aid being given to the allies. Parliament met on the 4th of November, and sanctioned loans of large amount to various foreign powers. There was at this time but one opinion, that the hour for the most strenuous exertions was come. Before Christmas, parliament adjourned to a period longer than usual, viz. the 1st of March; and on meeting on that day, adjourned further until the 21st. It was, in fact, to the executive rather than to the legislative body, and to the important movements of our allies, that the eyes of the country were directed. The great events which followed were, the entrance of the allies into Paris, the abdication, by Bonaparte, of the French throne, and his retirement to Elba, and the signature, on the 30th of May, 1814, of the definitive treaty of peace between France and the allied powers.

In the month of March Napoleon returned from Elba, and at once proceeded to Paris. Messages on the subject, from the prince regent, having been sent to parliament, Lord Liverpool moved corresponding addresses, dwelling, in the speeches by which they were introduced, on the peculiar advan-

tages of an attempt to overthrow this dangerous enterprise of the enemy, while the confederacy of the allies was subsisting in entire unanimity, and they were prepared to act in concert. These were not mere words. Never did England make efforts so gigantic, either in a financial or in a military point of view as on this occasion; and the result was the battle of Waterloo.

In a committee of the house of lords, on the 28th of May, 1816, the earl of Liverpool proposed an address to the prince regent on the silver coinage bill, which he prefaced with a statement of the outline of the measures contemplated. After alluding to the elaborate work of his father on the coinage, he remarked, "that it was impossible for him to state his views as to the silver coinage without saying something on the gold coin; and he laid down as the foundation of the measures in contemplation, that gold was in fact the standard or measure of property in this country. This being the case, it was intended to leave the gold coin in its present state; and it was a happiness that we had now arrived at a period when gold might be again allowed to operate as a measure of value on the old principle. With respect to silver, it was only necessary to take care that there should be enough of it for the purposes of change, and that it should not be liable to be melted down. They were therefore to consider first, what was the present price of silver; second, what it was likely to be; third, at what price it should be taken in the new coinage. The present price was 5s. 1½d. per ounce; at the rate of 62s. for the pound of silver, as calculated upon in 1773, the price would be 5s. 2d., so that it was now below the mint price, and therefore might be coined on the old principle. But, as the market price must rise, it would be proper to prevent the melting down of the coin by rendering it an operation of no profit, which would be effected by fixing upon the coin a small seignorage, or raising its value above bullion. This security, he thought, would be obtained by raising its coined value to 5s. 9d., in which case the difference between the mint price of 62s. for the pound, and 68s. or 70s., would pay for the recoinage. The earl then came to the discussion of the most important part of the present measure, which was the arrangements to be adopted in calling in the deteriorated silver coin and substituting the new. This process should be simultaneous; for if the base silver should be suffered to circulate with the good the latter would disappear, since the temptation of melting it down, to be converted into the counterfeit, would be irresistible. He thought that 2,500,000*l.* of new coinage would be sufficient to supply the place of the shillings and sixpences called in, or driven from circulation, which, from the improved machinery of the mint, might be prepared in six or seven months. With regard to the indemnity to be granted to the holders of the old coin, he was disposed to adopt the most liberal principles; and he would propose that all the silver which could be considered as legal tenders by having the proper marks, should be received when called in at the current value. Mere counterfeits could not be received for more than their value as determined by weight and fineness." He concluded by moving an address to the prince regent, thanking him for his message, and assuring him of the desire of the house to concur in its objects.

Lord Lauderdale dissented from the principle of

gold being the best standard for the coinage; he also objected to the expense of calling in the current silver and issuing new coins; but the amendment which his lordship proposed, requesting the prince regent to suspend the plan, was negatived, and the original measure carried into effect with great satisfaction to the public.

In 1817 we find Lord Liverpool making the following remarks on the suspension of the habeas corpus act:—"At the time that a noble friend of his (Lord Sidmouth) was at the head of the treasury, a conspiracy against the life of the sovereign was formed; and though nothing more flagitious and criminal had ever been planned, yet no bills like those now submitted were then brought in because it was regarded as an insulated transaction; and when once the traitors had been seized, tried, convicted, and executed, the conspiracy fell to the ground. He stated these things in order to show that those persons who, from their situations, were best acquainted with the aspect of affairs then, and who reasoned by comparison now, were perhaps more justified in proposing the present measure than some noble lords imagined. But the noble lord must have a precedent like that of 1794. This, however, was not the question; for, if their lordships would refer to their journals, they would find more instances of the suspension of the habeas corpus act which had taken place in peaceable times. With respect to the habeas corpus act he regarded it with as much veneration as the noble baron. He did not regard it as an act of Charles the Second, but venerated it as an anterior and integral part of the constitution. The question was whether there were sufficient grounds to entrust his majesty's ministers with the power they required for the conservation of the state? Domestic treason was worse than foreign treason. There might indeed be circumstances in foreign treason to take away its vital, its deadly stab. They had, according to their report, proofs of a system to overthrow the constitution of the country; and when they saw such a system, with malignant spirits to set it in full motion, was it too much to ask them to entrust the legislature with powers at least adequate to its suppression? He thought the seditious and blasphemous intercourse of the conspirators more dangerous than in 1794; the conspirators of these days borrowed some lessons from the conspirators of those; they acted by word of mouth, by signs, by concealed and indefinable, but understood ways. He felt the full importance of the question; he was prepared to meet it; and he would suffer no odium to frighten him from the stern path of duty. He felt what was more, the necessity of preserving the constitution; of, in fact, the preserving to every man his fire-side; and on these grounds he asked for a very short time the powers which were indispensable to the salvation of the state."

On the death of George III. in 1820 Lord Liverpool was the oldest premier in Europe, and he retained his office under the new sovereign with undiminished éclat.

In the legal proceedings which placed the queen in imminent danger from a bill of pains and penalties, Lord Liverpool appears to have imbibed the conviction of her majesty's guilt; and while he would gladly have avoided the public discussion of the question, he felt that the conduct of the queen left

to his majesty's ministers no alternative but to bring forward the grounds of this conviction. He corrected, we believe, his published speech on the second reading of the bill of pains and penalties. His language was—"Admitting, my lords, that we are so situated that we are in some measure compelled to make a choice between evils, I say that in this case, as in most cases, the straightforward course is the most expedient to pursue. There may be inconveniences, my lords, in going on with this bill; but, if you believe her majesty guilty, you are bound by every just and moral consideration not to stop here. I say, let the consequences be what they may, if you believe her majesty guilty you are bound to agree to the second reading of this bill. A noble earl alluded to the clamour which has been raised on this subject out of doors, and to the public discontent and ferment which the adoption of the measure would create; and the counsel at your lordships' bar very justly adverted to the attempts made by seditious and disaffected men to take advantage of the popular feeling which has been excited, and to convert it into the means of effecting their own infamous purposes. Undoubtedly, my lords, this is too true. Undoubtedly, in times like the present, every public misfortune, every supposed public grievance, is laid hold of with eagerness by those whose object it is to overthrow the constitution of the country. It would be most unjust to lay this at the door of her majesty, or to suffer her cause to sustain any prejudice in consequence of it. \* \* \* Far be it from me to say that any prejudice should be excited against her majesty on that account, which might in the least interfere or weigh in the decision of the great question before your lordships; but, after what the noble earl dropped on the subject of popular clamour, I could not allow this part of the subject to pass entirely without remark. The only observation which I wish to impress on your lordships is this,—that if you believe her majesty guilty, and that if you believe your not proceeding with this bill will give a triumph to guilt, no base principle of fear ought to prevent the firm discharge of your duty." He thus concludes his speech:—"I am content to be judged by your lordships, I am content to be judged by the public at large, as to the whole of my conduct in the course of these proceedings. I appeal to Him who alone knows the secrets of all hearts, and who can alone unravel all the mysteries and intricacies of this great case, if the judgment which I have given is not true—if it is not at least founded on a sense of integrity, and on a most sincere wish to do justice in mercy; not with any disposition to visit the illustrious individual accused with a harsher measure of punishment than necessity requires, but with an anxious desire—a desire which I am sure is entertained by all your lordships—to do justice, in this most important cause, between the crown, the queen, and the country."

In 1821 Lady Liverpool died, and in the following year his lordship married again.

When Earl Grey brought the subject of our foreign affairs under the notice of parliament, the noble earl alluded to what was called "The Holy Alliance." "He (Lord Liverpool) knew not for what particular purpose the noble earl had made that allusion, as it was an alliance to which this country was not a party. Whatever objection the people of other countries might have to that alliance, to us at least its

existence was harmless. The noble earl seemed to think that it was connected with this government in some secret manner. He could assure the noble earl that his apprehensions were unfounded. There was no mystery, difficulty, or doubt about the conduct of the English government. No arrangements had been made with any foreign power except those which were regularly laid before parliament. There never had been any arrangements with this country respecting the operations of foreign powers growing out of the treaty of Paris, or out of any other treaty that had not been laid on their table, and of which noble lords opposite had not full and perfect cognizance."

But we are now approaching the close of Lord Liverpool's public life, for parliament met, pursuant to adjournment, on the 8th of February, 1827, and Lord Liverpool, after first giving notice in the house of lords, that he should move on the following Monday an address of condolence to his majesty on the melancholy loss of his brother, the late duke of York, said "it was his intention to submit to the house, on Monday se'nnight, the views of government on the corn laws."

Lord Lauderdale objecting to this as too short a notice, his lordship added that "he had no intention of precipitating the inquiry or determination of the house, but that after stating the views of government on Monday week he should propose a farther day for the discussion of the subject, giving every reasonable time for the house and the public to consider it." Lord Liverpool was permitted to fulfil but one of these pledges, that is, to move the address of condolence to his majesty. In performing this melancholy duty he very ably reviewed the entire claims of his late royal highness on the public regard, and the peculiar situation in which he stood to the king. "Of nearly the same age they had been educated," he said, "together, and walked, as it were, side by side through life; though of differing opinions in some points, (and what two minds were perfectly one in all things?) their friendship, their brotherly regard and intercourse were never broken in upon until by the present mournful event. Their lordships, he knew, would follow him in the just admiration commanded by the noble duke's services to the country. He (Lord Liverpool) had opportunities of personally knowing the state of the army at the period of his royal highness's assuming the command; he had watched the measures by which it was, in point of fact, formed and constituted the army that had brought to an issue a war which threatened the very existence of the country, and involved all Europe; an army with which his noble friend near him (the duke of Wellington) had been enabled to free the Peninsula, and fight the battle of Waterloo! Never had the great power which his royal highness had to exercise for thirty years been more moderately, impartially, and beneficially administered." He concluded with a warm eulogium on the integrity and urbanity of his royal highness; and the address was carried nemine contradicente.

The earl of Liverpool was in his place in the house of lords on the 15th, and brought down a message from his majesty recommending a farther provision for the duke of Clarence. On Friday the 16th he moved the order of the day for taking the royal message into consideration. "He should not," he said,

"be under the necessity of occupying much of their lordships' time on this occasion; he believed there was a general disposition to agree to the reasonable provision which he should propose, a provision which in due order must commence in another place, but he felt it his duty to apprise their lordships of what was intended, that is, to add to his royal highness's income 3000*l.* a year, and to that of his amiable consort 6000*l.*; 3000*l.* more falling to his royal highness by the death of the duke of York. He could not think that such a provision would be deemed unreasonable in the circumstances in which their royal highnesses were now placed. With respect to her royal highness the duchess of Clarence, though she was comparatively a stranger in the country, all who had witnessed her conduct, and he spoke from his own experience here, would testify how proper was that conduct, and how worthy she was of the provision proposed for her." His lordship concluded by moving an address expressive of the willingness of the house to make a suitable provision for their royal highnesses. This was the last occasion on which this faithful servant of the crown and the country appeared at his post.

His lordship retired to rest at Fife House at his usual hour, and apparently in good health. On the following morning, Saturday the 17th of February, he took his breakfast alone in his library at ten o'clock. At about this hour also he received the post letters. Sometime after, his servant not having as usual heard his lordship's bell, entered the apartment, and found him stretched on the floor motionless and speechless. As soon as his situation would admit he was removed to his seat at Combe Wood. After various fluctuations, although at no time with the slightest prospect of convalescence, the fatal moment at length arrived. The noble earl had for some days been in his ordinary state, and no symptoms calculated to excite immediate apprehension had occurred. On Thursday the 4th of December, 1828, he had breakfasted as usual, when, about half-past nine o'clock, he was attacked with convulsions and spasms. A messenger was instantly despatched to Mr. Sandon, one of his medical attendants, who resided in the neighbourhood; but before that gentleman could arrive his lordship had breathed his last. We subjoin his lordship's autograph at a late period of his life.

**LIVERPOOL, CHARLES JENKINSON, EARL OF,** was the eldest son of Colonel Jenkinson, the youngest son of Sir Robert Jenkinson, the first baronet of the family. He was born in 1727, and educated at the Charter House. He removed to University college, Oxford, where he took the degree of M. A. in 1752. In 1761 he obtained a seat in parliament and was made under-secretary of state. In 1766 he was named a lord of the admiralty, from which board he subsequently removed to that of the treasury. In 1772 he was appointed vice-treasurer of Ireland, and was rewarded with the sinecure of the clerkship of the Pells, purchased back from Mr. Fox. In 1773 he was made secretary at war, and on the dissolution of the administration of Lord North,

joined that portion of it which supported Mr. Pitt, under whose auspices he became president of the board of trade, which office he held in conjunction with the chancellorship of the duchy of Lancaster, given him in 1786. In the same year he was also elevated to the peerage by the title of Baron Hawkesbury, of Hawkesbury in the county of Gloucester, and in 1796 he was created earl of Liverpool. He remained president of the board of trade until 1801 and chancellor of the duchy of Lancaster until 1803. His death took place on the 7th December, 1808, at which time he held the sinecures of collector of the customs inwards of the port of London and clerk of the pells in Ireland. The earl of Liverpool for a long time shared in all the obloquy attached to the confidential friends of the Bute administration, and in a particular manner was thought to enjoy the favour and confidence of George III., of whom it was usual to regard him as the secret adviser. The earl of Liverpool was the author of the following works—“A Discourse on the Establishment of a Constitutional Force in England,” “A Discourse on the Conduct of Great Britain in regard to Neutral Nations, during the Present War,” “A Collection of Treatises, from 1646 to 1673,” “A Treatise on the Coins of the Realm, in a Letter to the King.”

**LIVIA, DRUSILLA.**—This Roman lady was the wife of the emperor Augustus, and the daughter of Livius Drusus Claudianus, who lost his life in the battle of Philippi, on the side of Brutus and Cassius. She was first married to Tiberius Claudius Nero, by whom she had two sons, viz. Drusus and Tiberius. When she fled with her husband to Italy before the triumvir Octavianus, she narrowly escaped being made prisoner by him who afterwards became her husband. From that place she went with her son to Antony in Achaia, and when her husband was reconciled to Augustus, returned to Rome. Here her personal and mental charms made such an impression on the triumvir, that he repudiated his wife Scribonia in order to marry her, in the 715th year of Rome. Livia knew how to use her power over the heart of Augustus for the attainment of her ambitious purposes, and effected the adoption of one of her sons as successor to the throne. At her instigation, Julia, the only daughter of Augustus, was banished. Ancient writers, too, almost universally ascribe to her the deaths of the young Marcellus, of Lucius Cæsar, and the banishment of Agrippa Posthumus. Augustus, having no longer any near relatives, yielded to her requests in favour of Tiberius. In the emperor's will Livia was constituted the first heiress, was received into the Julian family, and honoured with the name of Augusta. She was also made chief priestess in the temple of the deified Augustus, and many coins were struck in her honour. But Tiberius proved himself very ungrateful to his mother, to whom he was indebted for every thing, and would not allow the senate to bestow upon her any further marks of respect. He did not, however, treat her in public with disrespect; but when he left Rome, in order to gratify his lusts in an uninterrupted solitude, he fell into a violent dispute with her, did not visit her in her last sickness, would not see her body after her death, and forbade divine honours to be paid to her memory.

**LIVINGSTON, BROCKHOLST.**—This American lawyer was born in the city of New York in November 1757. He entered Princeton college, but in

1776 left it for the field, and became one of the staff of General Schuyler, commander of the northern army. He was afterwards attached to the suite of General Arnold, with the rank of major, and shared in the honour of the conquest of Burgoyne. In 1779 he accompanied Mr. Jay to the court of Spain as his private secretary, and remained abroad about three years. On his return he devoted himself to the law, and was admitted to practice in April 1783. His talents were happily adapted to the profession, and soon raised him into notice, and, ultimately, to eminence. He was called to the bench of the supreme court of the state of New York in 1802, and in November 1806 was transferred to that of the supreme court of the United States, the duties of which station he discharged with distinguished faithfulness and ability until his death, which took place during the sittings of the court at Washington, in March 1823, in the sixty-sixth year of his age.

**LIVINGSTON, ROBERT**, an eminent American politician, who was born in the city of New York in November 1746. He was educated at King's college, and graduated in 1765. He studied and practised law in that city with great success; but about the commencement of the American revolution he lost the office of recorder on account of his attachment to liberty, and was elected to the first general congress of the colonies. In 1780 he was appointed secretary of foreign affairs, and throughout the war of the revolution signalized himself by his zeal and efficiency in the revolutionary cause. At the adoption of the constitution of New York, he was appointed chancellor of that state, which office he held until he went, in 1801, to France, as minister plenipotentiary, appointed by President Jefferson. He was received by Napoleon Bonaparte, then first consul, with marked respect and cordiality, and, during a residence of several years in the French capital, the chancellor appeared to be the favourite foreign envoy. He conducted, with Mr. Munroe, the negotiation which ended in the cession of Louisiana to the United States, took leave of the first consul in 1804, and made an extensive tour on the continent of Europe. On his return to Paris as a private citizen, Napoleon, then emperor, presented to him a splendid snuff-box, with a miniature likeness of himself, painted by the celebrated Isabey. It was in Paris that he formed a friendship and close personal intimacy with Robert Fulton, whom he materially assisted with counsel and money to mature his plans of steam navigation. In 1805 Mr. Livingston returned to America, and thenceforward employed himself in promoting the arts and agriculture. He introduced into the state of New York the use of gypsum and the Merino race of sheep. He was president of the New York academy of fine arts, of which he was a chief founder, and also of the society for the promotion of agriculture. He died in March 1813, with the reputation of an able statesman, a learned lawyer, and a most useful citizen.

**LIVY, ANDRONICUS**, a comic poet, who lived at Rome about 240 years before the Christian era. He was the first who turned the personal satires and fescennine verses, so long the admiration of the Romans, into the form of a proper dialogue and regular play. Though the character of a player, so valued and applauded in Greece, was considered vile and despicable among the Romans, Andronicus acted a part in his dramatical compositions, and engaged the

attention of his audience by repeating what he had laboured after the manner of the Greeks. Andronicus was the freedman of M. Livius Salinator, whose children he educated. His poetry was grown obsolete in the age of Cicero, whose delicacy and judgment would not even recommend the reading of it.

**LIVY, TITUS.**—This celebrated Roman historian was born at Padua. Few particulars of his life have been handed down to us; but on his appearing at Rome he acquired the favour of Augustus, and there he long resided. Some have supposed (for there is not any proof of it) that he was known to Augustus before, by certain philosophical dialogues which he had dedicated to him. Seneca says nothing of the dedication, but mentions the dialogues, which he calls historical and philosophical; and also some books written expressly on the subject of philosophy. Be this as it may, there is little doubt but that he began his history as soon as he was settled at Rome; and he seems to have devoted himself so entirely to the great work he had undertaken as to be perfectly regardless of his own advancement. The tumults and distractions of Rome frequently obliged him to retire to Naples, not only that he might be less interrupted in the pursuit of his destined task, but also enjoy that retirement and tranquillity which he could not have at Rome, and which yet he seems to have sought after; for he was dissatisfied with the manners of his age, and states that “he should reap this reward of his labour in composing the Roman history, that it would take his attention from the present numerous evils, at least while he was employed upon the first and earliest ages.” He read part of this history, while he was composing it, to Mæcenas and Augustus; and the latter formed so high an opinion of him that he appointed him superintendent of the education of his grandson Claudius, who was afterwards emperor. After the death of Augustus, Livy returned to the place of his birth, where he was received with great honour and respect, and died there in the fourth year of the reign of Tiberius, aged above seventy. A monument was erected to this historian in the temple of Juno, where was afterwards founded the monastery of St. Justina. There in 1413 was discovered a Latin epitaph to Livy, the translation of which is as follows:—“The bones of Titus Livius of Patavium, a man worthy to be approved by all mankind; by whose almost invincible pen the acts and exploits of the invincible Romans were written.”

The history of Livy, like other great works of antiquity, is transmitted down to us both mutilated and imperfect. Its books were originally a hundred and forty-two, of which are extant only thirty-five. The epitomes of it, from which we learn their number, all remain except those of the 136th and 137th books. Livy's books have been divided into decades. The first decade, beginning with the foundation of Rome, is extant, and treats of the affairs of 460 years. The second decade is lost, the years of which are seventy-five. The third decade is extant, and contains the second Punic war, including eighteen years. It is reckoned the best part of the history, as it gives an account of a very long war, in which the Romans gained many advantages. The fourth decade contains the Macedonian war against Philip, and the Asiatic war against Antiochus, which occupies the space of about twenty-three years. The first five books of the fifth decade were found at Worms by

Simon Grynæus in 1431, but are very defective; and the remainder of Livy's history, which reaches to the death of Drusus, in Germany, in 746, together with the second decade, are supplied by Freinshemius.

Never man, perhaps, was furnished with greater advantages for writing a history than Livy. Besides his own genius he had access to the very best materials,—such, for instance, as the memoirs of Sylla, Cæsar, Labienus, Pollio, Augustus, and others, written by themselves. “What writers of memorials,” says Lord Ealingbroke, “what compilers of the *Materia Historica* were these! What genius was necessary to finish up the pictures that such masters had sketched! Rome afforded men that were equal to the task. Let the remains, the precious remains, of Sallust, of Livy, and of Tacitus, witness this truth. What a school of public and private virtue had been opened to us at the resurrection of learning if the latter historians of the Roman commonwealth and the first of the succeeding monarchy had come down to us entire! The few that are come down, though broken and imperfect, compose the best body of history that we have; nay, the only body of ancient history that deserves to be an object of study. It fails us indeed most at that remarkable and fatal period where our reasonable curiosity is raised the highest. Livy employed forty-five books to bring his history down to the end of the sixth century and the breaking out of the third Punic war; but he employed ninety-five to bring it down from thence to the death of Drusus; that is, through the course of 120 or 130 years. Appian, Dion Cassius, and others, nay, even Plutarch included, make us but poor amends for what is lost of Livy.” Speaking then of Tully's orations and letters as the best adventitious helps to supply this loss, he says that “the age in which Livy flourished abounded with such materials as these: they were fresh, they were authentic: it was easy to procure them; it was safe to employ them. How he did employ them in executing the second part of his design we may judge from his execution of the first; and I own I should be glad to exchange, if it were possible, what we have of this history for what we have not. Would you not be glad, my lord, to see in one stupendous draught the whole progress of that government from liberty to servitude; the whole series of causes, and effects, apparent and real, public and private?”

The encomiums bestowed upon Livy by both ancients and moderns are great and numerous. He not only entertains like Herodotus, but he also instructs and interests in the deepest manner. But his great probity, candour, and impartiality, are what have distinguished Livy above all historians; for neither complaisance to the times, nor his connexions with the emperor, could restrain him from speaking well of Pompey; so well as to make Augustus call him a Pompeian. This we learn from Cremutius Cordus, in Tacitus, who also states, to the emperor's honour, that this offered no interruption to their friendship. But whatever eulogies Livy may have received as an historian, he has not escaped censure as a writer. In the age wherein he lived, Asinius Pollio charged him with Patavinity; which Patavinity has been variously explained by various writers, but is generally supposed to relate to his style of writing. The most common is, that this noble Roman, accustomed to the delicacy of the language spoken in the court of Augustus, could not bear with certain provincial idioms

which Livy, as a Paduan, used in many parts of his history.

Though we know nothing of Livy's family, yet we learn from Quintilian that he had a son, to whom he addressed some excellent precepts in rhetoric. An ancient inscription speaks also of one of his daughters, named Livia Quarta; the same, perhaps, that espoused the orator Lucius Magius, whom Seneca mentions; and observes, that the applauses he usually received from the public in his harangues were not so much on his own account as for the sake of his father-in-law. Learning perhaps never sustained a greater loss in any single author than by the destruction of the latter and more interesting part of Livy. Several eminent writers have indulged an expectation that the entire work of this noble historian might yet be recovered. It has been said to exist in an Arabic version; and even a complete copy of the original is supposed to have been extant as late as the year 1631, and to have perished at that time in the plunder of Magdeburgh. That munificent patron of learning, Leo X., endeavoured to rescue from oblivion the valuable treasure which his bigotted predecessors had expelled from every Christian library.

**LLOYD, CHARLES.**—This learned divine was born in September 1784, at West Wycomb. He received the rudiments of his education at Eton, and afterwards removed to Christ Church, Oxford, where he remained for a considerable period. Having taken his degree, he entered holy orders, and in 1819 was selected to succeed the bishop of Durham as preacher of Lincoln's Inn. He was shortly after made chaplain to the late archbishop of Canterbury, and he was presented by his grace to the living of Bersted in Sussex. In 1822 he was appointed regius professor of divinity on the death of Dr. Hodgson, and returned to Oxford.

In 1827 Dr. Lloyd was advanced to the see of Oxford on the death of Bishop Legge, but he seldom appeared in the house of lords, and never spoke until the 2nd of April, 1829, when the second reading of the Roman catholic relief bill was moved by the duke of Wellington. After a speech delivered by the archbishop of Canterbury in opposition, and seconded by the primate of Ireland, Bishop Lloyd rose to support the bill. The main point on which he insisted was the necessity of the measure, and he combated the notion that the introduction of Roman catholics into the houses of parliament would be an irreligious act, bringing down God's judgment upon the nation, declaring that he had received no new lights, and referring to the opinions which he had expressed before his advancement to the bench. As the subject is one of great interest we give the following extract from his speech:—

"My lords, I hope I have not diminished the dangers of the Irish church; they are assuredly very great; but the question now before us is, not whether the church of Ireland is in danger, but whether the measure now proposed by his majesty's government is calculated to diminish or increase that danger. My lords, after what I have heard with great sorrow from the primate of that church, I will not venture to express a strong opinion on the subject; but this I must say, that I think I can see in this measure some faint gleam of hope, and hail the dawning of a brighter day. My lords, I hope that this measure will carry English capital into Ireland, and that protestants will go along with it. I hope

that those who have hitherto lived out of their country in consequence of its troubles and disturbances, will many of them return thither, and encourage every thing that is peaceable and good. I hope that the protestant ministers will now find a more willing audience, and their instructions a readier admission into the hearts of those who hear them.

"But, my lords, I will say no more on that point. This is the only part of the subject which has for some years past pressed on my mind, and made me hesitate as to the propriety of measures similar to the present; and let not, I beseech you, my doubting hopes influence your judgments on this momentous part of the question now before your lordships. Give to the church of Ireland your most solemn and serious consideration. Do not, I entreat you, treat with scoffs, or levity, or disrespect, the fears, perhaps the too just fears, of those who are alarmed and agitated for her safety. In the aristocracy of England the church of England has hitherto found her firmest guardians and supporters; here let the church of Ireland find them too. On your care, and vigilance, and religion, let the united church of England and Ireland securely rest. Preserve her against the intrigues of the cunning, the lust of the avaricious, the violence of profligate and rebellious men. Preserve her inviolate against that day (a day which shall assuredly come) when Ireland shall at last be converted to a holier doctrine and a purer faith. Preserve her inviolate against that day when the sons of Ireland, returning from a longer than Assyrian captivity, shall find that the temple of the Lord has been already built, and the foundations have been long since laid; and if ye shall do this, whatever may be the event of your deliberations (as the event is assuredly in the hands of Providence), still posterity shall say,—that posterity of whose judgment we have been not unkindly or ungenerously reminded,—posterity will say that the peers of England, when they admitted the lay members of the catholic body into the communion of the legislature, still did not put God out of the question, but went about Sion, and marked well her bulwarks, that they might tell them that come after."

On the 2nd of May, 1829, the bishop went to the dinner given by the royal academicians at Somerset House. He returned home unwell, having, as he afterwards stated himself, been inconvenienced by a current of air in which he sat. The illness, which after death was incontestably proved to be inflammation of the lungs, was at first considered trifling, and afterwards pronounced hooping-cough; but at length it exhibited dangerous symptoms, and terminated fatally on the 31st of May, 1829.

**LLOYD, DAVID**, a British historian of the seventeenth century, who was educated at Oriel college, Oxford. He held several valuable preferments in North Wales, where he died in 1691. His principal works are, his "Lives of the Statesmen and Favourites in England since the Reformation," and "A Life of General Monk."

**LLOYD, NICHOLAS**, a learned English writer of the seventeenth century, who was born in Flintshire, and educated at Wadham college, Oxford. He was rector of Newington St. Mary, near Lambeth, in Surrey, till his death, which took place in 1680. His "Dictionarium Historicum" is a valuable work, to which Hoffman and Moreri are greatly indebted.

**LLOYD, ROBERT**, an English poet, who was born in 1733. His principal work is entitled "The

Actor," which gave rise to the celebrated "Rosciad" of his friend Churchill. He was subsequently employed in writing for the periodicals and magazines of the time, but through inattention to his pecuniary affairs he died in the Fleet Prison, in 1764.

LLOYD, WILLIAM, a learned English writer, who was born in Berkshire in 1627. He was educated under his father, who was rector of Sonning, and vicar of Tyle-hurst in Berkshire; then went to Oxford and took orders. In 1660 he was made prebendary of Ripon, and in 1666 chaplain to the king. In 1667 he took the degree of doctor of divinity, in 1672 he was installed dean of Bangor, and in 1680 was consecrated bishop of St. Asaph. He was one of the six bishops who, with Archbishop Sancroft, were committed prisoners to the Tower of London, for subscribing a petition to the king against distributing and publishing his declaration for liberty of conscience. Soon after the revolution he was made almoner to King William and Queen Mary: in 1692 he was translated to the bishopric of Lichfield and Coventry, and in 1699 to the see of Worcester, where he remained till his death, which took place in 1717, the ninety-first year of his age. Dr. Burnet gives him an exalted character, and his works are highly esteemed.

LOBEIRA, VASCO, author of the celebrated romance of "Amadis de Gaul," was born at Porta, in Portugal, in the fourteenth century. In 1386 he was knighted on the field of battle, at Aljubarrota, by King Joam I. He died at Elvas, where he possessed an estate, in 1403. The original of his celebrated romance was preserved in the library of the duke of Aveiro, who suffered for the conspiracy against Joseph I.; but whether still in existence or not, is doubtful. This romance has been claimed for France, it having been asserted that Lobeira was only a translator; but Dr. Southey has succeeded in refuting that pretension.

LOBEL, MARTIN DE, was born at Lille in 1538, and studied medicine at Montpellier, travelled through Italy, Switzerland, Germany, became physician to the prince of Orange, and was, at a later period, invited to England, as botanist, by King James. He died in 1616, at Highgate, near London. His chief works are "Stirpium Adversaria Nova," with engravings; "Plantarum seu Stirpium Historia, cum Adversariorum Volumine," with engravings. After him, a genus of plants has been called Lobelia. All the species are poisonous; some very much so.

LOCK, MATTHEW, an eminent English musical composer, of the reign of Charles II. He was a native of Exeter, and became chorister in the cathedral of that city. He was employed to compose the music for the public entry of King Charles II., and not long after was appointed composer in ordinary to that monarch. Dramatic music was that in which he chiefly excelled, but there are likewise extant many valuable compositions for the church. Amongst others is a morning service, composed for the chapel royal, in which the prayer after each of the commandments is set in a different way. This was deemed by many persons an inexcusable innovation, and, on the whole, was so much censured that he was compelled to publish the entire service in score, with a vindication by way of preface.

Lock involved himself in almost continual broils. About the year 1672 he was engaged in a controversy with Mr. Salmon, on the subject of a book written by

him, and entitled "An Essay to the Advancement of Music, by casting away the Perplexity of Different Cliffs, and uniting all sorts of Music into one Universal Character." Lock could not refrain from attacking this work. Accordingly he published "Observations upon a late Book, entitled an Essay," &c. Salmon answered it in "A Vindication of an Essay to the Advancement of Music from Mr. Lock's Observations." The subject matter of this dispute is not of sufficient importance to demand from us any detail of the arguments; suffice it to say, that, under a studied affectation of wit and humour, the pamphlets, on both sides, are replete with invective and abuse.

The musical world is indebted to Lock for the first rules that were ever published in this kingdom on the subject of thorough-bass. A collection of these were inserted in a book entitled "Melothesia," which also contains some lessons for the harpsichord and organ, by himself and other masters. It is well known that Lock was the composer of the music to Shakspeare's plays of "Macbeth" and "The Tempest," as altered by Sir William Davenant, and, in conjunction with Draghi, to Shadwell's opera of "Psyche." He was also author of a collection of airs, published in 1657, entitled "A Little Concert of Three Parts, for Viols and Violins." He died in the catholic persuasion in 1677.

LOCKE, JOHN.—This eminent English philosopher and metaphysician was born at Wrington in Bedfordshire in 1632. His father was not in affluent circumstances, and tenanted a small house represented in the subjoined sketch.

Young Locke was early sent to Westminster school, and afterwards entered at Christ Church college, where he took his degree in arts, and commenced the study of physic. But the strength of his constitution being found unequal to the fatigues of the medical profession, he accepted an offer of being secretary to Sir William Swan, who was appointed envoy to the court of Brandenburg in 1667. This employment continuing only a year, he returned to Oxford, and was pursuing his medical studies, when he accidentally became acquainted with Lord Ashley, afterwards the celebrated earl of Shaftesbury. His lordship being advised to drink the mineral waters at Acton, for an abscess in his breast, he wrote to a physician at Oxford, to provide him with a quantity

against his arrival in that city. This gentleman being absent, the commission devolved on Mr. Locke, who so much interested Lord Ashley by the urbanity of his manners, and superior understanding, that he invited him to his house. Having by his medical skill been instrumental in saving this nobleman's life, he would not allow him to leave his family, nor practise, except among a few particular friends. In this elegant retirement he formed the plan of his great work, "The Essay on Human Understanding." But he was at this moment prevented from making any considerable progress in this undertaking by another employment in the service of his patron, who, being created earl of Shaftesbury, and made lord chancellor the following year, appointed him secretary of the presentations. He held this place till November 1673, when the great seal being taken from his master, he became implicated in his disgrace; but his lordship being still president of the board of trade, he continued his post of secretary, which he held till the commission was dissolved, in 1674, when his public employments were at an end. He then visited Montpellier for the benefit of his health. Lord Shaftesbury being again called into office, he sent for Mr. Locke; but the disgrace of this nobleman, who was obliged to fly into Holland, again involved him in difficulties, and obliged him to share the exile of his illustrious patron.

During Mr. Locke's residence in Holland he was accused at court of having written certain tracts against the government of his country, which were afterwards discovered to be the production of another person; and upon that suspicion he was deprived of his studentship of Christ Church. Mr. Nicoll, in speaking of him at this period, says, that "being observed to join in company with several English malcontents at the Hague, this conduct was communicated by our resident there to the earl of Sunderland, then secretary of state; who acquainting the king therewith, his majesty ordered the proper methods to be taken for expelling him from the college, and application to be made for that purpose to Bishop Fell, the dean. In obedience to this command, the necessary information was given by his lordship, who at the same time wrote to our author, to appear and answer for himself on the 1st of January ensuing; but immediately receiving an express command to turn him out, was obliged to comply therewith, and, accordingly, Mr. Locke was removed from his student's place on the 15th of November, 1684." This account, however, is not correct. All that Lord Sunderland did, was to impart his majesty's displeasure to the dean, and to request his opinion as to the proper method of removing Mr. Locke. The dean's answer contains the following particulars of Mr. Locke, and of his own advice and proceedings against him. "I have," says the dean, "for divers years had an eye upon him; but so close has his guard been on himself that, after several strict inquiries, I may confidently affirm there is not any man in the college, however familiar with him, who had heard him speak a word either against or so much as concerning the government; and although very frequently, both in public and private, discourses have been purposely introduced to the disparagement of his master, the earl of Shaftesbury, his party and designs, he never could be provoked to take any notice, or discover in word or look the least concern: so that I believe there is not a man in the world so

much master of taciturnity and passion. He has here a physician's place, which frees him from the exercise of the college and the obligations which others have to residence in it; and he is now abroad for want of health."

Thus far we might suppose the dean had advanced enough in behalf of the innocence of Mr. Locke. What follows, however, will be read with regret, that so good a man as Bishop Fell should have given such advice:—"Notwithstanding this I have summoned him to return home, which is done with this prospect, that if he comes not back, he will be liable to expulsion for contumacy; and if he does, he will be answerable to the law for that which he shall be found to have done amiss. It being probable that, though he may have been thus cautious here, where he knew himself suspected, he has laid himself more open at London, where a general liberty of speaking was used, and where the execrable designs against his majesty and government were managed and pursued. If he don't return by the 1st of January, which is the time limited to him, I shall be enabled of course to proceed against him to expulsion. But if this method seems not effectual or speedy enough, and his majesty, our founder and visitor, shall please to command his immediate remove, upon the receipt thereof, directed to the dean and chapter, it shall accordingly be executed." In consequence of this a warrant came down to the dean and chapter in these words: "Whereas we have received information of the factious and disloyal behaviour of Locke, one of the students of that our college, we have thought fit hereby to signify our will and pleasure to you, that you forthwith remove him from his student's place, and deprive him of all rights and advantages thereunto belonging, for which this shall be your warrant," &c. And thus one of the greatest men of his time was expelled the college at the command of Charles II. without, as far as is known, any form of trial or inquiry. After the death of Charles II., a celebrated quaker, who had known Locke at the university, used his interest with King James to procure a pardon for him, and would have obtained it if Locke had not said that he had no occasion for a pardon since he had not been guilty of any crime.

In 1685, when the duke of Monmouth was making preparations in Holland for his unfortunate enterprise, the English envoy at the Hague had orders to demand Locke and eighty-three other persons to be delivered up by the states-general. As his natural temper was timorous, not resolute, and he was far from being fond of commotions, he immediately concealed himself, which his friends at Amsterdam enabled him to do. So highly was he respected, that one of the magistrates declared that although they could not protect him if the king of England should demand him, yet he should not be betrayed, and his landlord should have timely notice. While at Amsterdam, Mr. Locke formed a weekly assembly, consisting of Limborch, Le Clerc, and others, for conversation upon important subjects, and had drawn up in Latin rules to be observed by them; but those conferences were much interrupted by the frequent changes he was obliged to make of his places of residence. After being employed for some years on his great work, the "Essay concerning Human Understanding," he finished it in Holland about the end of 1687. He made an abridg-

ment of it himself, which his friend Le Clerc translated into French, and inserted in the "Bibliothèque Universelle" for January 1688. This abridgment created a very general wish for the publication of the whole. The revolution of 1688 at length restored Locke to England, to which he returned in the fleet which conveyed the princess of Orange. He now endeavoured to obtain his studentship of Christ Church,—not that he had any design to return to college, but only that this would amount to a public testimony of his having been unjustly deprived of it. But when he found that the society could not be prevailed on to dispossess the person who had been elected in his room, and that they would only admit him a supernumerary student, he desisted from his claim.

He was now at full liberty to pursue his speculations, and accordingly, in 1619, published his celebrated "Essay on Human Understanding," and the same year his "Two Treatises on Government," in which he fully vindicated the principles upon which the revolution was founded. His writings had now procured him such a high reputation, and he had merited so much of the new government, that it would have been easy for him to have obtained a very considerable place; but he contented himself with that of commissioner of appeals, worth about 200*l.* per annum. He was offered to go abroad in a public character, and it was left to his choice whether he would be envoy at the court of the emperor, the elector of Brandenburg, or any other, but he declined it on account of his ill health.

About this time Locke's attention was directed to the state of the coin, which had been so much clipped as to want above a third of its real value; and although his sentiments on the subject were at first disregarded, the parliament at length took the matter into consideration. Mr. Locke, therefore, published "Some Considerations of the Consequence of the Lowering of the Interest and Raising the Value of Money," and shortly followed it by two more on the same subject in an answer to objections. He had weekly interviews with the earl of Pembroke, then lord keeper of the privy seal; and when the air of London began to affect his health, he went for some days to the earl of Peterborough's seat near Fulham, but was obliged afterwards entirely to leave London, at least during the whole of the winter season. As Oates formed the principal seat of his literary labours for the remainder of this philosopher's life, we place in the subsequent column a sketch of the mansion as it appeared at that time.

The air in the neighbourhood of this residence was so good that it restored him in a few hours after his return at any time from town, although quite spent with fatigue. Besides this advantage here, he found in Lady Masham, the daughter of Dr. Cudworth, a friend and companion. She was also so much devoted to Mr. Locke that, to ensure his residence there, she provided an apartment for him of which he was wholly master; and took care that he should live in the family with as much ease as if the whole house had been his own. He had too the additional satisfaction of seeing this lady educate her son upon the plan which he had laid down as the best method of education, and, what pleased him still more, the success of which was such as seemed to give a sanction to his judgment in the choice of that method, which he published in 1693, under the title of "Thoughts

concerning the Education of Children," and afterwards improved considerably.

In 1695 he published his treatise of "The Reasonableness of Christianity, as delivered in the Scriptures." In this his argument is to prove "that the Christian religion, as delivered in the scriptures, free from all corrupt mixtures, is the most reasonable institution in the world." On the appearance of this work, Mr. Locke found an opponent in Dr. John Edwards, who considered his principles as verging towards Socinianism; and a defender in Samuel Bold. Some time before this Toland published his "Christianity not Mysterious," in which he endeavoured to prove that there is nothing in the Christian religion contrary to or above reason; and in explaining some of his opinions used several arguments drawn from Locke's "Essay on the Human Understanding." Some Socinians also about this time published several treatises, in which they affirmed that there was nothing in the Christian religion but what was rational and intelligible; and Locke having asserted in his writings that revelation delivers nothing contrary to reason, this induced Dr. Stillingfleet, the learned bishop of Worcester, to publish a treatise in which he vindicated the doctrine of the Trinity against Toland and the Socinians, and likewise opposed some of Mr. Locke's principles, as favourable to the above-mentioned writings. This produced a controversy, in the course of which Locke endeavoured to show the perfect agreement of his principles with the Christian religion, and that he had advanced nothing which had the least tendency to scepticism, which the bishop had charged him with.

In 1695 Mr. Locke was appointed one of the commissioners of trade and plantations, a place worth 1000*l.* per annum. The duties of this post he discharged with great ability and diligence until 1700, when the increase of his disorder obliged him to resign it. On this occasion he acquainted no person with his intention until he had given up his commission into the king's hand. His majesty, who knew his worth, was very unwilling to part with him, and said he would be well pleased with his continuance in office, although he should give little or no attendance, and certainly would not wish him to remain in town one day to the detriment of his health. But the year 1700 he lived altogether at Oates, and applied himself without interruption entirely to the study of the holy scriptures; and in this employment he found so much pleasure that he regretted his not having devoted more of his time to it in the former

part of his life. On one occasion, in answer to a young gentleman who asked him the shortest and surest way for a person to attain a true knowledge of the Christian religion, he replied, "Let him study the holy scripture, especially the New Testament. It has God for its author, salvation for its end, and truth, without any mixture of error, for its matter." In 1703 he suffered much from his disorder, but the pangs of bodily complaint were alleviated by the kind attentions of Lady Masham; still he foresaw that his dissolution was not far distant, and he could anticipate it without dread, and speak of it with perfect calmness and composure. After receiving the sacrament at home in company with some friends, he told the minister "that he was in perfect charity with all men, and in a sincere communion with the church of Christ, by what name soever it might be distinguished." He lived some months after this, which he spent in acts of piety and devotion. On the day previously to his departure he said, "he had lived long enough, and was thankful that he had enjoyed a happy life; but that after all he looked upon this life to be nothing but vanity," or, as he expresses a similar sentiment in a letter which he left behind him for his friend Mr. Anthony Collins, one that "affords no solid satisfaction but in the consciousness of doing well, and in the hopes of another life." He had no rest that night, and begged in the morning to be carried into his study, where, being placed in an easy chair, he had a refreshing sleep for a considerable time. He then requested Lady Masham to read aloud some of the psalms, to which he appeared for some time exceedingly attentive; he at last requested her to desist, and shortly after expired, on the 28th of October, 1704.

The moral, social, and political character of this eminent man is sufficiently illustrated by the foregoing brief account of his life and labours; and the effect of his writings upon the opinions, and even fortunes of mankind, is the best eulogium on his mental superiority. In the opinion of Dr. Reid, he gave the first example in the English language of writing on abstract subjects with simplicity and perspicuity. No author has more successfully pointed out the danger of ambiguous words, and of having

indistinct notions on subjects of judgment and reasoning, while his observations on the various powers of the human understanding, on the use and abuse of words, and on the extent and limits of human knowledge, are drawn from an attentive reflection on the operations of his own mind. In order to study the human soul he went neither to ancient nor to modern philosophers for advice, but like Malebranche he turned within himself, and after having long contemplated his own mind, he gave his reflections to the world. Locke was a very acute thinker, and his labours will always be acknowledged with gratitude, in the history of philosophy; but at the same time it must be remembered, that in attempting to analyze the human soul, as an anatomist proceeds in investigating a body, piece by piece, and to derive all ideas from experience, he has unintentionally supported materialism. His declaration that God, by his omnipotence, can make matter capable of thinking, has been considered dangerous in a religious point of view. Locke's great work, his "Essay on the Human Understanding," which he was nineteen years in preparing, owes its existence to a dispute at which he was present, and which he perceived to rest entirely on a verbal misunderstanding, and considering this to be a common source of error, he was led to study the origin of ideas, &c. The influence of this work has rendered the empirical philosophy general in England and France, though in both countries philosophers of a different school have appeared. Henry Lee and Norris were among his earliest opponents. In France, Jean Leclerc distinguished himself particularly as a partisan of Locke; and Gravesande spread his philosophy by compendiums in Holland. Amidst the improvements in metaphysical studies, to which the essay itself has mainly conducted, it will ever prove a valuable guide in the acquirement of the science of the human mind.

Locke's next great work, his two "Treatises on Government," was opposed by the theorists of divine right and passive obedience, and by writers of Jacobitical tendencies; but it upholds the great principles which may be deemed the constitutional doctrine of his country. It was a favourite work with the statesmen of the American revolution, by whom it is constantly appealed to in their constitutional arguments. We have seen that his "Reasonableness of Christianity" maintains that there is nothing contained in revealed religion inconsistent with reason, and that it is only necessary to believe that Jesus is the Messiah. His posthumous works also have caused him to be considered by some as a Socinian. Besides the works already mentioned, Locke left several MSS. behind him, from which his executors, Sir Peter King and Mr. Anthony Collins, published in 1706 his "Paraphrase and Notes upon St. Paul's Epistles to the Galatians, Corinthians, Romans, and Ephesians," with an essay prefixed for the understanding of St. Paul's epistles, by a reference to St. Paul himself. In 1706 the same parties published "Posthumous Works of Mr. Locke," comprising "A Treatise on the Conduct of the Understanding," "An Examination of Malebranche's Opinion of Seeing All Things in God." We subjoin this distinguished philosopher's autograph.

*John Locke*

**LOCKMAN, JOHN**, a dramatic writer of considerable talent, who was born in 1698. His principal works are, a musical drama, entitled "*Rosalinda*," and "*David's Lamentations*." He was also employed in compiling for the "*General Historical Dictionary*." He died on the 2nd of February, 1771.

**LODER, FERDINAND CHRISTIAN VON**, an anatomist and philosophical writer, who was born at Riga in 1753, and studied medicine at Göttingen. In 1778 he took the degree of doctor of medicine and surgery, and was immediately appointed professor in the medical faculty at Jena. He then travelled two years in France, Holland, and England, and formed an acquaintance with the most distinguished men of science. In 1782 he returned to Jena, where he established an anatomical theatre, a lying-in hospital, and a cabinet for the natural sciences. He likewise founded a medico-chirurgical clinicum, in which Hufeland and others assisted. He then became physician to the grand-duke of Weimar, and delivered lectures on several branches of medicine. In 1803 he entered the Prussian service, and was appointed ordinary professor of medicine in the university of Halle. In 1806 he declined an invitation to enter the service of the king of Westphalia, to whom Halle then belonged, and went to St. Petersburg. The emperor Alexander appointed him one of his physicians in 1810, after he had been raised to the dignity of a noble by the king of Prussia. Loder settled in Moscow in 1812, was charged with making provision for the wounded, and when the French occupied the city, he established hospitals for 600 officers and 31,000 privates, in different towns, the direction of which he held for eight months. In 1813 the great military hospital at Moscow was entrusted to him, but in 1817 he resigned this trust, though he continued to be active in the service of the hospitals. In 1818 he was employed in instituting an anatomical theatre at Moscow, at the expense of the imperial treasury. Six days in the week, for ten months in the year, he lectured in Latin, besides devoting much of his time to the church, the schools, the practice of medicine, and public affairs. Besides his translation of Park, Johnson, &c., and many academical dissertations and programs in Latin, at Jena and Halle, he has written "*Anatomisches Handbuch*," "*Anfangsgründe der Medic. Anthropologie und Gerichtl. Arzneiwissenschaften*," "*Journal für die Chirurgie, Geburtshülfe und Gerichtliche Arzneikunde*," "*Tabulæ Anatomice*," and other works.

**LODGE, WILLIAM**, a clever engraver of the seventeenth century, who was the son of a merchant at Leeds, where he was born in July 1649, and inherited an estate of 300*l.* a year. From school he was sent to Jesus college, Cambridge, and thence to Lincoln's Inn, where his studies appear to have ended. He afterwards went abroad with Thomas Lord Bellasis in his embassy to Venice, and meeting with Barri's "*Viaggio Pittoresco*," he translated it, and added heads of the painters of his own engraving, and a map of Italy. While on his travels he drew various views, which he afterwards etched. Returning to England, he assisted Dr. Lister of York in drawing various subjects of natural history, inserted in "*The Philosophical Transactions*." He died at Leeds in August 1689, and was buried in Harwood church. Besides the portraits above mentioned, there are several views by this artist etched in a slight but spirited style from his own designs.

**LOFFT, CAPEL**, a miscellaneous writer of eminence, who was born on the 14th of November, 1751. On account of the delicacy of his health his father did not till 1759 send him to Eton. He, however, distinguished himself at school by his classical attainments, and in 1769 removed to Peter-house college, Cambridge, which he left without taking a degree. In the same year he was admitted a member of Lincoln's Inn.

Having acquired a tolerable knowledge of shorthand, Mr. Lofft attended assiduously as a student in the court of king's bench. At that time Lord Mansfield, Sir W. D. Grey, afterwards Lord Walsingham, and Sir William Blackstone, were on the bench; men whom it must be ever arduous to equal, and whom it is rather improbable that posterity should see excelled. In 1774 Mr. Lofft began and nearly finished an irregular ode, entitled "*The Praises of Poetry*." This was published in the end of the same year. In 1774 he also attempted a tragedy, the title of which was "*Timoleon*." In 1775 he began to learn Hebrew; at the same time he made some progress towards learning the Saxon language.

Mr. Lofft was called to the bar in 1775. In the following year he published "*Cases*, chiefly in the King's Bench, from Easter Term 1772 (when he commenced his attendance in Westminster Hall) to Michaelmas Term 1774." At this time Mr. Lofft entered warmly into the American controversy. He published three tracts on the subject; namely, "*View of the Several Schemes respecting America*," "*Dialogue on the Principles of the Constitution*," and "*Observations on Mr. Wesley's Calm Address*." He also published a short letter addressed to the king with the hope of contributing to prevent hostilities. About 1776 Mr. Lofft wrote several books of an heroic poem in blank verse, which, in conformity to Cowley, he entitled "*Davideis*." He also published in the papers a letter, opposing subscriptions for raising troops without consent of parliament; and he wrote and afterwards published "*Remarks on the Historical Letters of Mrs. Macaulay*." He also translated the "*Athalie*" of Racine. In 1779 Mr. Lofft published his "*Collection of Maxims*," much enlarged, and reduced in part to a system of principles of general and municipal law, in two volumes, under the title of "*Principia cum Juris Universalis tum præcipue Anglicani*;" and at the same time a translation in part, with an improved arrangement, under the title of "*Elements of Universal Law*." Mr. Lofft was about this period a frequent attendant and speaker in the debating societies at Coachmakers' Hall, the Westminster Forum, &c., in which places questions of the greatest political importance were often ably discussed. He also wrote much in the "*General Advertiser*" on the question of parliamentary reform, and in opposition to the American war; and was one of the earliest members of the society for constitutional information, which was formed on the 1st of April, 1780.

At the time of the riots in the year 1780, Mr. Lofft exposed himself to some risk in the commencement by deprecating tumult. When the riots were at their height he published a letter in the "*Courier*," under his usual signature, Drusus, the object of which was to recal his countrymen from violence and outrage, and to check the desolating fury which then insulted and shook the metropolis. Early in the year 1780 Mr. Lofft published "*Eudisia*; a Poem on the Uni-

verse," in blank verse. In February 1781 his uncle, Mr. Edward Capel, died, and left Mr. Loft in the limitation of succession to his estates in Suffolk, after the death of Mr. Robert Capel, who was unmarried and without issue, and who himself died in the same year. In consequence of these occurrences Mr. Loft took up his residence at the family house at Troston, in Suffolk, which, with very short absences, he continued to inhabit for many years. Here he cultivated the same studies and pursuits as he had done in London. In March 1783, by request of the duke of Grafton, the lord-lieutenant of the county, he consented to act as a justice of the peace, and his name was accordingly inserted in the commission. In the same year he published "Observations on a Dialogue on the Actual State of Parliaments," and on a tract entitled "Free Parliaments."

In 1784 he published a "Translation of the First and Second Georgics of Virgil," and in 1785 an "Essay on the Law of Libels."

In 1788 and 1789, and at subsequent periods, Mr. Loft took some part in the exertions made for obtaining an abolition of negro slavery. In consequence of these exertions he was elected an honorary member of the society instituted for that purpose in Philadelphia, having been nominated by his friend Caleb Lowndes, from whose correspondence with Mr. Loft many valuable extracts, illustrative of the state of politics, agriculture, and manufactures in America, were published in "The Annals of Agriculture."

In the winter of 1789, efforts being then making for the repeal of the Corporation and Test Acts, Mr. Loft attended meetings held in London for that purpose, and early in the following year published a tract in support of its justice and policy. In the end of 1788 he wrote, and in the beginning of 1789 he published, "Three Letters to the People of England on the Question of the Regency;" the appointment to which he conceived to rest in the two houses of parliament in case of the temporary inability of the king to exercise the functions of royalty, or to appoint a regent. In the same year, 1789, he published "Observations on the First Part of Dr. Knowles's Testimonies; addressed to a Friend." This friend was the late Rev. Robert Garnham, a man eminently qualified in learning, critical abilities, intellectual endowments, and virtue. In December 1790, although at that time in a very anxious and agitated state of spirits, Mr. Loft published "Remarks on Mr. Burke's Letter on the Revolution of France." This in the year 1791 he enlarged and accompanied with "Observations on Mr. Burke's Appeal."

In November 1798 Mr. George Bloomfield put into his hands his brother's MS. of "The Farmer's Boy." The zealous kindness of Mr. Loft on this occasion was described in our memoir of the Suffolk poet, for which see BLOOMFIELD. Instantly perceiving the merits of the poem, he revised the manuscript, and then sent it to his friend Thomas Hill, Esq., in consequence of whose recommendation it was purchased on very liberal terms by Messrs. Vernor and Hood, the publishers. On its appearance Mr. Loft (who had furnished a preface comprehending some account of the author) again exerted himself in its favour, and to his efforts a portion of the extensive popularity which it obtained was doubtless attributable. To Mr. Loft Bloomfield was subsequently indebted for many other acts of friendship.

BIOGRAPHY.—VOL. II.

During the whole of this period Mr. Loft was laboriously engaged in his duty as a justice of the peace, usually many hours every day. But in the year 1800 he exerted himself, with the under-sheriff, to obtain delay of execution in the case of an unhappy young woman under sentence of death. Her case was of a very extraordinary nature; and from the circumstances of it and her behaviour after conviction, it appeared to Mr. Loft and to others, that there was ground to request and hope a pardon, if time could be gained. The execution was delayed. A petition, to which the duke of Grafton gave his concurrence, was most numerously and respectably signed. The event, however, was, that the prisoner at last suffered, with exemplary composure and magnanimity; and that at the summer assizes of 1800 the removal of Mr. Loft from the commission, without being in any manner called upon to account for his conduct, was officially announced to him. On being deprived of his magisterial functions, Mr. Loft resumed his practice as a barrister, and for some time attended the assizes and the session circuit with considerable success.

When the income tax was in operation, Mr. Loft became one of the commercial commissioners to superintend its execution. In doing so he exhibited no inconsistency; for although he had always greatly disapproved of the tax, yet, being adopted by the legislature, he felt that he ought not to decline a duty which the appointment of the grand jury of the county had entrusted to him, and the just performance of which he thought of more than ordinary concern to individuals and the public. Dismissed from magisterial duties, Mr. Loft returned to poetry, which those duties had in a great measure obliged him to relinquish, to the cultivation of flowers and plants, and to the contemplation of the heavens. On the occurrence of the dispute as to the proper termination of the century, he espoused in the "Gentleman's Magazine," "Monthly Mirror," &c., that side of the question which considered the eighteenth century as having terminated on the 31st of December, 1800. There are perhaps, few men living who have contributed with so bountiful a hand to the various magazines, journals, and other periodical publications of the day. In 1810 Mr. Loft also published a pamphlet "On the Revival of the Cause of Reform," in 1812, "Aphorisms from Shakspeare, Arranged according to the Plays, &c., with a Preface and Notes;" and in 1814, "Laura; or an Anthology of Sonnets on the Petrarchan Model, and Elegiac Quatuorzains, English, Italian, Spanish, Portuguese, French, and German; original and translated: great part never before published: with a Preface, critical and biographical; Notes, and an Index."

Mr. Loft, in the year 1816, repaired to the continent. He went first to Brussels, and thence to the neighbourhood of Nanci. In the year 1820 he proceeded to Switzerland, and lived for some time at Lausanne, and afterwards at the baths at Allier, near Vevay. In the autumn of 1822 he went to Turin, where he resided until the spring of 1824, when he removed to Montcallier, at which place he died on the 26th of May, 1824.

LOFTUS, DUDLEY, a learned oriental scholar, who was born in 1618 at Rathfarnham, near Dublin, in a castle built by his ancestor, and educated in Trinity college, where he was admitted a fellow-commoner in 1635. About the time he took his first degree in arts, the extraordinary proficiency

P

he had made in languages attracted the notice of Archbishop Usher, who advised his father to send him to Oxford, where he might improve his oriental learning, a matter which that worthy prelate considered as highly important in the investigation of the history and principles of the Christian religion. He was accordingly sent to Oxford, and the fruits of his learned labours afterwards appeared in a Latin translation of "The Armenian Psalter," and a Coptic version of "The New Testament." He also compiled a "History of Christ," from the Syriac, besides several other valuable works. His death took place in 1695.

LOGAN, JAMES, was born at Lurgan, in Ireland, in 1674, of Scottish parents, and at the age of thirteen years, having learned Latin, Greek, and some Hebrew, was put apprentice to a linen-draper in Dublin; but, the country being involved in much confusion by the war of the revolution of 1688, he returned to his parents at Bristol, where he devoted all the time which he could command to the improvement of his mind. In his sixteenth year, having happily met with a small book on mathematics, he made himself master of it without any instruction. Having, also, further improved himself in the Greek and Hebrew, he acquired the French, Italian, and Spanish languages.

He was engaged in a trade between Dublin and Bristol, when William Penn made proposals to him to accompany him to Pennsylvania, as his secretary, which he accepted, and landed in Philadelphia in the beginning of December 1699. In less than two years William Penn returned to England, and left his secretary invested with many important offices, which he discharged with fidelity and judgment. He filled the offices of provincial secretary, commissioner of property, chief justice, and, upon the demise of Governor Gordon, governed the province for two years as president of the council. He had for a long time earnestly solicited from the proprietary family a release from the fatiguing care of their business; but, even after this release, he was constantly consulted and appealed to in difficulty; and the quiet and good government of the province for a number of years was due to his prudence and experience. He lived about twenty years at Stenton, enjoying literary leisure, corresponding with eminent men in various countries, and engaged in collecting that library which he bequeathed to the public. He was also the author of several learned works. His "*Experimenta Meletemata de Plantarum Generatione*" entitles its author to be ranked among the earliest improvers of botany. It was written in 1739. The aborigines, of whose relations with the government of Pennsylvania he had the chief management, paid an affecting tribute to his worth, when, in his old age, they entreated his attendance on their behalf at a treaty held in Philadelphia in 1742, where they publicly testified by their chief, Cannassatego, their satisfaction for his services, calling him a wise and good man, and expressing their hope that, when his soul ascended to God, one just like him might be found for the good of the province and their benefit. He was a man of uncommon natural and acquired abilities, of great wisdom, moderation, and prudence, well acquainted with the world and mankind, as well as with books, of unblemished morals, and inflexible integrity. He died at Stenton, near Philadelphia, in 1751, having just completed his seventy-seventh year.

LOHENSTEIN, DANIEL CASPAR VON, a

German poet of the Silesian school, who was born in 1635, in Silesia, and died in 1683 at Breslau. He wrote a great deal, particularly tragedies and comedies; and we mention him merely as a model of bad taste. His bombast is to the furthest extravagance, and, as an instance of aberration from taste, is not uninteresting in the history of the human mind. His dramatic extravaganzas are collected in his "*Trauer und Lustgedichte*."

LOIZEROLLES, M. DE.—This French gentleman was a barrister at the time of the revolution, and was arrested with his father in 1793, on suspicion, and conveyed with him to the prison of St. Lazare. Two days before the fall of Robespierre, the messengers of the revolutionary tribunal arrived at the prison with a list of the prisoners who were to be tried, and called for Loizerolles, the son. The young man was asleep, but the father, with a heroic wish to sacrifice his life for the preservation of his son, allowed himself to be taken to the conciergerie, and appeared before the judges. The clerk, perceiving the error in point of age, substituted the name of François for John, the word father for son, and the age of sixty-one for twenty-two; and thus the father was led to the scaffold, though no charge or crime was alleged against him! M. Loizerolles, jun., celebrated this act of paternal affection in a poem, in three cantos, with historical notes.

LOKMAN.—The name of this Arabian sage figures in the proverbs and traditions of that ancient people. According to tradition Lokman was a scion from the stock of Ad, and was once sent with a caravan from Æthiopia to Mecca, to pray for rain in a time of great drought. But God's anger destroyed the whole family of Ad, except Lokman, the only righteous one: whereupon the Creator of the world gave him his choice to live as long as the dung of seven gazelles, which lay in an inaccessible hole in a mountain, should last, or for a period equal to the lives of seven successive vultures. Lokman chose the last, and lived for an almost incalculable length of time. There is also in the Koran an account of a Lokman surnamed the Wise; sometimes, also, called Abu-Anam, or the father of the Anams. This one—whether identical with the former or not, is not for us to determine—lived in David's time, and is represented as similar in many respects to the Phrygian Æsop; and the Arabians have a great variety of fables by him, which, however, are formed upon the model of those of Æsop, and of which the whole style and appearance are such that they cannot be referred to so early a date as the first century of the Hegira. This person had also a life of remarkable duration (according to some 300, according to others 1000 years), which coincidence in the accounts of them affords good grounds for the conjecture, that the Lokman of the Koran, and the one whom tradition ascribes to the race of Ad, are one and the same person, whose history in the course of ages has been thus fancifully adorned. The fables of Lokman were for the first time made known to Europe through the press by Erpenius, in 1615. They were first published in Arabic with a Latin translation, were afterwards appended to an Arabic grammar, published by Erpenius at Leyden, and have since gone through many editions, none of which, however, are free from errors. Among the oriental nations, these fables, owing to their laconic brevity and tasteless dress, are held in little respect, and, on the whole, are not worthy of the reputation

which they have for a long time sustained with us. In 1799, during the occupation of Egypt by the French, Marcel superintended an edition of "*Fables de Lokman*," at Cairo, which was republished in Paris in 1803; but the best is that prepared by Caussin, in 1818, for the use of the pupils at the *collège royale*.

LOLLI, ANTONIO, a celebrated violinist, was born in 1728, or, according to some, in 1740, at Bergamo, in the Venetian territory. In 1762 he was in the service of the duke of Wurtemberg. He afterwards went to Russia, and his performance pleased the empress Catharine II. so much that she presented him with a bow on which she had herself written the words, "This bow, made by Catharine, with her own hands, is intended for the unequalled Lolli." In 1775 he travelled in England, France, and Spain. In Madrid, besides other perquisites, he received 2000 reals from the director of the theatre for each concert. In 1789 he returned to Italy, and died at Naples in 1794. Lolli endeavoured to unite the excellences of the schools of Nardini and Ferrari. He had acquired an astonishing facility on his instrument. He was called the musical rope-dancer. None of his predecessors had attained such perfection on the finger-board; but, at the same time, he lost himself in wild and irregular phantasies, in which he often neglected all time, so that the most practised player could not accompany him.

LOMENIE DE BRIENNE, STEPHEN CHARLES, a celebrated cardinal, archbishop, and minister of state, who was born at Paris in 1727, and embraced the clerical profession, in which his active spirit, and the powerful influence of his connexions, enabled him to rise rapidly, although his connexion with the free-thinkers of the age could not have been very agreeable to the court and the clergy. In 1754 he published, with Turgot, "*Le Conciliateur, ou Lettres d'un Ecclésiastique à un Magistrat*," which was intended to quiet the difficulties then existing between the parliament and clergy, and which was afterwards several times republished by Condorcet, Dupont de Nemours, and others. In 1758 he was at Rome, in the capacity of conclavist of Cardinal de Luynes, in the conclave which raised Clement XIII. to the papal throne. In 1760 he was appointed bishop of Condom, and, three years after, received the archbishopric of Toulouse, in which situation he obtained the praise of those who were opposed to the old hierarchical and monkish establishments. While he attempted to reduce the power and wealth of the monasteries he was liberal in assisting all who were in need; he caused the Garonne to be united with the canal of Caraman by a lateral canal, which still bears his name; he established institutions for education, also hospitals, and several scholarships at the military school at Toulouse.

In 1770 he was made a member of the academy, and when Beaumont, the archbishop of Paris, died, he would have obtained that elevated situation, but for his attempts at a general reform of the monasteries, which the bigots at court could not forgive. At the first breaking out of the discontents in France Brienne was among the most active. He was the first to raise his voice against the administration of Colonne; and, after the dismissal of that minister, the partisans of Brienne induced Louis XVI. to place him as his successor at the head of the finances. His brother, the count de Brienne, was at the same time appointed minister of war. The new financier cer-

tainly fell short of the most moderate expectations; and, if some excuse is found for him in the almost inextricable confusion which reigned in the affairs of France at this period, still his warmest defenders must allow that, for once at least, they were deceived in him. The confusion increased daily, and the minister, whose ambition had raised him to the rank of prime minister, at this stormy period showed himself destitute of ability and resources. Complaints were soon raised against him on all sides, and in August 1788 the king found himself compelled to dismiss him, and to appoint Necker in his place; who, however, as is well known, was himself unable to quell the storm. Brienne had previously been nominated archbishop of Sens, in place of the cardinal De Luynes, and, to console him for the loss of his place as minister, Louis gave him some abbey, and obtained for him from Pius VI. a cardinal's hat. Brienne also took a journey to Italy, but without visiting Rome, and returned in 1790 to France, to make arrangements for the settlement of his debts, which, notwithstanding his immense income, were so considerable as to compel him to dispose of a portion of his valuable library. The cardinal de Lomenie, as he was now called, took the oath prescribed to the clergy by the constitution, and in March 1791 he asked his dismissal from the college of cardinals, a favour which Pius willingly granted. Brienne had hoped by this step to save himself from the persecutions of the revolutionary party, but he was arrested at Sens in November 1793, was released, and subsequently again arrested, and upon the morning of the 16th of February, 1794, was found dead in his prison. The ill treatment and abuse which he had suffered from his brutal guards, together with indigestion, had brought on an apoplexy, of which he died in the sixty-seventh year of his age. His brother, the minister of war, Athanasius Louis Marie de Lomenie, count de Brienne, whose successor in the ministry was De la Tour du Pin, fell the same year beneath the axe of the executioner.

LONG, EDWARD, a writer, who was born at St. Blaire, in Cornwall, in 1734. On the death of his father he went to Jamaica, where he filled the post of private secretary to his brother-in-law, Sir Henry Moore, then lieutenant-governor of the island; and was afterwards appointed judge of the vice-admiralty court. Mr. Long's ill health compelled him to leave the island in 1769, and he never returned to it, but passed the remainder of his life in retirement, devoting his leisure to literary pursuits, and particularly to the completion of his "*History of Jamaica*," which was published in 1774. His high station in the island afforded him every opportunity of procuring authentic materials, which he digested with ingenuity and candour, although perhaps a little too hastily. He saw its imperfections, however, and had been making preparations for a new edition at the time of his death. He was also the author of several other works. In 1797 he resigned his office of judge of the vice-admiralty court, and died in March 1813.

LONG, ROGER.—This ecclesiastic was master of Pembroke Hall in Cambridge, and Lowndes's professor of astronomy in that university, and the inventor of a remarkably curious astronomical machine, which is thus described by himself:—"I have, in a room lately built in Pembroke Hall, erected a sphere of eighteen feet diameter, wherein above thirty persons may sit conveniently; the entrance into it is

over the south pole by six steps; the frame of the sphere consists of a number of iron meridians, not cut complete semicircles, the northern ends of which are screwed to a large round plate of brass with a hole in the centre of it; through this hole, from a beam in the ceiling, comes the north pole, a round iron rod about three inches long, and supports the upper part of the sphere to its proper elevation for the latitude of Cambridge; the lower part of the sphere, so much of it as is invisible in England, is cut off; and the lower or southern ends of the meridians, in truncated semi-circles, terminate on, and are screwed down to a strong circle of oak, of about thirteen feet diameter; which, when the sphere is put into motion, runs upon huge rollers of *lignum vitæ*, in the manner that the tops of some windmills are made to turn round. Upon the iron meridians is fixed a zodiac of tin painted blue, whereon the ecliptic and heliocentric orbits of the planets are drawn, and the constellations and stars traced: the Great and Little Bear and Draco are already painted in their places round the north pole; the rest of the constellations are proposed to follow: the whole is turned round with a small winch with as little labour as it takes to wind up a jack, though the weight of the iron, tin, and wooden circle, is about a thousand pounds. When it is made use of, a planetarium will be placed in the middle thereof. The whole, with the floor, is well supported by a frame of large timber." Dr. Long published "A Treatise on Astronomy," and "An Answer to Dr. Galley's Pamphlet on Greek Accents." He died December 16th, 1770.

LONG, THOMAS, a learned divine of the church of England, who was born at Exeter in 1621, and became a servitor of Exeter college, Oxford, in 1638. In 1642 he took the degree of B. A., but soon after left the university, and obtained the vicarage of St. Lawrence Clist, near Exeter. After the restoration he was made prebendary of Exeter, which he held until the revolution, when, refusing to take the oaths to the new government, he was ejected. He died in 1700. Wood characterizes him as "well read in the fathers, Jewish and other ancient writings," and he appears also to have made himself master of all the controversies of his time in which subjects of political or ecclesiastical government were concerned, and took a very active part against the various classes of separatists. His principal works are, "An Exercitation concerning the Lord's Prayer in the Public Worship of God," his "History of the Donatists," and his "Vindication of the Primitive Christians in Point of Obedience." He died at a very advanced age.

LONGCHAMP, RICHARD, a distinguished English ecclesiastic, who was born in 1191, and, though only a farmer's son, rose by his talents to the rank of joint regent of England with the bishop of Durham, during the absence of Richard the First at the crusade. He was also legate from the pope, and chancellor of England. Longchamp very soon arrogated to himself the whole power vested in him and the bishop of Durham, with other lords whom the king had joined in the commission, and conducted himself with so much insolence and extravagance that he drew on himself the envy of the nobles and the hatred of the people. His attendants are said to have been so numerous that they consumed three years' revenue of any religious house in which he lay for one night. Prince John, the king's brother, upon whose ambitious projects the bishop, who was

firmly attached to Richard, was a considerable check, joined with the nobles against him, and he was summoned before the lords spiritual and temporal at St. Paul's church. He did not attend, but withdrew into the Tower, where he was besieged by Prince John, assisted by the earls and barons, and the citizens of London. After he had held out one night, he desired leave to go out of the kingdom, which was granted him upon condition that he should give up his castle. He gave sureties for the performance of this engagement, and went to Canterbury, and then to Dover, where he spent some time with Matthew de Clere his brother-in-law, constable of the castle. He then went to the sea-side disguised in a female's dress, with a piece of cloth under his arm, and a yard in his hand, to wait for a ship to convey him abroad; but being suspected to be a man by some persons who saw him, his hood was pulled off his head, and he was discovered. The people, justly offended at the recollection of his wicked administration, dragged him along the sands, and at last threw him into a cellar at Dover, where he was secured from farther violence. The council of the realm sent for him, and he was brought prisoner to the Tower, where he was examined, deprived of his offices, and banished. King Richard afterwards restored him, and he died as he was going to Rome in 1197.

LOMONOSOFF, MICHAEL WASILOWITZ.

—This learned Russian may be justly called the creator of the modern poetical language of his country, and the father of Russian literature. He was born in 1711, near Cholmogory, in the government of Archangel, where his father was a fisherman, whom he assisted in his labours for the support of the family, and in winter a clergyman taught him to read. A poetic spirit and a love of knowledge were awakened in the boy by the singing of the psalms at church and the reading of the Bible. Without having received any instruction, he conceived the plan of celebrating the wonders of creation and the great deeds of Peter I. in songs similar to those of David. But, hearing that there was a school at Moscow, in which scholars were instructed in Greek, Latin, German, and French, he secretly left his father's house, and went to the capital to seek that instruction which his inquisitive spirit demanded. He was then sent to Kiev, and in 1734 to the newly established academy of literature at St. Petersburg, where he studied natural science and mathematics. Two years later he went to Germany, studied mathematics under Christian Wolf, in Marburg read the German poets, and studied the art of mining at Freyberg. On his journey to Brunswick he was seized by Prussian recruiting officers, and obliged to enter the service; but, having made his escape, he returned, through Holland, to St. Petersburg, where he received a situation in the academy, and was made director of the mineralogical cabinet. Soon after, he published his first celebrated ode on the Turkish war and the victory of Pultawa. The empress Elizabeth made him professor of chemistry in 1745, and in 1752 he received the privilege of establishing a manufactory for coloured glass beads, &c. As he had been the first to encourage an attempt at mosaic work in Russia, the government confided to him the direction of two large pictures in mosaic, intended to commemorate the deeds of Peter I. In 1760 the gymnasiums and the university were put under his inspection, and in 1764 he was made counsellor of state. He died in

April 1765. Catharine II. caused his remains to be deposited with great pomp in the monastic church of Saint Alexander Newski. Besides odes and other lyric pieces, he wrote "Petreide," a heroic poem on Peter I., in two cantos, which is the best work of the kind that Russia has yet produced. Lomonosoff also wrote a Russian grammar, and several works on mineralogy, metallurgy, and chemistry. His grammar, and his "Sketch of Russian History," have been translated into German and French.

LONDONDERRY.—See STEWART.

LONGHI, JOSEPH, a clever engraver, born in 1768, in the States of the Church. He went during the political disturbances in Italy to Milan, where he greatly distinguished himself, and surpassed in drawing the celebrated Morghen. He was master of every species of engraving, but subjected technical science to the true object of the art. In the style which combines etching with the application of the burin, he surpassed the most distinguished of his predecessors. In this department are his *Philosopher*, from Rembrandt, and *Dandolo*, from Mettrini. His *Magdalen*, after Correggio, represents with an almost indescribable exactness the softness and transparency of tint admired in the original. His *Galatea Floating in a Shell*, from a painting by Albano, is equally excellent. Raphael's *Vision of Ezekiel* he has also engraved in a masterly style. His original pieces, as, for instance, *Pan pursuing Syrinx*, from the first book of Ovid's *Metamorphoses*, have been much admired. His Raphael's *Marriage of the Holy Virgin* is worthy of the original, and is one of the finest engravings of our times. Some fragments, which have been published, of his "History of the Art of Engraving," have also given him a reputation as a writer on this subject. Eugene Beauharnais, when viceroy of Italy, appointed Longhi professor at the academy of art in Milan, where he received from that prince the order of the iron crown.

LONGINUS, CASSIUS, a Platonic philosopher and celebrated rhetorician, who lived about the middle of the third century. According to some accounts, he was born at Emesa, in Syria; according to Rubken, Athens was his birth-place. Greek literature was the principal subject of his studies. At Alexandria and Athens he attended the lectures of the most distinguished scholars. He studied the Stoic and Peripatetic systems of philosophy, but subsequently became an ardent adherent of the Platonic, and annually celebrated the birth-day of its founder by a banquet. His principal attention was directed, however, to the study of grammar, criticism, eloquence, and antiquities. At the invitation of Queen Zenobia he went to Palmyra to instruct her in Greek learning and to educate her children. He was likewise employed by her in the administration of the state, by which means he was involved in the fate of this queen. For, when Zenobia was taken prisoner by the emperor Aurelian, and could save her life only by betraying her counsellors, Longinus, as the chief of them, was seized and beheaded, A. D. 275. He suffered death with all the firmness of a philosopher. Of his works, among which were some philosophical ones, none is extant, except the "Treatise on the Sublime," and this is in a state of mutilation. Longinus is usually called Dionysius, but this has arisen from the negligence of editors. The manuscript copy of the "Treatise on the Sublime," in Paris, and one in the Vatican, bear the inscription in

Greek, by Dionysius or Longinus, which appeared in the first printed copies as Dionysius Longinus.

LONGUS, the author of a Greek pastoral romance, the subject of which is the loves of Daphnis and Chloe, who lived in the time of Theodosius the Great. Nothing is known of the circumstances of his life, nor is he mentioned by any of the ancients. His work is interesting by its poetical spirit, graphic description, and style. The earlier editions, of which Villoison's is the best, do not contain the work in so complete a state as that of Courier. He supplied, from a Florentine manuscript, an important chasm, but, having taken a copy of it, was careless enough to render the page of the manuscript which contained that narration illegible by an enormous ink-spot.

LOOS, DANIEL FREDERIC, a distinguished die-sinker, who was born at Altenburg, in Saxony, in 1735. Stieler, the royal die-cutter, took him as an apprentice, but kept him back from jealousy. Loos, however, finally went to Dresden, where he worked at the mint, but his merits were here also kept secret by his employer. After many vicissitudes, Loos was employed in the Prussian service at Magdeburg, but was unable to maintain his family, and lived for some time in poverty in Berlin. His merit was at last acknowledged, and in 1787 he became member of the academy of fine arts, and produced a great number of medals. Purity of style and drawing were not so much required in medals as at present in Germany, but his successors have hardly surpassed him in technical skill. Loos died in 1818.

LOPE, DE VEGA, a celebrated dramatic poet, who was born at Madrid in 1562. While a child he displayed a lively taste for poetry, made verses before he knew how to write, and, as he himself avers, had composed several theatrical pieces when scarcely twelve years of age. About this time he ran away from school with a comrade, for the purpose of seeing the world, but was stopped in Astorga, and sent back by the authorities of the place to Madrid. Lope early lost his parents, but was enabled by the assistance of Avila, bishop of Alcala, to complete his studies. He afterwards found a patron in the duke of Alva at Madrid. Encouraged by Mæcenas, whose secretary he became, he composed his "Arcadia," a heroic pastoral in prose and verse, of which Montemayor had given an example in his "Diana." The "Arcadia" is an idyl in five acts, in which the shepherds with their *Dulcineas* speak the language of Amadis, and discuss questions of theology, grammar, rhetoric, arithmetic, geometry, music, and poetry. Inscriptions are also introduced upon the pedestals of the statues of distinguished men in a saloon, in which a part of the action takes place. This work proved the various acquisitions of the author. Conceits and quibbles are frequent in this, as in Lope's other writings. In general, he is one of those writers who set a dangerous example of that false wit, a taste for which extended almost all over Europe. Marino particularly introduced it into Italy, and acknowledged with lively expressions of admiration that Lope had been his pattern.

After the publication of his "Arcadia," Lope married. He appears, however, to have cultivated the poetic art with increasing zeal, for a nobleman of rank having made himself merry at Lope's expense, the poet revenged himself upon this critic, and exposed him to the laughter of the whole city. His opponent challenged him, and was dangerously wounded

in the encounter, and Lope was obliged to flee to Valencia.

After his return to Madrid, the loss of his wife rendered a residence in that place insupportable to him. In 1588, therefore, he served in the invincible armada, the fate of which is well known. During this expedition he wrote "*La Hermosura de Angelica*" ("*The Beauty of Angelica*"), a poem in twenty cantos, which continues the history of this princess from the time in which Ariosto left it. By this work he hoped to do honour to his country, in which, as he learned in Turpin, the succeeding adventures of the heroine occurred. In addition to the peril of rivalry with Ariosto, the difficulty of success was increased by the appearance of a poem upon the same subject by Luis Borhono de Soto, under the title, "*Las Lagrimas de Angelica*," which passed for one of the best poems in the Spanish language, and was honourably mentioned in "*Don Quixote*." In 1590 Lope returned to Madrid and again entered the married state. In 1598 he obtained one of the poetical prizes offered on the occasion of the canonization of St. Isidore. This prize poem he published with many other poems, under the name of "*Tomé de Burguillos*." About this time he also composed a great number of plays for the theatre. His literary fame increased, and his domestic situation made this the happiest period of his life. But he lost his son, and soon after his wife, and had only a daughter left.

He now sought consolation from religion, and became a priest and secretary of the inquisition. His devotion, however, did not interfere with his poetical studies, and he still endeavoured to maintain the distinguished rank which he had taken upon the Spanish Parnassus, and to repel the attacks of his foes and his rivals, among whom Luis de Gongora y Argote was the most distinguished. Lope, who had been attacked in his satires, and who was indignant at the corruption of taste produced by him, allowed himself to ridicule his obscure and affected style, and that of his pupils, although in his poem "*Laurel de Apollo*" he acknowledges the talents of Gongora. But Gongora's corrupt taste infected even his opponents, and it must be confessed that Lope's last works are not entirely exempt from it. Another yet more distinguished assailant was Cervantes, who publicly advised him in a sonnet to leave the epic poem upon which he was then engaged, "*Jerusalem Conquistada*," unfinished. Lope parodied this sonnet, and published his poem, the weakest of his performances. He accompanied it with many remarks, which are all found in the last edition of 1777. Cervantes acknowledged his merits, however, in the following words:—"A distinguished poet, whom no one in verse or prose surpasses or equals." Cervantes died soon after in poverty, in the very city in which his rival lived in splendour and luxury, and in the possession of the public admiration. How differently has posterity judged of these two poets! For 200 years the fame of Cervantes has been increasing, while Lope is neglected in his own country. About the time of Cervantes' death, the enthusiasm of the Spaniards for Lope approached to idolatry, and he himself was not wise enough to reject it. The number of his poetical productions is extraordinary. Scarcely a year passed in which he did not print a poem, and in general scarcely a month, nay, scarcely a week, in which he did not produce a piece for the theatre. A pastoral, in prose and verse, in which he celebrates

the birth of Christ, established his supremacy in this branch; and many verses and hymns on sacred subjects bore testimony to his zeal for the new calling to which he had devoted himself.

Philip IV., who greatly favoured the Spanish theatre, when he ascended the throne in 1621, found Lope in the possession of the stage, and of an unlimited authority over poets, actors, and the public. He immediately loaded him with new marks of honour and favour. At this time Lope published "*Los Triunfos de la Fé*," "*Las Fortunas de Diana*," novels in prose, imitations of those of Cervantes; "*Circe*," an epic poem, and "*Philomela*," an allegory, in which, under the character of the nightingale, he seeks to revenge himself upon certain critics, whom he represents under that of the thrush. His celebrity increased so much that, suspicious with respect to the enthusiasm which had been shown for him, he printed the work "*Soliloquios a Dios*," under the assumed name N. P. Gabriel de Padecopeo, an anagram of Lope de Vega de Carpio, which likewise obtained great applause. He afterwards published a poem on the subject of Mary Stuart, viz. "*Corono Tragica*," "*The Tragic Crown*," and dedicated it to Pope Urban VIII., who had also commemorated the death of this queen. The pope wrote an answer to the poet with his own hand, and conferred on him the title of doctor of theology; he also sent him the cross of the order of Malta, marks of honour which at the same time rewarded his zeal for strict catholicism, on which account he was also made a familiar of the inquisition. All this contributed to support the enthusiasm of the Spaniards for this "wonder of literature." The people for whom he wrote, without regard to criticism (for he says in his strange poem "*Arte de Hazer Comedias*," that the people pay for the comedies, and consequently he who serves them should consult their pleasure), ran after him whenever he made his appearance in the street, to gaze upon this prodigy of nature, as Cervantes called him. The directors of the theatre paid him so liberally, that at one time he is said to have possessed property to the amount of more than 100,000 ducats; but he was himself so generous and charitable that he left but little.

Until 1635 he continued without interruption to produce poems and plays. At this period, however, he occupied himself with religious thoughts, and devoted himself strictly to monastic practices, and died in August the same year. The princely splendour of his funeral, of which the duke of Susa, the most distinguished of his patrons, and the executor of his will, had the direction, the great number as well as the tone of the panegyrics which were composed for this occasion, the emulation of foreign and native poets to bewail his death and to celebrate his fame, presented an example altogether unique in the history of literature. The splendid exequies continued for three days, and ceremonies in honour of the Spanish Phoenix were performed upon the Spanish stages with great solemnity. The number of Lope's compositions is astonishing. It is said that he printed more than 21,300,000 lines, and that 800 of his plays have appeared on the stage. In one of his last works he affirmed that the printed portion of them was less than those which were ready for the press. The Castilian language is indeed very rich, the Spanish verses are often very short, and the laws of metre and rhythm are not rigid. We may, however, doubt the pretended number of Lope's works, or we must admit, that if

he began to compose when thirteen years of age, he must have written about 900 verses daily, which, if we consider his employments, and the interruptions to which as a soldier, a secretary, the father of a family, and a priest, he must have been subject, appears inconceivable. What we possess of his works amounts to only about a fourth of this quantity. This, however, is sufficient to excite astonishment at his fertility. He himself informs us that he had more than a hundred times composed a piece and brought it on the stage within twenty-four hours. Perez de Montalvan asserts that Lope composed as rapidly in poetry as in prose, and that he made verses faster than his amanuensis could write them. He estimates Lope's plays at 1800, and his sacramental pieces at 400. Of his writings, his dramatic works are the most celebrated. The plots of those that approach nearest to the character of tragedy are usually so extensive that other poets would have made at least four pieces of them. Such, for instance, is the exuberance found in "*La Fuerza Lastimosa*," which obtained the distinction of being represented in the *seraglio* at Constantinople. In fertility of dramatic invention and facility of language, both in prose and verse, Lope stands alone. The execution and the connexion of his pieces are often slight and loose. He is also accused of making too frequent and uniform a use of duels and disguises (which fault, however, his successors committed still more frequently), and of freedom in his delineations of manners. Some have attributed to him also the introduction of the character termed *gracioso* upon the Spanish stage. In those irregular pieces, which Lope composed for the popular taste, we find such bombast of language and thought, that we are often tempted to conclude that he intended to make sport of his subject and his hearers. The merit of the elaborate parts of his tragedies consists particularly in the rich exuberance of his figures, and, according to the Spanish critics, the purity of his language. In judging of his boldness in treating religious affairs, we must take into consideration the character of the nation and the nature of the Spanish stage. Many foreign dramatic writers, we may add, have imitated Lope, and are indebted to him for their best pieces and touches. Schlegel in his lectures on the drama says of Lope—"Without doubt, this writer, sometimes too much extolled, sometimes too much undervalued, appears in the most favourable light in his plays; the theatre was the best school for the correction of his three capital faults, viz. defective connexion, prolixity, and a useless display of learning."

LOTICHIUS, PETER, a poet, who was born at Saalmünster, in Hanau, in 1528, and studied philosophy, the ancient languages, rhetoric, and poetry under Melissus, Camerarius, and Melancthon; served in the forces of the Smalcaldic league; travelled in France and Italy as the tutor to some rich young men; during this time he studied medicine at the most celebrated universities of both countries, and afterwards received a doctorate at Padua. He died very young, while professor of medicine at Heidelberg in 1560. His Latin poetry, particularly his elegies, give him a place among the first modern Latin poets.

LOUIS.—The name of many of the most distinguished monarchs who have filled the throne of France. Of these, however, our limits only allow us to take those most celebrated in the annals of history. Louis IX., of France, was the eldest son

of Louis VIII. and Blanche of Castile. He was born in 1215, and baptized at Poissy (for which reason he sometimes wrote himself Louis of Poissy), came into possession of the government in 1226, and remained under the guardianship of his mother, who was at the same time regent of France. This is the first instance of the guardianship and regency being united in one person. The queen had, with the assistance of the pope, brought into subjection the independent barons, who, always at war with each other, disturbed the tranquillity of the kingdom. Louis successfully pursued the enterprise of his mother, summoned to his council the most able and virtuous men, put an end to the abuse of the ecclesiastical jurisdiction, composed the disturbances in Brittany, preserved a wise neutrality in the quarrels of Gregory IX. and Frederic II., and was always intent upon promoting the happiness of his subjects. The wise management of his states enabled him to levy a powerful army against Henry III. of England, with whom the great men of the kingdom had united themselves. Louis had the good fortune in 1241 to defeat his adversary twice in the course of six days, and to force him to a disadvantageous peace.

In the year 1244, when sick of a dangerous disorder, he made a vow to undertake a crusade to Palestine; and neither his mother nor wife was able, four years after, to prevent him from fulfilling this vow. He embarked with his wife, his brothers, and the French chivalry, landed at Damietta, and in 1249 conquered that city. He afterwards twice defeated the sultan of Egypt, to whom Palestine was subject. He himself performed prodigies of valour, particularly in the battle of Massura, in 1250. But famine and contagious disorders soon compelled him to retreat; his army was almost entirely destroyed by the Saracens, and himself and his followers carried into captivity. The sultan demanded for the ransom of the king and his lords the restoration of Damietta and 1,000,000 gold byzantines. But Louis answered, "A king of France cannot allow himself to be bartered for gold." He offered, however, to restore Damietta, as the ransom of his own person, and to pay the sum demanded for his followers. The sultan was so well pleased with this answer that he contented himself with 800,000 byzantines (about 100,000 marks of silver), and concluded a truce of ten years. It was not till the year 1254 that Louis returned to France, and in the interval Queen Blanche, who had ruled the kingdom in an exemplary manner, had died. Louis again turned his attention to the administration of the laws, which, until this time, had been left entirely to the caprice of the barons. The subjects could now appeal from the decision of their lords to four royal tribunals, and learned men were introduced into the parliaments, whose members had till now been composed of barons frequently so ignorant as to be unable to write. Louis likewise diminished the taxes, which had exhausted the wealth of the subjects. In 1269 he drew up a pragmatic sanction, which secured their rights to the chief or cathedral churches. He nevertheless repressed, when occasion required, the arrogant pretensions of the clergy. The high character which Louis IX. bore among his contemporaries may be seen from this circumstance, that Henry III. and his nobles in 1268 selected him for the arbiter of their disputes. After he had united to his dominions several French pro-

vinces which had hitherto been under the dominion of England, he determined in 1270 to undertake another crusade. He sailed to Africa, besieged Tunis, and took its citadel; but a contagious disorder broke out, to which he himself, together with a great part of his army, fell a sacrifice. The instructions which he left in writing for his son show the noble spirit which inspired this king; a spirit which, if it had not been infected with the religious bigotry of the times, would have rendered his administration the greatest of blessings. In 1297 he was canonized by Boniface VIII. Louis XIII. afterwards obtained from the pope that the festival of Saint Louis should be celebrated in all the churches in August 1270.

A statue in freestone was erected to the memory of this monarch in the abbey of Royaumont, of which we give a view in the above engraving.

Louis XI., king of France.—This monarch lived at a period when old principles were giving way to new, and whose life, therefore, becomes an epoch. But Louis XI. is a subject of great interest, not only as a representative of his age, but in his individual character. A person more ready for crime, if conducive to his ends, or a greater devotee, not for the purpose of deceiving others, but to quiet himself, is not to be found in history. The life of such a sovereign can hardly be treated satisfactorily within the limits to which we are confined, because it is not particular events, but the policy of his government and the character of his measures, which render him remarkable. A full view of his life would be a history of France during the fifteenth century; we can give only the outlines. Louis XI. was the son of Charles VII., and was born at Bourges on the 3rd of July, 1423. He was educated in a simple manner, under the eyes of his mother, Mary of Anjou, one of the most virtuous women of her time. At an early age he married Margaret of Scotland, who died

seven years afterwards. Active, bold, and cunning, he was the reverse of his well-disposed but imbecile father, of whose ministers and mistress, Agnes Sorel, he soon showed himself a decided enemy. In 1440 he left the court and put himself at the head of an insurrection at Niort, known under the name of *la Praguerie*. Charles defeated the rebels, and executed some, but pardoned his son, whom he even trusted in 1442 and 1443 with the command against the English and Swiss. Louis conducted himself with valour and prudence, and his father became entirely reconciled to him; but having soon entered into new conspiracies, Louis was obliged to flee to Dauphiné, which Charles left at his disposal. Contrary to the will of his father, he married the daughter of the duke of Savoy, and entertained a treasonable correspondence with the king's court; he is even said to have been accessory to the death of Agnes Sorel. His father however obliged him to flee to Burgundy, and he lived five years at Genèp in Hainault, in a dependent condition. He repeatedly appeared disposed to return when the king's death seemed to be at hand, but with the restoration of his father's health always declined so doing.

Charles VII. died in 1461, having, from fear of being poisoned by his son, hardly ventured to eat any thing, and thus lost his life by excessive care of it. Louis now hastened to Rheims to be crowned. He promised pardon to all who had used force against him in the service of his father, excepting seven, whom he did not name. He swore not to increase the taxes, and immediately broke his oath. The ministers of his father were dismissed, and men of the lower orders—barbers, tailors, &c., assumed their places. Insurrections broke out at Rheims, Alençon, &c., in consequence of his imposition of new taxes, in violation of his oath; but they were soon quelled and followed by many executions. Louis now made a tour through the south of his dominions, supported the king of Arragon in his usurpation of Navarre, and obtained the cession of Rousillon and Cerdagne. His policy became more and more evident. Whilst he pretended to reconcile contending parties, he secretly instigated them against each other; and whenever he had a meeting with a foreign prince, he corrupted his courtiers by bribes, and established secret correspondences with them: instances of this are to be found in his conduct as arbitrator between Castile and Arragon in 1463, at his meeting with Henry IV. of Castile, on the Bidassoa, and, at an earlier period, at the court of the duke of Burgundy and the count of Charleroi.

His vassals rebelled against him on account of his treatment of Francis II., duke of Brittany, whom he attempted to deprive of his rights. The duke being taken by surprise, had promised every thing required of him, but encouraged the dukes of Lorraine, Bourbon, Alençon, Nemours, Burgundy, and the king's brother, the duke of Berri, to conclude the *ligue du bien public*, which in 1465 began open hostilities. The Burgundians besieged Paris, and the king could force his way to his capital only by means of the battle of Montlhéry. But Louis extricated himself on this, as on other occasions, by artful treaties, which he never observed longer than he was compelled to. He consented to yield Normandy to his brother, part of Picardy to Burgundy, &c.; but no sooner was the league dissolved, than he declared that Normandy could not be severed from France,

and forced his brother to seek refuge in Brittany. The duke, however, was too weak singly to maintain the struggle against the king, and signed a sort of capitulation just as Charles the Bold, the young duke of Burgundy, approached with an army to his relief. Louis, who might have risked a battle with Charles, preferred negotiation; which, however, proceeding slowly, he requested a passport from the duke of Burgundy, and actually went to visit him at Peronne. He had just before secretly instigated the people of Liege to rise, and promised them aid. Charles, having discovered this act of treachery, was furious with rage, and hesitated three days (during which he kept the king in prison) as to what course he should adopt. Nothing but the aversion of Charles to take the life of a king, and the greatest presence of mind on the part of the latter, who asserted his innocence under the most solemn oaths, saved him. He was obliged to accompany Charles to Liege, and to witness the pillage and slaughter of which he had been the cause. A peace was concluded on favourable terms for Charles and his allies; but when Louis returned to Paris he used every artifice to evade its fulfilment. He had promised to cede Champagne to his brother, but persuaded him to take Guienne instead. The duke of Burgundy, irritated at this conduct, secretly concluded an alliance with England and Brittany. Meanwhile, Louis XI. had become the father of a prince (afterwards Charles VIII.), and the duke of Guienne had lost all hope of ascending the throne of France. He therefore renewed his connexions with Burgundy. Louis obtained information of these proceedings, and soon after the duke of Berri died of poison administered in an apricot. It never has been doubted but that the king was the perpetrator of the crime, though he ordered masses to be said for the deceased. The duke of Burgundy openly accused him of the murder of his brother, and also of an attempt on his life, whilst Louis charged Charles with a design of assassinating him. The war broke out between them with renewed fury, but an armistice was soon after concluded, in which the duke of Brittany was included. The king of Arragon, who had also waged war against Louis, was not a party to this treaty, and the French king now turned his arms against that prince, from whom he wrested a large extent of territory. He sent the cardinal Joffroi against the count of Armagnac, who atoned for his constant rebellions by a terrible death. During the armistice, Charles had attacked Neuss with great loss. Louis united with the emperor Frederic III., and the Swiss, and attacked Burgundy in 1475. He concluded a truce of seven years with Edward IV. of England, who had hastened to assist Charles by the promise of a sum of money and a pension, and of marrying the dauphin to an English princess. Burgundy and Brittany soon after concluded another armistice with him, by which St. Quentin was ceded to Louis, and the *connétable* count St. Pol was given up to him.

After the death of Charles the Bold, before Nancy, in 1477, Louis took possession, by force, of a considerable part of his dominions, as vacant fiefs of France, and rejected the proposed marriage of the daughter of Charles, then twenty years old, with the dauphin, who was but ten years of age. Maximilian, son of the emperor Frederic III. obtained the hand of that princess, with a part of her dominions, and defeated the forces of Louis at Guinegate in 1478.

After protracted negotiations, peace was finally concluded, on the 28th of December, 1482, Mary being then dead, and the city of Ghent remaining faithful to her heirs, Margaret and Philip. It was agreed that the dauphin should marry Margaret, and receive the counties of Artois and Burgundy, &c., and that Philip should receive the remaining territories. In 1481, Louis, who had been twice affected by apoplexy, haunted by the fear of death, shut himself up in the castle of Plessis-lès-Tours, endeavoured to conceal the state of his health, loaded himself more than ever with images of saints and relics, continued to commit crimes and ask pardon for them from *sa bonne dame, sa petite matresse*, and died at last, on the 31st of August, 1483. The great object of Louis was the consolidation of France, the establishment of the royal power, and the overthrow of that of the great vassals. He has often been blamed for neglecting to marry the dauphin to Mary of Burgundy, and allowing her to be united to an Austrian prince; also for not taking the opportunity to marry the dauphin to Joanna, daughter of Ferdinand and Isabella, which would have made Charles VIII. heir of Spain and America. But Chateaubriand says, that mere increase of territorial dominion was never the policy of Louis. He refused the investiture of Naples, and, when the Genoese offered to take him for their sovereign, he answered, "The Genoese give themselves to me, and I give them to the devil." His great object was to overthrow the feudal aristocracy, and make himself absolute; and he neglected no opportunity and spared no crime to effect his purpose. The chronicles of the time enumerated four thousand people who perished on the scaffold, or by the gibbet, during his reign. Tristan, his chief hangman, was his favourite, and his ministers and companions were of the lowest classes. His cruelties were often studied. The children of the duke of Nemours were placed under the scaffold, in such a manner that their father's blood flowed upon them; they were then thrown into dungeons, where they were exposed to great suffering, and their teeth were pulled out at intervals. On the other hand, he encouraged commerce as much as the ignorance of his times allowed, was extremely active, and attended to every thing. The contradictory traits of his character occasioned a singular opposition in his tastes and feelings. He was, at the same time, confiding and suspicious, avaricious and lavish, audacious and timid, mild and cruel. "Towards the end of his life," says Chateaubriand, "Louis XI. shut himself up in Plessis-lès-Tours, devoured by fear and ennui. He dragged himself from one end of a long gallery to the other, surrounded by grates, chains, and avenues of gibbets leading to the castle. The only man who was seen in these avenues was Tristan, chief hangman, and companion of Louis. Fights between cats and rats, and dances of young peasant boys and girls, served to amuse the tyrant. It is said that he drank the blood of young children to restore his strength. *De terribles et de merveilleuses médecines*, say the chronicles, were compounded for him. Yet his efforts could not avert death.

Louis XII., king of France.—This monarch, who reigned from 1498 to 1515, was called by his subjects *le père du peuple*. Before his accession to the throne, which took place after the death of Charles VIII., he was duke of Orleans, and first prince of the blood. The lessons of his German mother,

Mary of Cleves, and the misfortunes which he underwent at a later period, corrected the faults of his education, which had been purposely neglected, in compliance with the will of Louis XI.; but, on ascending the throne, he pardoned the wrongs which he had suffered before his accession. "The king of France," said he, "must not revenge the injuries done to the duke of Orleans." He showed himself grateful toward his friends. The ambitious Georges d'Amboise, his minister, archbishop of Rouen and cardinal legate, enjoyed his full confidence. After the death of this minister in 1510, Louis took the reins himself. He re-established discipline in the army, and brought the turbulent students of Paris to order—a task which was not without difficulty, on account of their great number and the privileges which they enjoyed. He much improved the administration of justice, lessened the taxes, and would never consent to increase them, though he was engaged in many wars. The expense of these he supplied by making a number of offices venal, and selling some crown estates. He united the duchy of Brittany for ever with the crown, by marrying, in 1499, the widow of Charles VIII., the beautiful Anne, duchess of Brittany, the object of his love even before his separation from the excellent but extremely plain Jeanne, daughter of Louis XI., whom he had been forced to marry, and who had borne him no children.

In order to enforce the rights which he inherited from his grandmother, Valentina Visconti, to the duchy of Milan, against Louis Sforza, called Moro, he sent in 1499 an army over the Alps, which conquered the duchy of Milan within twelve days; after which Genoa also surrendered to him. In vain did Louis Moro attempt to maintain himself by the assistance of the Swiss; he was taken prisoner in 1500 at Novara, and died in 1510, in confinement, at Loches in France. In 1500 Louis XII. concluded a treaty with Ferdinand the catholic, by which the kingdom of Naples was divided between them. King Frederic of Naples proceeded to France, where Louis gave him a considerable annuity. But Ferdinand possessed himself of the whole kingdom of Naples, and retained it by the treaty of 1505. Louis had promised to marry his daughter Claude to the grandson of the German emperor, Charles of Luxemburg, afterwards Charles V., and to give her Brittany, Burgundy, and Milan, as a dowry. But the estates assembled in 1506 at Tours, begged, on their knees, the father of his people, as they called him, to marry his daughter to Francis, count of Angoulême, of the family of Valois. Louis consented, the estates declared the first contract of marriage void and contrary to the fundamental laws of the realm, and Francis married Claude. Louis now devoted himself particularly to the education of this prince, who was to succeed him, but at first with but little success. The league of Cambray, established by Pope Julius II. against Venice in 1508, involved France in a new war. Louis now commanded the army in person, and was victorious over the Venetians at Agnadello in 1509, where he fought with great bravery. Julius II., however, fearing the power of France in Italy, concluded the holy league with Venice, Switzerland, Spain, and England, against Louis XII. in 1510. In vain did the king, in conjunction with the emperor Maximilian, assemble in 1511 a council at Pisa, in order to reform the church in its head and

members, and to depose Julius II.; the pope laid an interdict on France in 1512, and declared Louis XII. to have forfeited his crown. The French armies could not maintain themselves after the death of their general, Gaston de Foix; they were beaten by the Swiss at Novara in 1513, and retreated over the Alps; after which Maximilian, son of Louis Moro, took possession of Milan, and Genoa made herself independent of France. The Swiss, at the same time, penetrated into France as far as Dijon, and Henry VIII. of England defeated the French in 1513 at Guinegate. Ferdinand the catholic also, in 1512, had taken Upper Navarre, which, until then, belonged, together with Lower Navarre, in France, to the house of Albret. Louis XII. now renounced the provinces on the other side of the Alps and the Pyrenees, became reconciled with Leo X., the successor of Julius II., and concluded in 1514 a general peace with Henry VIII., whose sister Mary he married, after the death of Anne, after which he united his second daughter, Renée, to the arch-duke Charles (Charles V.). From love to his beautiful wife, who was only sixteen years old, Louis, then fifty-three years of age, changed his whole mode of life, to the injury of his health, and thus accelerated his death, which took place in January 1515.

Louis XII. possessed many of the qualities of a good ruler. He was open, honest, economical, just, kind-hearted, and magnanimous; he was a friend of science, and attracted learned men to his country, particularly from Italy, and France owes to him its first scientific collections. He loved to read Cicero's "*De Officiis*," "*De Senectute*," and "*De Amicitia*." France enjoyed, under him, a degree of prosperity and security which it had never possessed before. In regard to the foreign relations of the country, Louis had not sufficient talent to oppose the crafty Julius II., Ferdinand the catholic, and Cardinal Wolsey. His generals, Trivulce, De la Tremouille, Gaston de Foix, Bayard, and others, maintained, even in misfortune, the glory of the French arms.

Louis XIII., who was surnamed the Just in the early part of his reign, but from what cause is not known, was born in 1601. He was the son of Henry IV. and Maria de' Medici, and ascended the throne in May 1610, after the murder of his father. Maria de' Medici, who was made guardian of her son and regent of the kingdom, squandered the treasures of the crown in forming a party for herself, and departed from the principles of her husband, especially by forming a close alliance with Spain. The troops were dismissed, and Sully was obliged to retire from the court. The princes of the blood and the nobles took advantage of the weakness of the kingdom occasioned by these measures; they rose in rebellion with the marshal Bouillon at their head. The government was compelled to yield to their demands, and these concessions led to still greater encroachments upon the rights of the crown and people. France became the prey of internal parties and civil dissensions, which the Florentine Concini, Marshal D'Ancre, prime minister at that time, was utterly unable to suppress. The disturbances rose to the highest, when the king in 1615 married a Spanish princess.

Henry, prince of Condé, abandoned the royal party, and took up arms in conjunction with the Huguenots. The king, too weak to oppose this at-

tack, made peace with the prince, but sent him to the bastille some time after, by which another civil war was kindled, in which however the insurgents had no success, and the marshal D'Ancre, whom the king hated, being murdered, tranquillity appeared to be again restored. But when the king soon after banished his mother to Blois new disturbances arose; for the people, who had hated Maria on account of her tyranny, now took compassion upon her in her misfortunes. The king was obliged to be reconciled to her, and a formal peace was concluded at Angoulême, in 1619, between the contending parties.

But it was hardly signed when it was again broken. Maria, at the instigation of the bishop of Luçon, again took up arms against her son. A new reconciliation took place, only to be followed by new dissensions. During these disturbances the Huguenots rose in arms, with Rohan and Soubise at their head; and a great part of the kingdom rebelled against the king, who now delivered himself up to the guidance of the cardinal Richelieu. After victory had inclined, sometimes to one side, sometimes to the other, and both parties felt deeply the necessity of repose, peace was again concluded between the king and the Huguenots. This also continued no longer than the preceding. Rochelle, the head quarters of the Huguenots, revolted, and was supported by England. The king drove the English to the sea, conquered the island of Ré, and at last Rochelle likewise, which, under the spirited command of the mother of the duke of Rohan, had defended itself for more than a year, and contended with all the horrors of a siege. This siege cost the crown 40,000,000 livres.

Afterwards a war arose with the emperor, who had refused to the duke of Nevers the investiture of Mantua. The united forces of the emperor, Spain, and Savoy, were again defeated by the French at Vegliano in 1630, and the duke of Mantua confirmed in his possessions by the peace of Chierasco. The only brother of the king, Gaston of Orleans, now revolted against him, in conjunction with the queen mother. The insurgents were, nevertheless, defeated; the duke of Montmorenci, in alliance with Gaston, was vanquished in the battle of Castelnaudary, taken prisoner, and executed at Toulouse in 1632. Gaston received a pardon. In the succeeding war with Spain, which continued twenty-five years, during thirteen of which it was waged in Germany, success inclined sometimes to one side, sometimes to the other; yet the king was at last enabled in 1636 to expel from the French dominions the Spaniards who had landed in Provence, and the imperial troops which had penetrated as far as Burgundy. The events of the following year were yet more favourable to France; but the exhausted state of the finances opposed an insuperable obstacle to the progress of the French arms. In this state of misfortune Louis XIII. died, on the 4th of May, 1643. During this war Louis had put his person, his crown, and kingdom, under the protection of the Holy Virgin; a day which was long regarded as a festival in France.

Louis XIV., king of France and Navarre, was born on the 5th of September, 1638, after a barrenness of twenty-two years on the part of his mother. Being, therefore, considered a particular gift of heaven, he was called *Dieu-donné*. He came into the world with several teeth, on which subject Grotius has some jests in his letters. He married, in 1660, Maria Theresa, daughter of King Philip IV., who died

in July 1683, and the same year he secretly married Françoise d'Aubigné, widow of Scarron. Louis XIV. was five years of age when his father, Louis XIII., died, and his mother caused herself to be declared regent and guardian. To Mazarin was entrusted the superintendence of the education of the king, which was much neglected. But, although Louis learned nothing from his teacher (the archbishop Péréfixe), he observed much. A deep impression was made on him during his minority by the commotions of the Fronde, which set so many different characters in action. In September 1651 Louis proclaimed his majority, but Mazarin continued at the head of the government till his death. From this time Louis reigned fifty-four years, without any prime minister, in complete accordance with his own words—*L'état c'est moi!* From Mazarin he had learned an ambitious policy, and a contempt of the parliament. On one occasion, when Mazarin could not effect his purpose, the young king, then but seventeen years of age, entered the hall of the parliament of Paris, booted and spurred, with his whip in his hand, and commanded an edict to be registered. Every thing united to surround him with splendour. History, however, has not confirmed his title of *great*. Louis possessed some royal qualities, perhaps all that are requisite for show. Thus he was enabled to gratify the inclination of the French for theatrical display; he even gave this inclination a permanent direction. His reign was adorned by great statesmen and generals, ecclesiastics, and men of literature and science. The civil wars had produced the same effect which the revolution afterwards produced, of calling forth men of talent and energy, who made the national glory and the splendour of the king the object of their exertions. Louis himself had a taste for a kind of greatness. "This was," as John Müller says of him, "the source of the benefits which he rendered to the arts and sciences, of the disturbances of Europe, of the violation of all treaties, in short, of the remarkable character of his reign. With handsome features and a tall form he united a peculiar dignity of language and manner, and the noble and charming tone of his voice, won the heart, but the loftiness of his whole demeanour inspired respect. The Spanish gravity which he inherited from his mother was tempered by the graces of French politeness. Naturally so grave that even the oldest courtiers never recollected to have heard more than one jest from his mouth, he loved, nevertheless, gaiety in others, applauded Molière's comedies, and laughed at the witty sallies of Madame de Montespan. At his court, which became a model for all the others of Europe, every thing had reference to the king, and tended to augment his dignity. The nearer you approached his person, the higher rose your awe. It was a reverence resembling worship which was paid to the throne, the person of the king, and the pride of the nation. But he possessed, nevertheless, qualities which are requisite for playing well the part of a monarch. "The qualities of his mind," says Grouvelle, "were justness, solidity, constancy, and application. He united therewith habitual discretion and the seriousness which conceals deficiencies. He was naturally silent and inclined to observation." Louis had nothing of the hero, but he possessed the art of ruling those who surrounded him. He was no general, but was able to appropriate to himself the reputation of his generals. Resoluteness and

energy elevated him, at times, above the strictness of courtly etiquette. Early in life he danced in the ballets. But hearing at the theatre when "Britannicus" was performed the verse in which it is said of Nero, as a reproach, *Il excelle à se donner lui-même en spectacle aux Romains*, he never again danced in public. With an excellent memory his judgment was sound; he knew how to say what was suitable at the right time, and with dignity and delicacy; he understood how to punish and reward with words. The following trait shows that even in generosity he had a dash of ostentation. The marquis of Uxelles, having been compelled to surrender Mayence, thirty-two days after the opening of the trenches, threw himself at the feet of the king, whose displeasure he feared, while he related the reasons of the surrender:—"Rise, marquis," said the king, "you have defended the fortress like a man of spirit, and capitulated like a man of sense." He intimated to the aged Boileau, who had retired to Auteuil, and appeared but seldom at court, that when his health permitted him to come to Versailles he would always have half an hour for him. When de Grammont found fault with a madrigal of the king's, Louis was pleased that the courtier, being ignorant of the author, had spoken so freely. Boileau, also, ventured to blame some verses which met the king's approbation, and Louis was by no means displeased. "He understands such things, it is his business," was his remark. Low flattery he repelled: thus he rejected the prize-question of the French academy:—"Which of the virtues of the king deserves the preference?" By the esteem which he manifested for Boileau, Molière, Bossuet, Massillon, &c., he contributed to inspire the higher classes with a respect for the arts and sciences, and a taste for the society of men of learning and genius. But his natural pride often degenerated into haughtiness, his love of splendour into useless extravagance, his firmness into despotism. Determined no longer to tolerate Calvinism in France, he said:—"My grandfather loved the Huguenots without fearing them; my father feared, without loving them; I neither fear nor love them." He evinced his severity, also, in the case of Fouquet, superintendent of finance, from whom he accepted a *fête* when he was on the point of condemning him to perpetual imprisonment in 1661.

He manifested an interest in the advancement of his nation, but, deceived by self-love, he submitted to the influence of others. While he believed himself free and independent, Madame de Maintenon exercised the strongest power over him by her talents, piety, and virtue. His credulity went so far that he assured the nuncio, in 1685, that whole cities, such as Uzes, Nismes, Montpellier, &c., had been converted! While the protestants were robbed of their property and freedom he was engaged in splendid hunting expeditions. Two meritorious naval officers who had taken the liberty to offer some modest suggestions respecting a naval school, were imprisoned for a year and cashiered. The reputation of Louis is the work of his ministers and generals. Feuquières raised the art of war into a science. Louvois introduced discipline into the army. Vauban greatly improved the art of fortification. Men like Estrades and D'Avaux, made diplomacy at home in France. Louis himself was capable of negotiating immediately with ambassadors on matters of state. The splendour of the French court, the boldness displayed in the

cabinet and the field, the fame of the nation in arms and arts, introduced the French language into the courts of Europe; and from the peace of Nimeguen, in 1678, it gradually supplanted Latin as the official language of states. But Colbert was the chief source of the greatness of Louis and France. That ordering, creating, and sagacious spirit originated the great standing armies of Louis, and imposed this burden on all the governments of Europe; at the same time he maintained a hundred ships of the line, and encouraged manufactures, navigation, and commerce; and the first French settlement in the East Indies was founded at Pondicherry. Colbert developed the astonishing resources of France in population, natural riches, and national spirit.

But, after his death in 1683, Louvois and Louis plucked the fruit while they felled the tree. The pride of the king, and the vanity of the nation, seconded the ambition of the despotic minister of war. Notwithstanding all this oppression disaffection never found a rallying point of resistance. Such gratification did the nation experience in the splendour of a cruel and prodigal reign! Five wars, the revocation of the edict of Nantes, the building of Versailles, the hatred of the nations, the battle of La-Hogue, and the deep policy of William III. of England, overthrew the power of Louis in the Spanish war of succession. Favourable circumstances, the opinion of the age, and the consciousness of strength on the part of a people not yet corrupted, were all that preserved from downfall the tottering throne of the falling king. Death rapidly snatched away those who stood nearest him; first his only son, then his grandson, with his grandson's wife and eldest son, the hopes of France. The court intrigues, satiety, devotion, and the religious predominance of Maintenon, together with the influence of his confessor La Chaise, and his far worse successor Tellier, from 1709, made the heart of the aged king indifferent to the state of his dominions. The proud Louis, who imagined himself competent to every thing, who, after the death of his great minister, selected young men whom he could guide at pleasure, was at last so led astray by his confessor Tellier, that he caused the constitution Unigenitus, drawn up according to Tellier's plan by three Jesuits, to be issued as a bull in 1713 by Pope Clement XI., who was equally deceived, thus giving the Jesuit party the triumph over their opponents, and at the same producing commotions, which continued for forty years to agitate the church and state. Louis manifested, however, a strength of mind and firmness in death, as well as in the misfortunes which, in his last years, shook his throne and house; for Heinsius, Eugene and Marlborough humbled the pride of France before the Spanish throne was secured to the grandson of Louis, by the death of Joseph I. and the victory of Villars at Demain. He submitted to all conditions, unless they were dishonourable, but such he rejected with scorn. When Philip was finally established on the throne at Madrid, the partition wall of the Pyrenees was not destroyed, as Louis had hoped, when he said to his grandson on his departure, *Il n'y a plus de Pyrénées*; and France was burdened with a debt of 2,500,000,000 livres. The plan of attaching Spain to France in order to counteract the connexion of England and Holland (which threatened the French commerce, navigation and colonies), exhausted France and laid the foundation of that revolution which was

not to terminate till a century after the death of Louis XIV. Grouvelle says, therefore, of him, with justice:—"We may allow him good qualities but not virtue. The misfortunes of succeeding reigns were, in part, his work, and he has hardly influenced posterity except for its ruin." The same judgment is passed by Madame de Staël, in her "Reflections on the French Revolution." What is called the age of Louis XIV., as compared with Pericles, Augustus, and the Medici, was a result of the impulse which circumstances communicated to the national genius. Louis, who was not himself possessed of a great, comprehensive mind, and who was much and laboriously occupied on trifles, patronized genius only as a necessary instrument for his purposes. At Colbert's suggestion he founded the academy of sciences and that of inscriptions; he improved the French academy, encouraged able writers to raise his reputation and the French language above the hatred of nations, and the sphere of its influence was wider than that of his armies. His nation gave laws to Europe in matters of taste. The tone of French society was a model for the German courts, and corrupted the spirit of the nobility while it destroyed morals.

It is not, however, to be forgotten, that the expulsion of the Huguenots from France also promoted the diffusion of the French language and manners. The great art of pleasing was the soul of all the other arts in France; it even opened to science itself the avenue to the circles of the polished classes. Pascal, who wrote with vigour and delicacy, the sublime Bossuet, and Fenelon, splendid in his humility, the great Corneille who boldly took his flight among the surrounding barbarism, the unique Molière, the inimitable Fontaine, and the calm thinker and spirited satirist Boileau, the friend of the classical Racine, kindled the blaze of light and philosophy in France. "Their electrical shock roused the north from the monotonous studies of its universities." The fine arts were not neglected. Of Lebrun's epoch of art under Louis XIV. we are reminded by thirty-four paintings by this master in the museum of the Louvre. The Flemish school, particularly Teniers, did not please the king. Girardon was distinguished among the sculptors. Lenotre laid out the splendid gardens of Versailles; Perrault built the colonnade of the Louvre, Hardoin Mansard the dome of the invalids. Lulli was the creator of French music. A large proportion of the great monuments of France, which excite the attention of the traveller, had their origin in the reign of Louis. He constructed the wonderful harbours, ship-yards and fortifications at Brest, Rochefort, L'Orient, Havre, Dunkirk, Cette, and Toulon; and at his bidding the canal of Languedoc united the Mediterranean with the ocean.

The most splendid period of the reign of Louis XIV. extended from the peace of the Pyrenees, concluded by Mazarin in 1659, to the death of the great Colbert in 1683. That peace, however, lasted only till 1665, when Louis, on the death of his father-in-law, Philip IV. king of Spain, laid claim to the Spanish Netherlands, by virtue of the right of *devolution*, as it was called, which was a private law in part of the Netherlands, but could by no means be considered the rule of succession to the government of these states. Holland, therefore, concluded in 1668 a triple alliance with England and Sweden for the preservation of the Netherlands, of which alliance,

although Louis was victorious in two campaigns, the peace of Aix-la-Chapelle was the result. Louis retained, indeed, the conquered places in the Netherlands, but was compelled to abandon his intentions on the country at large, and, as he attributed this to the triple alliance, he resolved on a retaliatory war against Holland, having previously succeeded in separating England and Sweden from their connexion with the republic, and uniting them with himself. This war, undertaken without regard to the commerce of France, to which it was very detrimental, and in which Spain, the German emperor, and Brandenburg also engaged against France, continued from 1672 till the peace of Nimeguen, concluded 1678 and 1679, in which Holland lost nothing, while Louis XIV. received from Spain, Burgundy, which the king of Spain had previously held, as an appurtenance to the circle of Burgundy, under the sovereignty of the German empire, and sixteen places in the Netherlands. Louis lost in this war his two greatest generals, Turenne and Condé; the former fell at Sasbach in 1675, the latter retired in 1676 on account of his feeble health. Louis, however, still had Catinat, Crequi, Luxembourg, Schomberg, and Vauban. After the peace of Nimeguen, it would have been politic for Louis to have ceased prosecuting for a while his plans of aggrandizement; but he renewed immediately after the *réunions*, as they were called. In the three treaties of peace a number of places, with all their appurtenances, had been ceded to France, though it had not been decided what really did pertain to them. Louis, therefore, established, in 1680, chambers of *réunions* at Metz and Brisach, whose office it was to accord him, under the form of right, every thing that could be considered in any way as belonging to those places. France in this manner acquired large districts on the borders of the Netherlands and of Germany. Louis would also gladly have obtained Strasburgh, but, as even the chambers of *réunions* could start no formal claim to it, this important place was quietly surrounded by soldiers, and compelled to surrender in 1681 without a blow. Spain and the German empire protested against this act, but both found it expedient in 1684 to enter into a twenty years' truce with Louis XIV., by which this monarch obtained for that time, besides Strasburg, all the places re-united prior to August 1681.

Meanwhile, Colbert had died in 1683. From this time France declined with the same rapidity that it had risen under his administration. The first blow it received was the revocation of the edict of Nantes, in October 1685, after several years' oppressions of the protestant party, by which measure the kingdom lost 700,000 of its most valuable subjects. To this measure the king was led by the united exertions of the two parties of the court, in other respects opposed to each other—the parties of the minister Louvois and of Maintenon, who co-operated with the generally benevolent confessor of the king, Lachaise. Colbert, to his death, had opposed the adoption of violent measures, which might induce the protestants to emigrate. France was soon after involved in a new war. Several circumstances gave Louis XIV. and Louvois opportunity, in spite of the twenty years' truce, to enter the field anew. The war which Louis now waged from 1688 to 1697 against Germany, Holland, Spain, Savoy, and England, was terminated by the peace of Ryswick, in which Louis resigned all

the *réunions*, and, in addition, ceded to Germany, Brisach, Friburg, Kehl, and Philipshurg, besides all the smaller fortresses erected by France on the German side of the Rhine. Although, throughout the war, Louis was conqueror rather than conquered, he was bent on peace. The exhaustion of his kingdom, and especially the fear that a continuance of the war might frustrate his views on the Spanish succession, compelled him to yield. The death of Charles II., king of Spain, to which Louis had long looked forward, took place at the end of 1700. Louis had already concluded treaties of partition with respect to the Spanish succession with England and Holland; but Charles II., by a secret testament, had designated the grandson of Louis, Philip of Anjou, as heir of the whole monarchy, to the disadvantage of the house of Austria, in which the inheritance was legitimately vested. On the enforcement of this testament Louis insisted, after the death of Charles, and was thus involved in the Spanish war of succession, which he precipitated by acknowledging the English pretender, son of James II., in violation of the peace of Ryswick. The finances of Louis were in great distress; he had also lost many of his great men in the cabinet and field; while, on the other hand, his numerous enemies—England, Holland, the emperor and the German empire, Prussia, Portugal, and Spain—could oppose to him two of the greatest generals—Eugene and Marlborough.

France suffered greatly by this war, which was terminated by the treaty of Utrecht in 1713, and those of Radstadt and Baden in 1714, brought about by the concurrence of several circumstances favourable to France, especially by the change that took place in the political system of England in 1710, after Louis had several times proffered peace, without success, on account of the hard terms insisted on by his enemies. Louis made, indeed, some concessions to England, Holland, and Savoy, but saw his grandson acknowledged as king of Spain, under the name of Philip V. This, however, was connected with a renunciation, which should prevent the possibility of any future union of the Spanish and French crowns. The internal prosperity of the kingdom was totally ruined by this war, of which the expenses in the year 1712 alone amounted to 825,000,000 livres. The great army which he kept on foot was what chiefly excited and nourished in Louis the love of conquest. He maintained a larger standing army than any other prince of his time. It rose from 140,000 to 300,000 men. Respecting the policy of Louis XIV., the following is the language of Flaccus:—"The cabinet of Louis XIV., notwithstanding the diversity of talents of his ministers, exhibits, in its most important negotiations with foreign powers, almost always the same character of lofty pretension. The spirit of his policy may be clearly seen in the manner in which he insisted on interpreting the treaties of Münster, of the Pyrenees, and of Nimeguen, and the renunciation of Queen Maria Theresa. The means of imparting validity to such arbitrary explanations were, force of arms, artful diplomacy, expert spies, and corruption. The king expended great sums in securing the favour of sovereigns—Charles II., for example, of England—their ministers and mistresses. Against his enemies he employed, even in times of war, clandestine popular excitements; he encouraged the commotions in Catalonia, Sicily, England, Portugal, and Hungary. More than any king before him

he enlarged the boundaries of the kingdom, especially towards the north, by which means he secured the capital against the accidents of war. Till the battle of La Hogue in 1692, in which the English and Dutch fleet, under Admiral Russel, overcame the French admiral Tourville, he maintained the balance of power on the ocean, and made his flag respected by the natives of Barbary and by the most powerful maritime states. On the continent he held a decided predominance till the peace of Nimeguen, so that he had no reason to fear any coalition of the other powers. To this his connexion with Sweden and some of the small German principalities mainly contributed. He subsequently fell somewhat from his high elevation, but continued to be the first sovereign of Europe, even after his defeats in the Spanish war of succession; for, after he had severed the league formed against him by the peace with England, neither Austria nor the German empire could long offer resistance." To this foreign policy, favoured by the weakness and political errors of his neighbours, was added an arbitrary internal administration. The system of police, organized by D'Argenson, in the last years of the reign of Louis, was, in its effects, as formidable as an inquisition.

Louis XV., was the great grandson of Louis XIV., and son of the duke of Burgundy. He was born in February 1710, and commenced his reign in 1715. The influence of the age of Louis XIV. on the religious and political notions of the cultivated classes, and especially the increasing power of public opinion in France during the reign of Louis XV., are conspicuous. The characteristic of the age of Louis XV. consists in the intellectual development of the nation in the splendour and boldness of new philosophic views, which had so strong an influence on society. From them proceeded a fearful separation of reason from morality, of the passions from rectitude, and of enlightened ideas from the church and state. The immoderate love of pleasure which, from the higher, descended into the lower classes, and was defended or excused by the philosophy of the day, was united with an avaricious selfishness which was awakened by the rash financial schemes of Law and the regent, and connected with fraud, despair, and the bankruptcy of 500,000 citizens. From this love of pleasure and selfishness proceeded most of the faults and vices of the contemporaries of Louis XV. The moral infection spread farther and farther, and ate deeper and deeper into the roots of public spirit and every civil virtue. Louis XIV. left his great grandson and successor with the words, "I have, against my inclination, imposed great burdens on my subjects; but have been compelled to do it by the long wars which I have been obliged to maintain. Love peace, and undertake no war, except when the good of the state and the welfare of your people render it necessary." A much deeper impression should have been made on the mind of the royal child by the conduct of the people who accompanied the hearse of the king with insults and the grossest expressions of joy. But what an idea must the boy of six years have formed from the *lit de justice* (the strongest exertion of despotism) held by the regent to confirm his regency! How different were the views of his father, the noble duke of Burgundy, who intended, in case he ascended the throne, to restore to the people their lost rights! On one occasion, when Louis had recovered from a

violent sickness, his subjects manifested their satisfaction by repeated rejoicings. The court and gardens of the Tuileries were full of men. Villeroy carried the king from one window to another. "See them, my king! your people: all this people belongs to you; all that you see is your property; you are lord and master of it." The instructor of the young king, the prudent and modest Fleury, won the confidence of his pupil in a noble manner. A third, who had, however, less influence on the young king, was his confessor, the Jesuit, Linières. The cardinal Dubois had effected his appointment to this important office against Fleury's wish and the advice of Cardinal Noailles. Fleury, however, acquired the entire confidence of Louis, who, after the death of the regent in 1724, by the advice of his instructor, appointed the duke of Bourbon chief minister of state, who could undertake nothing, however, without the knowledge and consent of the prelate, then seventy-three years old. Till now, the king, who entered upon the government himself in 1723, but had hitherto entrusted the management of affairs to the former regent as first minister of state, had shown no will of his own. A Spanish princess of six years old had been destined for his wife, and had been subsequently sent back to her parents; the marshal Villeroy had been banished from the court, and the king had married Maria Leczynski, the daughter of Stanislaus, the dethroned king of Poland, but he appeared indifferent and submissive in all these proceedings. But when the party of the duke attempted to get rid of the prelate, and the offended Fleury had retired to his country seat, the king insisted on his return with such firmness that the duke found himself obliged to apply to the prelate and solicit his return.

Soon after, in 1726, Fleury was placed at the head of the administration. He declined the title of first minister, but was, in fact, such till his death in 1743. His habit of dissimulation extended itself to the king, in whose private life a great change now took place, probably favoured by Fleury himself. The germ which his application and some generous expressions had manifested, was stifled in sensual pleasures and the luxury of a court life. The peaceful Fleury, who endeavoured to restore order and economy, now gave the enervated monarchy a seven years' tranquillity; but he was not sufficiently enlightened to compose the controversy respecting the bull "Unigenitus."

After the death of Augustus II., king of Poland, in 1733, Louis wished to see his father-in-law chosen successor of Augustus, and declared that the freedom of election should be interrupted by no foreign power; but the emperor Charles VI., having concluded an alliance with the elector of Saxony, and supported his election as king of Poland, Louis's plan was frustrated and a war broke out. After two campaigns, France acquired for Stanislaus, who had fled from Dantzic in danger of his life, the possession of the duchy of Lorraine, by the preliminaries of Vienna in 1735. After the death of Charles VI. in 1740, the project of Marshal Belleisle, to dismember the Austrian hereditary states, plunged the aged cardinal into a war, the success of which was frustrated by the parsimony of the minister. The French armies fought on the side of the elector of Bavaria, who laid claim to the whole Austrian monarchy. England was on the side of Maria Theresa.

The conquest of Bohemia was not accomplished; scarcely could Maillebois, Belleisle, and Broglie, effect the retreat of the wreck of the defeated army from Bohemia and Bavaria, over the Rhine. Still greater were the losses of France by sea; for Fleury had neglected the marine. After his death in 1743, the victories of Count Maurice of Saxony gave new splendour to the French arms; and, by the peace of Aix-la-Chapelle in 1748, France regained her lost colonies.

But the state was more than ever exhausted by an unjust and impolitic war. Louis had himself taken a part in several campaigns, and when he was attacked at Metz by a severe malady, received the appellation of the Well-beloved. The affection felt for him by the French exceeded his deserts; for Louis became from this time more and more unworthy of the public respect, sinking into the grossest indolence and sensuality, and abandoning the management of state affairs to the marchioness of Pompadour. She was, in reality, the ruler, the monarch being absorbed in his orgies or childish amusements and despotic fears. He showed himself without dignity, the sport of petty passions, and the instrument of external influences. The nation, on which so powerless a government could have no effect, followed entirely its restless caprices. Contests of public opinion, bold hopes and new systems, amused and engaged all classes of society. Every one longed for a new and better state; obedience became more and more lax, the wish of change more decided; a few steps more would lead to insurrection. The sensuality of the king put him entirely in the power of the ambitious Pompadour. While she made him lead the shameless life of an eastern monarch, she sacrificed, according to the caprice of the moment, the honour, wealth, and the prosperity of the state, to those who were able to gain access to her by their attractive qualities. She accustomed the king to the *acquits de comptant* or warrants for payment, which exhausted the treasury, and introduced confusion into the accounts. The cost of the *parc-aux-cerfs*, as it was called,—the most abominable instrument of the king's voluptuousness,—was defrayed by such *acquits*, which, according to Lacroix, amounted, eventually, to 100,000,000fr. Louis also loved to play deep, and appropriated for this purpose a private chest, the losses of which he supplied from the public chest. Those who lost to him were indemnified by lucrative public offices. In order to increase this fund he engaged in stock-jobbing and in speculations in grain. The rise and fall of the stocks, and the price of corn, interested him in a manner entirely unbecoming a king. He appropriated a capital of ten millions from his private treasury to this disgraceful traffic, and even allowed the name of M. Mielavand to be introduced into the state almanac of 1774, among the officers of finances as *trésorier des grains pour le compte de S. M.*

To relieve his ennui he printed several books, and was even pleased with the celebrated physiocratical system of his physician Quesnay. He called him his thinker (*penseur*), listened with satisfaction when he censured the policy of his ministers, but never troubled himself about the application of his ideas. Towards women he conducted himself in public with the courteousness of a French chevalier, mingled in their petty quarrels, and played the part of a confidant. He was inquisitive about the intrigues of all the courts of Europe, and to inform himself respect-

ing them, maintained secret agents, of which his ministers in many cases knew nothing. The dignified manly conduct of the dauphin, the virtues of the dauphiness, made no permanent impression on him. He sometimes, however, seemed to feel remorse, especially after the death of the queen. But he soon sought and found solace in his old pleasures. From the year 1769 he was governed by Du Barry, who is said to have cost the royal treasury in five years, 180,000,000 livres.

As Louis became older, his bigotry and apathy increased, while he sank deeper in sensuality. His secret debaucheries dishonoured innocence, and poisoned the domestic happiness of his subjects. The public contempt was expressed in satires, caricatures, and songs, to which the people had already become accustomed under the regency. The hatred of the people gave credence to the most exaggerated accusations, and Louis, from fear and aversion, withdrew himself from the public eye. With this carelessness and apathy of the king, the French levity increased continually; every one was engaged with trifles and selfish plans; the most important affairs of state on the contrary were neglected. France at the same time saw itself involved, in 1754, in a maritime war with England on account of the forts on the Ohio, and, as if this contest was of no importance, rashly took the side of Austria against Prussia in 1756. The shrewd Kaunitz had gained the favour of the vain Pompadour, who was offended by the sarcasms of Frederic II. By her influence the duke de Choiseul was appointed first minister in the stead of the abbé Bernis, and on the 1st of May, 1756, a new alliance was concluded with Austria at Versailles, which was unique in history. The French suffered great losses by sea and land; even their military reputation had declined since the battle of Rosbach, and, after seven unhappy years, they had reason to congratulate themselves when Choiseul concluded a peace with England at Fontainebleau in 1762, and the definitive treaty was settled at Paris in 1763, although France had to relinquish to England, Canada, as far as the Mississippi, Cape Breton, and the islands of Grenada, Tobago, St. Vincent, and Dominica, together with Minorca. Louis remained indifferent to all these events. The first time that he saw Marshal Richelieu after the conquest of Mahon, he turned to that general, who was adored by the whole nation, with the question, "How did you like the Minorca figs?" The celebrated family compact of the Bourbons, by which Choiseul hoped in the course of the war, to unite for ever the policy of Spain, Sicily, and Parma, with the French interest, was of no great benefit to France. After the war, Choiseul's ministry was marked by several often violent reforms; especially by the expulsion of the Jesuits from France in 1764, and by the acquisition of Corsica in 1769. Shortly after, Madame du Barry, in connexion with the chancellor Maupeou, effected the overthrow of the duke de Choiseul, and elevated to his post the duke of Aiguillon. The quarrel of the latter with the parliament at Rennes, which had written against him in a violent tone as former governor of Bretagne, and the refractoriness of all the parliaments, especially with respect to the new oppressive financial edicts, induced the king, in 1771, to banish the members of the parliament from Paris, and soon after to abolish the parliaments entirely, which were first re-established under Louis XV. in 1774, with

certain limitations. The notorious edict which the chancellor Maupeou then issued, called the king the sole and supreme legislature of the kingdom, who permitted parliament indeed to protest against a new law, but after two considerations, might demand unconditional obedience. Thus Maupeou made the absolute will of the monarch a constitutional law. A worthy counterpart of Maupeou was the comptroller-general of finances, the abbé Terrai, who impoverished the country, while he received an income of 1,200,000 livres. In proportion as the king was despised at home, the authority of France was lessened abroad. The partition of Poland took place in 1773, without the knowledge of France. After having sunk into a complete nullity, the king, whom no domestic misfortunes, not even his own attempted assassination in 1757 by a fanatic, Damiens, nor the public misery, could restore to consciousness, died of the small pox, on the 10th of May, 1774, leaving a debt of 400,000,000 livres.

In proportion as the reign of Louis was weak and pernicious to the state, the spirit of the nation rose, awakened by the times of Louis XIV. and by distinguished men in the arts and sciences. In Paris, public institutions arose; palaces and churches were built, &c.; the military school of Paris, and the Champs Elisées were laid out in 1751 by the minister of war, Count D'Argenson; the intendant Trudaine prosecuted with success the construction of roads. The commerce of Lyons and Bourdeaux adorned those cities with regal splendour. Stanislaus Leczynski restored the public prosperity in Lorraine, and Pigal designed a splendid monument, which was executed in Strasburg to the marshal Saxe, who died in 1750. Of the numerous painters of this period, the best were Lemoine and Vernet. But taste degenerated under the influence of a voluptuous court, and art paid homage to luxury. It delighted in empty show, but at the same time carried manufactures to perfection. The ingenious Vaucanson applied his talents to the improvement of the Gobelins manufactory. Louis XV. himself took an interest in the porcelain manufactory established at Sevres by the advice of Madame de Pompadour. At the same time he is said to have suppressed, from humanity, a means of destruction which would have been more formidable than the Greek fire; but this is not historically proved. Enterprising and intelligent men like La Bourdonnaye, the founder of the colonies of the Isle de France and Bourbon, and even his calumniator Dupleix, extended the commerce of France. Louisiana, Canada, especially St. Domingo, and the Lesser Antilles, the colony on the Senegal, and the ports of the Levant, employed the French activity, and enriched the maritime cities. But by the unjust measures of La Bourdonnaye, the state deprived itself of the advantages acquired in the East Indies over England; and while France lost Canada and several islands by the manner in which it carried on the war, it promoted the British power in India. The third estate, however, gradually acquired, by its wealth and intellectual advancement, consequence and influence. Public opinion assumed in the age of Louis XV. the character of levity, frivolity, and boldness, which was afterwards so strongly developed in the revolution.

Striking events, such as the trial of the unfortunate John Calas, and the execution of the young chevalier De Labarre, for sacrilege, brought new

opinions into general circulation. But the evil genius of France willed that the decline of morals and religion, contemporary with the abuses of arbitrary power, with prevalent prejudices and the oppressions of the priesthood, should change the light of truth, just springing up in France, into a destroying fire, and the defensive weapon of knowledge into a two-edged sword; that the egotism of sensuality should gain possession of the territory of reason, and that brilliant wit should be more esteemed than a serious purpose and a solid character. This unhappy concurrence of public misery with general licentiousness, stifled those improved views, and that scientific cultivation which Montesquieu and others, to whom France was indebted for its intellectual influence on the higher classes of society in a great part of Europe, exerted themselves to disseminate. The ignorant, stupified Louis had an abhorrence of all intellectual cultivation. He feared talented writers, and frequently said of them, that they would be the cause of ruin to the monarchy. He, nevertheless, followed, in the first part of his reign, the advice of Cardinal Fleury, who highly esteemed the sciences, and subsequently yielded to the opinion of the court, and especially of Pompadour, who took a pleasure in being denominated the patron of genius, and a judge of the excellent.

The most powerful and permanent influence on the spirit of the nation was exerted by Voltaire, who commenced his splendid career in 1716 with the tragedy of "Œdipus." Louis had an aversion to him, but the marchioness induced him to appoint Voltaire his historiographer and groom of the chambers. Meanwhile, the preference visibly manifested by the court towards the poet Crebillon inspired the author of the "Henriade" with a disgust at residing in Paris. Simultaneously with him, the immortal Montesquieu awoke the powers of reflection and of wit in the nation. His "Lettres Persannes" kindled the spirit of public criticism, and his work "Sur les Causes de la Grandeur et de la Décadence des Romains," like his "Esprit des Loix," became a classic manual for the study of politics. About this time, the interest universally felt in scientific subjects induced Cardinal Fleury and Count Maurepas to persuade the king to ascertain the truth of Newton's opinion respecting the form of the earth by the measurement of a degree in a high northern latitude, and under the equator, which was undertaken in 1735 and 1736, and to patronize Cassini's map of France. After 1749 Rousseau, Diderot, D'Alembert, Duclos, Condillac, and Helvetius are found in the ranks of the great writers of France. The greatest agitation in public opinion was caused by the "Dictionnaire Encyclopédique" of Diderot and D'Alembert, against which the clergy, particularly the Jesuits, and the ministers, rose *en masse*. No less attention was excited by the work of Helvetius, "De l'Esprit." Even the ladies took a very active part in the contest of philosophy. *Bureaux d'esprit* were formed, and from the philosophical circles at the houses of the baron of Holbach and Helvetius there proceeded several works in support of materialism and atheism, especially from 1758 to 1770. The most celebrated of them is the "Système de la Nature." Religion was shamelessly assailed by La Mettrie, D'Argens, and the abbé de Prades, who, banished from France, sought refuge with Frederic II., but whose opinions found reception in France. Condemnation by the *Sorbonne* only ex-

cited opposition, and the boldness of the age loved to defend rash and splendid errors, if they afforded opportunity for the exhibition of acuteness. No work was more destructive of public morals than Voltaire's "Pucelle"—a talented poem, which the licentious spirit of the times of the regency alone could have inspired. But better men, such as Turgot and Malesherbes, laboured, not without the approbation of the better part of the public, to counteract this pestilence, and saved the honour of sound reason. Such a production is Duclos's "Considérations sur les Mœurs," of which Louis XV. himself said, "It is the work of a man of honour." Thomas, Marmontel, and Laharpe remonstrated loudly against atheism. Rousseau roused the most violent anger of the antiphilosophers by his "Emilie." Jesuits and Jansenists united against him, and notwithstanding the general admiration which he received, he was obliged to leave France. Such was the revolutionary spirit of the age of Louis XV. The contempt for the court and royalty produced by his reign, the exhaustion of the state caused by his extravagance, the rise of a critical and liberal spirit, and the corruption of state and church, gave birth to the revolution, and the debased state of the public morals, poisoned by the example of the court, stained it with hideous excesses. The favourite residence of this monarch is delineated beneath.

LOUIS XVI., who was destined to ascend the throne of France on the eve of a great political convulsion, and to atone with his life for the faults and follies of his predecessors, was the grandson of Louis XV., and the second son of the dauphin, by his second wife, Maria Josephine, daughter of Frederic Augustus, king of Poland and elector of Saxony. Louis was born on the 22nd of August, 1754, and in 1770 married Marie Antoinette of Austria. The countess Marsan, governess of the royal family, had a large share in his education, and even after he became king, Louis listened to her representations, of which the abbé Georgel relates a remarkable instance in his memoirs. With the best intentions, but entirely inexperienced in matters of government, this unfortunate prince ascended the throne in 1774. He modestly declined the title of *le Desire*, given him by the nation, which he excused from the tax usual on the occasion. After the death of the dauphin in 1765, his grandfather had intentionally kept him from acquiring the knowledge connected with his destination; and the countess Du Barry sought to revenge herself for the contempt exhibited towards her by the serious, strictly moral prince, whom she hated, by making him ridiculous in the eyes of the king. The ministers, also, secretly spread the opinion that the prince was severe and far removed from

Q

the indulgent kindness of his grandfather. He was retiring, silent, and reserved, and did not dare to express his benevolent feelings, so that his reserve passed for distrust. He felt himself a stranger at a court where he was surrounded by vice under a thousand glittering forms. As he heeded not flattery, he was indifferent to the courtiers. The duke Choiseul therefore said, that, on the most desirable throne of the world, he was the only king who not only had no flatterers, but who never experienced the least justice from the world. In his countenance, which was not destitute of dignity, were delineated the prominent features of his character—integrity, indecision, and weakness. He was injured, however, by a certain stiffness of demeanour, repulsive to the communications of friendship. His manners had nothing of the grace possessed by almost all the princes of the blood. In confidential intercourse alone, he frequently expressed himself sensibly and ingeniously, but blushed if his observations were repeated. Facility of comprehension, industry, and an extraordinary memory, made him successful in his studies; but, unhappily, they had no immediate relation to the duties and knowledge of a prince. Upright, pious, and indulgent, he was philanthropically disposed, both towards his nation and towards individuals. The virtues of his father, the quiet, domestic life of his mother, had deeply impressed upon him a moral religious feeling. But his example was destined to show how insufficient on a throne are the virtues of a private man.

He chose Count Maurepas as his minister of state, a man of talent and experience, but of little solidity of character, and desirous of shining in epigrams. In the room of the abbé Terrai, he committed the financial department to the enlightened, able, and upright Turgot, who resolved to remedy the abuses of the state by thorough reforms on strict philosophical, and, in some degree, physiocratical principles, and looked upon the privileged orders as the sources of all evil. But the friends of ancient abuses, the high nobility, the court, and the clergy, immediately formed a combination against him. When the parliaments were restored, by the influence of Maurepas, against the judgment of Turgot, the contest of opinion between old and new views more than ever embarrassed the government. The count of Vergennes was at the head of foreign affairs; Count Mury was minister of war, and Sartine, of the marine. The new theories which Turgot proposed in the council of state, had indeed the approbation of the philosophers: even the talented men and women, whom Madame Helvetius, Madame Geoffrin, Mlle. Espinasse, the princess of Beauveau, and the duchess D'Anville, collected around them, took a lively interest in Turgot's liberal plans, which were loudly praised by Joseph II. and Leopold; but his opponents found a support for their resistance in the old parliaments. The most oppressive feudal services, arbitrary exactions, slavery in the mountains of Jura, and the rack, were abolished, and many useful regulations established; but Turgot could not overcome the king's dread of an open struggle with the clergy, the nobility, and parliament. These bodies united against the minister, and the people, who were on his side, could not, without representatives, afford any assistance against such a league. The foes of the minister stirred up the populace, and on the occasion of an edict declaring the corn-trade free, scenes

occurred resembling those which subsequently marked the revolution. The timid and inexperienced Louis believed himself hated by the nation, and was indulgent towards the seditious; finally, by the advice of Turgot and Mury, he acted with vigour, and the disturbances, called in Paris *la guerre des farines*, were quieted after the amnesty of May 1775.

The coronation of the king on the 11th of June, 1775, was followed by the appointment of the virtuous Malesherbes as minister. He was the friend of Turgot. Their united influence might, perhaps, have done much towards reforming the old abuses, but unhappily, the new minister of war, the count of St. Germain, was too violent in his innovations. The corps that were disbanded or diminished, and the offended military nobility, loudly expressed their dissatisfaction at the system of innovation, which was disliked moreover by the higher classes. "The state will perish," was the general cry, and the parliament refused to register five edicts of the king. Louis resolved, indeed, to maintain his authority by a *lit de justice*, on the 12th of March, 1776; but the queen, a princess who was equally superior to her husband in vivacity of understanding and in wit, and loved splendour and pleasure, supported the opposition together with Maurepas, who was Turgot's secret enemy. Her the king could not resist. He hesitated: the deficit produced by the payment of debts and the expenses of the coronation in 1775 inspired him with distrust of Turgot's philosophical views. Malesherbes gave in his resignation, and Turgot was obliged to follow his example. The privileged party was victorious, but the hatred of the third estate, and the desire of all enlightened and well disposed persons for a thorough reform was increased. They did not wish to overthrow the whole system until the North American revolution threw a firebrand into this inflammable mass. The day on which Louis concluded the treaty with the United States in 1778 decided his fate; for the war to which it gave rise from 1778 to 1782, and which cost France, according to Audouin, 1,400,000,000 livres, accustomed the nation and army to republican ideas, and produced a cureless deficit; this, a meeting of the states-general; and this, the fall of the monarch and monarchy. Louis himself was averse to engaging in this war, but he was out-voted in the council of state, the ministers hoping to establish French commerce on the overthrow of the English.

After Turgot's removal, the extravagance of the court increased: while Louis refused himself any great expenditures he yielded too easily to the tastes of the queen and the princes of the blood. Luxury and splendour made the expenses of the court very great; they played high, they built, they exhibited races, they gratified every whim, and Louis's dissatisfaction, which often withdrew him from these entertainments, was regarded as the indication of an ordinary mind. The regularity of his manner of life, in which study and domestic pleasures were intermingled with business, made no impression on the gay spendthrifts. Louis did not possess the art of inspiring the court and princes with respect. He paid the debts of Count Artois. The queen also gave herself up to her love of gayety. Taste and love of the arts, clothed in all the humours of the fashion, reigned in the festivals of Versailles and Petit Trianon. Maurepas either did not see whither all this must lead, or, with his characteristic levity, yielded

to necessity. Pleasure was his element. He remained the directing minister till his death in 1781, sharing the confidence of the king with the talented queen, and with every one who could deceive the monarch under the appearance of zeal for the common welfare. The changes in the ministry of the finances, which was committed in turn to Clugny, Taboureaux, Necker, Joly de Fleury, and D'Ormesson, increased the confusion. The existence of great abuses was notorious; but the extirpation of their deep-rooted causes was impossible. The dismissal of Necker, who had become an object of great dislike by his vain *compte rendu*, was considered as a public misfortune by the third estate, whose favour Necker exerted himself to acquire. Thus, long before the revolution, a real anarchy prevailed in public opinion, which penetrated even to the council of state.

After the peace of Versailles in 1783, which brought some advantages—not however sufficient to repay the expense incurred—the frivolous Calonne, liberal in promises, few of which were redeemed, was appointed minister of finance. In foreign affairs, for example, in the dispute about the Scheldt, Vergennes maintained, though not without sacrifice of money, the honour of the French crown; but the commercial treaty of 1786 with England was deemed the greatest error of his administration, although it was a consequence of the peace of Versailles. He was also blamed for having rejected the closer connexion proffered by Joseph II., and for thus causing the approximation of Austria to Russia. The king himself betrayed weakness in dismissing the minister before the accomplishment of his plans which he had at first approved. Louis took pleasure in literary occupations, and engaged with fondness in public enterprises. He framed, with much sagacity, the plan and instructions for Lapérouse's voyage round the world in 1786, and several passages in those instructions express, in a touching manner, the benevolent feelings of this artless prince. He often lamented Lapérouse's unhappy fate with the words, "I see very well that I am not fortunate." His kindness of disposition made him particularly interested for the poorer clergy. He followed, however, the maxim of Louis XV. not to give bishoprics or rich benefices to any but nobles. He drew a line of division equally unjust, and far more pernicious with respect to the army, in which military rank was confined exclusively to the nobility. The third estate could not speak out; so much the more bitterly and violently did the populace complain of the court and higher classes, when, in consequence of the infamous affair of the necklace, the process against the cardinal prince of Rohan was commenced in 1785. The libel of the branded countess De la Motte and her husband, disseminated the grossest calumnies against the innocent queen, which were but too easily credited by the people. By this means the throne was disgraced in public opinion; and the duke of Orleans, the implacable enemy of the queen, was accused of using the infamous La Motte as the tool of his hatred. In this fermentation of public sentiment, Calonne persuaded the king to convene the notables in order to find some resources for the exhausted treasury. Unhappily, the count of Vergennes died on the 13th of February, 1787, and on the 22nd of February the king opened the assembly with a speech, which was not favourably received. The deficit which the comptroller-general had stated at 112,000,000 francs, but

which was estimated at more than 140,000,000, rendered Calonne's plans suspected. An opposition was formed, and Calonne received his dismissal. Parliament refused the imposition of two new taxes, which would have been burdensome to the large landed proprietors, and demanded the convocation of the estates. The nation heard the proposition with exultation; the court trembled. Louis ventured on a *lit de justice*, but the parliament declared it void. The king banished the parliament to Troyes, and thus war was declared between the throne and nation. The government, moreover, had acted without dignity in regard to the contest of the Dutch patriots with the hereditary stadtholder in 1787, and thus entirely lost the respect of the people. The king himself manifested a good nature, bordering on weakness, to his nearest connexions, who, like the duke De Coigny, consented only with the greatest reluctance to the restrictions of the royal household. A negotiation was finally commenced with the parliament; it returned; the measures on both sides became more violent; the rebellion broke out in Brittany in June 1788; the nobility and the officers of the regiment Vassigny, then, for the first time, dared to carry arms against the commands of the king. Even the clergy loudly demanded the convocation of the estates. The weak prime minister, Brienne, opposed in all his projects, resigned, and Necker entered the council in 1788 as minister of finances. Louis convened a second time the notables to settle the form of the estates and the manner of voting. On the 5th of May, 1789, the states-general met. Amidst the conflicts of the privileged orders and the new opinions, the king remained gentle and timid, deserted and alone. "God forbid," said he to the nobility, who would not unite with the third estate, "that a single man should perish for my sake." His sole object, which he pursued with earnestness of purpose, was the common weal; but around him every thing vacillated; how could he show firmness? The democrats hated him as a king; the emigrants and the aristocrats, who remained in France, deemed him incapable of governing. He himself made the greatest sacrifices to the state, even such as endangered his personal security, for instance, the disbanding of his body guard. He could not, nevertheless, escape the most envenomed calumny. Among other things it was reported, that by a secret act he had protested against every thing which had been extorted from him in limitation of the ancient royal prerogatives. Meanwhile, even amid the grossest calumnies, a flattering word was sometimes heard. When Louis XVI. attended the national assembly in February 1790, the national guard of Versailles caused a gold medal to be struck, on which was represented a pelican feeding its young with its blood. The device was *Français, sous cet emblème adorez votre roi!* The 12th, 13th, and 14th of July, 1789—the night of the 4th of August—the horrors of the 5th and 6th of October—the flight of the king in June 1791, intercepted at Varennes, when Louis from his hesitation to use force, prevented the success of Bouillé's plan for his escape, and at the same time excited public opinion against himself by the declaration which he left behind—the acceptance of the constitution of September 1791, which declared his person inviolable—the attack of the populace of Paris on the royal palace on the 20th of June, 1792, when Louis with equal firmness and dignity rejected the demands of the in-

surgents, and on the 22nd openly declared that violence would never induce him to consent to what he considered hurtful to the general welfare—the catastrophe of the 10th of August, to which Louis submitted, because he had not the courage to overcome the danger—his arrest in the national assembly to which he had fled for refuge—finally, his trial before the convention, where he replied to the charges with dignity and presence of mind;—these were the most important events in the history of the king. He exhibited, under these circumstances, the courage of innocence and a strength of mind before unknown in him. As a prisoner of the municipality of Paris, in the Temple, he was denied till shortly before his death, pen, ink, and paper. His usual employment was instructing his son and reading. He read almost every day portions of Tacitus, Livy, Seneca, Horace and Terence; in his native language, chiefly travels. On the evening before his death, he found that he had read 157 volumes in the five months and seven days of his imprisonment. He evinced himself a loving husband and an affectionate father, and in his private capacity no candid man can withhold from him his esteem. On the 15th of January, 1793, Louis was declared guilty of a conspiracy against the freedom of the nation and of an attack on the general security, by a vote of 690 out of 719; on the 17th of January he was condemned to death, the law requiring for condemnation two thirds of the votes having been repealed on the 16th during the trial, and a bare majority declared sufficient. After repeated countings it was found that 366 votes were given for death, making, consequently, a majority of five in 727. On the 21st of January, 1793, he was guillotined in front of his former palace, in his thirty-ninth year, the appeal to the nation proposed by his advocates, Malesherbes, Tronchet, and Desèze, having been rejected on the 19th by 380 votes out of 690. He died with the courage of Christian faith. His last words, which asserted his innocence and forgave his judges, were drowned in the rolling of drums and in the cry *Vive la republique!*

Even in his youth Louis manifested a sensibility unusual in the higher classes. He needed not the sight of misery; when he heard it spoken of, he shed

tears, and hastened to relieve it. Unknown, he alleviated misfortune in the cottage and garret. When he was first saluted at court as dauphin, after the death of his father, the duke of Burgundy, he could not restrain his tears. Still greater was his grief at the death of Louis XV. "O God," he cried, "shall I have the misfortune to be king!" His favourite maxim was, "Kings exist only to make nations happy by their government, and virtuous by their example." The establishment of the *mont de piété*, the *caisse d'escompte*, the abolition of feudal services, of torture, and of slavery in the Jura, are only some of his benevolent measures. He caused the state prisons to be examined, and liberated the unhappy victims of despotism. Louis declared that he would never sign beforehand a *lettre de cachet*. His great object was the happiness and love of his people. On his journey to Cherbourg in 1786, where he had undertaken the construction of the celebrated harbour in 1784 to which he had appropriated 37,000,000 livres, he received the most unequivocal marks of the love of the French. He wrote at the time to the queen, "The love of my people has touched me to the heart; think you not that I am the happiest king on earth?" And in his will he says, "I forgive from my whole heart those who have conducted themselves towards me as enemies without my giving them the least cause, and I pray God to forgive them. And I exhort my son, if he should ever have the misfortune to reign, to forget all hatred and all enmity, and especially my misfortunes and sufferings. I recommend to him always to consider that it is the duty of man to devote himself entirely to the happiness of his fellow men—that he will promote the happiness of his subjects only when he governs according to the laws—and that the king can make the laws respected and attain his object, only when he possesses the necessary authority." In the same spirit he wrote to Monsieur, afterwards Louis XVIII., "I submit to Providence and necessity, in laying my innocent head on the scaffold. By my death, the burden of the royal dignity devolves upon my son. Be his father, and rule the state so as to transmit it to him tranquil and prosperous. My desire is, that you assume the title of a regent of the kingdom; my brother Charles Louis will take that of lieutenant-general. But less by the force of arms than by the assurance of a wise freedom and good laws, restore to my son his dominions usurped by rebels. Your brother requests it of you, and your king commands it. Given in the tower of the Temple, January 20, 1793." Louis was buried in the Magdalen churchyard, Paris, between the graves of those who were crushed to death in the crowd at the Louvre, on the anniversary of his marriage in 1774, and the graves of the Swiss who fell on the 10th of August, 1792, in his defence.

LOUIS XVII. was the second son of Louis XVI. and of Maria Antoinette, and was born at Versailles on the 27th of March, 1785, and in 1789, after the death of his elder brother, received the title of dauphin. He was four years old when his mother presented him to the seditious populace of Paris, and carried him to the capital on the terrible 5th and 6th of October. Confined with his parents and his aunt Elizabeth in the Temple, his innocent gaiety and affectionate disposition were the chief solace of the unhappy prisoners. On the death of Louis XVI. he was proclaimed king by the royalists, and his uncle assumed

the title of regent. He was soon after separated from his mother, sister, and aunt, and delivered in 1793 to a shoemaker by the name of Simon, a fierce Jacobin, of a gross and ferocious disposition, who, with his wife, treated the young Capet with the most unfeeling barbarity. Reproaches, blows, scanty food, the damps and filth of a dungeon, and a sleep broken by menaces and abuse, were the lot of the innocent child. He was even compelled to drink strong liquors and join in the obscene songs, and repeat the atrocious language of his tormentor. He survived this treatment only till the 8th of June, 1795, when he died at the age of ten years and two months. He was buried in the common grave in the cemetery of St. Marguerite, where his remains could not be distinguished in 1815.

LOUIS XVIII. was the third son of the dauphin, the son of Louis XV. He was born in November 1755. At the accession of his brother Louis XVI., in 1774, he received the title of Monsieur, and after his death became regent of France. After the death of his nephew in 1795, from which time he reckoned his reign, he took the name of Louis XVIII., king of France and of Navarre; but, with the exception of England, the states of Europe did not acknowledge him as king of France before the taking of Paris in March 1814. His brother, Monsieur, count of Artois, as lieutenant-general, became the head of the provisional government in Paris. Immediately after, Louis XVIII. began his reign by his manifesto from St. Ouen, in May 1814. During the reign of his brother he had taken but little interest in the intrigues and the pleasures of the court, and had principally occupied himself with books; his wife had followed a different course. It is said that in his youth Louis had much taste for poetry, and was the author of several tolerably good poems. He translated also some volumes of Gibbon's History, and applied himself to the study of the Roman poets and philosophers. The history of his emigration he has related in an agreeable manner in a work which appeared at Paris in 1823. In the first assembly of the notables in 1787 he was at the head of the first of the seven *bureaus*, and appeared on the side of the opposition against Calonne, *contrôleur-général des finances*; at least the latter was most violently attacked by the *bureau*, under the presidency of the count of Provence. The people therefore looked upon him with favour, and saluted him with cries of joy, when he received from the king order to compel the registration of some edicts by the *cour des comptes*. His brother, the count of Artois, afterwards Charles X., on the other hand, who did not belong to the opposition, was loaded with reproaches. At the second assembly of the notables in November 1788 he alone declared himself for the double representation of the third estate. During the revolution it was as impossible for him as for the king to escape the attacks of calumny. After the destruction of the *bastille* the king, accompanied by his two brothers, entered the hall of the national assembly, and declared that he counted upon the love and the fidelity of his subjects, and had therefore given orders to the troops to withdraw from Paris and Versailles. But the people of Paris had already proscribed the count of Artois, who therefore left the kingdom with his two sons. He was followed by the princes of Condé and Conti, and the dukes of Bourbon, Enghien, and Luxembourg: Monsieur remained. As the people

were clamorous for the execution of the marquis of Favras, who had sought means for the escape of the king, and had attempted a counter revolution, in which the count of Provence had taken part, the latter went to the *hôtelle de ville* in Paris the day after the arrest of the marquis to defend himself in person. He asserted that the only connexion he had ever had with the marquis was that he had bargained with him for 2,000,000 of livres wherewith to pay his debts. The people believed that this money was to have been appropriated to the levying of troops. The marquis was condemned to death by the *châtelet*, and hanged in February 1769.

At last the violence of the factions in Paris induced the king, in June 1791, to attempt to escape to the frontier of the kingdom. Louis took the road to Montmedy, and the count of Provence that of Mons. The former was arrested at Varennes, the latter reached Brussels in safety. From Coblenz he protested against the decrees of the national assembly and the restraints put upon the freedom of the king. When the king, in October 31, 1791, called upon him to return, the princes issued a declaration that they regarded the constitution as the work of rebels, and that the king held the throne merely in trust, and was obliged to leave it to his posterity as he had received it. In January 1792 the legislative assembly therefore declared the count of Provence to have forfeited his right to the succession. The two brothers of the king, at the head of 6000 cavalry, now joined the Prussian army. After the death of Louis XVI., Monsieur, who had previously been residing at Hamm, in Westphalia, lived at Verona, under the name of count of Lille. In 1795 he was here proclaimed by the emigrants, king of France and of Navarre. The calamities which afterwards befel him he bore with dignity and resolution. In the following year, when the Venetian senate, through fear of Bonaparte, obliged him to leave Verona, he declared himself ready to do so, but required that the names of six princes of his house should first be struck from the golden book of the republic, and that the armour, which his ancestor Henry IV. had given it, should be restored. He now led a wandering life, supported by foreign courts, especially the English, and some friends of the house of Bourbon. He first went to the army of Condé, on the Rhine, to serve as a volunteer, but was afterwards obliged to leave it, and went to Dillingen, in Suabia. In 1796, as he was standing at a window with the dukes of Grammont and Fleury, a musket ball was fired at him, which grazed his temple. "Never mind it," said he immediately to the alarmed dukes, "a blow on the head that does not bring a man down is nothing." When the count D'Avary exclaimed, "If the ball had struck a line deeper," Louis replied, "then the king of France would have been called Charles X." From thence he went to Blankenburg, a small town in the Hartz, where he lived under the protection of the duke of Brunswick, and carried on a correspondence with his friends in France, especially with Pichegru. After the peace of 1797 he went to Mittau, where he celebrated the marriage of the duke of Angoulême with the daughter of Louis XVI. When Paul I. refused to permit him to reside any longer in his states the Prussian government allowed him to remain in Warsaw. While here Bonaparte, in 1803, attempted to induce him to renounce his claims to the throne; but he answered to the messenger of the first consul,

"I do not confound M. Bonaparte with his predecessors; I esteem his valour and his military talents, and thank him for all the good he has done my people. But, faithful to the rank in which I was born, I shall never give up my rights. Though in chains, I shall still esteem myself the descendant of St. Louis. As successor of Francis the First, I will at least say like him—'We have lost all except our honour.'" The princes concurred in the answer of the king.

In 1805, Louis, with the consent of the emperor Alexander, returned to Mittau; but the peace of Tilsit obliged him to leave the continent, and he at last took refuge in England in 1807. His brother, the count of Artois, had lived in Great Britain, principally in Edinburgh, from 1796. Louis had taken several steps to procure the restoration of his family in France. With this view, he had written to Pichegru, and given him full powers. His letter of May 1796 is a proof of the great confidence which he had in this "brave, disinterested and modest" general, to whom, as he then thought, "was reserved the glory of restoring the French monarchy." When the army of the prince of Condé, in which, since 1798, the duke of Berri had commanded a cavalry regiment of nobles, first in Russian, and afterwards in English pay, had been by circumstances gradually broken up, and had obtained from the Russian emperor the liberty of residing in Volhynia, the princes of the Bourbon family ceased to take an active part in the operations of the war. Louis XVIII., until the conclusion of the great struggle, remained in England, where he lived at Hartwell in Buckinghamshire, in a very simple manner, occupying himself partly with the Roman classics, especially Horace, of whom he translated much, and retained in memory a large part, and partly with political studies. That he resembled in character his unfortunate brother, we know from several examples of his kind feelings. Soon after the disastrous expedition of the French to Russia, he wrote to the emperor Alexander a letter, recommending the French prisoners of war, as his children, to the magnanimity of that monarch, and he refused to join in the rejoicings in England, for he could not but mourn the death of so many Frenchmen.

When the allies invaded France, the count of Artois went to Basle. His eldest son, the duke of Angoulême, had gone to join Wellington. They published a proclamation from Louis XVIII. to the French, dated Hartwell House, 1st February, 1814, which induced a party, first in Bordeaux, and afterwards in Paris, to declare for the Bourbons. The king promised entire oblivion of the past, the support of the administrative and judicial authorities, the preservation of the new code, with the exception of those laws which interfered with religious doctrines; security to the new proprietors against legal processes; to the army, all its rights, titles and pay; to the senate, the support of its political rights; the abolition of the conscription; and, for himself and his family, every sacrifice which could contribute to the tranquillity of France. Soon after the dissolution of the congress of Chatillon, the count of Artois entered Nancy. But the duke of Angoulême first saw the lilies of the Bourbons planted on French ground at Bordeaux, on the 12th of March, 1814.

The restoration of the Bourbons was a subject first brought strongly home to the French, at the time of the entrance of the allies into Paris, by the

declaration of the emperor Alexander, that they would treat neither with Napoleon nor with any member of his family. Talleyrand, Jaucourt, the duke of Dalberg, Louis, and De Pradt contributed not a little to this in an interview with Alexander, the king of Prussia, Schwartzberg, Nesselrode, Pozzo di Borgo, and Liechtenstein, by the assurance that the restoration of the Bourbons was the wish of a large majority of the nation. The senate now appointed a provisional government under the presidency of Talleyrand, which gave the authority of a law to the resolve of the senate for the deposition of Napoleon, and published in "The Moniteur" the project of the constitution, according to which the Bourbons were to be recalled to the throne. A decree also entrusted the government to the count of Artois until the moment when Louis, called to the throne of France, should accept the constitution drawn up for the kingdom. Louis XVIII. now left Hartwell, and reached London, whence the prince regent accompanied him to Dover. From Dover, the duke of Clarence conducted him to Calais. With Louis landed also the duchess of Angoulême, the prince of Condé, and his son, the duke of Bourbon. Upon landing, he pressed the duchess of Angoulême to his heart, and said, "I hold again the crown of my ancestors; if it were of roses, I would place it on your head; as it is of thorns, it is for me to wear it." The memory of his landing upon French ground is perpetuated by a Doric column of marble erected at Calais, and the trace of his first footstep is carefully preserved in brass. The king remained some days in Compiègne, where, as at St. Ouen, he received deputations from the authorities at Paris. He was welcomed at St. Ouen by the emperor of Austria, and at Compiègne by the emperor of Russia. From St. Ouen he issued that remarkable proclamation, by which he accepted the most essential part of the constitution of the senate in twelve articles, but submitted the whole, as being too hastily drawn up, to the revision of a committee of the senate and legislative body. On the 2nd of May Louis made his entrance into Paris. In compliance with the will of his unhappy brother, who had commanded forgiveness, he solemnly declared "that all examinations into opinions and votes, until the time of the restoration, are forbidden. The same oblivion is made the duty of the courts of justice and of the citizens." He formed his ministry of members of the former provisional government, and of zealous royalists, such as the chancellor D'Ambray. One of his first ordinances related to the continuance of the oppressive taxes, which the state of the kingdom rendered necessary. It had been promised that they should be abolished, but it was only possible to ameliorate the mode of their collection. He afterwards concluded peace with Austria, Russia, England, Prussia, Spain, Portugal, and Sweden, at Paris on the 30th of May, 1814, and caused a constitution to be drawn up.

Although his ministry too little understood the spirit of public opinion, yet by prudence and firmness it was able to restrain the disaffected. It inclined however to the old prejudices, and fulfilled none of the just expectations of the nation, with regard to the freedom of the press and the prevalence of liberal ideas. The old royalists, as well as the partisans of the empire, had been deceived in the dreams of their pride and their covetousness. The former thirsted for revenge and aspired to regain their lost advan-

tages. The latter, including the soldiers of Napoleon, 100,000 of whom had returned from captivity, were indignant at the disgrace of the French arms. After the proclamation of peace, Louis caused his chancellor, D'Ambray, in his presence, to lay before the legislative body and the senators the constitution of the kingdom (*la charte constitutionnelle*), it having been already approved by nine senators and nine deputies, after it had been drawn up by the three ministers, D'Ambray, Montesquieu, and Ferrand. It was unanimously accepted as the will of the king, and recorded. The chamber of deputies, which was established by this instrument, requested the king to take the surname of "the desired," *Louis le Désiré*. When the chamber was occupied with fixing the civil list, Louis answered the deputies, "Let them attend to the state and neglect me." The king appointed from the new and old nobility, from the senators and marshals, 151 members of the chamber of peers; fifty-three of the former senators, among whom were twenty-three foreigners, who were not appointed peers by the king; others were excluded, as Caulaincourt, Fesch, Fouché, Grégoire, Roderer, Siéyes. They retained, however, their property, and the widows of those who had died received pensions.

It was not to be expected that men who had voted for the death of Louis XVI. could now be peers of France. The king gave his full confidence to his ministers, M. de Blacas, and the chancellor D'Ambray. The latter and the five secretaries of state, (the minister of foreign affairs—Talleyrand—of the interior, of war, of the finances, of the navy), and the directors-general of the police and the post-office, together with the state counsellors and the *maîtres des requêtes*, formed the king's council, to which were admitted distinguished men of the old and new nobility, and the former state officers, together with some whose only claim was, that they had shared the sufferings of Louis. The new relations with foreign powers were regulated by Talleyrand with his usual ability, and not without dignity and a proper regard to the pride of the nation. His diplomacy now professed great magnanimity and respect for the rights of the people. On the other hand, the minister of the interior, Abbé Montesquieu, did not succeed in gaining the public opinion in favour of the Bourbons. Still less did the minister of war, General Count Dupont, succeed in gaining the favour of the army, which hated him. His successor, Soult, contributed much by his severe measures to excite the anger of the army against the king. The personal mildness of Louis XVIII. and his love of justice were often betrayed, in spite of the judgment which he frequently showed, into imprudent and inconsistent measures. He was accused of surrounding himself with the leaders of the Chouans, and with emigrants, and admitting them, in preference to all others, into the royal guard. The army was exasperated by the diminution of the pensions of the members of the legion of honour, and the severity which had placed so many officers upon half-pay. The chamber of peers, composed mostly of the old nobility, and attached to their old prejudices, often thwarted the better views of the chamber of deputies. The chancellor D'Ambray showed great weakness in favouring the privileged classes, and was careless in the duties of his office. The count Blacas, little acquainted with France, was hated by all parties. The censorship of the ministers limited the freedom

of the press, while libels were promulgated against men who had displeased the government. Merely in consequence of a political re-action, thirty honourable names were struck from the list of members of the national institute. Hired or fanatical writers maintained that the sale of the national domains was invalid, and that the crimes of the revolution were not to be pardoned. The restoration of tithes and the old privileges was openly talked of in the country. The ordinance of Blacas with regard to the Sunday police excited so much ill feeling in Paris, that it was found necessary to repeal it. The prohibition of masked balls during Lent caused still greater dissatisfaction; and the obstinacy of the curate of St. Roch, who opposed the burial of a celebrated actress in consecrated ground, exasperated the people against the priests. In short, every thing appeared to confirm the warning of Lally-Tollendal. —"But one more act of madness was wanting to France, and that we now have; we see the throne of the king shaken by his friends." Against the *pure*, or, as they were afterwards called, *ultra* royalists, were united the republicans and the military and constitutional royalists.

In the midst of all this Napoleon returned from Elba. To understand the events of March 1815, it is necessary to call to mind what the majority of the nation expected of Louis XVIII. The nation wished, 1. to have its political liberties secured, or the right of being represented by deputies chosen by the people; 2. the personal liberties of individuals, or security from prosecutions for imaginary crimes, or contrary to the legal forms; 3. the equality of citizens in the eye of the law, and the rights of all to obtain any civil and military dignity by merit and talents; 4. the abolition of feudal services; 5. the right in criminal accusations, to be judged by a jury; 6. the independence of the judiciary upon every other power in the state; 7. the right of levying taxes by their representatives, and on all in proportion to their property; 8. the right of every individual to exercise any means of gaining a living which did not interfere with the rights of other citizens; 9. the right of every one to communicate his thoughts to his fellow citizens by public writings, being responsible only to the law; and, 10. the right of every one to perform divine worship in his own way without molestation. But instead of satisfying the demands of the nation, the Bourbons, it was maintained by the parties above mentioned, had sought to destroy public opinion, and had thus lost the attachment of the French. The following grievances were particularly complained of: 1. the abolition of the national colours; 2. the surrender of all the fortresses beyond the ancient frontiers of France to the allies by Monsieur, as lieutenant-general, April 23, 1814 (with these fortresses he had given up 13,000 cannons, and had thus caused the loss of Belgium, and of the left bank of the Rhine); 3. the royal declaration whereby the new constitution had been imposed upon the nation by virtue of the royal pleasure and prerogative, while it ought to have been proposed to it for acceptance (from the form used for this purpose it would follow, that every successor of the king might abrogate or alter the charter at will); 4. the stain upon the national honour from the king's declaration that he owed his crown to the prince regent of England; 5. the exclusion of many respectable members of the senate from the chamber

of peers, and the filling their places by others, who for twenty years had borne arms against France; 6. the neglect to abolish the *droit réuni*, and other vexatious taxes; 7. the restrictions on the freedom of the press; 8. the persecutions of the holders of the national domains, and the expressions of the minister, Count Ferrand, on this subject in the chamber of deputies; 9. the libels against those who had taken part in the revolution, although these were forbidden by the constitution; 10. the exclusive appointment of the old nobility to embassies; 11. arbitrary taxes imposed without the consent of the legislature; 12. the great influence of priests, &c.

It ought to be observed however, on the other hand, that Louis XVIII. had provided for the personal security of the subject by the independence of the tribunals and the responsibility of the ministers; though the law on the latter point had not yet gone into effect when the revolution of March began. But the ministers should have forgotten their old ideas, and ruled in a popular manner. Henry IV. had, when he ascended the throne, changed his religion, and thus obtained the love of his people. Napoleon at Elba was fully informed of the troubles in France and the divisions at the congress. His appearance in France on the 1st of March, 1815, was like a thunder-bolt to the army and the nation. The state of popular feeling was entirely unknown to Louis. Those who surrounded him, as ignorant as himself, still deceived him with accounts of the devotion of the army, and of desertion among the soldiers of Napoleon. The defection of Labédoyère and Ney finally opened the eyes of the king, but it was too late. He was obliged to flee from Paris in the night of March the 20th, after having dissolved the two chambers on the 19th. On the evening of March 22 he reached Lille, whence he issued several decrees, forbidding all levies and contributions for Napoleon, and disbanding the rebellious army. Twenty-four hours after he was obliged to leave Lille to avoid falling into the hands of his enemies, and went by Ostend to Ghent. The duke and duchess of Orleans, the old prince of Condé, the count of Artois, and the duke of Berry, hastily left Paris. The duke of Bourbon remained in Vendée, and the duke and duchess of Angoulême in the south of France. Their object was to awaken a popular sympathy in favour of the king.

An army was indeed formed in Vendée, and the duke of Angoulême levied troops, but deserted by a part of them, and surrounded by the generals of Napoleon, he was obliged to conclude the capitulation at Pont d'Esprit, in consequence of which he embarked at Cette for Barcelona. The duchess of Angoulême, whose fortitude had been the subject of admiration, showed at Bordeaux the courage of a heroine. The city and the people were devoted to her, but the troops favoured the advance of General Clauzel, and the duchess was obliged to embark for England. Besides the ministers and several officers, Marshal Berthier, Victor, Marmont, and the duke of Feltre, followed the king. The number of his followers amounted at last to a thousand. While in Ghent, he issued an official paper, the "Journal Universel," which contained several pieces by Chateaubriand. In the meanwhile Talleyrand, at Vienna, was actively engaged in the cause of the king, and Louis was included in the league against Napoleon. When the allies invaded France, Louis XVIII. re-

turned and went to Cambray. He here proclaimed a general amnesty, with the exception of traitors, and promised to avoid all the faults he had committed in 1814 from ignorance of the new spirit of the nation, and to dismiss Blacas. In the meanwhile the chambers convoked by Napoleon had appointed an executive commission under the presidency of Fouché, and deputies who were to negotiate with the allies upon the basis of their independent right to choose a form of government; but the allies would not consent to this. Blucher and Wellington besieged Paris, and Fouché, who had already induced Napoleon to leave France, put a stop to the shedding of blood by the capitulation of Paris. Louis was thus again restored to the throne of France, and the Prussians and English entered Paris, and Louis followed under the protection of Wellington.

The king immediately appointed his new ministry, at the head of which was Talleyrand, and in which Fouché was minister of police. The most declared partisans of Napoleon now lost their places; the former chamber of deputies was dissolved, and a new one summoned. Among the most decided measures by which the king sought to support his throne, was the ordinance for disbanding the army according to the wishes of his allies; which Macdonald effected with great prudence. To form a new army 4000 officers were appointed in part of those who had escaped the conscription; and according to the edict of May 1818, of the half-pay officers of the army of 1815 only those were appointed who had served for fifteen years or more, and consequently all French soldiers since 1803 were made incapable of service. Yet the constitution of 1814 had secured to all officers the preservation of their rank and their pensions. An ordinance of July 1815 designated the rebels who were excluded from the amnesty. According to this, nineteen generals and officers, Ney, Labédoyère, the brothers Lallemand, Erlon, Lefevre, Desnouettes, Ameilh, Drouot, Brayer, Gilly, Mouton Duvernet, Grouchy, Clauzel, Laborde, Debelle, Bertrand, Cambronne, Lavalette, and Savary, were to be arrested and brought before a court-martial. Thirty-eight others were exiled according to a resolution of the chambers, including Soult, Carnot, Excelmans, Bassoano, Vandamme, Lamarque, Lobau, Barrère, Arighi, Regnault de St. Jean d'Angely, Real, Merlin, De Douay, Hulin, the poet Arnauld, Colonel Bory de St. Vincent, Mellinet, and others. Twenty-nine were degraded from the peerage, as Lefebvre, Suchet, Augereau, Mortier, Cadore, Piacenza, &c. A few exculpated themselves by proving that they had not received from Napoleon a seat in the new chambers. Of the rebels, towards whom many circumstances recommended mercy, Labédoyère, Ney, and Mouton Duvernet, were shot. Lavalette escaped from prison; Drouot and Cambronne were released; the greater number took refuge in flight; some, like Debelle, were pardoned; others, as Dejean the son, Laurence, Gamon, Alquier, Duboisdubai and Grandpré received in 1818 permission to return.

In the meanwhile the royalists, who called themselves rectilignes, obtained greater influence. The princes were dissatisfied with Fouché's appointment to the ministry. At the same time he made himself obnoxious to the allies by his reports to the king on the new state of France. Talleyrand and Fouché, though devoted to the cause of the king, were looked upon by the royalists as men who ought not to be

admitted to authority in the new system of things. Thus a change in the ministry took place in September 1815. Fouché was dismissed, and in order to please Russia the duke of Richelieu was made minister of foreign affairs in his place. Decazes became minister of police, Corvetto of the finances, and Clarke, duke of Brabant, minister of war, &c. The ultra royalists now raised their heads. The state of things before 1789 alone appeared legitimate in their eyes. The election of the deputies was made accordingly, and many of those elected were but twenty-five years old, though forty was the legal age. A change of the constitution was openly talked of. On the other hand, the partisans of the fallen government, excited by the ultras, began to form conspiracies; but for their speedy punishment prevotal courts were introduced, which, however, were abolished in 1818. Decazes discovered several conspiracies, among which, however, that under Didier alone broke out, in May 1816, in the vicinity of Grenoble. The numerous arrests attracted attention, and several foreigners, as the English who had favoured Lavalette's escape, Lord Kinnaird, in his "Letter to Lord Liverpool," and the Polish Count Sierakowski, complained of the arbitrary conduct of the French police. It excited great dissatisfaction that the duke of Richelieu, as minister, in the trial of Ney had availed himself of the extreme rigour of the law in procuring his condemnation. Among the princes the duke of Orleans alone used a milder tone. When an address of thanks to the king, written by Chateaubriand, was read in the house of peers, the duke proposed to change the passage in which traitors were given up to the justice of the king, so as to recommend the persons there named to the mercy of the king. The censors of the press would not allow his speech to be printed; and the duke, for whom a party was already forming, though without his own consent, soon after came to England.

Richelieu now concluded with the allied powers the treaty of November 1815, which embarrassed the finances of the kingdom, since from December 1815 France was bound to pay 140,000,000 francs yearly toward 700,000,000, which had been the expenses of the war, with 130,000,000 for the support of the army of occupation. A violent dispute soon after arose in the chamber on the subject of the law of amnesty. The ultra royalists in 1816 proposed some changes, which extended and rendered more severe the first propositions of the king. All the relations of Napoleon were, under pain of death, banished from France; they lost the property conferred upon them, and were obliged to sell what they had bought. Those, also, who had voted for the death of the king, and those who in 1815 had received offices of honours from Napoleon, or had acknowledged the additional act to the constitution, were banished from the kingdom, and forfeited all their civil rights, and the titles, estates, and pensions which had been conferred on them. Of 366 who had voted for the king's death, 163, who were still living, were banished from France. Three only, Tallien, Milhaud, and Richard, were allowed to remain. If violent measures were taken against the real or suspected anti-Bourbonists the public authorities did but little to restrain the commotions at Nismes, and the department of Gard, where political and religious fanaticism had caused the persecution and murder of the protestants in 1815 and 1816. One voice only was heard in the chamber

in the cause of the protestants, that of the noble D'Argenson; but Tréstaillons, who was universally known to be a murderer, remained unpunished. The victory in the chambers gradually inclined to the royalists, who were called *exagérés*, or white Jacobins. The king therefore closed the session in April 1816, after a law prohibiting divorces had been passed. Laine, the former president of the chamber of deputies, was appointed minister of the interior, and, with Corvetto, Richelieu, and Decazes, formed in the ministry the constitutional majority; the minister of the marine, Dubouchage, appeared to join them, so that the chancellor, D'Ambray, and the minister of war, Feltre, alone possessed the confidence of the ultras.

In the midst of continual seditions in France, the majority of the ministers, supported by the influence of the Russian ambassador, Pozzo di Borgo, and of Wellington, succeeded in obtaining from the king the ordinance of September 1816, by which he dissolved the chamber of deputies, and ordered that the new members should all be of the lawful age of forty. At the same time he declared that the constitution should be subjected to no alteration. This victory of the constitutional party gave a check, for a time, to the ultra royalists, to whom Louis XVIII. himself did not appear to be enough of a royalist, and silenced, for some time, their *Vive le roi, quand même*! The organ of that party, Chateaubriand, in his work "De la Monarchie selon la Charte," reproached the government with having taken away personal liberty and the liberty of the press. He was even bold enough to maintain that that ordinance was contrary to the wishes of the king. The elections for the new chambers were such that the constitutionalists could raise their voices. They spoke in vain, though with great talent and boldness, for the freedom of the press and a jury. The law of censorship of November remained in force. The state of the people, in the general dearness of all articles, and the weight of the taxes, needed every possible alleviation and the king's spirit of order contributed greatly to this. From 1814 to 1816 the arrears amounted to more than 83,000,000 of francs, which had increased the budget of expenses for 1817 to 1,088,000,294 francs, being 699,000 more than in 1816; while the revenue for 1817 could not be estimated higher than 774,000,000, so that a deficit of 314,000,000 was to be covered. Recourse was had to loans; the same thing took place in 1818.

The diminution of the standing army, and its entire dissolution in consequence of the congress of Aix, were, therefore, fortunate events. Among the events of the administration of Louis XVIII., it must, however, be remarked, that the national institute was restored in 1816 with its former four academies, although the best institutions, as that of the decennial prizes, were not retained. The attempt to bring Hayti to submission, by the offer of favourable conditions, utterly failed, and the concordate was not effected with the pope. Louis was himself inclined to use mild measures. On the day of St. Louis, therefore, in 1818, when the bronze statue of Henry IV. was erected in Paris, which had been paid for by private subscription, several persons arrested for political offences were pardoned. He allowed, also, some of the exiles who had voted for the death of the king, as Cambacérès, Raboud, and fifteen members of the convention, to return. As, however, he gave way to the inclinations of the emigrant party on several

occasions, the nation conceived suspicions that the Bourbons could not sincerely forgive. The king neglected to give full security in their property to the possessors of the national domains, by a particular edict. At the same time, the constitutional party was strengthened by the passing of laws which contradicted the articles of the charter. The liberals, therefore, obtained for a time their superiority, and Louis named, December 29, 1818, his third, and November 19, 1819, his fourth ministry, under Decazes.

For some time the government of Louis had the support of public opinion; but, after the assassination of the duke of Berry, on the 14th of February, 1820, the party of the ultras again raised its head, Richelieu took the place of Decazes, the law of election was altered, the censorship of newspapers was introduced, personal freedom limited, &c. All this gave more power and influence to the extreme royalists. The party of anti-Bourbonists, which thought that the welfare of France required a dynasty not belonging immediately to the Bourbon line, remained still a large one, while the party of the princes, which showed a very great and very natural predilection for Louis, was supported by the ultras, who sought to form in all Europe a general coalition against liberal principles. The white conspiracy, as it was called, detected in 1818, showed that it was the object of the ultra royalists to destroy the constitution. They had given to the ambassadors of foreign powers a paper—written, as it is said, by the baron de Vitrolles—to attract their attention to the dangers which menaced the reign of the Bourbons, that their troops might not be withdrawn from France, but a change made in the French ministry. This note, the giving of which was, according to the French laws, treasonable, caused so much dissatisfaction that Chateaubriand, in his "*Remarques sur les Affaires du Moment*," denies having had any thing to do with it. That party had in view to form a new ministry, of which Villèle, Chateaubriand, Donadieu, and others, were to be members. All examination into this business was, however, prevented, and the generals Canuel, Chapdelaine, with H. H. Joannis, Romilly, De Sorgis, &c., who had been already arrested as accomplices, were released in August 1818 from the secret prison. By the ordinance of the following July, however, the baron Vitrolles was struck off the list of ministers of state and members of the privy council of the king. But Louis allowed what was called the theocratic party, in union with the friends to old privileges, to gain continually more influence in the internal management of the kingdom. This was shown by the prosecutions against the writers who complained of abuses in the public administration, and especially of the measures of the secret police, by which those who were suspected of being political enemies were enticed to manifest their feelings by deeds. An instance of this kind was the punishment of the deputy Köchlin. By the change in the law of elections in June 1820, the system of the strict royalists was triumphant; Villèle was placed at the head of the ministry. But the strength of the king, who had for several years been unable to walk, now entirely failed him. His last triumph was the campaign in Spain in 1823. In August 1824 it became evident that his disease was mortal, and he died on the 16th of September, 1824. Louis XVIII. possessed much intellectual cultivation and sagacity, but, en-

feebled by disease, he had not sufficient strength of character to restrain the ultras, nor did he understand new France.

LOUIS III., called, in German history, the Child, was born in 893, and succeeded his father, the emperor Arnulph, when six years old. In his minority, Archbishop Hatto, of Mentz, administered the government, and carried the monarch about with him wherever the affairs of the empire required the presence of the regent. During the course of his reign Germany was desolated by the Hungarians, and torn asunder by civil discord. He assumed the imperial title in 908, but was never crowned. He died in 911 or 912, and with him ended the royal line of Charlemagne.

LOUIS IV., the Bavarian, and emperor of Germany, was the son of Louis the Severe, duke of Bavaria. On the death of Henry VII., five electors were in favour of Louis, while the others supported Frederic duke of Austria. The two rivals being both crowned, a war ensued, and Frederic was made prisoner, in the sanguinary battle of Mühldorf. In 1315 Louis had expelled his brother, Rodolph, who opposed his election, from the palatinate, but after the death of the latter had formed a convention with his sons, by virtue of which their patrimony was restored to them, and the electoral dignity was to belong alternately to Bavaria and the palatinate. The vacant Mark of Brandenburg he conferred, in 1322, on his eldest son. In his disputes with Pope John XXII., against whom he was joined by the Visconti party in Italy, he maintained the dignity of the German crown, and set up the antipope Nicholas V. In 1346 Clement VI. excommunicated him, and succeeded in causing five electors to set Charles of Luxemburg, king of Bohemia, on the imperial throne. In the midst of this dispute Louis died, in 1347.

LUCIEN BONAPARTE was the third son of Charles Bonaparte, and was born at Ajaccio in 1772. The effective assistance which he rendered to Napoleon on some of the most important occasions in the early period of his career, and the misunderstanding which, at a later period, took place between the two brothers, render Lucien an object of much interest. We cannot enter minutely into these particulars, which will form subjects of study for the future historian, but must confine ourselves to a short biographical notice. Lucien Bonaparte received his education at the college of Autun, in Burgundy. At the commencement of the revolution, he embraced with enthusiasm the party of the people. He became engaged to Mademoiselle Boyer, whose brother was a land-owner and innkeeper at St. Maximin, in the department of the Var. The marriage took place in 1795. In the same year he was appointed to a place in the commissariat of war. In March 1797 he was chosen deputy of the department of Liamone to the council of the five hundred, and in the following July he appeared for the first time in the tribune. He opposed the regulation for shutting up the shops on the 10th day of each decade, as arbitrary; attacked with energy those who had wasted the public money; and, on the anniversary of the establishment of the republic, exhorted his colleagues to bind themselves by an oath to die for the constitution of the year III; though he soon after co-operated in overthrowing its supporters, Merlin, La Réveillère, and Treilhard. His influence soon increased, and he formed a party, which afterwards promoted the views of his brother. Not long before the memorable 18th

Brumaire, he became president of the council, and prepared the proceedings of that day. Being unable to appease the agitation caused by General Bonaparte's entrance into the assembly, he abandoned his seat, laid aside the badges of his dignity, mounted his horse, rode at full speed through the ranks of the assembled troops, and exhorted them to save their general, whose life was in great danger. After the consular government was established, Lucien was made minister of the interior. While in this station, in 1799, he encouraged with great zeal the arts, sciences, and public instruction. He established a second *prytaneum* at St. Cyr, and organized the prefectures. In October 1800 he went as ambassador to Madrid, where, by his address and captivating demeanour, he soon gained the entire confidence of King Charles IV., of the queen, and the prince of peace, and supplanted the British influence at the court of Madrid. He was also active in the creation of the kingdom of Etruria, and in the cession of Parma to France. In September 1801, Lucien, with the prince of peace, signed, at Badajoz, the treaty of peace between Spain and Portugal; and by virtue of a secret preliminary treaty, the prince-regent paid thirty millions of francs, which were equally divided between Spain and France. On his return to Paris he became a tribune, and advocated the plan of the establishment of the legion of honour, of which he was appointed grand-officer. Shortly after the institute chose him member of the class of political and moral sciences, and he received the senatorship of Treves; after which he took possession of the donations made to the legion of honour in the departments of the Rhine and in Belgium. Lucien, whose first wife died in 1802, having married at the end of the year 1803 the beautiful widow of the banker Joubertou, against the will of Napoleon, withdrew to Italy in 1804, and purchased the villa de' Nemori, in the neighbourhood of Rome, where he devoted himself to his family, and to the arts and sciences. Whether this marriage alone, or, as has been asserted by many, his disapprobation of Napoleon's policy, was the cause of the misunderstanding between the brothers, we have not the means of determining. At a meeting of the two brothers at Mantua, in November 1807, the emperor proposed to him the marriage of Lucien's eldest daughter, then twelve years of age, with the prince of Asturia; but the proposal was rejected. Mademoiselle Tascher was next offered to Prince Ferdinand, but the prince refused her because he wished to connect himself with Napoleon's family only. By this opposition Lucien excited the anger of the emperor, and became desirous to repair to the United States, in order to remain undisturbed. He applied to Mr. Hill, the English ambassador at the Sardinian court, for passports from the English government, and, having received satisfactory assurances from him, embarked at Cività Vecchia with his family, a retinue of thirty-five persons, and his personal property. A storm compelled him to put into Cagliari; but the English agent at that place denied him passports, and he was not even permitted to land. On leaving the harbour, his vessel was seized, and Mr. Adair, who was then proceeding to Constantinople as British ambassador, caused him, at Mr. Hill's suggestion, to be conveyed to Malta, where Lucien assigned to the London cabinet, as the sole motive for his departure to America, the wish

to live there in safety as a private individual. He was not however permitted to repair thither, but was brought to England in December of the same year, where he was treated with respect. Lord Powis at first gave up to him his seat of Stonehouse, at Ludlow; he then removed to a seat which he had purchased in Worcester, where he remained under *surveillance*, having an English colonel for a companion.

Some time after, the question was moved in parliament whether Lucien Bonaparte, as he had actually believed that he had obtained English passports, was to be considered as a prisoner of war. After protracted debates, he was declared a prisoner of war on the ground that he had not renounced the dignity of French senator, but no alteration was made in his treatment. Napoleon's downfall, in 1814, restored him to liberty, and he returned to Rome. While in London he published his epic poem, "*Charlemagne, ou l'Eglise Délivrée*." Napoleon's opinion of this poem may be found in Las Cases' "*Mémorial*." When Napoleon had regained possession of the French throne, after his return from Elba, Lucien, at the suggestion of the pope, proceeded to meet the emperor, in order to obtain an order that Murat, who then occupied Rome, should evacuate the States of the Church with the exception of a military road through the Mark of Ancona. This order he obtained at an interview with Napoleon. All the other requests which he made in favour of the pope were also granted, after which he remained in Paris. Lucien then had to enter the chamber of peers, where he sat, not among the princes, but among the other peers. The second class of the national institute, of which he was a member, sent a deputation to welcome him. In this deputation was Suard, who, in February 1815, had made the proposal, received with dissatisfaction by all the members, to exclude Lucien from their body because he bore the name of Bonaparte. The second restoration of Louis XVIII. compelled him to return to Rome; but the Austrian general, Count Bubna, caused him to be confined in the citadel of Turin, where he was treated with respect. The allies restored him his freedom, and on the mediation of the pope, though the papal see was obliged to pledge itself that neither he nor any one of his family should leave the States of the Church, he afterwards lived in Rome, or on his estates in the neighbourhood, among which the Ruffinella became the seat of the most refined taste. In 1817 Lucien solicited passports for himself and one of his sons to the United States, which were however refused by the ministers of the allied powers. His son Charles Bonaparte was finally permitted to go to the United States, and lived there for some time with his uncle Joseph, whose eldest daughter he married. He published, whilst in the United State, his splendid work on American ornithology, and was elected member of the philosophical society at Philadelphia, and that of natural history. Distinguished as were Lucien's talents as an orator, his poetical powers were far less splendid. In 1819 he published at Rome a second heroic poem, in twelve cantos, "*La Cynéide, ou la Corse Sauvée*," in which he celebrates the expulsion of the Saracens from Corsica.

LOUISA, AUGUSTA WILHELMINA AMELIA.  
—This princess, who was a daughter of Charles, duke of Mecklenburg-Strelitz, was born in March 1776 at Hanover, where her father was commandant. When

six years old she lost her mother, and her grandmother at Darmstadt took charge of her education. In 1793 the king of Prussia, then prince royal, saw her at Frankfort, when she and her sister were presented to his father. The prince was immediately struck with her uncommon beauty, and was soon after betrothed to her. Prince Louis of Prussia was betrothed on the same day to her sister, the present queen of Hanover. On the 24th of December, 1793, the princess Louisa was married to the crown prince at Berlin, and when her husband ascended the throne in 1797, she became, in her exalted station, the model of a wife, a mother, and a queen, who alleviated misery wherever she could, and promoted merit. In 1806, when Prussia was suffering severely under the burdens of war, this princess became still more popular; indeed her beauty and grace, her benevolent and pure character, her sufferings and her fortitude, rendered her an object almost of adoration. She died in 1810.

**LOUTHERBOURG, or LUTHERBURG, PHILIP JAMES**, a landscape painter of eminence, who was born at Strasburg in 1740. He studied under Tischbein, and afterwards under Casanova, and displayed great talents in the delineation of battles, hunting scenes, &c. After having been admitted a member of the academy of painting at Paris, where he first settled, he removed in 1771 to London, where he was employed in the decorations of the opera-house, and also at Drury Lane theatre. He subsequently contrived an exhibition, called the *Eidophusikon*, somewhat on the plan of the diorama, which, however, did not prove a very profitable speculation. In 1782 he was nominated a royal academician; and, as a landscape painter, he possessed deserved celebrity. He also painted some historical pictures, as the Victory of Lord Howe, and the Siege of Valenciennes. His character was eccentric, and he was so far infatuated with the reveries of animal magnetism as to have accompanied the impostor Cagliostro to Switzerland. He afterwards returned to England, and died near London in 1812.

**LOUVEL, PIERRE LOUIS**, the assassin of the duke of Berry. He was the son of a catholic mercer, and was born at Versailles in 1783. From his youth upwards he was of a gloomy and reserved disposition, and impatient of contradiction, but industrious and temperate. He often changed his master, and oftener his residence. From all circumstances, it is evident that he was fanatical and eccentric. He hated the Bourbons, and wished to extirpate the family, the duke of Berry in particular, because he was expected to continue the line. On the 13th of February, 1820, about eleven o'clock in the evening, when the prince was conducting his wife from the opera to the carriage, Louvel pressed towards him, seized him by the left shoulder, and stabbed him with a knife in his right side. Upon the first cry of the prince, the soldiers of the guards pursued the murderer, who was apprehended and conducted into the guard-room of the opera-house. He was examined in the presence of the minister Decazes, and immediately avowed, that six years previous he had formed the resolution of delivering France from the Bourbons, whom he considered the worst enemies of the country; that after the duke of Berry, he had intended to murder the rest, and finally the king. His trial was conducted by the chamber of peers. The investigations continued three months, and 1200 witnesses were

examined in order to discover accomplices. At length Bellart, the attorney-general, declared in the indictment that none had been discovered. Louvel was then placed at the bar of the chamber of peers. The chancellor D'Ambray, president of the chamber, examined him. Louvel declared that no personal offence had induced him to commit the murder, but only an exasperation created by the presence of the foreign troops as early as 1814; that in order to distract his thoughts, he had travelled and visited the island of Elba, but in that place had no conference with Napoleon or his attendants; that after Napoleon's return from Elba, he was taken into service as saddler in the imperial stables, and hence had obtained this station in the royal stables. No political party, no individual, had persuaded him to commit this act. He had read no newspapers nor pamphlets. He admitted that his deed was a horrible crime, but stated that he had determined to sacrifice himself for France. Louvel's defenders alleged a *monomania*, or an insanity consisting in a fixed idea, and appealed to the dying request of the prince for the pardon of his murderer. Louvel then read his defence. The high court of justice condemned him to death. After a long delay, he admitted the visit of a clergyman, but on the day of his execution, which took place on the 7th of July, 1820, he paid no attention to his words, directing his eyes over the multitude which witnessed his execution in silence.

**LOUVET DE COUVRAY, JOHN BAPTIST**, a French advocate, who was a distinguished actor in the revolution. At the commencement of the political commotions he joined the popular party, and displayed a decided aversion to royalty and nobility. He published a romance entitled "*Émilie de Valmont, ou le Divorce Nécessaire*," in support of the prevalent opinions relative to marriage, and spoke at the bar of the national assembly in favour of a decree of accusation against the emigrant princes. In 1792 he was chosen a deputy to the convention, when he attached himself to the party of the Girondists, and voted for the death of Louis XVI., with a proviso that execution should be delayed till after the acceptance of the constitution by the people. He was denounced by the terrorists, and included in an order of arrest issued in June 1794. Having escaped from the capital, he retired to Caen with several of his colleagues, and employed himself in writing against the Jacobins. He was then declared an outlaw; on which he fled to Brittany, and thence to the department of the Garonne. At length he separated from his companions and returned to Paris, where he kept himself concealed till after the fall of Robespierre. He subsequently published an account of his adventures during the time of his proscription, entitled "*Notices sur l'Histoire et le Récit de mes Périls*," a work written in a romantic style, which has been translated into English and other languages. Louvet recovered his seat in the convention in March 1795, and he occupied the presidency in June following. He was afterwards a member of the council of five hundred, which he quitted in May 1797, and died at Paris in August of that year.

**LOUVOIS, FRANCOIS MICHEL LETELLIER, MARQUIS OF**.—This celebrated French minister of war to Louis XIV. was son of the chancellor Letellier. He was born at Paris in 1641, and was early made a royal counsellor through the influence of his father; but he displayed so little in-

clination for business, and so great a love of pleasure, that his father threatened to deprive him of the reversion of the secretariship in the war department, which had been conferred on him at the early age of thirteen. From this moment young Louvois abandoned his habits of dissipation, and devoted himself to business. After 1666 he had the whole management of the ministry of war, and soon exercised a despotic control over his master and over the army. His extensive knowledge, his decision, activity, industry, and talents, rendered him an able minister; but he cannot aspire to the praise of a great statesman. He was too regardless of the rights of human nature, too lavish of the blood and treasure of France, too much of a despot to deserve that honourable appellation. His reforms in the organization of the army, his manner of conducting the wars of his ambitious master (if they were not rather his own), and, above all, his successes, render his administration brilliant. But, justly appreciated, Louvois must be considered as the evil genius of the showy but disastrous reign of Louis XIV. While the king was flattered with the idea of having formed the young minister, and of directing his government in person, every thing was in fact done by Louvois, and according to his views. The generals were all required to communicate immediately with him; and although Turenne would not submit to this order, yet the king showed all his letters to his minister, and answered them according to his suggestions. Bold and grasping schemes, which could be executed only by the unwearied activity and industry of Louvois, were proposed by him for the purpose of rendering himself necessary to Louis, who, he was conscious, disliked him personally. Hence, notwithstanding the solemn renunciations of all claims to Franche-Comté and the Spanish Netherlands, war was undertaken to get possession of them. The war of 1672 against Holland was begun at the instigation of Louvois, and would have been finished much sooner had he not, contrary to the wishes of Condé and Turenne, insisted upon occupying the fortresses, and thus given the Dutch time to open their sluices. The victories of Turenne in 1674 and 1675 were gained by a disobedience of the orders of the minister of war; but the desolation of the palatinate was commanded by him. The system of re-union, as it is called, was now adopted, and Louvois took possession of Strasburg in the time of peace in 1680. On the death of Colbert, of whom he had been the enemy, his influence became still greater, and one of its most fatal effects was the revocation of the edict of Nantes, the *dragonnades*, and the consequent flight of so many peaceful and industrious Calvinists. Louvois was now superintendent of the royal buildings, and on occasion of a dispute with the king about the size of a window, in which the latter had spoken severely to him, "The king," said the minister, "begins to meddle with every thing; we must give him something to do; he shall have a war;" and a pretext was soon found. The system of re-union had united the European powers in the league of Augsburg, and it was determined to seize on Philipsburg, one of the bulwarks of Germany. This was done with so much secrecy as to prevent the place being relieved. The French arms were successful, but disgraced by the horrid burnings and devastations committed by the direction of Louvois. The palatinate was reduced to a wilderness in mid-

winter. The war was conducted with great ability by Louvois, but his arrogance had long rendered him odious to Louis. The king's dislike had been increased by the cruel devastations of the palatinate, and when the minister proposed to him to complete the desolation by the burning of Treves, he refused his consent. Louvois replied, that to spare his majesty's conscience, he had already despatched a courier with orders to that effect. Louis, filled with indignation, was prevented from striking his minister only by the interference of Madame de Maintenon. Soon after, on presenting himself at the royal council, he discovered, or fancied he discovered, in the countenance and words of the king, marks of severity, and was obliged by faintness to retire to his hotel, where he died within half an hour. Whatever may be our feelings at the arrogance, cruelty, and despotism of Louvois, we cannot deny him the merit of having organized the brilliant but useless victories of the reign of Louis.

LOVAT, SIMON FRAZER, commonly called Lord, a Scottish statesman, who was born in 1667. He was educated in France among the Jesuits, and, returning to his native country, he entered into the army, and in 1692 he was a captain in the regiment of Tullibardine. After having committed some acts of violence in taking possession of his hereditary estate, he fled to France, and gained the confidence of the pretender, which he made use of on his return to Scotland, in order to ruin his personal enemies. He again went to France, where he was imprisoned in the Bastille, and was liberated only on condition of taking religious orders, in pursuance of which engagement he is said to have become a Jesuit. In 1715 he a second time betrayed the pretender, and was rewarded by the government of George I. with the title of Lovat, and a pension. He now led a quiet life, uniting in his own person the contradictory characters of a catholic priest and a father of a family, a colonel and a Jesuit, a Hanoverian lord and a Jacobite laird. Notwithstanding the favours he had received, he engaged in the rebellion in 1745; and after having displayed his usual craft and audacity, he was finally seized, tried, condemned, and executed in April 1747, at the age of eighty. Notwithstanding his age, infirmities, and a conscience supposed to be not wholly void of offence, he died, says Smollett, like a Roman, exclaiming, "Dulce et decorum pro patriâ mori."

LOVE, JAMES, a dramatic writer and actor, who was born in London and educated at Cambridge. He made his first appearance as an author in a defence of Sir Robert Walpole, who had been severely satirized in a publication entitled "Are these Things so?" Mr. Love replied in a work called "Yes, they are: What then?" This procured him a handsome present from Sir Robert. He afterwards became an actor, and wrote several popular dramas for the stage. He died in 1774. The real name of this gentleman was Dance, but he is only known in his public life as Mr. Love.

LOVELACE, RICHARD, a poet of the seventeenth century, who was born about 1618, and educated at Oxford. On leaving Oxford he repaired to court, entered the army, and became a captain. He expended the whole of his estate in the support of the royal cause, and after entering into the French service in 1648, returned to England, and was imprisoned until the king's death, when he was set at

liberty. His condition was at this time very destitute, and strongly contrasted with Anthony Wood's gay description of his handsome person and splendid appearance in the outset of life. He died in great poverty in an obscure alley in 1658. His poems, which are light and elegant, but occasionally involved and fantastic, are published under the title of "Lucasta," under which name he complimented Miss Lucy Sacheverell, a young lady to whom he was attached, who, on a false report of his death, married another person. Colonel Lovelace, who for spirit and gallantry has been compared to Sir Philip Sidney, also wrote two plays, "The Scholar," a comedy, and "The Soldier," a tragedy.

**LOWENDAL, ULRICH FREDERICK WOLDEMARE, COUNT OF.**—This distinguished military leader was the great grandson of Frederick III., king of Denmark. He was born in 1700 at Ham-burgh, and began his military career in Poland, where he became captain. In 1716 he served in Hungary, and distinguished himself at the battle of Peterwar-dein, and at the sieges of Temeswar and Belgrade. He next took part in the wars in Sardinia and Sicily, and was present at all the battles from 1718 to 1721. During peace he studied gunnery and engineering, and was made field-marshal and inspector-general of the Saxon infantry in the service of Augustus, king of Poland. The death of this monarch gave him an opportunity of distinguishing himself by his valiant defence of Cracow. Having entered the service of the empress of Russia, she was so well satisfied with his conduct in the Crimea and Ukraine that she appointed him commander of her forces. In 1743 he was made lieutenant-general in the French service, and at the sieges of Menin, Ypres, and Fribourg, was conspicuous for his courage and skill. In 1745 he commanded the corps of reserve at the battle of Fontenoy, in which he took an honourable share. After having taken many strong places in Flanders, he obtained possession of Bergen-op-Zoom by storm in September 1747. This place till then had been considered impregnable, and was occupied by a strong garrison, and covered by a formidable army. The following day he received the staff of marshal. He died in 1755. Lowendal was thoroughly acquainted with engineering, geography, and tactics, and spoke Latin, German, English, Italian, Russian, and French, with fluency. With these accomplishments he combined modesty and amiableness of disposition, though a devotee of pleasure, like the marshal Saxe, his most intimate friend, whom he also resembled in his application to military studies.

**LOWMAN, MOSES,** a learned divine, who was born at London in 1680, and educated at the universities of Leydon and Utrecht. He subsequently settled at Clapham, where he died at a very advanced age. His principal works are "A Dissertation on the Civil Government of the Hebrews," and "An Argument from Prophecy to prove that Jesus is the Messiah."

**LOWRY, WILSON,** an English artist, who was distinguished for his great skill in the art of engraving. He was the son of a portrait painter of Whitehaven, where he was born on the 24th of January, 1762. He is said to have reached the age of fifteen before he displayed any decided partiality for the profession in which he afterwards distinguished himself. Early in life he was induced to leave his paternal home, in company with a youth of his own age. They had formed a resolution to support themselves

by house-painting; and, after wandering about the country for a little time, they went to London, and were there actually employed in the business on which they had fixed. About the age of eighteen, Mr. Lowry, after visiting Warwick, Shrewsbury, and other large towns, where he maintained himself by engraving, and teaching drawing, repaired for the second time to the metropolis; and being the bearer of a letter of introduction to Alderman Boydell, he received him with great kindness, and was ever after his warm friend.

He subsequently commenced the study of surgery, but after several years' sedulous attendance at the lectures and hospital, he gave the plan up and recommenced his old occupation of engraving, in which he soon raised himself to eminence. Some of the finest etchings for the topographical publication of Hearne and Byrne were by Mr. Lowry; among others, the view of Holyrood House, the Round Tower at Ludlow, and the ancient Market Cross at Glastonbury. These plates were at least equal, if not superior, to any similar productions of that period. His style of etching picturesque antiquities was evidently formed on a keen preception of, and sensibility to, the beauties of the style of the elder Rooker, and of the analogy between that style and its archetype in nature.

Not content, however, with the uncertain and imperfect modes of execution then existing, Mr. Lowry bent all the powers of his mind to the invention of such mechanical means as might ensure evenness of texture and clearness and precision of line upon copper, especially in the representation of architectural subjects, machinery, apparatus, &c. In this desirable object he completely succeeded, and the merit of his invention has long been universally acknowledged. About the years 1790 or 1791, Mr. Lowry completed, principally with his own hands, and of wood, his first ruling machine, possessing the property of ruling successive lines, either equidistant, or in just gradation from the greatest required width to the nearest possible approximation.

In 1798 he invented the diamond points for etching, the durability of which, as compared with steel points, and the equality of tone produced, have rendered them highly important to the art of engraving. In 1799 he improved upon his ruling machine, and constructed a new one, capable of drawing lines to a point, as well as parallel lines, and of forming concentric circles. In 1800 he invented a simple instrument for describing parts of circles, of which the radius is so large as to preclude the use of even beam compasses. In 1801 he invented a machine for drawing ellipses on paper or copper. In 1806 he invented a machine for making perspective drawings; and so great was its accuracy, that, after having finished with its aid an elaborate drawing of the west front of Peterborough cathedral, on taking the actual measurements of the building, they were found to agree exactly with all the parts of the drawing. Besides these important inventions, Mr. Lowry constructed an instrument to place over a vanishing point, to which lines were to be drawn on copper, a variety of compasses, with micrometer screws, moveable points for the insertion of diamonds, &c.; and not very long before his death he completed two new ruling machines, of singular simplicity and accuracy. Mr. Lowry at length, by the inventions which have just been described, and by the taste and skill with which

he adapted them to his purpose, established himself, without a rival, in the peculiar walk of art to which he principally devoted his attention. The first production of his on which he employed his ruling machine was a plate which occurs in the third volume of Stuart's "Athens." It is a sort of Corinthian capital. Some time afterwards he executed several plates for Murphy's "Description of the Church of Batalha, in Portugal." After the completion of this publication, Mr. Lowry executed several plates for Murphy's "Travels in Portugal," among the best of which may be ranked a View of the Bath at Cintra, and a View of the Temple of Diana at Evora. Mr. Lowry was then engaged by Mr. Peter Nicholson to execute the plates of his book on Grecian and Roman architecture. Unfortunately, the inferior ink with which the plates were printed prevented him from receiving the full praise to which he was entitled; for no one can have an adequate idea of the exquisite beauty of the engraving who has not seen the proof impression which Mr. Lowry had struck off for himself before the plates were sent to the publishers. For a year or two after this Mr. Lowry was principally employed in engraving scientific subjects, for such works as Tilloch's "Philosophical Magazine," and "The Journal of the Society of Arts, Manufactures, and Commerce." Towards the latter end of the year 1800 Messrs. Longman and Co. resolved to publish, under the name of "Dr. Rees's Cyclopædia," a work which, in every respect, should surpass all publications of a similar nature that had preceded it, and Mr. Lowry was engaged to engrave the plates and machinery. In his efforts to do justice to the publishers of the work, he was warmly seconded by their liberality, of which he always expressed a grateful sense. On his part, nothing could exceed the enthusiasm with which he devoted himself to the undertaking. It was one of the excellent qualities of Mr. Lowry's character, never to be satisfied but by the nearest possible approximation to perfection. At his recommendation, original drawings were made for most of the plates; and if he thought he had reason to suspect that any of those drawings were inaccurate, he would never transfer them to copper, until, at whatever expense of time, he had ascertained their truth or had made the corrections which his knowledge suggested and enabled him to effect.

For nearly twenty years "Rees's Cyclopædia" occupied the greater part, but not the whole of Mr. Lowry's time. Among other works in which he was employed, were several of the plates in Wilkins's "Magna Græcia," almost all the plates in Wilkins's "Vitruvius," and some of those which adorn Nicholson's "Architectural Dictionary." About the month of June 1820, the last plates of the Cyclopædia were finished. Mr. Lowry was shortly after engaged to engrave the plates for Crabbe's "Technological Dictionary." Towards the latter end of 1821 Messrs. Mawman and Rivington secured his services for the "Encyclopædia Metropolitana," and in this work he was chiefly employed until his last illness. Whoever might be called upon to pronounce a judgment on Mr. Lowry's engravings would find it difficult to decide whether, in the extreme accuracy of the drawing or in the beauty of the mechanical execution, lay their chief merit. It may, perhaps, be said that the correctness of the drawing is owing to the draftsman and not to the engraver. This is true to a certain extent in all other cases, but it is not true in the

case before us. Very few drawings were brought to Mr. Lowry in which his penetrating judgment could not discover some error; and, as we have already observed, he exercised the right of supplying whatever deficiencies he observed. Besides, many of his plates were drawn, as well as engraved, by himself, although he did not always affix his name as the delineator. All those plates in "Rees's Cyclopædia" which are without the name of any draftsman, were drawn either by Mr. Lowry or by his daughters. His engravings in Leslie's "Treatise on Light and Heat" are among his most finished specimens, and were also drawn by him.

It will, doubtless, be interesting to the reader to know what was Mr. Lowry's opinion of the comparative merit of his own works. He esteemed, as the most perfect specimen which he had ever produced, an engraving in Nicholson's Architecture, with the following title: "From the Doric Portico at Athens;" declaring that, if he were to receive a thousand pounds for the attempt, he could not do a single line of it better. Next to this he ranked two plates in the same publication, with the following titles,—"From the Temple of Apollo at Cora," "From the Coliseum at Rome."

Mr. Lowry was confined to his house for some months previous to his death, by a complaint under which he had laboured for several years, and which terminated fatally on the 23rd of June, 1824. Mrs. Lowry has obtained considerable reputation as a teacher of mineralogy and the elements of mathematics.

LOWTH, ROBERT, a distinguished English prelate, who was born at Buriton in 1710. He received his education at Winchester school, whence he was elected in 1730 to New college, Oxford, of which he was chosen a fellow in 1734, and in 1741 was elected professor of poetry in the university of Oxford. In 1753 he published his "De Sacra Poesi Hebræorum Prælectiones Academicæ," which has been translated into English, French, and German. The best edition is that of Leipsic, 1815, with notes by Michaelis Rosenmüller, &c. In 1754 he received the degree of D. D. from the university of Oxford by diploma, and in 1755 went to Ireland as chaplain to the marquis of Hartington, appointed lord lieutenant, who nominated him bishop of Limerick, which preferment he exchanged for a prebend of Durham, and the rectory of Sedgfield. In 1758 was published his "Life of William of Wykeham," which in 1762 was followed by "A Short Introduction to the English Grammar." In 1765 a misunderstanding took place between Doctors Lowth and Warburton, the latter of whom took offence at certain passages in the Prælectiones respecting the book of Job, which he believed to be aimed at the theory of his "Divine Legation of Moses." Warburton, in an appendix concerning the book of Job, added to the second edition of his "Divine Legation," indulged in the acrimony by which he was distinguished, and thereby produced a reply from Dr. Lowth in a "Letter to the right reverend the Author of the Divine Legation of Moses," which has become memorable at once for the ability and severity of its criticism. The ultimate silence of the Warburtonians gave the victory to their antagonists. In 1766 Dr. Lowth was appointed bishop of St. David's, whence, in a few months afterwards, he was translated to the see of Oxford. In 1777 he succeeded to the diocese of London, and the

next year published the last of his literary labours—"Isaiah, a New Translation, with a Preliminary Dissertation and Notes." Rosenmüller says he understands and expresses the Hebrew poet better than any other writer. On the death of Archbishop Cornwallis, the primacy was offered to Dr. Lowth, but he declined that dignity in consequence of his age and family afflictions. He died in November 1787.

LOWTH, WILLIAM, a distinguished divine, who was born in London in 1661, and received his early education at Merchant Tailors' school. He subsequently went to Oxford, where he took his degree in 1688, and then entered holy orders. Through the interest of the bishop of Winchester he obtained, besides other church preferments, the rectory of Buriton, where he remained till his death, which took place in May 1732. He is best known in the literary world as the author of "A Vindication of the Divine Authority of the Old and New Testament."

LOYOLA, IGNATIUS, a member of the Roman catholic church, who was the founder of the society of Jesuits. He was born in 1491 in the castle of Loyola, in the Spanish province Guipuscoa. Till his twenty-ninth year he served in the army, was distinguished for bravery, gallantry, and vanity, and made indifferent verses. At the siege of Pampeluna by the French, he was wounded in both legs, one of which being crooked after the cure, he caused it to be broken again for the purpose of having it made straight. During the siege he had shown great valour and firmness, and when the commander wished to surrender in consequence of want of provisions, he alone opposed it. As soon as the soldiers saw him fall they surrendered. During his sickness, Ignatius beguiled his time with books, and as there were no romances in the house, he read a Spanish translation of the life of the Saviour, by Landolphus, a Carthusian, and a volume of the lives of the saints. His imagination was highly excited by these books. What others had done, as was recorded in those biographies, he thought he might do also, as he afterwards said himself. He determined to live a life of abstinence, penitence, and holiness. The virgin he thought appeared to him with the holy infant in her arms, both regarding him with looks of benign complacency and encouragement. His brother, Martin Garcia, observed the change which had taken place in him, and endeavoured to dissuade him from his purpose, entreating him to remember his illustrious birth, and the reputation which he had already obtained; but Ignatius was firm.

Leaving his brother at a sister's house in Onate, he proceeded to Navarretta, where he collected some debts, and, having paid his servants and all his creditors, gave the rest for the restoration of the picture of the virgin, and proceeded alone upon his mule to Montserrat. A Moor overtook him, who, in their conversation, uttered an opinion respecting the virgin which appeared to Ignatius blasphemous; and while the Moor, luckily for himself, pricked forward, Loyola deliberated whether it was not his duty to follow and stab him. The Moor had gone to a village off the road, and Ignatius let his mule choose his own way, with the intention of killing the infidel if the mule should carry him to the village; but it was not so ordered, and he arrived at Montserrat. Here he consecrated his arms to the virgin, declared himself her knight, and proceeded to the hospital at Manresa, a small place not far from Montserrat, where he

fasted rigorously, scourged himself, neither cut his nails nor combed his hair, and prayed seven hours a day. He begged his bread, bread and water being his only food, and, eating very sparingly, he gave what remained to others. In the condition to which he was thus reduced, visions haunted him and tempted him. Recollections arose of his birth and breeding, his former station, his former habits of life,—these compared with his present situation in a hospital, in filth and in rags, the companion of beggars! This temptation he at once quelled and punished by drawing closer to the beggar at his side, and courting more familiarity with him. He then shrunk from the prospect of living in this painful, and, as he could not but feel it to be, beastly life, till the three-score and ten years of mortal existence should be numbered: could he bear this? The question he thought came from Satan: to Satan he replied triumphantly, by asking him if it was in his power to ensure life to him for a single hour; and he comforted and strengthened himself by comparing the longest span of human life to eternity.

It is affirmed that at this time he was entranced from one Sunday to another, lying all that while so apparently lifeless that certain pious persons would have had him buried if others had not thought it necessary first to ascertain whether he were dead, and, in so doing, felt a faint pulsation at the heart. He awoke from this ecstasy as from a sweet sleep, sighing forth the name of Jesus. Orlandini says it is a pious and probable conjecture, that, as great mysteries were revealed to Paul when he was wrapt in the third heaven, so during these seven days the form and constitution of the society which he was to found were manifested to Ignatius. It is pretended that he retired from Manresa to a cave in a rock not far from that city. The cave was dark and not unlike a sepulchre, but for this incommensurateness, as well as for its solitude and the beauty of the narrow vale where thorns and brushwood concealed it, the more agreeable to him. Having remained some ten months at Manresa, a city which his biographers say he undoubtedly regards with peculiar favour in heaven, as the cradle of his Christian infancy and the school of his first evangelical discipline, he determined upon going to Jerusalem, less from the desire of seeing those places which had been hallowed by the presence of our Lord than in the hope of converting some of the infidels who were masters of the holy land, or of gaining the palm of martyrdom in the attempt, for of this he was most ambitious. A dangerous passage of five days brought him to Gaëta, from whence he proceeded to Rome on foot. This was a painful and perilous journey. It was seldom that he was admitted into a town or under a roof for fear of the plague, his appearance being that of a man who, if not stricken with the disease, had recently recovered from it; and for the most part, he was fain to lie down at night in a porch, or in the open air. He reached Rome, however, where there was either not the same alarm, or not the same vigilance. At Venice he begged his bread, and slept on the ground, till a wealthy Spaniard, recognising him for a countryman, took him to his house, and afterwards introduced him to the doge, from whom he obtained a free passage to Cyprus. From Jaffa he proceeded with other pilgrims to Jerusalem in the usual manner; and when they alighted from their asses, on the spot where the friars were waiting with the cross to receive them, and when they

had the first sight of the holy city, all were sensible of what they deemed an emotion of supernatural delight.

He now began his return to Spain more unprovided even than he had left it. No difficulty occurred in re-crossing to Cyprus. He had obtained a good character from his fellow-pilgrims, and they having taken their passage from that island in a large Venetian ship, besought the captain to give him a passage, as one for whose holy conversation they could vouch. The Venetian captain was no believer in such holiness, and he replied, that a saint could not possibly want a ship to convey him across the sea, when he might walk upon the water, as so many others had done. The master of a smaller vessel was more compassionate; and this, though so much less seaworthy than the other that none of the other pilgrims embarked in her, reached Italy safely after a perilous voyage, while the other was wrecked. He had been warned of the danger to which he would be exposed in travelling from Ferrara to Genoa, where the French and Spanish armies were in the field, by both which he must pass, with the likelihood of being apprehended as a spy by both. Some Spanish soldiers, into whose company he fell, pointed out another route. But Ignatius liked to put himself in the way of tribulation; the more suffering, the greater merit, and consequently the more contentment; and he was contented accordingly; when, upon attempting to enter a walled town, which was in possession of the Spaniards, he was seized and searched as a spy. The journey to Jerusalem, notwithstanding all the hardships which he endured in it, had so greatly improved his health, that he thought the relaxation of austerity in his course of life, which had been enjoined him as a duty, had ceased to be allowable, having now ceased to be necessary. He did not, indeed, resume his former mode of apparel in its full wretchedness; but he clad himself as meanly as he could, and cut the soles of his shoes in such a manner as to let the gravel in, and also to prepare for himself a further refinement of discomfort, for the fragments of sole which he had left were soon worn away, while the upper-leather remained, and thus he contrived to walk in winter with his bare feet on the earth, and yet no one suspected that he was thus purposely afflicting himself.

In 1524 he returned to Barcelona, and after a residence of two years he went to the university of Alcalá, where he found some adherents; but the inquisition imprisoned him for his misconduct, which appeared strange, and rendered him suspected of witchcraft. He was not delivered from the prison of the holy office until 1528, when he went to Paris to continue his studies, the subjects of which, indeed, were only works of an ascetic character. Here he became acquainted with several Spaniards and Frenchmen, who were afterwards celebrated as his followers; as Lainez, Salmeron, Bovadilla, Rodriguez, St. Pierre, Favre, and others. They conceived the plan of an order for the conversion of heathens and sinners, and, on Ascension day in 1534, they united for this great work in the subterranean chapel of the abbey of Montmartre. Some of these men had not yet finished their theological studies, and, until this should take place, Ignatius returned to Spain. They then met again in 1536 at Venice, whence they proceeded to Rome, and received the confirmation of their society from Pope Paul III. They took the triple vow of chastity, obedience, and poverty, in the

presence of the papal nuncio Veralli at Venice. The account of the origin of their name, given by Lainez, adopted by the society, and recorded by them upon a marble tablet, is, that, Ignatius, losing his bodily senses, saw himself surrounded with the full splendour of heaven; saw the Father beholding him with an aspect full of love, the Son bearing his cross, and pointing to the marks of his passion; heard the Father earnestly recommend him to the Son; saw himself benignantly accepted by the Son, and heard these words from the lips of the Son, *Ego vobis Romæ propitius ero*. Therefore it was, according to Lainez, that he gave his order the name of the Society of Jesus. In 1541 Ignatius was chosen general of the society, but Lainez, his successor, must be considered, even from the commencement, as the person who gave to the order the organization by which it has astonished the world, though Ignatius by his ardent zeal may have given it a great impulse. Ignatius continued his abstinence and penances during life. Even when general, he used to perform the meanest labours in his church in Rome, and died in July 1556, exhausted by fatigues. Forty-three years after, he was declared *beatus* by Paul V., and Gregory XV. canonized him. There are two works of Loyola, his "Constitution of the Order," in Spanish, praised by Cardinal Richelieu as a master-piece; and his "Spiritual Exercises," also in Spanish; a work the first plan of which was drawn up in the hospital at Manresa.

LUBIENIETSKI, STANISLAUS, a Polish gentleman, who was born at Cracow in 1623, and educated by his father with great care. He became a celebrated Socinian minister, and took great pains to obtain a toleration from the German princes for his Socinian brethren. His labours, however, were ineffectual, being himself persecuted by the Lutheran ministers, and banished from place to place; until at length he died, with his two daughters, from poison, his wife narrowly escaping, in 1674. We have of his writing "A History of the Reformation in Poland," "A Treatise on Comets," with other works in the Latin language.

LUBIN, EILHARD, a learned German, who became professor of poetry in the university of Rostock in 1595, and ten years after was promoted to the professorship of divinity. He wrote notes on Anacreon, Juvenal, Persius, &c., and several other works; but that for which he became most celebrated was a treatise on the nature and origin of evil, entitled, "Phosphorus de Causa Prima et Natura Mali," in which we have a curious hypothesis to account for the origin of moral evil. He supposed two co-eternal principles; not matter and vacuum, as Epicurus did, but God and Nihilum, or Nothing. This being written against by Grawer, was defended by Lubin; but after all he is deemed better acquainted with polite literature than with divinity. He died in 1621.

LUCANUS, MARCUS ANNÆUS, a Latin poet, born at Corduba in Spain. He was the son of Annæus Mela, the youngest brother of Seneca, and was taken to Rome from the place of his nativity at the age of eight months. At Rome he was educated under the stoic Cornutus, so celebrated by his disciple Persius the satirist. In the close of his education Lucan is said to have passed some time at Athens. On his return to Rome he rose to the office of quaestor before he had attained the legal age. He was afterwards enrolled among the augurs, and married a

R

lady of noble birth. Lucan had for some time been admitted to familiarity with Nero, when the emperor was contending for poetical honours by the public recital of a poem he had composed on Niobe. Lucan had the imprudence to repeat a poem on Orpheus in competition with that of Nero; and, what is more remarkable, the judges of the contest were just enough to decide against the emperor. From that period Nero became the prosecutor of his successful rival, and forbade him to produce any poetry in public. The well-known conspiracy of Piso against the tyrant soon followed; and Tacitus, with his usual sarcastic severity, concludes that Lucan engaged in the enterprise from the poetical injuries he had received,—“a remark which does little credit to the candour of the historian, who might have found a much nobler and a more probable motive for his conduct in the generous ardour of his character, and his passionate adoration of freedom. In the sequel of his narration, Tacitus alleges the following charge against this poet: The historian asserts that Lucan, when accused of the conspiracy, for some time denied the charge; but corrupted at last by a promise of impunity, and desirous to atone for the tardiness of his confession, accused his mother Atilla as his accomplice. This circumstance is so improbable in itself, and so little consonant to the general character of Lucan, that some writers have treated it as a calumny invented by Nero to vilify the object of his envy. But the name of Tacitus has given such an air of authority to the story, that it may seem to deserve a more serious discussion, particularly as there are two subsequent events related by the same historian which have a tendency to invalidate the accusation so injurious to our poet. The events are, the fate of Annæus and the escape of Atilla, the two parents of Lucan. The former died in consequence of an accusation brought against him after the death of his son, by Fabius Romanus, who had been a friend of Lucan, and forged some letters in his name with the design of proving his father concerned in the conspiracy. These letters were produced to Nero, who sent them to Annæus from a desire (says Tacitus) to get possession of his wealth. From this fact two inferences may be drawn, according to the different lights in which it may be considered:—If the accusation against Annæus was just, it is clear that Lucan had not betrayed his father, and he appears the less likely to have endangered by his confession the life of a parent to whom he owed a still tenderer regard.—If Annæus was not involved in the conspiracy, and merely put to death by Nero for the sake of his treasure, we may the more readily believe that the tyrant who murdered the father from avarice, might calumniate the son from envy. But the escape of Atilla affords us the strongest reason to conclude that Lucan was perfectly innocent of the abject and unnatural treachery of which Tacitus has supposed him guilty. Had the poet really named his mother as an accomplice, would the vindictive and sanguinary Nero have spared the life of a woman whose family he detested, particularly when other females were put to death for their share in the conspiracy? That Atilla was not in that number the historian himself informs us in the following remarkable sentence:—“The information against Atilla, the mother of Lucan, was dissembled; and, without being cleared, she escaped unpunished.”

Lucan's firmness and intrepidity of character are forcibly displayed in the picture of his death which

Tacitus himself has given us. He was condemned to have his veins cut; and while his blood issued in streams, perceiving his feet and hands to grow cold and stiffen, and life to retire by little and little from the extremities, while his heart was still beating with vital warmth, and his faculties in no shape impaired, recollected some lines of his own, which described a wounded soldier expiring in the manner that resembled this. The lines themselves are believed to have been the last words he ever uttered. The following translation is by Rowe:—

“Now the warm blood at once, from every part,  
Ran purple poison down, and drain'd the fainting heart.  
Blood falls for tears; and o'er his mournful face  
The ruddy drops their tainted passage trace.  
Where'er the liquid juices find a way,  
There streams of blood, there crimson rivers stray.  
His mouth and gushing nostrils pour a flood,  
And e'en the pores ooze out the trickling blood;  
In the red deluge all the parts lie drown'd,  
And the whole body seems one bleeding wound.

No single wound the gaping rupture seems.  
Where trickling crimson wells in slender streams;  
But, from an op'ning horrible and wide,  
A thousand vessels pour the bursting tide:  
At once the winding channel's course was broke,  
Where wand'ring life her mazy journey took;  
At once the currents all forgot their way,  
And lost their purple in the azure sea.”

Rowe.

Such was the death of Lucan before he had completed his twenty-seventh year. His wife, Polla Argentaria, is said to have transcribed and corrected the first three books of the “Pharsalia” after his death. The veneration which she paid to the memory of her husband is recorded by Martial; and more poetically described in that elegant production of Statius, called “Genethliacon Lucani,” a poem said to have been written at the request of Argentaria. The author, having invoked the poetical deities to attend the ceremony, touches with great delicacy and spirit on the compositions of Lucan's childhood, which are lost, and the “Pharsalia,” the production of his early youth: he then pays a short compliment to the beauty and talents of Argentaria, laments the cruel fate which deprived her so immaturity of domestic happiness, and concludes with an address to the shade of Lucan. The severest censures on Lucan have proceeded from those who have unfairly compared his language to that of Virgil: but how unjust is such a comparison! it is comparing an uneven block of porphyry, taken rough from the quarry, to the most beautiful superficies of polished marble. How differently should we think of Virgil as a poet if we possessed only the verses which he wrote at that period of life when Lucan composed his “Pharsalia!” In the disposition of his subject, in the propriety and elegance of diction, he is undoubtedly far inferior to Virgil; but if we attend to the bold originality of his design, and to the vigour of his sentiments,—if we consider the “Pharsalia” as the rapid and uncorrected sketch of a young poet, executed in an age when the spirit of his countrymen was broken, and their taste in literature corrupted,—it may justly be esteemed as one of the most noble productions of the human mind.

LUCAS, CHARLES, an Irish patriot, who was born in 1713, in the county of Clare. After completing his education he took the degree of M. D. and became a practising physician. His first political publication of importance was a pamphlet which he entitled “The Complaints of Dublin.” It contained a statement of what he conceived to be the grievances of his fellow-citizens, which he presented to Lord Harrington, the then lord lieutenant, by

whom though Lucas was politely received, the matter nevertheless ended in nothing. In this and some other publications he gave the results of his investigations of the ancient records and charters of the city, and endeavoured to arouse the citizens of Dublin to seek legal redress. These exertions naturally made him universally popular with those whose cause he had so warmly espoused, and in defence of whose interests he for several years maintained an arduous and persevering contest. On the death of Sir James Somerville, the representative of the city in parliament, which took place in August 1748, both Lucas and Latouche being put in nomination for the vacant seat, a difference of interests was created between them, and the election was carried on with all the excitement and violence of party spirit. In several of Dr. Lucas's speeches, and more especially in many powerful and energetic addresses which he published about this period, he animadverted in strong and unguarded language upon the conduct of the government. But though it may be admitted that this was sufficiently deserving of reprehension, yet nothing could warrant the perfidious advantage which was taken of his unsuspecting rashness, in placing in the hands of the lord lieutenant's secretary, Mr. Weston, for the purpose of justifying himself, copies of some of his publications which had been most censured. It seems that it was determined at any rate to get rid of Lucas, who was both feared and hated; and accordingly, when brought before the house of commons on the ground of having published some seditious pamphlets, it would perhaps have been impossible to have proved him the author (for the printer could not be found, and no other evidence was to be had), when Mr. Weston "produced the very papers which Lucas had left at the castle, which of course could not be denied by him, had he been disposed to take refuge that way." After some opposition the publications were voted criminal, Lucas was ordered to be taken into custody, and the attorney general directed to prosecute him. In consequence of this, Lucas conceived it most prudent to retire to England; and accordingly he appears to have resided here, and to have followed his professional avocations with considerable profit and credit for some time. "An Essay on the Bath Waters," which he published in London in 1756, appears to have added not a little to his character and fame as a physician. Here he became acquainted with Dr. Johnson, by whom he was much valued and esteemed. The following energetic passage occurs in a review by Johnson of the essay to which we have alluded:—"The Irish ministers drove him from his native country by a proclamation, in which they charged him with crimes which they never intended to be called to the proof, and oppressed him by methods equally irresistible by guilt and innocence. Let the man thus driven into exile for having been the friend of his country, be received in every other place as a confessor of liberty; and let the tools of power be taught in time, that they may rob, but cannot impoverish."

The most remarkable of Dr. Lucas's publications, namely, his "Translation of the Great Charter of Dublin," appeared in 1749; to which is prefixed a dedication, in which, at considerable length and with great ability, he traces the political history of the city of Dublin.

At length, by the intervention of some influential persons, Dr. Lucas was enabled to return to Ireland;

and at the election which took place upon the accession of George III. he was elected for the city of Dublin, which he thenceforward continued to represent while he lived.

It is said that in the house of commons his influence and importance were considerably diminished by his impetuosity, and perhaps also from the comparatively humble rank in life from which he had originally sprung. Certain it is, however, that he advocated with much power and ability, and in some degree took a leading part in bringing forward many popular measures which were discussed in the Irish parliament at that period; that he was constantly assailed by the newspapers under the influence of ministers, is a sure proof that he was in no small degree formidable to them. He was much considered and regarded by many estimable persons of his contemporaries, and among the rest by Lord Claremont, who also thought very highly of his professional abilities, and often declared that he had received more benefit from the advice of Lucas than from all his other physicians.

During the latter part of Lucas's life he suffered much from impaired health; and this seems not to have been diminished by discovering that his unremitting exertions in the service of the public were frequently foiled and rendered abortive. Almost worn out by the disappointments which too constantly attend our most zealous labours, he declared in one of his addresses to his constituents—"I dare not neglect, much less desert my station, but I wish by any lawful or honourable means for my dismissal." His appearance in the house of commons at this period is described by a contemporary to have been very dignified and imposing; "his infirmities, for he was always carried into and out of the house, being so enfeebled by the gout that he could scarcely stand for a moment; the gravity and uncommon neatness of his dress; his gray venerable locks blending with a pale but interesting countenance, in which an air of beauty was still visible, altogether excited attention; and I never saw a stranger come into the house without asking who he was."

He died in November 1771, and his remains were honoured with a public funeral, which was attended by the lord mayor and other members of the corporation in their dresses of ceremony, and also by many distinguished men of his party in the house of commons, as well as private friends. Soon after his decease a subscription was raised among the merchants and citizens of Dublin, and others who appreciated the unspotted character he had sustained, through life, of steady and incorruptible patriotism, for the purpose of erecting a statue to his memory, which has been accordingly placed in a conspicuous niche on the west staircase of the royal exchange. It represents Lucas in a striking and dignified attitude, in the act of addressing an assembly; in his right hand he holds a roll, on which is inscribed "Magna Charta."

LUCAS, JACOBS, an eminent artist, who was born at Leyden in 1494. He received his first instructions in the art of painting from his father, Hugues Jacobs, but completed his studies in the school of Cornelius Engelbrecht. It is said that a few years before his death he made a tour into Zealand and Brabant; and during his journey a painter of Flushing, envious of his great talents, gave him poison at an entertainment; which, though very slow,

was too fatal in its effect, and put an end to his life after six years' languishing under its influence. Others attribute his death to his incessant industry. The superiority of this artist's style manifested itself in his early youth. His tone of colouring is good, his attitudes (making a reasonable allowance for the stiff German taste) are well chosen, his figures have a considerable expression in their faces, and his pictures are very highly finished. He endeavoured to proportion the strength of his colouring to the different degrees of distance in which his objects were placed; for in that early time the true principles of perspective were but little known, and the practice of it was much less observed.

This artist painted not only in oil, but also in distemper and upon glass. Nor was he less eminent for his engraving than for his painting. He carried on a correspondence with Albert Dürer, who was his contemporary; and it is said, that as regularly as Albert Dürer published one print, Lucas published another, without the least jealousy on either side, or wish to depreciate each other's merit. And when Albert came into Holland upon his travels, he was received by Lucas with great cordiality. His style of engraving, however, differed considerably from that of Albert Dürer, and seems evidently to have been founded upon the works of Israel van Mechlen. His prints are very neat and clear, but without any powerful effect. The strokes are as fine and delicate upon the objects in the front as upon those in the distances; and this want of variety, joined with the feebleness of the masses of shadow, give his engravings, with all their neatness, an unfinished appearance, much unlike the firm substantial effect which we find in the works of Albert Dürer. He was attentive to the minutiae of his art. Every thing is carefully made out in his prints, and no part of them is neglected. He gave great character and expression to the heads of his figures, but on an examination of his works we find the same heads too often repeated. He engraved on wood as well as on copper, but his works on the former are by no means numerous. They are, however, very spirited, though not equal, upon the whole, to those of his friend Albert Dürer. Of his engravings the following may be mentioned as among the principal:—1. Mahomet Sleeping, with a Priest Murdered by his side, and another figure stealing his sword, said to be one of his most early productions; the Crucifixion on Mount Calvary; the Wise Men's Offering; Return of the Prodigal Son; his own portrait; and David Playing before Saul; this is a very fine print, the expression of Saul's countenance, in particular, is admirable.

LUCAS, RICHARD, D.D., a learned English divine, who was born in 1648, and studied at Oxford; after which he entered into holy orders, and was for some time master of the free school at Abergavenny. He subsequently became vicar of St. Stephen's, Coleman Street, in London, and lecturer of St. Olave's in Southwark; and in 1696 was installed prebendary of Westminster. He published several works, particularly, "Practical Christianity," "An Enquiry after Happiness," several sermons, and a Latin translation of "The Whole Duty of Man." He died in 1715.

LUCIAN, a celebrated Greek author, who was born at Samosata, in the reign of the emperor Trajan. He studied law, and practised some time as an advocate, but subsequently became a rhetorician. He

lived to the time of Marcus Aurelius, who made him register of Alexandria in Egypt. Lucian was one of the best writers of antiquity. His dialogues and other works are written in Greek. In these he had joined the useful to the agreeable, instruction to satire, and erudition to elegance; and we every where meet with that fine and delicate raillery which characterizes the Attic taste. Those who censure him for impiety have reason on their side, if religion consisted in the theology of the pagan poets, or in the extravagant opinions of philosophers; for he throws so much ridicule on the vices of the gods and philosophers that he covers them with contempt.

LUCRETIUS, CAIUS TITUS, a celebrated Latin poet, who is believed to have been born 95 B. C., and studied the Epicurean philosophy at Athens. He is said to have been made insane by a philtre, and in his lucid intervals to have produced several works, but to have committed suicide in his forty-fourth year. We possess of his composition a didactic poem, in six books, "De Rerum Natura," in which he exhibits the principles of the Epicurean philosophy with an original imagination and in forcible language. The unpoetical subject of the poem must of itself make it on the whole a failure; but parts, notwithstanding, such as the description of human misery, the force of passions, the terrible pestilence of Greece, &c., demonstrate that Lucretius was possessed of great poetical talents.

LUCULLUS.—This Roman leader was the conqueror of Mithridates. Being chosen *edilis curulis* at the same time with his brother Marcus Licinius, he displayed in the Marcian war both ability and courage. In the civil wars of Sylla and Marius, he sided with the former. In the year of the city 679, he was appointed consul and commander of the army which was to proceed to Cilicia against Mithridates. Having already served against Mithridates with an inferior command during his questorship, he was acquainted with that country. He first sought to restore the ancient discipline which the Roman soldiers had forgotten among the voluptuous Asiatics. Mithridates had already made a victorious beginning of the campaign by a naval battle with the consul Aurelius Cotta, the colleague of Lucullus. Lucullus was therefore compelled to hasten the attack of his land forces. But when he approached the army of Mithridates and ascertained its strength, he deemed it judicious to avoid a decisive battle, and contented himself with cutting off the king's communications. Mithridates now advanced with a considerable force to besiege the city of Cyzicum, the key of Asia, then in possession of the Romans. Lucullus, however, defeated his rear-guard on their march thither, and compelled the king to give up his attempt. Lucullus now advanced to the coasts of the Hellespont, prepared a fleet, and vanquished the squadron of Mithridates near the island of Lemnos. This victory enabled him to drive all the other squadrons of Mithridates from the Archipelago. The generals of Lucullus subdued, meanwhile, all Bithynia and Paphlagonia. Lucullus again, at the head of his army, conquered the various cities of Pontus, and although overcome by Mithridates in a battle, he soon acquired such advantages that he finally broke up the hostile army, and Mithridates himself sought protection in Armenia. Lucullus now changed Pontus into a Roman province, and on Tigranes refusing to surrender Mithridates to the Romans, Lucullus

marched against Armenia, and vanquished Tigranes. Mithridates, however, contended with various fortune till Lucullus was prevented from continuing the war against him effectually, by the mutiny of his soldiers, who accused him, perhaps not unjustly, of avarice and covetousness. In Rome the dissatisfaction of the soldiers towards Lucullus was found well grounded; he was deprived of the chief command and recalled. He was received, however, by the patricians with every mark of respect, and obtained a splendid triumph.

From this time Lucullus remained a private individual, spending in profuse voluptuousness the immense riches which he had brought with him from Asia, without however entirely abandoning the more noble and serious occupations of a cultivated mind. During his residence as a questor in Macedonia, and as general in the Mithridatic wars, he had become intimate with the most distinguished philosophers. His principal instructor was the academician Antiochus, who accompanied him in some of his campaigns. Lucullus was therefore most interested in the Platonic system. After his return he pursued the study of philosophy, induced many scholars to come to Rome, and allowed them free access to his house. He also founded, by means of Tyrannion, whom he had taken prisoner in the Mithridatic war, an extensive library, which was free to every one, and of which Cicero made great use. His example also induced other distinguished Romans to draw learned men to Rome at their expense. At last he is said to have lost his reason in consequence of a philtre, administered by his freedman Callisthenes, so that it was necessary to place him under the guardianship of his brother. He soon after died in his sixty-sixth or sixty-eighth year.

LU DEN, HENRY, a writer of eminence, who was born at Lockstadt, in the duchy of Bremen, in 1780, and studied at Göttingen. In 1806 he was made extraordinary professor of philosophy at Jena, and in 1810 professor of history. Besides numerous historical, philosophical, and political treatises in periodical publications, he has written the lives of Thomasius, Grotius, and Sir W. Temple, and other valuable works. In his "*Nemesis, a Political and Historical Journal*," he attacked the statements of Kotzebue with great success.

LUDLOW, EDMUND, a distinguished leader of the republican party in the civil wars of Charles I., who was born about 1620 at Maiden Bradley, in the county of Wilts, and received his education at Oxford, whence he removed to the Temple, in order to study the law. He served with distinction in the parliamentary army, and when "the self-denying ordinance" took place he remained out of any ostensible situation until chosen member for Wiltshire in the place of his father. At this time the machinations of Cromwell becoming visible, he was opposed by Ludlow with firmness and openness. With a view of establishing a republic he joined the army against the parliament, when the latter voted the king's concessions a basis for treaty, and was also one of Charles's judges. With a view of removing him Cromwell caused him to be nominated general of horse in Ireland, where he joined the army under Ireton, and acted with great vigour and ability. When Cromwell was declared protector Ludlow used all his influence with the army against him, on which account he was recalled and put under arrest. Although he refused to enter into any engagement not

to act against the government he was at length allowed to go to London, where, in a conversation with Cromwell himself, he avowed his republican principles, and, refusing all security or engagement for submission, he retired into Essex, where he remained until the death of the protector. When Richard Cromwell succeeded he joined the army party at Wallingford House, and was instrumental in the restoration of the long parliament, in which he took his seat. The restoration was now rapidly approaching, and, finding the republicans unable to resist it, he quitted the country, and proceeded to Geneva, whence he afterwards, with many more fugitives of the party, took refuge at Lausanne, where Lisle was assassinated by some English royalists. Similar attempts were made on the lives of Ludlow and others; but his caution, and the vigilance of the magistracy of Berne, protected him, and he passed the remainder of his life at Vevay, with the exception of a brief visit to England after the revolution, from which he was driven by a motion in parliament for his apprehension, by Sir Edward Seymour, the leader of the Tory party. He closed his life in exile in 1693, being then in his seventy-third year. Ludlow was one of the purest and most honourable characters on the republican side, without any fanaticism or hypocrisy.

LUDOLPH, JOB, a very learned writer of the seventeenth century, was born at Erfurt, in Thuringia. He travelled much, and was master of several languages; visited libraries, searched after antiquities every where, and corresponded with learned men of all nations. He published "*A History of Ethiopia*," and other curious books.

LUDOLPH, HENRY WILLIAM, a nephew of Job Ludolph, who was born at Erfurt in 1655. He came over to England as secretary to M. Lenthe, envoy from the court of Copenhagen to that of London; and, being recommended to Prince George of Denmark, was received as his secretary. He enjoyed this office for some years, until he was incapacitated by ill health, when he was discharged with a handsome pension. After he recovered he went to Russia, where he was well received by the czar. On his return to London in 1694 he wrote a grammar of the Russian language. He then travelled into the east to obtain information of the real state of the Christian church in the Levant; the condition of which induced him, after his return, with the aid of the bishop of Worcester, to print an edition of the New Testament in the vulgar Greek, to present to the Greek church. In 1709 Mr. Ludolph was appointed by Queen Anne one of the commissioners to manage some charitable institutions, and he died early the following year.

LUKE, the author of one of the gospels, which is distinguished for fulness, accuracy, and traces of extensive information; also of the Acts of the Apostles, in which he gives a methodical account of the origin of the Christian church, and particularly of the travels of the apostle Paul. Though these two books were designed merely for his friend Theophilus they soon attained a canonical authority, and were publicly read in the churches. Concerning the circumstances of the life of this evangelist nothing certain is known, except that he was a Jew by birth, was a contemporary of the apostles, and could have heard accounts of the life of Jesus from the mouths of eye-witnesses, and was for several years a compa-

nion of the apostle Paul in his travels; so that, in the Acts of the Apostles, he relates what he himself had seen and participated in. The conjecture that he was a physician is more probable than the tradition which makes him a painter, and which attributes to him an old picture of Christ, preserved at Rome. On account of this latter tradition, however, he is the patron saint of painters, and a celebrated academy of these artists at Rome bears his name.

**LUKE OF LEYDEN**, one of the founders of modern painting in the north, who stands by the side of Dürer, Holbein, and Kranach, at the head of the old German school of art. He was born at Leyden in 1494, and enjoyed in early life the instruction of his father, Hugo Jacob, and afterwards that of Cornelius Engelbrechtsen, an eminent painter, and scholar of Van Eyk. At the early age of nine he began to engrave, and in his twelfth year astonished all judges by a painting in water colours of St. Hubert. In his fifteenth year he produced several fine works of art, designed and engraved by himself, among which the Trial of St. Anthony, and the Conversion of St. Paul, in regard to composition, characteristic expression, drapery, and management of the graver, are models. After this he executed many paintings in oil, water colours, and on glass; also a multitude of engravings, which spread his fame over the whole continent. He formed a friendly intimacy with the celebrated John of Mabuse and Albert Dürer, who visited him in Leyden. His unremitted application injured his health, and his anxious friends persuaded him to travel through the Netherlands. But his hypochondria was not removed. He imagined himself poisoned by envious painters, and hardly left his bed for almost six years, during which time he laboured uninterruptedly, and rose to the highest rank in his art. He died in 1533, in his fortieth year. This artist is excellent in almost all parts of his art, though he could not entirely divest himself of the taste which characterized the childhood of painting. His designs are striking, ingenious, and varied; his grouping judicious and natural; character appears in all his figures, particularly in the heads, though this character cannot be called noble. The situations and attitudes of his figures are very various, which is the more remarkable from the great number of persons often found in his paintings. His drawing is correct, yet not ideal, but fashioned after the models of the country in which he lived. His drapery is indeed mostly arranged with truth, but without taste, heavy, and deformed by many small folds. His colouring is pleasing and natural, but the aerial perspective is neglected, and there is a certain harshness, not to be mistaken, peculiar to that period of the art. Notwithstanding his high finish he painted easily. His engravings and wood cuts bear evidence of a most careful and steady management of the graver. They are very rare, and highly prized, particularly those in which he selected the same subjects with Albert Dürer, in order to compete with him. The friends often shared their ideas and compositions, but Luke ranks below Dürer. The fullest and most beautiful collection of engravings by this master is in the library at Vienna. His paintings are scattered about in many galleries; the principal in Leyden, Vienna, Dresden, Munich, and in the Tribuna at Florence.

**LULLY, RAYMOND**, a distinguished scholastic of the thirteenth century, author of the method called

*Ars Lulliana*, taught throughout Europe during the fourteenth, fifteenth, and sixteenth centuries. He was a native of the island of Majorca, and after having been attached to the gay court of James I. of Arragon, he became filled with pious feelings, and at about the age of thirty retired to a solitude, and, for the purpose of converting infidels, began to study theology. Encouraged by visions, he undertook the task by studying the Eastern languages, and invented his new method, or "*Ars Demonstrativa Veritatis*," for the purpose of proving that the mysteries of faith were not contrary to reason. He then visited Rome and France, in the schools of which he taught; and while at Montpelier composed his "*Ars Inventiva Veritatis*," in which he develops and simplifies his method. Passing over into Africa for the purpose of convincing the Mohammedan doctors of the truth of Christianity, he narrowly escaped with his life; and on his return to Europe wrote his "*Tabula Generalis*," a sort of key to his former works, and in 1298 obtained from Philip the Fair a professorship at Paris. From this period dates the establishment of his doctrine in Europe. His "*Ars Expositiva*," and "*Arbor Scientiæ*," are his other principal works on this subject. A second visit to Africa for the purpose of converting the disciples of Averroës, resulted in his banishment from that region; but he returned a third time, and was stoned to death about 1315. The Lullian method was taught and commented on for several centuries in Europe.

**LULLY, JEAN BAPTISTE**, a talented musician, who was born at Florence of obscure parents in 1634. As a child he exhibited a passionate fondness for music. The chevalier Guise, who had been commissioned by Mlle. de Montpensier to send her an Italian page, struck with his talent, engaged him, and despatched him to Paris in his tenth year. The lady, however, was so little pleased by his appearance that she sent him into her kitchen, where he remained some time in the humble capacity of an under-sculion. His musical talent becoming accidentally known to a gentleman about the court, his representations procured him to be placed under a master. He now rose rapidly till he obtained the appointment of musician to the court. His performance soon attracted the notice of the king, by whose direction a new band, called *les petits Violons*, was formed, and Lully placed at the head of it, in 1660; about which period he composed the music to the then favourite amusements of the court, called *ballets*, consisting of dancing, intermixed with singing and recitative. In 1670 Lully was made joint-director of the French opera, established the preceding year on the plan of that at Venice, which situation he filled till his decease in 1687. Lully contributed much to the improvement of French music, and is said to have been the inventor of the overture.

**LUTHER, MARTIN**.—The family name of this distinguished German divine was Lauther. His father was a poor miner, and the son, who was destined by Providence to spread the tenets of the Reformation by attacking a church that had successfully opposed the encroachments of the mightiest sovereigns in Europe, and ultimately to work a change next in importance to the introduction of Christianity itself, commenced his career as a humble mendicant. Luther received the rudiments of his education at Magdeburg, and there, according to the best authorities, he was so scantily supplied with the necessaries of life

that he was compelled to perambulate the town, and beg his bread from day to day.

The Franciscans had founded a school at Issenach, which, under the superintendence of John Trebonius, was in high reputation in that part of Germany; this induced a great many scholars to repair thither, and Luther remained at this school four years. His application to his studies was indefatigable, and his proficiency was what might be expected from the union of such labour and such talents, under the direction of so able a master. He excelled all his school-fellows in the proficiency he had made in Greek and Roman literature, and the exercises which were prescribed were written with greater facility and accuracy.

After having laid a good foundation for the farther cultivation of classical learning, he repaired to the university of Erfurt in the end of 1501 or beginning of 1502. The European universities were at that time in a most deplorable state. The Aristotelian logic was what solely occupied the attention of the students. Every thing else was neglected as of little or no importance; and had their diligence been directed to the study of the genuine works of Aristotle, their time would have been spent to better advantage. But they had so perplexed the doctrines of that philosopher, and rendered his text so obscure by bad translations and foolish commentaries, that hardly a vestige of what he taught remained.

Notwithstanding Luther's dislike to the school logic, he prosecuted the study of it with uncommon success. Resembling all men of generous tempers, he was naturally fond of applause, and his proficiency in this art was the chief avenue by which it could be obtained. So deep an impression had he made, that the whole university admired his genius. The master under whom he studied was Jodocus, an enthusiastic admirer of Aristotle. And Luther, in a letter to Spalatin, says that he believed he was the means of hastening the death of this doctor by treating the scholastic theology so rudely. He was created master of arts in 1503. Being elated with his success at the university, and the reputation he had there acquired, they urged him to study law, imagining that this was the most likely way to obtain both honours and wealth. To please them he began

to study law, but soon relinquished the task. It is probable that it was with reluctance he proposed to follow the profession of law, but an event of a very affecting nature induced him immediately to abandon it. There was a young man of the name of Alexius, with whom he was united by the closest ties of friendship. In an excursion to the country, they were overtaken by a thunder-storm, and Alexius was struck dead by the side of Luther, who was unhurt. Such sudden dispensations of Providence are much calculated to inspire the mind of every person with awe and dread: to one of natural sensibility, even though destitute of the principles of religion, they produce a powerful effect; but to a careful observer of divine providence, whose thoughts are constantly directed to the contemplation of the ways of the Almighty, they lead to a series of the most serious and devout reflections. Sudden death, by what circumstances soever accompanied, naturally excites sympathy; but to one of Luther's character, and in his peculiar situation at this time, every thing contributed to excite the strongest emotions. He was more forcibly impressed than he had ever been before with the uncertainty and vanity of all terrestrial enjoyments; he therefore determined to consecrate his time and talents to devout meditation, and to live sequestered from the world and its temptations. He vowed on the spot, that if God were pleased to deliver him from his present perilous situation, he would enter into a monastery, and dedicate his powers, both of body and mind, to the service of God. He seems to have considered this alarming incident as an express intimation from the Almighty to become a monk. As he was remarkable for showing respect to his parents, he took an early opportunity of informing them of his resolution. They were of a very different opinion, attempted to dissuade him from entering on a monastic life, and even warned him not to be deluded by the devil. Luther, however, determined to fulfil his vow; and accordingly, in the year 1505, became a member of the Augustin monastery at Erfurt. Many years afterwards he gave a full exposition of all the circumstances attending this extraordinary part of his history, in the dedication to his father of the "Treatise on Monastic Vows."

It may not be improper to mention some of Luther's habits at this time before he commenced a new course of life. He was a lively and interesting companion, to whom no one could be indifferent; possessed an admirable ear for music, of which he was passionately fond; he had a good voice, performed upon several instruments, and occasionally amused himself in composing music: indeed, tradition has ascribed to him what is commonly called the "Old Hundredth Psalm tune." When his views of divine truth became more clear and consistent, he confined himself to the cultivation of sacred music; and at a late period of life he was accustomed to sing a hymn after supper with his family and visitors. Notwithstanding that he naturally possessed a great flow of spirits, what not unfrequently happens to persons of that temper, he was subject to melancholy, from which he was generally relieved by music. From a letter written by him to Linccius, in which he jests upon the subject, we learn that, for the sake of exercise, he amused himself by practising the art of a turner.

Luther was constitutionally of a very ardent dis-

position, and had no idea of only executing imperfectly whatever he attempted. The zeal for his order was so immoderate that he wished to be called Augustin instead of Martin. He sent to his father the ring which he received upon being created master of arts. Upon assuming the peculiar garb of an Augustinian or Blackfriar, he also sent to him the clothes he had been accustomed to wear; and, as the cultivation of literature was esteemed a reproach by his illiterate associates, the works of no author being studied except those of Augustin, he left all his books behind him except Plautus and Virgil.

Luther's being a friar did not prevent him from taking orders. He was ordained upon the Sabbath, in May, 1507, and on the same day performed mass. About the same time one of the most important events happened which ever occurred during the whole course of his life, and to which his subsequent splendid career may be in a great measure ascribed. He accidentally found a Latin Bible in the library belonging to the convent. Though he had resided two years in the monastery, yet so little value was attached to it, that it had never attracted his own attention nor that of any of his brethren. When he examined its contents he was perfectly confounded. He had received as liberal an education as his country could afford. So great was his ignorance, however, that he did not know that the whole of scripture was not read to the people. He now saw that by far the greatest part of the scripture was not read. It is probable that all the acquaintance he had with the word of God was derived from the breviary; his surprise, therefore, may be more easily conceived than described.

It was Luther who, in monkish times, first saw, and clearly pointed out, upon what foundation all religious truth is placed, as well as showed the necessity of carefully studying what was contained in the Bible. In the language of Chillingworth, it was he who first proclaimed this inestimable truth—"The Bible, the Bible is the religion of protestants." He had only access to the Latin Vulgate; but, imperfect as his sources of information were, he made the best use of them he could. He devoured with avidity the sacred volume, and though he had no opportunity of deriving assistance from the labours of others, it is astonishing what progress he made. His perseverance was indefatigable, and we are informed by Melanethon, that not unfrequently he would spend a whole day in meditating upon a passage he did not understand, or which he believed to contain a revelation of some of the most important truths of the gospel. So great was his application to the study of the scriptures at this time, which he accompanied by a careful perusal of Augustin's voluminous works, that his health was materially injured. For seven successive days he paid no regard to the hours appointed for divine service by the canons in the monastery. As every relict of this extraordinary man must be interesting at the present period, we furnish in the next column a sketch of his study at Erfurt, which was for many years preserved exactly as it was tenanted by the great reformer.

Luther's fame had now spread very extensively, and Staupitz, who was always consulted by the elector, entertained a high opinion of Luther's talents. By his means Luther was translated to Wittenberg, and created professor of philosophy in 1508. He discharged the duties of his office with great applause,

and taught the dialectics and physics of Aristotle with increasing reputation.

Though Luther had left the monastery at Erfurt, he notwithstanding still continued his connexion with the Augustinians. There were seven Augustinian convents in Saxony, subject to the direction of a vicar general. Some dissension had taken place between this man and the friars. The monks thought it necessary to refer the cause to the pope, and that for this purpose one of their own order should undertake a journey to Rome. So great was Luther's influence among his brethren, that in 1510 they selected him as a fit person to execute the mission. He had never been at Rome, and besides his anxiety to promote the interests of his order, he was very desirous of visiting the holy city. He had not the most distant idea of the licentiousness that infected all ranks in the city of Rome. When he saw the real state of the case, he was exceedingly shocked. The following is a translation of Luther's own account of it:—

"I saw," said he, "the pope and the pope's court, and had an opportunity of observing the morals of the Roman clergy. There I celebrated mass, and saw others celebrate it, but with such indecency, that as often as I think of it I am immoderately shocked. Among other things, I have seen courtesans, at the very altar, behave in the most irreverent manner, acting improperly, and laughing. I have heard some repeat these words over the bread and the wine on the altar. 'Thou art bread, and thou shalt remain bread—thou art wine, and thou shalt remain wine.' Such behaviour could not fail to disgust every one of ordinary moral feeling, especially when uttered by priests who professed to believe in the real presence. When he performed divine service with the utmost devotion, the Italian clergy laughed at him; and they themselves celebrated mass so rapidly, that before Luther had come to the Gospel (that is, to that part of the service so called, and which Luther read at the time the priest was engaged), the service was

concluded: he then exclaimed, "Holy Father, holy Father, dismiss, dismiss."

All his biographers mention, that his progress in scripture knowledge was so evident to his friends, and his study of the Bible so unwearied, that they agreed he would produce some change in the religious world. Such an occupation was in those days a complete novelty, and gave him a decided superiority over every one with whom he had to contend. "This kind of knowledge was so rare," said Mosheim, "that when Luther arose there could not be found, even in the university of Paris, which was considered as the first and most famous of all the public schools of learning, a single person qualified to dispute with him, or oppose his doctrine, upon a scripture foundation."

He had executed his commission at Rome with such address, that he not only received the thanks of the Augustinians, but at their urgent solicitation he was prevailed on to take the degree of doctor of divinity. This he did upon the festival of St. Luke (18th October), though he wished to decline it. The necessary expense was defrayed by the elector of Saxony, a singular proof how highly he was respected by that prince; and, it may be added, how distinguished a figure he had made as a public professor. During the course of the same year in which he took his degree of doctor in divinity (1512), he was preferred to a chair much more congenial to his wishes. He was appointed professor of divinity in the same university. The elector frequently heard him preach, and greatly admired his pulpit talents. Luther came better prepared to discharge the duties of the professorship of divinity than most of his contemporaries. The study of divinity was fully in as bad a state as philosophy. They were both polluted by the same means. The plain doctrines and precepts of the Bible were completely concealed by the jargon of what was called logic. The streams of the sanctuary were deserted; hardly any one was acquainted with the scripture, or was aware of the inestimable treasure it contained. The theological lectures at that time consisted of nothing else than a dry syllabus of doctrines, which had very little tendency to benefit mankind.

We are told, that about this time he studied with the most unremitting application the Hebrew and Greek languages, being thoroughly persuaded of the necessity of an acquaintance with the scriptures in the originals, in order to obtain correct sentiments respecting the doctrines of the gospel. The history of our reformer is pretty accurately known after he attacked the sale of indulgences in 1517, but previous to that ever memorable era the documents are very scanty. The progress of his knowledge was, according to his own account, slow, and it would seem that it was with considerable reluctance he abandoned some of the leading doctrines of popery. From a letter addressed to Spalatin, secretary to the elector of Saxony, and preserved in his works, we are informed what his sentiments were respecting the perspicuity and integrity of the canon of scripture. He had espoused an opinion which in those days was esteemed a heresy, that the sense of divine revelation was to be ascertained by a calm and careful examination into the grammatical construction of the words, and that the meaning was one and not manifold. His reverence for the fathers was considerably higher than it was a few years afterwards.

We have now reached that part of the history of Luther's life, when, from being comparatively in an obscure situation, he suddenly arrested the attention of all Europe, and laid the foundation of a revolution which caused the immense fabric of the popish hierarchy to totter, and established in a considerable number of the European states in the course of time the principles of political liberty, religious toleration, and, what was of much more importance, just views respecting the gospel of the grace of God.

Luther was at first satisfied with speaking against new abuses only, but he afterwards began to study the origin and foundation of indulgences, and passing from the new to the ancient, from the building to the foundation, he perceived the iniquity of the traffic. So timid was he at first, and so little design had he in his opposition, that he promised to be silent, provided the abettors of indulgences would do the same. Their not acceding to this moderate proposal was fatal to their cause. His diligence and ingenuity were roused. He was not only instigated by a love to truth, but from motives of self-defence he entered keenly into the dispute; and in proportion as his inquiries advanced, he perceived the fallacy of the arguments upon which they were pretended to be founded. Unexpectedly to Luther, his theses were well received, and this gave him encouragement in his investigation. Disposed to behave respectfully to his superiors, he in 1518 submitted what he had written to the bishop of Brandenburg, his diocesan, and requested him, if he was offended at any thing contained in his writings, to blot it out or even to burn the whole. This requisition was accompanied with a commentary on his propositions. Luther, in the letter he addressed to him, took the greatest pains to assure him that he was only a seeker after truth; that he was anxious not to affirm any thing dogmatically; and that he only speculated upon some points concerning which it was common for the schoolmen to dispute. Nay, they disputed about the plainest truths in order to show their acuteness, whilst he was actuated by a very different motive—the love of truth. Through the mediation of an abbot, Luther was prevailed upon to delay for a short time the publication of his "Resolutions," in which work he strongly attacked Tetzall, the agent for the sale of indulgences.

As Luther had shown the most dutiful respect to his diocesan, so he determined, as an Augustinian, to exhibit equal submission to Staupitz, his provincial, who had patronised him at an early period, and to whom he was indebted for the situation he now held. Fifteen days, therefore, after he had written to the bishop, he inclosed the same resolutions in a letter to Staupitz, and requested him to transmit them to the pope, that the malevolent misrepresentations of his enemies might be obviated. He expressed great anxiety that Staupitz would not expose himself to danger on his account, and added, that he wished to be alone responsible for his own opinions. The conclusion of this letter is very remarkable:—"To those of my friends who would alarm me for the consequences, I have nothing else to say than what Reuchlin said: 'He who is poor has nothing to fear, he can lose nothing.' I possess no property, neither do I desire any. There remains to me only a frail body, harassed by continual illness, and if they take away my life by open violence or stratagem, they make me but little poorer. I am satisfied with my

Redeemer and propitiation, the Lord Jesus Christ, whom I shall praise as long as I exist. If any one be unwilling to join me in these praises, what is that to me? Let him raise his voice after his own fashion. The Lord Jesus will save me for ever."

Luther had not only to defend himself from the attacks of those who were bigotted admirers of the church and of papal authority, but he learned about this time that some of his own brethren, the Augustinians, were hostile to his opinions. He determined therefore to seize the first opportunity that offered of vindicating himself. This presented itself in the month of May 1518. Accordingly, he disputed publicly at Heidelberg with M. Laurentius Beyerus, a monk of his own order. There was a general assembly of Augustinians held in that city at that time. Luther's opinions and habits were then so monastic, that he went thither on foot to show his contrition. The elector of Saxony gave him a letter of introduction to the prince palatine, which is supposed to have been intended to operate as a safe conduct or to protect him both on his journey and during his residence at Heidelberg. He was treated with great kindness by Laurentius, bishop of Wurtzburg, who favoured Luther's endeavours at reformation, but died soon afterwards. The principal subject of discussion was "Justification by Faith." The *paradoxes*, as they were called (or assertions contrary to appearance), amounted to forty; twelve related to philosophy, and twenty-eight to divinity. Though Luther and Beyerus sustained the principal parts in the disputation, yet a great many others engaged in it. The most distinguished of those was Martin Bucer, who afterwards became one of the most eminent champions of the reformation. He took notes of what passed, and represents Luther as having acquitted himself with great ability as well as gentleness in defending the paradoxes.

Luther's writings were first transmitted to Rome in 1518. The controversy had hitherto been chiefly confined to Germany; but upon the arrival of his books at Rome, the abettors of the holy see awoke from their lethargy, caught the alarm, and a reply was attempted by Sylvester a Priorio, a Dominican, and master of the pope's palace. It is almost impossible to imagine any thing more contemptible than this answer. The work is called a dialogue, though for what reason it is impossible to say, as it is not written in that form, and consists of a tissue of assertions respecting the very worst and most absurd tenets of popery, and adducing in confirmation of his assertions, the authority of the angelical doctor, Thomas Aquinas. Luther replied, and with a very unsparing hand lashes Priorio, holds up to ridicule his arguments, and warns him, if he be disposed to enter the lists again, he had need to look for better arms, otherwise he should treat him and his Thomas very roughly. Sylvester, still confident of the goodness of his cause, replied, which made Luther lose all patience. If his former animadversions were severe, those contained in his answer to this are ten times more so. The whole fraternity of Dominicans were now exasperated to an excessive degree against Luther. James Hoogstraet, an inquisitor, proposed a summary method of getting quit of Luther—viz. instead of reasoning with him, to cut him off by fire and sword.

In consequence of the terror with which the victorious arms of Selim I. had inspired the European

nations, it had been resolved to encourage all Christian princes to unite against the Turks. The subject was to be deliberately discussed at the diet of Augsburg, and for this purpose the pope sent Cardinal Thomas de Vio de Gaète, surnamed Cajetan, to Germany. The death of Selim, however, rendered this nugatory; and finding it impossible to obtain a grant of the tenths that had been decreed, his chief employment respected the Saxon reformer. Cajetan prevailed upon Maximilian to write a letter to the pope condemning Luther's theses. Nothing could be more agreeable to Leo's wishes, or apparently better calculated to nip in the bud the endeavours of the reformer. Inattentive as Leo had been to the cause of Luther, he of a sudden awoke from his sleep. The Dominicans employed every argument they could invent to induce him to exert his power in suppressing the heresy. Before Leo had received the emperor's letter, Luther was summoned to appear at Rome within sixty days. It is probable that this summons was presented to him upon the 7th of August. This measure, so unexpected on the part of Luther, excited considerable alarm. He had perhaps received some intelligence of the machinations that were going forward at Augsburg, but from the manner in which he expressed his uneasiness, it is apparent that he was not aware of their real extent. Luther was at a loss what course to follow. He at last resolved to apply to Spalatin, who had always befriended him at the court of Frederick. He proposed two methods to evade the summons—either that the elector should refuse him a safe-conduct, or not grant him permission to leave Wittenberg.

Meanwhile the court of Rome did not relax its diligence. Exasperated against Luther, bent on his destruction, and vainly supposing that with him the cause of the reformation would also die, Leo wrote to the legate at Augsburg, informed him what he had done, and gave instructions what line of conduct he was to adopt till he should receive farther orders.

Whilst these transactions were going forward in Germany, the inveterate malice of Luther's enemies at the court of Rome instigated the pontiff to exert every nerve to overwhelm him in ruin. Application had been made to the Germanic ecclesiastical and secular authorities to contribute their assistance in effecting this; but as Luther was an Augustinian monk, means were employed to render him hated by his superiors, that he might be an outlaw in the utmost latitude of the expression. For this purpose Leo wrote to Gabriel, grand vicar of the order, and urged him to prevent Luther from disseminating new doctrines in Germany, and not to proceed languidly in the business.

Very little was done in regard to Luther for about the space of a month. Neither party, however, was idle. The pope was busily engaged in devising means by which he might accomplish the destruction of the reformer; whilst he, on the other hand, though he remained quiet at Wittenberg, discharging his public duty as a professor with fidelity and increasing reputation, did not permit any opportunity to escape that might be turned to his own advantage, or by which his safety might be preserved from papal vengeance. Sensible of the strong hold he possessed in the affections of his colleagues, and of their willingness to render every assistance in their power, he applied to the university, and requested them, as a body, to mediate between the pope and

him. This was instantly complied with. They, however, judged it most expedient, in the first instance, to solicit the good offices of Charles Miltitz, a German, and chamberlain to the pope. They entreated him to use his influence to obtain from Leo the favour of Luther being tried in Germany by judges not liable to suspicion, and where he had security that his personal safety would not be violated. They also praised his moral character. Upon the same day, 25th September, they wrote a letter to Leo, in which the same sentiments were expressed respecting Luther, and a similar request preferred.

Luther's patron, the elector, was the only person from whom he could expect any effectual protection in this critical emergency. Frederick in his public conduct still professed submission to the Holy See, and had been, only at the short interval of two or three years before, an enthusiastic admirer of papal supremacy. The natural soundness of his understanding, aided by political reason; the rapaciousness of the church against which all his subjects exclaimed; the partiality of his favourite ministers for the new doctrine, combining with Luther's arguments, and the brilliant victories he had gained over all his opponents, seem to have alienated his affection from the catholic church. So equivocal, however, does the conduct of this prince appear, that it is uncertain whether it was the effect of inclination or convenience that he did not at this time suffer Luther to be sacrificed by his enemies. What brooded on the mind of Luther, as has already been mentioned, was the terror of being carried to Rome. The consequences of that pilgrimage he knew well, but he was also unwilling to risk his personal safety in the hands of Cajetan, who was a Dominican inquisitor. He had the dreadful example of John Huss before him, and of the never-to-be forgotten perfidy which his enemies reckoned it no ignominy to employ. Whilst he was labouring under this embarrassment, in order to comfort and soothe his mind, and give him the courage necessary for such an enterprise, the elector promised that he would not suffer him to be carried to Rome, and would give him letters of recommendation to the senate, and some of the principal inhabitants of the city of Augsburg. Knowing his poverty, and consequent inability to defray the expense which would necessarily attend such a journey, he furnished him with a small sum of money for that purpose. Thus poorly equipped for such an expedition, he was under the necessity of appearing to disadvantage, not only before the legate, but the whole of his countrymen also, whose eyes were now fixed upon him. Luther says, "That all the Germans, tired with the explications that were given, the scandalous sale of justice, and the infinite impostures of the church, waited the issue of so interesting a business with minds full of suspense, as I had attacked what neither any bishop nor divine had in times past dared to touch. The voice of the populace cherished me, because the arts and quackery of the church of Rome with which they had filled and harassed the whole world, had already become detestable in the sight of all." He who had the courage to oppose so powerful a body as the church, and to whom the eyes of his countrymen were directed, was literally a pauper, and went to Augsburg on foot. At a late period of his life he condemned his rashness in setting out upon such an expedition, and venturing in the midst of his enemies

without obtaining a safe-conduct. This course he adopted in consequence of the command of the elector, who, it would appear, conceived that he was safe enough without it, and that Cajetan would never attempt to offer any violence to his person. The poverty of this extraordinary man at this time must appear surprising when contrasted with the opulence of those whom he opposed. When he reached Nuremberg he was under the necessity of borrowing a friar's cowl from his friend Linccius, a divine of his own order, that he might make a respectable appearance before the legate. At the distance of three German miles from Augsburg he obtained a humble mode of conveyance, and entered that city upon Friday, the 8th of October.

Though Luther's finances were so exceedingly moderate that he was under the necessity of being indebted to others for his support at Augsburg, yet he did not remain long in obscurity. Cajetan looked forward with great eagerness to his appearance. Relying upon his own dexterity in argument, no less than on the authority with which he was invested as the pope's legate, he never doubted of success. Had he been better acquainted with the undaunted spirit of his opponent, and the footing upon which he placed the controversy, he would have been less confident. He was, however, fully aware of the necessity of exercising the utmost precaution in so critical a conjuncture. It is probable that he had never examined Luther's arguments against indulgences. Be that as it may, he held them in great contempt. But as the reformer was protected by one of the most powerful of the Germanic princes, and his opinions had been received with open arms by all ranks, it was deemed expedient that a person of address should in the first instance hold a conversation with Luther, who might be able to report to the legate in what tone of temper the reformer was, and how he acquitted himself in discourse.

The accomplishment of these measures was confided to Urban, an Italian, who was in Cajetan's train, and well versed in all the intrigues of the court of Rome. Shortly after Luther's arrival at Augsburg, this personage found means to be introduced to him, and was, indeed, the first individual with whom he had an interview. Urban conversed freely on the object of Luther's journey, but cautiously avoided giving the least hint of any commission he had received from his master. He was extremely desirous of obviating Luther's suspicions in regard to his personal safety, and employed the most soothing words in order to induce him to confide in the cardinal. Nothing was omitted which he imagined would have a tendency to prevail upon him to appear before the legate, and banish every idea of bad faith from his mind. Luther was at this time entirely ignorant of the commission Cajetan had received from the pope to be judge in his cause, and received no intimation of this circumstance till his return to Nuremberg on his road home.

By means of Luther's faithful friends, the Augustinians, Maximilian was prevailed upon to grant Luther a safe-conduct, though contrary to the inclination of the cardinal. In a letter, however, afterwards written to the elector of Saxony, Cajetan wished to make it appear that it was obtained only in consequence of his permission. The church considered it as an invidious act on the part of the emperor to extend his protection to a monk, when, according to

the principles of the ecclesiastical law, then recognised in Europe, he had no jurisdiction over him.

Fortified by the safe-conduct which he had received from Maximilian, he ventured into the presence of the legate, in the confidence that how much soever Cajetan might be disposed, he durst not employ any personal violence in direct opposition to the assurances of safety he had received from a prince whose friendship the pope wished to cultivate. Whether the cardinal had discovered any inclination to treat Luther harshly is not known; but upon the same day that he appeared the imperial senate thought proper to communicate the intelligence to him, that the reformer had received a safe-conduct, and at the same time recommended that no harsh measure against him should be resorted to. Luther had several theological disputes with the papal envoy, which ended in the triumph of the reformer; but he ultimately found it advisable to quit Augsburg in the middle of October, being mainly prompted by a fear that his enemies would seize him on the road home, and procure his transmission to Rome. In 1521 Leo signed a bull in which he formally excommunicated Luther. From this sentence its object made his appeal in the face of the Christian world to a general council. Soon after the emperor Charles V. offered him a safe-conduct if he would present himself at the diet of Worms, and there explain his opinions. Luther's friends, apprehensive of treachery, strenuously advised him to decline this invitation; but he replied that go he assuredly would, were he to meet with as many devils in the diet as there were tiles on the roofs of the houses in the town. His entry into Worms, where thousands thronged around the car in which he was borne through the streets, was like the triumphal procession of a conqueror. Neither the threats nor the persuasions of the emperor were able to prevail upon him to offer his submission; and an edict of outlawry was issued against him. It was now thought necessary that his friends should interpose to protect his person; and accordingly the elector Frederic of Saxony, whose subject he was, and who had already become strongly attached to his doctrines, secretly admitted him into his castle at Wartburg, near Eisenach. In this asylum he remained nearly ten months, during which time his chief employment was the translation of the New Testament into his mother tongue. The emperor having then returned to Spain, Luther came forth from his concealment, and in the year 1522 published his translation—a work which at once gave a greater impulse than any thing else could have done to the progress of the reformation, and established a new era in the history of the German language. The dialect in which it was composed, being that of Luther's native province, has since become the literary language of all Germany, or that in which all books are written, although up to this time another dialect had enjoyed that honour.

In 1523 Luther threw off his cowl which he had hitherto continued to wear; and this year also he, for the first time, dispensed the sacrament of the Lord's supper at Wittenberg according to the mode used in the reformed churches. In 1524 he published the Pentateuch in German, and in 1525 his translation of the Psalms. This year also, on the 27th of June, he married Catherine de Boren, a lady of noble family, who with eight of her companions had

some time before run away from the convent of Nimptsch, near Grimuna, of which they were members, having been induced to take that step by the perusal of some of Luther's writings. Luther had six children by his wife, the descendants of some of whom survived in Germany till the latter part of the last century. It was in 1529, at a diet of the empire held at Spire, that the adherents to the reformation delivered that protest against the proceedings of the meeting from which they became first known by the name of protestants, now the common designation of all the sects of Christians dissenting from the church of Rome. The next year the celebrated confession or declaration of their belief, drawn up by Melancthon, was presented to the emperor at Augsburg by the protestant leaders, Luther directing the whole proceeding from his retreat at Cologne, although the sentence of banishment under which he lay prevented him from being present at the ceremony. The remainder of the great reformer's life was spent in maintaining and extending by his preaching and his writings that formidable resistance against the pretensions of the Roman see in which he had taken the lead. The close of Luther's life is so simply but graphically depicted by his attached friend and pupil Justus Jonas, that we furnish a literal translation of his letter to the elector of Saxony on the occasion:—

"Most Serene Elector,—I present to you my most humble and ready service. It is with a very sorrowful heart that I communicate the following information to your highness. Although our venerable father in Christ, Dr. Martin Luther, felt himself unwell before he left Wittenberg, and on his journey to this city, and complained of his weakness when he arrived in this place, he nevertheless was present at dinner and supper every day in which we were engaged in the business of the counts. He ate and drank tolerably well, and humorously observed, that in his native country they knew well what he ought to eat and drink. His sleep, also, and rest could not be complained of. His two youngest sons, Martin and Paul, and I, with one or two men-servants, slept in his bed-chamber, and sometimes also M. Michael Cœlius, minister at Aisleben. We put him to bed after having every night warmed it. On account of his infirmity he had been accustomed to this. Luther, for the three weeks he remained here, regularly bade us good night, in the following words:—'Pray to God that the cause of his church may prosper, for the council of Trent is vehemently enraged against it.' The physician who attended caused the medicines to which he had accustomed himself at home to be brought from Wittenberg. His wife also sent some others of her own accord. Even at this time the business of the counts of Mansfield required to be attended to every other day, or sometimes at the interval of two days; he assisted Wolfgang, Prince Anhalt, and John Henry Count Schwarzburg, and transacted business for one or two hours. But yesterday, being Wednesday, the 17th February, by the persuasion of Prince Anhalt and Count Schwarzburg, and at our earnest request and recommendation, he remained in his study till mid-day and did no business, and walked through the room in his undress. He sometimes looked out of the window and prayed so earnestly that we who were present could perceive it. He was always pleasant and cheerful; he, however, said to Cœlius

and me, 'I was born and baptized at Aisleben; what if I should remain and die here?' That same day he did not sup in his study, but in the parlour, and during the time of it expounded various remarkable passages of scripture. He once or twice said in the course of his conversation, 'If I shall effect concord between the proprietors of my native country, I shall return home and repose myself in my coffin, and yield my body to be eaten by worms.' Before supper, indeed, he had begun to complain of a great uneasiness at his breast, and had given orders that it should be rubbed with a warm cloth, and when he had found a little ease he supped in the parlour as has been mentioned, and said, 'To be alone affords no pleasure.' He ate well, was cheerful, and even jocular. When supper was ended, he again began to complain of an oppression at his breast, and asked for a warm linen cloth. He forbade us to send for medical assistance, and slept on a couch for almost two hours and a half. Cœlius, the landlord, Drachstedius, and his wife, whom we called in, the town clerk, Luther's two sons, and myself, sat by him, watching him till half after eleven. He then requested that his bed in his own bed-chamber should be warmed, which was done with great care, and he was conducted to it. Myself, his two sons, Ambrosius, whom he brought from Wittemberg, and other servants, lay down in the same bed-chamber; Cœlius was in the adjoining room. At one o'clock A. M. he awoke Ambrosius and me, and desired him to warm the room, which was done. He then said to me, 'Oh Jonas, how ill I am! I feel a very great weight at my breast; I shall certainly die at Aisleben.' I answered, 'Reverend father, God, our heavenly Father, will assist you by Christ whom you have preached.' In the mean time Ambrosius made haste, and conducted him out of bed into the chamber. He went without any assistance, and passing the threshold said, 'Into thy hands I commit my spirit.' There he began to walk, but in a short time asked for warm linen cloths. We immediately sent for two physicians from the city, who came instantly. We also caused Count Albert to be awakened, who, together with his wife, came to his assistance. The latter brought some cordials and other medicines. But Luther began to pray, saying, 'O my heavenly Father, eternal and merciful God, thou hast revealed to me thy Son our Lord Jesus Christ; I have preached him, I have confessed him, I love him, and I worship him as my dearest Saviour and deliverer, whom the wicked persecute, blame, and blaspheme—receive my soul.' He then three times repeated the words of the psalm, 'Into thy hands I commit my spirit; God of truth, thou hast redeemed me.' Also, 'God hath so loved the world.' Whilst the physicians and we applied the most salutary medicines, he began to be silent and to faint, nor did he answer us, though we called aloud to him and shook him. When the countess again gave him a little cordial, and the physicians insisted that he should answer, in a feeble tone of voice he said to Cœlius and me, yes or no, according as the question required to be answered. When we both cried out, 'Dearest father, do you verily confess Jesus Christ the Son of God our Saviour and Redeemer?' He then answered so distinctly as to be heard, 'Yes.' Afterwards his forehead and face became cold, and although we shook him and called him by name, he returned no answer, but with his hands clasped gently breathed and groaned; and

thus (which with a very sorrowful heart, and many tears, we lament) he fell asleep."

Luther died February the 18th, 1546, and it is but justice to add, that he was as highly distinguished for his moral qualities as for his theological learning. His life was remarkable for its innocence and purity; most punctilious in every thing which related to his conscience, and rigid in acting strictly as his deliberate judgment prescribed; yielding to no authority without evidence, which his enemies termed obstinacy: he possessed great simplicity, and much of the milk of human kindness. Of a warm temper, he uniformly treated his wife and family with affection and tenderness. He delighted in his little domestic society, and entered with great ardour into their innocent amusements. But he was not distinguished by the exercise of the softer virtues alone. No power could control the energies of his mind—the prospect of no danger could appal him. As the "servant of God, he, single handed, maintained the cause of truth;" and in comparison with it, the most powerful monarchs and high-sounding titles were, in his scale, considered as unworthy of the most trifling concession.

LUTTI, BENEDITTO, an eminent painter, who was born at Florence in 1666. He was the disciple of Antonio Dominico Gabiani, and his merit was judged equal to that of his master. The emperor knighted him, and the elector of Mentz, together with his patent of knighthood, sent him a cross set with diamonds. Lutti was never satisfied in finishing his pictures, yet though he often retouched them they never appeared laboured. He died in 1724.

LUXEMBOURG, FRANCIS HENRY DE MONTMORENCI, DUKE OF, marshal of France. This nobleman was born in 1628, and was the posthumous son of the count de Bouteville, who was beheaded in the reign of Louis XIII. for fighting a duel. He served, when young, under the prince of Condé, and in 1662 he was made a duke and peer of France. In 1672 he commanded during the invasion of Holland, and having gained the battle of Senef, in 1674, he was created a marshal of France. In the war of France against England, Holland, Spain, and Germany, he won the three great battles of Fleurus, Steinkirchen, and Neerwinden. He died in 1695.

LUYNES, CHARLES D'ALBERT, DUKE DE, favourite and premier of Louis XIII., and constable of France. He was born in 1578, and descended from a noble Florentine family which had been banished from Florence. Having become one of the pages of Henry IV., he was the playmate of the dauphin, whose favour he soon won by consulting all his caprices. When Louis ascended the throne, he appointed Luynes his grand falconer, and Marshal D'Ancre, who was all-powerful at court, showing some jealousy of his influence, the favourite soon effected his disgrace. The marshal was assassinated, and Luynes obtained a grant of all his immense estates, and succeeded to all his places and charges. In 1619 his estate of Maille was erected into a duchy, under the title of Luynes. He next supplanted Mary of Medici, mother of the king, whom he caused to be exiled; and the whole administration was now in his hands. In 1621 the dignity of constable of France was revived for him. Though the feeble king often complained of his cupidity and arrogance, though the whole court was intriguing against him, and the nation indignantly called for his disgrace, Luynes died

in 1621, without having experienced any visible loss of favour or influence.

LUZAC, JOHN, a distinguished philologist, jurist, and publicist, who was born at Leyden in 1746. His parents were French protestants, who had left France to avoid religious persecutions. After completing his studies, under Valckenaer and Ruhnken, he declined the chair of jurisprudence offered him at Leyden, and that of Greek at Groningen, and went to the Hague to prepare himself for the bar. In 1772 he returned to Leyden, to assist in editing the "Leyden Gazette," which was read by all European scholars and statesmen at that time on account of the valuable character of its materials. From 1775 he had almost the entire direction of that journal. His editorial and professional labours did not prevent him from the assiduous study of ancient literature. He corresponded with the most distinguished personages of the time, and received the most flattering marks of esteem from Washington, Jefferson, Adams, the emperor Leopold, and Stanislaus king of Poland. In the midst of these various occupations he accepted the Greek chair in the university of Leyden, to the regular duties of which he added private lectures and exercises for deserving students. In 1795 he published an address, "De Socrate Cive," accompanied with learned and judicious notes, and dedicated to John Adams, whose eldest son had studied under his direction. During the revolutionary troubles which succeeded in Holland, Luzac, who was no less a friend of order than of liberty, was forbidden to continue his lectures on history in 1796, but was permitted to continue his instructions in Greek literature. He refused to accede to this arrangement, and was therefore entirely suspended from his professorial functions. On this occasion Washington wrote to him, assuring him of his esteem, encouraging him to hope for justice when the ferment of the moment should be over, and professing that America was under great obligations to the writings and conduct of men like him. In 1802 he was restored to his former post, with an increase of salary and powers. He continued actively engaged in his literary labours till 1807, when he was killed by the explosion of a vessel with gunpowder aboard, in the harbour of Leyden. His "Lectiones Atticæ," a defence of Socrates, was published in 1809 by Professor Sluiter.

LUZERNE, ANNE CESAR DE LA, a French diplomatist, who was born at Paris in 1741. After having served in the seven years' war, in which he rose to the rank of colonel, he abandoned the military career, resumed his studies, and, turning his views to diplomacy, in 1776 was sent as envoy extraordinary to Bavaria, and distinguished himself in the negotiations which took place in regard to the Bavarian succession. In 1778 he was appointed to succeed Gérard as minister to the United States, and conducted himself, during five years in which he remained there, with a prudence, wisdom, and concern for their interests, that gained him the esteem and affection of the Americans. In 1780, when the American army was in the most destitute condition and the government without resources, he raised money on his own responsibility, and without waiting for orders from his court, to relieve the distress, he exerted himself to raise private subscriptions, and placed his own name at the head. In 1783 he returned to France, having received the most flat-

tering expressions of esteem from congress; and in 1788 was sent ambassador to London, where he remained till his death in 1791. When the federal government was organized, the secretary of state addressed a letter to the chevalier De la Luzerne, by direction of Washington, for the purpose of making an express acknowledgment of his services, and the sense of them entertained by the nation.

LYCOPHRON, a learned grammarian, who was born at Chalcis in Eubœa. He lived at Alexandria 280 years B. C., under Philadelphus, whose favour he won by the invention of anagrams. He is said to have died of a wound inflicted by the arrow of an antagonist, with whom he was contending on the merits of the ancient poets. Of all his writings there remains but one tragedy, "Cassandra," which is written in iambics, and bears the marks of learning acquired by patient industry; it is therefore very difficult, and filled with obscure allusions. It is, properly speaking, a continued soliloquy, in which Cassandra predicts the fall of Troy, and the fate of all the heroes and heroines who shared its ruin. It affords some information of value respecting antiquities and mythology.

LYCURGUS, a celebrated Spartan lawgiver, who is supposed to have lived in the latter half of the ninth century before the Christian era. Plutarch, whose "Life of Lycurgus," and "Laws and Customs of the Lacedemonians," we must be content to follow through some portion of our history of this extraordinary man, appears to have collected and preserved most of the information on those subjects which had escaped the ravages of time. He wrote, too, at a period when, though Sparta with the rest of Greece had been reduced to the condition of a Roman province, yet her institutions still retained some of their influence, and curiosity would naturally be excited to learn the history of her lawgiver. It appears from Horace that *patiens Lacedemon* was a theme among the courtiers of Augustus. Livy also, in the same age, had celebrated her rigid discipline, and described the city as distinguished, not by magnificent buildings, but by a well-ordered government. Yet so little had been done to separate truth from fiction in the Spartan story, that Plutarch commences his account of her lawgiver by the confession that he has "nothing to relate that is certain or incontrovertible; for there are different accounts of his birth, his travels, his death, and especially of the laws and form of government which he established."

Eunomus, the father of Lycurgus, was of the family of Procles. He lost his life in a popular commotion, leaving his share in the kingdom to Polydictes, the elder son, on whose decease, after a short reign, the royalty descended on Lycurgus. Yet he no sooner understood that the deceased king's widow was likely to become a mother than he declared that the regal authority would belong to her issue should it prove a son, and in the mean time he administered the government under the title of Prodicos, by which the Lacedemonians denominated the guardians of a minor king.

The widowed queen, in whom ambition appears to have prevailed over moral sentiment and natural affection, now made to Lycurgus the inhuman proposal of procuring the destruction of the child, if he would promise to espouse her on thus succeeding to the royalty. He abhorred the suggestion, yet disguised his resentment, and persuaded the cruel mo-

ther, from a regard to her own life, to abandon the present destruction of her child, promising that he would take care to destroy it immediately on the birth.

Having thus diverted the queen from her design, he gave strict orders to her attendants that if she were delivered of a girl the child should be committed to the care of the woman; but if of a boy, that he should be immediately brought into his presence, however he might be engaged. The infant proving to be a son, was carried to Lycurgus, who was then at supper with the magistrates, to whom he is reported to have said, "Spartans, see here your newborn king," naming him Charilaus, because of the joy and admiration of his own magnanimity and justice, testified by all present towards so faithful and disinterested a guardian.

"Thus," says Plutarch, "the reign of Lycurgus lasted only eight days. But the citizens had a great veneration of him on other accounts; and there were more that paid him their attentions, and were ready to execute his commands out of regard to his virtues, than those that obeyed him as guardian of the king, and director of the administration." There were, however, some who opposed his advancement as too high for so young a man, particularly the relations and friends of the queen-mother. He therefore took the resolution of travelling into other countries, till his nephew should be grown up and have a son to succeed him in the kingdom. The guardianship of the infant king was now probably assumed by Leonidas, brother of the queen, whose violent hostility to Lycurgus must have contributed to his resolution of becoming a voluntary exile.

The visit of Lycurgus to Crete appears to have had great influence in assisting his future plans of legislation for Sparta. Minos, the king of Crete, was famed for his jurisprudence; and his laws, which he professed to have received from Jupiter, remained in vigorous exercise to the time of Plato, more than 1000 years after the death of the legislator. Here Lycurgus associated also with Thales, whom he persuaded to settle in Sparta. He was a poet, famed likewise for political wisdom, then generally recorded in traditionary verse, to which he procured the attention of the people by the attractions of his lyre. From Crete, Lycurgus passed into Asia, desirous to compare the Ionian expense and luxury with the Cretan frugality and hard diet. There, in the reputed country of Homer, and amidst the scenes on which his genius had conferred immortality, he is reported to have discovered the entire poems of the bard, of which only a few detached pieces had been known in Greece. "Observing," says Plutarch, "that many moral sentences, and much political knowledge, were intermixed with his stories, which had an irresistible charm, he collected into one body, and gladly transcribed them in order to take them home with him; for his glorious poetry was not yet fully known in Greece, only some particular pieces were in a few hands, as they happened to be dispersed."

The proverbial wisdom of the Egyptians scarcely failed to attract the attention of Lycurgus, who could not indulge his personal security from enemies at home without seeking to acquire among foreign states all the information which could enable him on his return to improve the institutions of his own country. Nothing therefore is more probable than

the opinion, that during his travels, which appear to have extended through ten, or probably a greater number of years, he visited Egypt to examine those remarkable laws and customs which were early celebrated among the nations of antiquity. "He was most pleased," says Plutarch, "with their distinguishing the military men from the rest of the people;" a regulation which he is said to have adopted at Sparta, though it is not easy to comprehend what distinction could exist among a people who, as to the free citizens, if they are correctly described, were all military. So indeed were many of the Helots, who accompanied their masters in battle though their valour was frequently so ill requited. The accounts of the visits of Lycurgus to Libya and Spain, and his interview with the gymnosophists of India, appear to rest, according to his biographer, on insufficient authority. His inquiries into the institutions of foreigners were, however, suddenly terminated by the situation of his own country, probably long before the period which he had proposed for his return. This he had intended to defer till the infant king should have attained to manhood and become a father, a period during which time might lessen the number of his enemies, and abate the rancour of those who survived. But here we must revert to the earlier history of Sparta.

Laconia, of which that city was the capital, is said to have been re-peopled about 1100 years before the Christian era, after having been reduced to a desert by the devastations of intestine war. Two kings of great power, the sons of Aristodemus, then shared the regal authority. This divided rule, uncontrolled as it afterwards became by a senate, appears to have little promoted the public tranquillity. The nominal authority indeed still descended in the two branches of the royal family, yet it was perpetually disputed, till at length that tumult occurred which proved fatal, as we have seen, to the father of Lycurgus. Previous to his departure from Sparta he had administered the government only a few months, but in that time his abilities had become known to his fellow-citizens, who now, more sensible of his merit, sent deputations to him in conjunction with the kings to solicit his return. At length Lycurgus determined to revisit his country, and, as the only remedy he could devise for the existing evils, to new-model the government. Influenced by the superstitious notions of his time, or rather perhaps by the policy of encouraging them, he deferred the execution of his great design till he had visited the far-famed oracle of Delphos. The Pythia, who was no doubt prepared for his reception, saluted him as the beloved of the gods, and rather a god than a man,—so great was either the reputation of Lycurgus to command this testimony, or so great his art in procuring it. Returning with this sanction from the oracle, he soon engaged in his design the principal citizens, of whom Arithmiades was his chief supporter. They agreed, to the number of twenty-eight, to assemble armed in the public square lest any other citizens should oppose him. None of this description appeared, and Lycurgus proceeded to accomplish the suggestions of his extraordinary mind, aided by the lights which his travels had afforded him. He found the royal authority in the possession of Charilaus, his nephew, and Archelaus, who had both attained it by hereditary descent. But this authority was undefined, and frequently disputed,

while the people passed by rapid transitions from the suffering of tyrannical oppression to the indulgence of licentious anarchy. Lycurgus now undertook to remedy both these evils, and to secure the liberty of the citizens by tempering its exercise, while by limiting the sovereign power he consolidated and confirmed it.

Archelaus does not appear to have resisted his projects, or to have expressed any alarm; but Charilaus, remarkable for the gentleness of his disposition, and still a youth, was terrified by the appearance of armed citizens, and, apprehending a design against his person, took refuge in the Chalcoicos, or brazen temple of Minerva; but he was soon satisfied, accepted their oath, and joined in the undertaking.

Lycurgus now established a senate consisting of twenty-eight members, and nominated to that office those citizens who had been the first promoters of his design. Plutarch quotes the opinion of Aristotle that they were only twenty-eight, because two of Lycurgus's friends had deserted him through fear, though he himself concludes that this number was chosen that, with the kings, the whole body might consist of thirty members. Of these no one must be under sixty years. This election, determined according to Plutarch by the shouts of the people, was for life, and the senators were not responsible. Both these regulations are censured by Aristotle. He especially considers it as prejudicial to the public weal that those should continue to possess a control over their fellow-citizens who had survived their capacity of forming a wise and equitable decision. Plutarch applauds this establishment of a senate as an intermediate body, which, "like ballast, kept the state in a just equilibrium; the senators adhering to the kings whenever they saw the people too encroaching, and supporting the people whenever the kings attempted to make themselves absolute."

"Lycurgus had this institution so much at heart that he obtained from Delphi an oracle in its behalf called *rhetra*, or the decree. This decree, which was couched in very uncommon terms, recognised the establishment of a senate of thirty persons, including the two kings. It also directed that the people should be occasionally summoned to an assembly between Babyca and Cnacion, and that they should have the determining voice." These boundaries are supposed to describe a spot where they held their assemblies, "having neither halls nor any kind of building for that purpose. Lycurgus thought these things of no advantage to their counsels, but rather a disservice, as they distracted the attention and turned it upon trifles, on observing the statues and pictures, the splendid roofs, and every other theatrical ornament. The people thus assembled had no right to propose any subject of debate, and were only authorized to ratify or reject what might be proposed to them by the senate and the kings."

Of these popular assemblies there were two descriptions. One, which was held once a month, was called the lesser assembly. This consisted exclusively of the citizens of Sparta. They decided on all questions respecting the regal succession; the choice or removal of magistrates; the punishment to be inflicted on public criminals; and all important questions of internal policy or religious rites. The larger assembly comprehended, with the citizens of Sparta, the deputies from the cities of Laconia, and those of their allies, and even from any nations who came to

implore their succour. In these assemblies of the people, no one was allowed to give an opinion till he had completed his thirtieth year, and he might lose the privilege by misconduct. When any subject which engaged the attention of the assembly had been sufficiently discussed, one of the Ephori called for their voices, or ascertained their opinion by the numbers on a division.

The Ephori were five in number, like the *Quinqueviri* at Carthage. They were annually chosen by the people in their general assemblies, and designed to be a check on both the senate and the kings, thus possessing a power not unlike the tribunitial authority in Rome. In the exercise of this power, they were obliged to be unanimous. It was among the duties of the Ephori not only to preside in the assemblies of the people, and collect their suffrages, but also to proclaim war and negotiate peace; to decide on the number of troops to be embodied, and to appoint the funds for their maintenance. They appear, indeed, at length to have engrossed nearly the whole power in the administration of the government; yet, according to Herodotus (Erato), the kings still possessed an authority and distinction scarcely consistent with such a power in the Ephori.

The priesthoods of the Lacedæmonian and celestial Jupiter were assigned to the kings. They had the power also of making hostile expeditions whenever they pleased; nor might any Spartan obstruct them without incurring the curses of their religion. In the field of battle their post was in the front, when they retired in the rear. They had one hundred chosen men as a guard for their persons (three hundred according to others). When on their march, they might take for their own use as many sheep as they pleased, and had the chine and skin of all that were sacrificed. Such were their privileges in war. In peace they had many distinctions. In the solemnity of any public sacrifice the first place was reserved for the kings, to whom not only the choicest things were presented, but twice as much as to any other person. In the public games they sat in the most distinguished place, appointed the *Præneni* (entertainers of ambassadors), and each of them chose two Pythii, who were sent to the oracle at Delphi, and maintained like the kings at the public expense. If the kings did not choose to take their repast in public, two *chanices* of meal, with a *cotyla* of wine, were sent to their respective houses; but if they were present they received a double portion. The oracular declarations were preserved by them, though the Pythii also must know them. The kings alone had the power of deciding in the following cases, and they decided these only. They chose a husband for an heiress, if her father had not previously betrothed her. They had the care of the public ways. Whoever chose to adopt a child must do it in the presence of the kings. Such were the honours paid by the Spartans to their princes, according to Herodotus, who has here left some interesting traces of ancient manners, but whose account we shall find, on some points, at variance with the representations of Plutarch.

Lycurgus, having established his new government and defined the powers by which it should be administered, proceeded to the important objects which he considered as essential to its permanence. The first innovation on the existing forms of society at Sparta which he attempted, was a measure of extraordinary hazard, in which nothing could have en-

couraged or supported him but the reputation he had now acquired as a favourite of the oracular Apollo.

"He found," says Plutarch, "a prodigious inequality; the city overcharged with many indigent persons who had no land, and the wealth centred in the hands of a few. These he persuaded to cancel all former divisions of land, and to make new ones in such a manner that they might be perfectly equal in their possessions and way of living. His proposal was adopted. He made nine thousand lots for the territory of Sparta, which he distributed among so many citizens, and thirty thousand for the inhabitants of the rest of Laconia. Each lot was capable of producing (one year with another) seventy bushels of grain for each man [as master of the family], and twelve for each woman, besides a quantity of wine and oil in proportion."

Lycurgus next projected an equalization of personal property: "but," according to Plutarch, "he soon perceived that they could not bear to have their goods directly taken from them, and therefore took another method. First he stopped the currency of the gold and silver coin, and ordered that they should make use of iron money only. Then, to a great quantity and weight of this, he affixed a very small value; so that to lay up ten mina (about 30*l.* sterling) a whole room was required; and to remove it, nothing less than a yoke of oxen. He next excluded unprofitable and superfluous arts; which, if he had not done, most of them would have fallen of themselves, when the new money took place, as the manufactures could not be disposed of." Plutarch adds, that their iron coin would not pass in the rest of Greece, but was ridiculed and despised. And, as the result of this contrivance of our lawgiver, he states, that "luxury, losing by degrees the means that cherished and supported it, died away of itself: when even they who had great possessions had no advantage from them, since they could not be displayed in public, but must lie useless in unregarded repositories."

The next institution of Lycurgus was that of "public tables, where all were to eat in common of the same meat, and such kinds of it as were appointed by law. They had not the privilege of eating at home, and so to come without appetite to the public repast; and they made a point to observe any one that did not eat and drink with them, and to reproach him as an intemperate and effeminate person that was sick of the common diet." When returning home from the tables they were forbidden to use a light, that they might be accustomed to march in the night without apprehension.

At these public repasts, the plan of which Lycurgus appears to have borrowed from the institutions of Crete, there were about fifteen persons to a table. "Each was obliged to contribute monthly a bushel of meal, eight gallons of wine, five pounds of cheese, two pounds and a half of figs, and a little money to buy flesh and fish. If any of them happened to offer a sacrifice of first fruits, or to kill venison, he sent a part of it to the public table; for after a sacrifice, or hunting, he was at liberty to sup at home, but the rest were to appear in the usual place."

In these public halls there were distinct tables or messes, to which a new member could be admitted only by ballot. The favourite dish of the Spartans was their black broth; of its ingredients we have no very inviting description, as it consisted of pieces of

flesh, blood, salt, and vinegar. Yet the old men were so fond of it, that they ranged themselves on one side, and ate it, leaving the meat to the young people.

By proscribing the currency of the precious metals, Lycurgus had rendered the indulgence of those luxuries which ingenious artists must supply scarcely attainable. As an additional guard against the propensity, he ordered that "the ceilings of houses should be wrought with no tool but the axe, and the doors with nothing but the saw," taking it for granted that into such houses no one would introduce highly wrought and costly furniture. Plutarch, however, attributes to the Spartans excellent workmanship "in their useful and necessary furniture," and instances their "cup called *cothon*, which was highly valued, particularly in campaigns."

Lycurgus encouraged marriage by setting a brand of disgrace upon celibacy. The bachelors were liable to a prosecution, and were compelled to sing verses containing ridicule of themselves. They were likewise refused those honours to old age, which were in all other cases so scrupulously paid by the Spartans. On the other hand, those who married had many privileges, and if they had four children were free from taxes. Plutarch says, that "in their marriages, the bridegroom carried off the bride by violence, and she was never chosen in a tender age, but when she had arrived at full maturity."

Lycurgus considered children not so much the property of their parents as of the state. Under this notion, he established the following severe regulation: The father "was obliged to carry the child to a place called *Lesche*, to be examined by the most ancient men of the tribe who were assembled there. If it was strong and well-proportioned, they gave orders for its education, and assigned it one of the nine thousand shares of land; but if it was weakly and deformed, they ordered it to be thrown into the place called *Apotheta*, which is a deep cavern near the mountain Taygetus, concluding that its life could be no advantage either to itself or to the public, since nature had not given it at first any strength or goodness of constitution." As to the children who survived this ordeal, the parents were not at liberty to educate them as they pleased. How the girls were initiated does not appear, except that they were taught "to exercise in running, wrestling, and throwing quoits and darts."

When a boy had passed the examination of the ancient men, and was allowed to live, he was laid upon a buckler, and a spear placed within his reach, that his very first efforts might be warlike. The boys at seven years of age were enrolled in companies, where they were all kept under the same order and discipline, and had their exercises and recreations in common. He who showed the most conduct and courage amongst them was made captain of the company. The rest kept their eyes upon him, obeyed his orders, and bore with patience the punishments he inflicted. The old men were present at their diversions, and often suggested some occasion of dispute, or quarrel, that they might observe with exactness the spirit of each, and their firmness in battle. At twelve years of age their under-garment was taken away, and but one upper one a year was allowed them. Hence they were necessarily dirty in their persons, and not indulged the great favour of baths and oils, except on some particular days of the year. They slept in companies, on beds made of the tops of reeds, which

they gathered with their own hands, without knives, and brought from the banks of the Eurotas. They were introduced to the public tables; and when they first entered, the oldest man present pointed to the door and said, "Not a word spoken in this company goes out there." In the education of the Spartans, the higher branches of literature appear to have been excluded upon principle, as also were arts and sciences, except some attention to the art of design, probably for the purposes of war; poetry, such as might consist with their habitual conciseness; and music, on an instrument, the form of which was limited by law. Among the Spartans was an instructor called *iren*, who had left the class of boys two years, and was twenty years old. It was his employment to improve the boys by conversation, and to draw out those concise repartees for which the Spartans were celebrated, and which gave birth to the epithet laconic. The *iren* also presided over the juvenile contests, which were designed to prepare the combatants for those perilous encounters which were their sole manly occupations. These contests were severe, and maintained with a perseverance of which history has furnished few, if any, adequate examples.

It was also the business of the *iren* to inure the boys to hardships, and to encourage feats of craft and agility. These adventures have been, perhaps, improperly censured as thefts, which they could scarcely be called, when we consider the community, especially of subsistence, which prevailed in Sparta. Plutarch says that the *iren* sends the eldest of the boys "to fetch wood, and the youngest to gather pot-herbs. These they steal where they can find them, either slyly going into gardens, or else craftily and warily creeping to the common tables. But if any one be caught, he is severely flogged for negligence or want of dexterity."

Another severe discipline of the Spartan youth, by which Laconia nursed her hardy sons to war, was also one of their religious rites, performed at the altar of Diana. Plutarch appears to have witnessed this celebration, and to have seen many of the youths "expire under the lash."

Though thus early trained to hardihood, the Spartans appear not to have been admitted into military service till thirty years of age. For this service Lycurgus established various regulations. Their dress was scarlet, probably to hide the appalling spectacle of blood. They were never to march before the full moon, nor to fight often against the same enemies, lest they should thus teach them, though by severe experience, the art of war. They slept all night in their armour, except the advanced guard, who were not allowed their shields, that they might depend solely on their vigilance. After every meal they sang hymns to their gods, who were always represented in armour, that every thing might foster the military spirit. The king, who commanded the army, was attended by two Pythii, or augurs, with the polemarchs, who formed a council of war, and he had an Olympic champion to fight by his side. On his departure from the city he offered a sacrifice to Jupiter; a youth took from the altar a flaming brand, and bore it at the head of the troops till they reached the frontiers, when the king offered another sacrifice. Just before the onset of battle he sacrificed to the Muses, that they might perform deeds worthy of praise. The troops then advanced to the sound of flutes, and with chaplets on their heads, as if in an-

ticipation of a victory, the king singing the pæan or hymn of Castor, as a signal to engage.

The Spartan wives and mothers encouraged their sons and husbands to the fight, conjuring them to return either with their shields, or upon them; never lamenting those who died in battle, but rather thanking the gods for the honour they entailed on their families. Those who fell in battle were buried in scarlet cloth, and had inscriptions on their tombs, which was not generally permitted. And that his Spartans might be familiarized with mortality, Lycurgus, contrary to the practice of the Greeks, his contemporaries, directed their tombs to be built around their temples; among which he is said to have built a temple to Laughter, and was at length honoured with one, which Sparta dedicated to her lawgiver.

There is one striking feature in the legislative system of Lycurgus of which we have yet said nothing, but which well deserves to be considered; we mean the case of the Helots or *Nota*. A maritime town of Laconia, called Helos, was conquered, and the inhabitants were reduced to slavery by the Lacedæmonians, some ages before the time of our lawgiver. From them all the slaves in Laconia are supposed to have been called Helots.

To these Helots, who were far more numerous than the free inhabitants of Laconia, were appropriated all mechanic arts, and the cultivation of their lands; for the free Lacedæmonians, when not engaged in war, or preparing for it by martial exercises, claimed the privilege of idleness, which they accounted dignity. Plutarch, in his "Laws," &c. describes the Helots as "employed not only in all kinds of servile offices, but especially in tilling the fields, which were let out to them at reasonable rates." But, in his life of Lycurgus, these Helots are represented as the victims of the most wanton cruelty. They were slaves not only of individuals, but of the public. The youth massacred them in cold blood, to prepare themselves for the slaughter of foreign enemies; and lest they should become too numerous for the safety of the freemen of Laconia, they sallied forth in the evening to cut off great numbers of them as they returned home from reaping their harvests. This occasional destruction of the Helots appears to have been brought into a regular system by the institution of the *cryptia*, or ambuscade, which Plutarch describes, but is disposed to consider it an invention of much later date than the time of Lycurgus.

How long Lycurgus remained in Sparta to superintend the practical application of his laws, and under what circumstances he finally left the country, are questions involved in the common uncertainty of his story. Plutarch describes him as living on good terms with his countrymen, and highly gratified by the effect of his institutions. He represents him as pretending an occasion for visiting the oracle at Delphos, and obliging the Spartans by an oath to alter nothing till his return, which he never intended. He then, after an interview with the Pythia, is said to have put an end to his life by abstaining from food, at the age, according to Lucian, of eighty-five; which must, in that case, have been after a long residence at Sparta; yet Plutarch evidently supposes him to have died in the prime of life. Tertullian, in his "Apology," differs from Plutarch as to the retirement of Lycurgus. He twice alludes to the circumstance, and attributes it to the determination of the

Spartans to mitigate the severity of his laws, on which he withdrew in disgust and pined himself to death. These laws, which certainly discover a mind superior to the general information of his age, have been panegyrised in all times, though several of them need only a description to be justly censured. At best, they considered war rather than peace as the business of life; and it has been well observed that Sparta flourished while she was in perpetual hostilities, but in the enjoyment of tranquillity immediately decayed.

LYDGATE, JOHN, an early English poet, who was the pupil and imitator of Chaucer, and if inferior to the great father of English poetry in original genius and inventive fancy, yet he exceeded him in smoothness of language and harmony of versification. He was educated at Oxford, and then travelled into France and Italy; and returned a complete master of the language and the literature of both countries. He principally studied the Italian and French poets, particularly Dante, Boccaccio, and Alain Chartier; and became so distinguished a proficient in polite learning, that he opened a school in his monastery for teaching the arts of versification and the elegancies of composition. Yet, although philology was his object, he was not unfamiliar with the fashionable philosophy: he was not only a poet and a rhetorician, but a geometrician, an astronomer, a theologian, and a disputant.

Lydgate's works are very numerous. Ritson has given a list of two hundred and fifty-one, some of which he admits may not be Lydgate's, but he supposes, on the other hand, that he may be the author of many others that are anonymous. His most esteemed works are his "Story of Thebes," his "Fall of Princes," and his "History, Siege, and Destruction of Troy." The first is printed by Speght in his edition of Chaucer; the second, "The Fall of Princes," or "Boke of Johan Bochas," is a translation from Boccaccio, or rather from a French paraphrase of his work "De Casibus Virorum et Feminarum Illustrium."

LYDIAT, THOMAS, a learned English divine, who was born in 1572, and educated at Oxford. About the year 1609 he became acquainted with Dr. James Usher, afterwards archbishop of Armagh, who

took him to Ireland. He was at Dublin college for about two years, after which he returned to this country, and the rectory of Alkington becoming vacant, he was presented to it; but owing to his want of prudence, he was sent to the king's bench prison, where he remained till Sir William Boswell, Dr. Robert Pink, warden of New college, Bishop Usher, and Dr. Laud, discharged the debt. During the civil wars he suffered much in his rectory of Alkington from the parliament party. He died in 1646. He wrote many works, in Latin, on chronology and natural history.

LYE, EDWARD, a learned English antiquary, who was born at Totness, in Devonshire, in 1704. He was educated partly at home under his father, who kept a school at Totness, and partly under other preceptors, but chiefly by his own private care and application. At the age of nineteen he was sent to Oxford, and took his bachelor's degree in 1726. He entered holy orders in 1729, soon after which he was presented to the living of Houghton Parva in Northamptonshire. In this retreat he laid the foundation of his great proficiency in the Anglo-Saxon language. Having now qualified himself completely for a work of that nature, he undertook the arduous task of publishing the "Etymologicum Anglicanum" of Francis Junius, from the manuscript of the author in the Bodleian library. In the seventh year from the commencement of his design, he published the work with many additions, and particularly that of an Anglo-Saxon Grammar prefixed. Mr. Lye became a member of the society of antiquaries, and about the same period was presented by the earl of Northampton to the vicarage of Yardley Hastings, on which accession he resigned his former living of Houghton. His next publication was that of the Gothic Gospels, undertaken at the desire of Eric Benzelius, bishop of Upsal, who had collated and corrected them. This, which he had been long preparing, appeared from the Oxford press in the same year with a Gothic grammar prefixed. His last years were employed chiefly in finishing for the press his own great work, the Anglo-Saxon and Gothic dictionary, which was destined to owe that to another editor which he had performed for Junius. His manuscript was just completed when he died, at Yardley Hastings, in 1767.

LYON, GEORGE FRANCIS.—This enterprising traveller was a native of Chichester, and educated at Dr. Burney's naval academy at Gosport. After serving with distinction for some years in the navy, he obtained an appointment under government for exploring the interior of Africa. In this expedition he was accompanied by Mr. Ritchie, a gentleman of considerable science and ability. In 1821 Captain Lyon published his journal, under the title of "A Narrative of Travels in Northern Africa, accompanied by Geographical Notices of Soudan, and of the Course of the Niger," with a chart of the routes, and a variety of coloured plates, illustrative of the costumes of the several natives of that country. The tour is divided into two parts; the first comprises a journey over the Gharian mountains to Benioloed, and the subsequent progress of the mission from Tripoli to Mourzouk, the capital of Fezzan, where Mr. Ritchie died on the 20th of November, 1819; the second embraces Mr. Lyon's proceedings between that period and March 25th, 1820, when he returned to Tripoli, after an absence of exactly one year,—"it be-

ing deemed too hazardous to attempt advancing any farther into the interior without fresh authority and additional pecuniary supplies from government." During this period Lieutenant Lyon wore the dress of a Moslem, kept his head shaved, allowed his beard to grow, and travelled under the name of Said-ben-abd-Allah. Previous to the commencement of his journey, he was instructed in reading Arabic by a *fighi* (or clerk) of one of the mosques, who also gave him all the requisite information respecting the ceremonies used in prayer; which, when he became perfect in them, he taught to Mr. Ritchie. The following extracts will show what he had to contend with in the course of his travels:—

"Mr. Ritchie felt much anxiety respecting a further allowance from government, as we had scarcely more than money sufficient to pay the hire of our camels to Mourzouk, and beyond that place we were uncertain how we could procure a fresh supply for the use of the mission. He had brought with him a good deal of merchandise; but, from what he learned at Tripoli, it was likely to be of little service to us, as it consisted of few or none of the articles of trade most commonly used in the interior. I furnished myself with a horse and the greater part of my equipments. M. Dupont thought fit to resign the office which he had pledged himself to fulfil, and abruptly left Mr. Ritchie, influenced, as we had reason to think, by the advice and suggestions of some of his supposed friends. The petty intrigues which were carried on in order to detract from the merits of the mission, and eventually to obstruct its progress, were most disgraceful. Such was the inauspicious state of our affairs when we entered on our hazardous journey, determined, at all events, that, however unpromising in its commencement, its failure should not be attributed to our want of zeal in the service we had undertaken.

"At Mourzouk (where the mission arrived on the thirty-ninth day after leaving Tripoli) I was attacked with severe dysentery, which confined me to my bed during twenty-two days, and reduced me to the last extremity. Our little party was at this time miserably poor, for we had only money sufficient for the purchase of corn to keep us alive, and never tasted meat unless fortunate enough to kill a pigeon in the gardens. My illness was the first break-up in our little community, and from that time it rarely happened that one or two of us were not confined to our beds. The extreme saltiness of the water, the poor quality of our food, together with the excessive heat and dryness of the climate, long retarded my recovery; and when it did take place, it was looked on as a miracle by those who had seen me in my worst state, and who thought it impossible for me to survive. I was no sooner convalescent than Mr. Ritchie fell ill, and was confined to his bed with an attack of bilious fever, accompanied with delirium, and great pain in his back and kidneys, for which he required repeated cupping. When a little recovered, he got up for two days, but his disorder soon returned with redoubled and alarming violence. He rejected every thing but water; and, excepting about three hours in the afternoon, remained either constantly asleep, or in a delirious state. Even had he been capable of taking food, we had not the power of purchasing any which could nourish or refresh him. Our money was now all expended, and the sultan's treacherous plans to distress us, which daily

became too apparent, were so well arranged, that we could not find any one to buy our goods. For six entire weeks we were without animal food, subsisting on a very scanty portion of corn and dates. Our horses were mere skeletons, added to which, Belford (a shipwright of Malta dock-yard, who had volunteered to accompany Mr. Ritchie,) became totally deaf, and so emaciated as to be unable to walk.

"My situation was now such as to create the most gloomy apprehensions; for I reflected that, if my two companions were to die, which there was every reason to apprehend, I had no money with which to bury them or to support myself; and must in that case have actually perished from want in a land of comparative plenty. My naturally sanguine mind, however, and, above all, my firm reliance on that Power which had so mercifully protected me on so many trying occasions, prevented my giving way to despondency; and Belford beginning soon to rally a little, we united, and took turns in nursing and attending on our poor companion. At this time, having no servant, we performed for Mr. Ritchie and for ourselves the most menial offices, Mr. Ritchie being wholly unable to assist himself. Two young men, brothers, whom we had treated with great kindness, and whom we had engaged to attend on us, so far from commiserating our forlorn situation, forsook us in our distress, and even carried off our little store of rice and cuscussoo, laughing at our complaints, and well knowing that our poverty prevented the redress which we should otherwise have sought and obtained."

Mr. Ritchie was confined to his bed for fifty-eight days. By the 20th of August he had tolerably recovered, though Lieutenant Lyon observed, with much regret, that his late and frequent disorders appeared to have very materially depressed his spirits, insomuch that he almost constantly remained secluded in his own apartment, silent, unoccupied, and averse to every kind of society.

"Being now reduced to the last extremity, and Mr. Ritchie not thinking it right to draw for money on the treasury, I drew a bill on my own private account for 20*l.*, with which we proceeded immediately to the sultan, hoping it would have the desired effect, Mr. Ritchie having before explained to him, that if he accommodated us with eighty dollars, and sent the draft to his (the sultan's) wife, who was then resident at Tripoli, she would instantly receive the amount from the British consul. He still, however, refused to assist us; when on a sudden, artfully pretending to mistake eighty for eight, he exclaimed, 'Well! I did not think it necessary to draw a written agreement for so small a sum; I will advance the eight dollars you require, and you may return them when convenient.' Further explanation to a man determined not to understand, was wholly useless; and our poverty not allowing us to refuse the sum, however small, we accepted it; and immediately employed part of our newly acquired wealth in treating ourselves with a little meat. We determined to fatten our horses for sale, and to purchase some fowls and a milch ewe, as a resource against future illness. I often drenched the horses with water, when they were not thirsty, to increase their size and improve their appearance, and at length (in October) sold a grey one for seventy dollars, twenty of which, with a negress valued at thirty-two, were paid to us on taking the animal away; the remainder was to be

paid when the purchaser had sold his slaves. The girl was a native of Mandra, in Bornou, and about thirteen years of age. Mr. Ritchie was witness with Belford to my liberating her in due form from slavery; but as we were much in want of a servant, it was settled that she was not to return to her native country, my ticket of freedom being only to prevent all chance of her being sold. We economised, as well as we could, our small allowance of money, which, however, soon became much reduced, as we had incurred many debts, and now punctually paid them. Within the last two or three months we frequently had passed a whole day without food.

"Belford and I fell ill about this period, and were both confined to our beds; he with a bilious fever, and I with severe pains in my back and head, which frequently caused delirium. I had had repeated attacks of ague and fever from the beginning of August, generally about three times a week, and sometimes more frequently, which had much weakened me, and brought on a decided liver complaint as well as an affection of the spleen. Fortunately, however, my spirits were good, or I must have sunk under so many attacks. In this month about twenty Tripoli merchants died from the effects of climate, bad water, and the want of nourishing food; even many of the natives were very ill, and it was quite rare to see a healthy-looking person. I remained a week in bed, and arose from it quite a skeleton; Belford was still in a very dangerous state.

"On the 8th of November, Mr. Ritchie being again attacked by illness, I much wished him to allow of my selling some of our powder to procure him a few comforts; but to this he would not assent. On the 9th I again fell ill, and was confined to my bed; and Belford, though himself an invalid, attended on us both. Our little girl, however, assisted in nursing us. After lying in a torpid state for three or four days, without taking any nourishment or even speaking to us, Mr. Ritchie became worse, and at last delirious, as in his former illnesses. In the interval, my disorder having abated, I was enabled to rally a little, and to attend on my poor suffering companion.

"After he had somewhat recovered his intellect, he appeared very anxious to know whether any letters had arrived announcing to us a further allowance of money from government; but when I, unfortunately, was obliged to reply in the negative, he avoided all comment on the subject. He would not drink any tea, of which we had still some remaining, but preferred vinegar and water, our only acid, which he drank in great quantities. Being entirely free from pain, he flattered himself that he should, in a day or two, recover, particularly as he was not at all emaciated, but rather stouter than he had been some months previous to his illness. One day he appeared so far recovered as to be able to get up; we placed him on the mat in the centre of the room, when he seemed much refreshed, and thanked us for the trouble we had taken; he then expressed a wish to have a little coffee, which, for a time, I was unwilling to give, fearing it might injure him: he was, however, so earnest in his request, that I was obliged at last to comply with it. In the evening one or two of the Mamelukes came in; he spoke to them for a little while, and soon after fell asleep. In the morning I found he had crept from his bed, and was lying uncovered, and in a state of delirium, on the cold sand.

We immediately put him to bed, and he again appeared to rally.

"On the 20th we got a fowl, of which we made a little soup for him; and while he was taking it, a man came in, and told me a courier had arrived from Tripoli with letters. I went out, but returned, to my sad disappointment, empty-handed, the man having no despatches for us. The broth which Mr. Ritchie drank was the first nourishment he had taken for ten days, though we had used all our endeavours to prevail on him to eat. He said he felt much revived by it, and turned round to go to sleep. He seemed to breathe with difficulty; but as I had often observed this during his former maladies, I was not so much alarmed as I should otherwise have been. At about nine o'clock, Belford, on looking at him, exclaimed in a loud voice, 'He is dying!' I begged him to be more cautious, lest he should be overheard, and immediately examined Mr. Ritchie, who appeared to me to be still in a sound sleep; I therefore lay down on my bed, and continued listening. At ten I rose again, and found him lying in an easy posture, and breathing more freely: five minutes, however, had scarcely elapsed before his respiration appeared entirely to cease; and on examination I found that he had actually expired, without a pang or a groan, in the same position in which he had fallen asleep. Belford and myself, in our weak state, looked at each other, expecting that in a few days it might probably be our lot to follow our lamented companion, whose sad remains we watched during the remainder of the night. And now, for the first time in all our distresses, my hopes did indeed fail me. Belford, as well as he was able, hastened to form a rough coffin out of our chests; and a sad and painful task it was. The body of the deceased was washed, perfumed, and rubbed with camphor; and I procured some white linen, with which the grave-clothes were made. Within an hour after the funeral had taken place, a courier arrived from Tripoli, bringing a truly welcome letter, announcing that a further allowance of 1000*l.* had been made by our government towards the expences of the mission. Had this letter reached us a little sooner, many of our troubles and distresses would have been prevented.

"I waited on the sultan to announce to him Mr. Ritchie's death, at which the hypocrite affected to be much grieved, though he must have been well aware that, had his inclination equalled his power to serve us, he might have enabled us to procure the necessities of life, and thus at least tranquillised the last moments of Mr. Ritchie. I informed him of the additional allowance which I expected, begging him to lend me some money. He talked much of his regard for me, but dwelt a great deal on his poverty; and ended by saying, he might perhaps be able to furnish me with a little, which he expressed with particular emphasis, reminding me that I already owed him eight dollars. I was not then, I own, in the humour to remonstrate with such a wretch, and plainly told him I would never more ask for his assistance or friendship. On my return home I found poor Belford greatly overcome by the efforts he had made, whilst I was equally so from the exertions of mind I had undergone. The consequence was, that a strong fever confined us both to our beds, at the mercy of any one who chose to pillage us. We lay ten days in this state; our little girl was our principal nurse, and was very humane and careful."

Lieutenant Lyon now found himself under the absolute necessity of returning home to receive instructions for his further proceedings; for, although money might have been procured at Tripoli, much time must have elapsed before he could have received it; and he had no one whom in his absence he could have left in charge of the goods at Mourzouk, Belford being too sick and helpless either to keep guard over them or to remain alone in that place. Added to this, 1000*l.* was a sum by no means sufficient to carry him through Africa, as it would be requisite to purchase merchandise totally different from that which had already been provided, and without which he could not have made his way. Belford, from his weak state, could not accompany him far; and to proceed alone would have been actual madness, until the necessary arrangements for his future operations, and regulations as to pecuniary matters, had been fully made and understood. Under all these circumstances, therefore, and to his great regret, he could only resolve on a short journey into the interior, proceeding in the first place to Zuela, the principal town east of Mourzouk, and from thence passing the desert to Gatrone and Tegerry, at which latter place he arrived on the 2nd of January, 1820. During his progress thither, he was more than once severely attacked with illness, and suffered much in the spleen and liver. On the 8th of March he repassed the northern boundary of the kingdom of Fezzan; and on the 21st reached the ruins of Leptis Magna, the exploration of which ancient city had been successfully undertaken by Captain William Henry Smyth, R.N., in the year 1816.

Shortly after Mr. Lyon's return to Tripoli, a dangerous fever broke out and made great ravages, many of the inhabitants dying daily in the town and suburbs. He remained there until May, then sailed for Leghorn (where he performed quarantine); and, passing overland, arrived at London in July 1820. In travelling through France, he was so severely attacked by ophthalmia as to be nearly deprived of sight; but, on his arrival in England, he soon recovered. In December 1820 Captain Lyon was named by Captain Smyth as a person properly qualified to assist him in completing the investigation of the coast between Tripoli and Egypt. In a letter to Lord Viscount Melville, that scientific officer observed, "From my long acquaintance with him, I make no hesitation in recommending Lieutenant Lyon as singularly eligible for such a mission, from his natural ardour, his attainments, his professional habits, and, above all, his very complete assumption of the Moorish character."

Instead, however, of being sent back to Tripoli, he was very soon afterwards promoted to the command of the *Hecla* bomb-vessel, then fitting out at Deptford, for the purpose of exploring Repulse Bay, &c., in company with, and under the orders of, Captain Parry. This expedition sailed from the Nore on the 8th of May, 1821, and remained out during the whole of two seasons; after which they returned home in October 1823, their partial success in having made considerable additions to the geographical and scientific history of the North Sea receiving very warm testimonies of the public approbation. Captain Lyon's private journal of this expedition was also published, and has been aptly termed "*The Sayings and Doings of the Esquimaux.*" He was rewarded with post rank dated November 1823; and

on the 16th of January he was presented with the freedom of his native city of Chichester, and entertained by the corporation at a public dinner. The freedom was enclosed in an oaken box, turned from a portion of the *Hecla*, lined with gold, and bearing the following inscription:—"Presented, Jan. 16, 1824, by the Mayor, Aldermen, and Citizens of Chichester, to George Francis Lyon, Esq., Captain in the Royal Navy, in testimony of their admiration of the zeal, perseverance, and spirit of enterprise displayed by him in his travels in Northern Africa, and in the late voyage to the Polar Sea, in search of a north-west passage."

A few days before this gratifying occurrence, Captain Lyon had been appointed to the *Griper* bark, fitting out for another voyage of discovery in the icy regions. She sailed from the Nore on the 16th of June, 1824, for the purpose of making an attempt to connect the western shore of Melville Peninsula with the important discoveries of Captain Franklin; but our limits do not permit us to trace this enterprising voyager through the details of his dangerous course, and it may be enough to state that, after enduring the greatest hardships, he returned to London on the 13th November.

In June 1825 the honorary degree of D. C. L. was conferred upon Captain Lyon by the university of Oxford; and, on the 5th of September following, he married Lucy Louisa, the younger daughter of the celebrated Lord Edward Fitzgerald. Not long after he went to Mexico as one of the commissioners of the Real del Monte mining company. Returning home by way of New York, in the *Panthea* packet bound to Liverpool, he was wrecked in a gale at Holyhead, in January 1827, and lost every thing belonging to him, including his journal, plans of the mines, &c. To add to his distress, he heard, upon landing, of the death of his wife, which had taken place about four months before. Captain Lyon afterwards returned to South America on mining business, which he prosecuted with his wonted intelligence; and the specimens of South American minerals which he forwarded to this country are evidences of his taste. At length his sight began to fail him to an alarming degree, insomuch that he determined to revisit England for advice. He accordingly embarked for that purpose, but died on board his Majesty's packet the *Emulous*, on her passage from Buenos Ayres, October 8th, 1832, at the age of thirty-seven.

LYONNET, PETER, a celebrated naturalist, born in 1707 at Maestricht, graduated at Utrecht, and was for some time a counsellor at the Hague. He afterwards became secretary, and Latin and French interpreter to the states of Holland. This situation occupying but little of his time, he employed himself in researches into the natural history of insect and other animals, particularly such as were to be found in the vicinity of the Hague. He formed a valuable collection of shells, and was admitted into many of the principal scientific societies in Europe. His death took place in 1789. His most important production is entitled "*Traité Anatomique de la Chenille qui Ronge le Bois de Saule,*" a work no less remarkable for originality of design than for splendour of execution. Lyonnet was distinguished for his skill as a painter and engraver, and he displayed much ingenuity in improving microscopes and other instruments used in making his observations.

**LYSIAS**, an Athenian orator, who flourished about 458 B. C. His father, Cephalus, was also an orator, of whom Plato makes honourable mention in his Republic. Soon after his father's death Lysias, then in the fifteenth year of his age, went to Thurium, in Magna Græcia, to study philosophy and eloquence under Tisias and Nicias of Syracuse. Having settled in Thurium, he was employed in the government; but on the defeat of the Athenians in Sicily he was banished with many of his countrymen. He returned to Athens, but the thirty tyrants banished him from that city, and he retired to Megara. After Athens had recovered its freedom, he exerted himself for the advantage of the city, and even sacrificed much of his property for the public welfare. Yet, notwithstanding his generosity, the rights of an Athenian citizen were never granted him. At first he gave instruction in eloquence; but finding himself surpassed by Theodorus, another teacher of oratory, he devoted his time to writing orations for others. He wrote more than 200, some say 400, orations; only 223, however, were regarded as genuine. In these he excelled all the orators of his time, and has rarely been surpassed by succeeding orators. Dionysius praises the purity, clearness, conciseness, and elegance of his expressions, the beautiful simplicity of his style, his knowledge of men, and his lively description of their peculiarities, and, above all, his unparalleled grace. His style is applauded as a perfect example of the simple Attic eloquence. The efforts of Lysias in panegyric, however, according to Dionysius, were unsuccessful; he strives to be magnificent and lofty, but does not fully reach his object. None of these eulogies is extant except the one entitled "Epitaphios," and the genuineness of this is doubted; hence we cannot form an opinion of this class of his works.

**LYSIMACHUS**, son of Agathocles, a general and friend of Alexander, in the division of whose conquests he received a part of Thrace. The inhabitants stubbornly opposed his authority, and he was obliged to conquer the country. After this he built the city of Lysimachia, on the Thracian Chersonesus, assumed the royal title like the other generals of Alexander, and formed a league with some of them against Antigonos, who had brought under his own power the territories conquered by Alexander in Asia. After the battle of Ipsus in Phrygia, which cost Antigonos his life and his crown, Lysimachus became master of Asia Minor, Cappadocia Proper, and all the provinces between the Taurus and the Antitaurus. He next made war on the nations on the borders of Thrace, and enlarged his territories by conquest. In attempting to subjugate the Getæ, who lived beyond the Danube, his son and himself fell into their hands. He was compelled to surrender with his army to the barbarians, who with horrid cries demanded his death. But their king treated him more generously than the ambitious Lysimachus dared to hope. He provided for his prisoners an entertainment in the manner of the Greeks, and left them their own splendid furniture and utensils; his own food, on the contrary, was mean, and his vessels were all made of clay or wood. After the meal was concluded he asked the captive monarch whether the rude living of the Getæ, or the splendid banquets of his own country, seemed to him most desirable, and advised him to make peace with a nation from whom so little was to be gained, restored him his power, admitted him to his friendship, and dismissed him without a ransom. This generous

conduct made a deep impression on the tyrannical conqueror. He restored to the king of the Getæ the countries which he had gained beyond the Ister, and gave him his daughter in marriage. From this time the power of Lysimachus became more and more extended, till his domestic relations involved him and his kingdom in ruin. Having put away his first wife, he married Arsinoë, a daughter of Ptolemy, who led him to commit many acts of folly, and even prevailed upon him to murder Agathocles, his son by his first wife, in order to secure the succession to her own children. The virtues of Agathocles had gained him many powerful friends, who determined to take vengeance upon his weak and cruel father. They fled to Seleucus, and engaged him in a war against Lysimachus. Seleucus conquered all Asia Minor almost without a blow. A general battle was fought at Couropedium, in Phrygia, and after a valiant resistance, Lysimachus was totally defeated and slain, B. C. 282, in the seventy-fourth year of his age.

**LYSIPPUS**, a sculptor, who flourished in Sicily about 330 B. C., in the time of Alexander the Great. Alexander would permit no one but Apelles to paint his portrait, and no one but Lysippus to make his statue. The statues of Lysippus were principally portraits. The painter Eupompus, whom he asked what master he should follow, told him to follow nature. His statues were wrought with much greater beauty and elegance than those of his predecessors. He made the body more slender; the head smaller; the hair more natural, flowing and delicate; he avoided angularity, and endeavoured to give to every part more roundness and softness of outline. He used to say, he represented men as they appeared to his imagination, but his predecessors represented them as they really were. Even the minutest parts were laboured with the greatest care. It is not known whether he executed any marble statues, but many in bronze are still preserved. The most celebrated are, a man rubbing himself in a bath (*Apoxyomenus*); several statues of Alexander, representing him in all the different stages of his life; a group of Satyrs, which was found at Athens; Alexander and his Friends, a number of statues which were intended to bear an exact resemblance to the original; and a Colossal Jupiter at Tarentum.

**LYSONS, SAMUEL**, a learned English topographical writer, who was born in 1763. He was educated for the law, but in 1804 succeeded Mr. Astle as keeper of the records in the Tower of London. His various works, illustrative of Anglo Roman antiquities, are of a very interesting character; but his most voluminous writings will be found in the "Magna Britannia." Mr. Lysons died in 1819.

**MABILLON, JOHN**, a learned French writer on ecclesiastical antiquities and diplomatics, who was born in 1632 in Champagne, and studied at the college of Rheims. He took the monastic vows in 1654, and in 1660 was ordained a priest. After having assisted D'Acheri, in his "Spicilegium," he edited the works of St. Bernard, and in 1668 published the first volume of the "Acta Sanctorum Ordinis S. Benedicti," of which the ninth and last volume appeared in 1702. One of his most important productions is his treatise "De Re Diplomatica, Lib. vi." of which a folio edition appeared in 1681. He was sent to Italy, with a commission from the king to make literary collections; and returning to France with books and MSS. for the royal library, he pub-

lished an account of his journey, &c., under the title of "*Musæum Italicum*." In 1701 he was chosen a member of the academy of inscriptions, and in that year began to publish his "*Annales Ordinis S. Benedicti*," four volumes of which appeared previously to his death in 1707.

MABLY, GABRIEL BONNET DE, a French political and historical writer, who was born at Grenoble, 1709. He was educated by the Jesuits at Lyons, but as soon as he was at liberty to follow his inclination he abandoned theological studies for Thucydides, Plutarch, and Livy. The young abbé now went to Paris, where he was favourably received by Madame De Tencin, sister of the cardinal, to whom he was related, and soon after published his "*Parallèle des Romains et des Français*," which was received with much applause, and obtained him the patronage of Cardinal Tencin. That minister employed Mably to write his memorials and reports; and it was from minutes drawn up by himself for the use of the cardinal that Mably prepared his "*Droit Public de l'Europe Fondé sur les Traités*." He was appointed in 1743 to carry on the secret negotiations with the Prussian ambassador at Paris, with whom he concluded a treaty against Austria. The instructions of the French minister at the congress of Breda were drawn up by him. Notwithstanding his prospects of success in politics, a misunderstanding with the cardinal induced him to retire from public affairs, and devote himself to study. The tone of his subsequent publications is somewhat different from that of his *Parallèle*. Among them are "*Observations sur l'Histoire de la Grèce*," "*Observations sur les Romains*," "*Entretiens de Phocion*" (in which he gives his ideas of virtue, patriotism, and the mutual obligations of the state and the citizens towards each other), "*Observations sur l'Histoire de France*," "*Entretiens sur l'Histoire*." His complete works appeared at Paris in 1794, in fifteen volumes. His style is easy, pure, often elegant, but tame; his views often partake of the asperity of his temper.

MABUSE, or MAUBEUZE, JOHN DE, an able artist, was born at Maubeuze, a village of Hainault in 1492, and studied the works of the great masters in Italy. His habits were so dissipated that the patience, fidelity, and beauty with which his works were executed were doubly remarkable. He painted a great altar-piece, representing the descent from the cross, for a church in Middleburg; but the church and the picture were destroyed by lightning. Another Descent from the Cross by him is still at Middleburg. His irregularity occasioned his imprisonment in this place; and, during his confinement, he painted several fine pictures, which are lost. He afterwards came to England, and painted for Henry VIII. Several excellent works of his are at Middleburg; the best of which is the altar-piece, representing the descent from the cross. Having received a piece of rich brocade in order to appear before the emperor Charles V., he sold it at a tavern, and painted a paper suit so exceedingly like it that the emperor could not be convinced of the deception until he examined it with his own hands. He died in 1562.

MACABER, an early German poet, who is best known as the author of a work entitled "*The Dance of Death, or the Dance of Macaber*," consisting of a series of dialogues between Death and a number of personages belonging to various ranks of society. Others suppose the word merely a corrup-

tion of the Arabic *magbarah*, a cemetery. An English translation of these dialogues was published by Dugdale and Dodsworth, in the third volume of the "*Monasticon Anglicanum*;" and French and Latin versions have been repeatedly printed.

MACARTHY, SIR CHARLES, an active but unfortunate Irish officer, who entered the army early in life, and was appointed captain of the Irish brigade in 1796, and major in the New Fencible Infantry on the 14th of March, 1800. He discharged his duty with great ability; and succeeded as much in attaching to himself the affectionate esteem of the whole corps as in bringing them rapidly to a high state of discipline. He was appointed lieutenant-colonel of the Royal African Corps in May 1811, and immediately proceeded to Africa. After Sir Charles had arrived at Cape Coast, and whilst he was making great preparations for invading the country of the Ashantees, the king of Ashantee sent Sir Charles his compliments, with a threat of soon having his head as an ornament to the great war drum of Ashantee!—It is a singular fact, that the subject of this threatening message was frequently adverted to by Sir Charles Macarthy. When at the head of his troops, in alluding to the king of Ashantee, he once remarked in a jocular way to some officers, "That fellow says nothing will satisfy him but my head," which created a laugh at the expence of the sable monarch; but Sir Charles, looking seriously, replied, "You need not laugh, it might so happen." On another occasion, two days before the fatal action of the 21st January, he said in an ironical manner to two Ashantee prisoners who had been brought before him, "I hear your master wants my jaw-bones for his big drum; very well, I am going to give them to him to-morrow." Alas! how true the prediction!

This gallant but unfortunates officer appears to have sunk under a concurrence of misfortunes, such as no valour or skill could have successfully resisted. Deserted by his native allies, he was deprived of the aid of the British reserve by the unaccountable delay, for four days, of the messenger who bore his orders to Major Chisholm to bring it up. The day preceding the action was one of incessant rain, and Sir Charles's army was exposed uncovered in that dreadful climate during the night that followed; a circumstance which still farther enfeebled the soldiers, already much reduced by several days marching through underwood, ravines, and morasses. Even in the action misfortune seemed to persecute him, for after the British had been engaged two hours with ten times their number, the Ashantees received a reinforcement of 5000 men; and Sir Charles then discovered, for the first time, that his troops had received but half the proper allowance of ammunition, which was exhausted before the savages were able to make the slightest impression.

It is gratifying to observe with what affection his memory was cherished in a colony over which he had so long presided. In recording the lamentable event which terminated his existence, the editor of the "*Sierra Leone Gazette*" says, with a feeling and energy which do him honour, "Thus has fallen, by the hands of the ruthless savages, our noble, brave, and revered benefactor and friend—the friend of mankind, and the idol of every loyal and grateful heart within the colony! While, therefore, with sincere yet unavailing regret, we deeply deplore his

loss, we bow, with humble resignation, before the will of the Almighty Disposer of events, who hath been pleased to visit us with this heavy affliction, satisfied that 'He doeth all things well.' To him must we look for that consolation and support in this trying and disastrous hour, which he alone is capable of affording: we must call upon him to enable us to bear, as Christians, the loss of one who possessed all those qualities which could assure the fidelity and attachment of every class of inhabitants; and the memory of whose bright example as the true father of the people, placed under his government, will remain engraven in the hearts of the present and be handed down to future generations. We ourselves, who have lived so long under his paternal government and care, and have so frequently witnessed the blessings which he has dispensed to all, and the beneficial effects produced by his talents and virtues, are, alas! too well aware of the loss we have sustained by this awful event. Under his mild and judicious administration, we have seen every endeavour to promote the spiritual and temporal welfare of the people; and have beheld the colony, by his exertions and example, advance in a few years to a state of prosperity and happiness which has far outstripped the expectations of the most sanguine; while the greatest evil of the present melancholy catastrophe will be found to arise from the non-completion of those beneficial plans which our late governor had formed for the welfare of Africa."

**MACARTNEY, GEORGE, EARL MACARTNEY**, who was the son of a gentleman of Scottish descent, was born in Ireland in 1737, and educated at Trinity college, Dublin; after which he became a student of the Temple. In 1764 he was appointed envoy-extraordinary to Russia, afterwards became secretary to the lord-lieutenant of Ireland, and was created knight of the Bath. In 1775 he was made captain-general and governor of the Caribbee islands, Grenada, the Grenadines, and Tobago. Grenada was invaded and taken by the French, and the governor was sent a prisoner to France. On his return to England he was appointed to the presidency of Madras, having previously received an Irish peerage. His embassy to China in 1792 he conducted with great address, and succeeded in the chief object of his mission. His only subsequent public situation was that of governor of the Cape of Good Hope, whence he returned, on account of ill health, in 1797. He died in March 1806. His English earldom was bestowed on him for his services in China. Lord Macartney was the author of a journal of his Chinese embassy, and other publications.

**MACAULEY, CATHERINE**.—This lady was born in Kent, at the seat of her father, John Sawbridge, and became early attached to the perusal of history. In 1760 she married Dr. George Macauley, a physician, and in 1763 published the first volume of her "History of England from the Accession of James I. to that of the Brunswick Line." This was continued in successive volumes, to the eighth, which completed the work in 1783. The spirit of this history is almost purely republican. The other works of Mrs. Macauley are, "Loose Remarks on Some of Mr. Hobbes's Positions;" "An Address to the People of England on the Present Important Crisis;" "A Treatise on the Immutability of Moral Truth," afterwards republished, with additional matter, under the title of "Letters on Education." Her last

publication was "A Letter to Earl Stanhope, in reply to the Opinions of Burke on the French Revolution." In 1785 Mrs. Macauley married a young man of the name of Graham, and the disparity of their ages subjected her to much ridicule. She died in 1791.

**MACCHIAVELLI, NICCOLO**.—It is not easy to determine a man's disposition and character from his writings. When however, as was the case in the governments of antiquity and the Italian republics of the middle ages, a man's writings are more the offspring of his political situation than mere exercises of his intellect, and especially if they coincide with his conduct, they afford fair grounds for judging of the author's character. This is the case with Niccolo Macchiavelli, the celebrated Florentine diplomatist. The prejudices against him, arising from an incorrect understanding of his treatise called "Il Principe"—"The Prince," have caused him to be regarded as the teacher of a detestable line of policy, called from him Macchiavellism, intended to enable despotism to perpetuate its existence by fraud and violence, though there are few men on record who have shown so much of a truly civic spirit. Macchiavelli was born at Florence, in the year 1469, of a noble family, whose members had enjoyed the highest dignities in the republic. Little is known of his youth, and nothing of his education, except that he studied under Marcellus Virgilius. On account of his distinguished talents he was very early appointed chancellor of the Florentine republic, and not long afterwards was advanced to the post of secretary of state, for which reason he is most commonly called Segretario Fiorentino. When Florence had recovered her liberty by the expulsion of the Medici, and from fear of the exiled family had become involved in the ambitious wars and intrigues of Charles VIII., at a time when great political adroitness and a spirit of genuine republicanism were required in her envoys, Macchiavelli was several times charged with important embassies. He was four times plenipotentiary at the French court, twice at that of the pope, and twice also at that of the emperor Maximilian. The republic acknowledged his great services, but rewarded them sparingly, so that he was some times obliged to petition the signoria (supreme authority of the state) on account of his poverty. His advice was of great use to the commonwealth at the time of the insurrection of Val di Chi-ana. The leading principles of his counsels at this juncture may be deduced from his numerous letters preserved in the Florentine archives. They were to maintain a peaceful and friendly spirit in the settlement of difficulties, to provide for an upright and strict administration of justice, to make the burden of taxes as light as possible, and to keep a watchful eye on the smallest circumstances that had relation to public affairs. Even in regard to military affairs, the state was so convinced of the sagacity of his views that they preferred his counsel to any other. Among other things, a Tuscan legion was established by his advice. This band, at a later period, distinguished itself remarkably under the command of Giovanni de' Medici.

When Pope Julius II. had succeeded in establishing a league in Italy against the overwhelming power of the French, Louis XII., to revenge himself, and wound the dignity of the pope in the tenderest point, attempted to assemble a council in Italy, and requested the Florentines to allow Pisa, which had be-

come again subject to them, to be the place of the meeting. Macchiavelli feared the papal thunders, and advised his countrymen to evade the proposal. He went with this view as envoy to the king, but the king would not be refused. After his return he was sent to Pisa to watch the proceedings of the council and to labour for its dissolution. Nevertheless, the pope was so indignant against the Florentines that he formed an alliance with Ferdinand of Arragon, to deprive them of their freedom, and by their means the power of the Medici was re-established. As Macchiavelli had laboured incessantly for the good of the republic, Lorenzo de' Medici, now dictator at Florence, seized the opportunity, in spite of a public decree, to strip him of his dignities. He was afterwards accused of participating in the conspiracy of the Boscoli and Capponi against the cardinal Giovanni de' Medici, imprisoned, put to the torture, and banished; all which he endured with a firmness approaching to indifference. After the cardinal became pope his punishment was remitted. He returned to his native country, and wrote his "Discourses on the Ten First Books of Livy;" also his "Prince," which he dedicated to Lorenzo de' Medici. Upon this he was received again into favour by this powerful family, and Cardinal Julius, who ruled Florence in the name of Leo X., and earnestly desired to reform the condition of the state, availed himself of the advice of Macchiavelli in extinguishing various civil commotions. He was suspected of being concerned in a new conspiracy against the Medici, but the only consequence was, that he was obliged to return to private life and to indigence. When Julius, under the name of Clement VII., ascended the papal chair, Macchiavelli was again employed in public business: in particular he was sent to aid the allied forces of the pope and the Florentines in the defence of Tuscany against the army of Charles V. The confidence now reposed in him by the Medici alienated from him the affections of the Florentines, and after his return to Florence, he died in June 1627, poor and neglected.

It appears from the letters of his son Pietro to Francisco Nelli, that he manifested on his death-bed the feelings of a Christian. The writings of the immortal Florentine may be arranged under four heads, history, politics, belles-lettres, and military treatises.

His eight books on "The History of Florence," written at the command of Clement VII., begin with the year 1215, and end with Lorenzo de' Medici in the year 1492. They are among the first historical works of modern times which deserve to be placed side by side with the beautiful remains of antiquity. Macchiavelli was probably prevented by death from completing his work, and is said to have left his collection of materials to Guicciardini. The history is distinguished for its pure, elegant, and flowing style; its impartiality is doubtful. The "Life of Castruccio Castracani, Lord of Lucca," is more properly a romance than a biography. The hero, who is as great a villain as Cæsar Borgia, is continually quoting apothegms from Plutarch. Under the head of politics are included his two most important works, "The Prince" and "The Discourses upon the Ten First Books of Livy." His purpose in these last is, to show how a republic may be supported, and how it is exposed to ruin. The work breathes throughout a warm love of freedom. Filippo Nerli relates in his commentaries, that Macchiavelli was induced to write these discourses, and those on "The Art of War," by a number of young men who were accustomed to assemble with him in a garden in Florence, and had been made republicans by the perusal of the ancients. Montesquieu and Rousseau have both drawn freely from these works. In a treatise composed in the year 1519, upon "A Reformation in the State of Florence," he advises the pope, Leo X., to restore the republican form of government to that city, although he pretends to have the aggrandizement of the Medici in view. His object in the seven books on "The Art of War" was to show the Italians that they were able to recover their freedom without the assistance of the foreign mercenaries so generally employed in the states of Italy; and he shows himself fully sensible of the great importance of infantry, then little valued. Frederic the Great knew and esteemed this treatise. For the restoration of the comic drama also the world is indebted to him. His comedies, "La Mandragola" and "La Clizia," are the first regular dramas written since the time of the Romans; and Voltaire preferred the first to any of the plays of Aristophanes. The novel entitled "Belfagor" has been versified by La Fontaine. And his description of the pestilence which raged in Florence in the year 1522 may be compared to the similar account in Thucydides. Among his papers is a constitution for the regulation of a gay company, called *Compagnia di Piacere*. The opinions on this work are very various. Some persons condemn it as intended to instruct tyrants in the art of oppression. This idea originated with the archbishop of Consa, Ambrosio Catarino, long after the book was given to the world. And Bayle in his dictionary, and Frederic the Great in his "Anti Macchiavelli," which was translated together with "The Prince," by the order of Mustapha III., are of the same opinion; but they mistake Macchiavelli's meaning, for his other writings, as well as his life, prove that he loved liberty ardently. Others consider "The Prince" as a satire; but this is impossible, as the tone of the work is most serious throughout; no trace of satire can be discovered. And others think it a work full of valuable counsel for princes, but infected with a looseness of morals which prevailed in the age of the writer: but Macchiavelli hated Alexander VI., Cæsar Borgia, and all the tyrants of his age; and the full consideration with

which he advances his startling principles, shows that they could not have sprung from the unconscious influence of his time. Others maintain that Macchiavelli treated the question of tyranny in the abstract without reference to morality, not in order to give advice but as a mere scientific question, on the ground of Lord Bacon, that "there be not any thing in being or action which should not be drawn and collected into contemplation and doctrine;" just as a person might write a treatise on poison, investigating all their effects, without touching on their antidotes. But could a mind like Macchiavelli's, if his object had been merely scientific discussion, have contemplated long and closely crimes so shocking to his love of liberty without ever betraying his horror? Could we believe a man to possess a pure spirit, who could write a long and scientific treatise on the seduction of innocence as skilful in its way as Macchiavelli's in his, though such a treatise might afford much interesting analysis of the springs of human conduct? In our opinion "The Prince" must be considered as a work written for a certain purpose, time, and person, although particular questions, doubtless, are often treated abstractly and the application left open. As a whole "The Prince" is not to be considered originally, nor in its execution, as a mere scientific treatise. Many questions are left undiscussed, and the titles of the chapters are often of a general nature, while the chapters themselves are not. Macchiavelli's feeling was, that union and freedom from a foreign yoke were even more important than civil liberty; that they formed the very elements of the life of a nation. In the first part of his career he had been thoroughly Florentine in spirit, but his misfortunes forced him to elevate his views to become Italian; and for the purpose of saving Italy he could have seen with patience even Florence enslaved. No noble-minded Italian has written or sung, since Dante's "Di Dolor Ostello," without giving vent to his grief for the unfortunate condition of his beautiful country; and Macchiavelli, one of the noblest spirits of Italy, burned to see her united and freed from foreign tyrants.

**MACBETH.**—The period when this Scottish tyrant lived is not known with certainty, but it is believed to have been in the middle of the eleventh century. Macbeth is said to have been by birth the thane of Ross, by marriage with the lady Gruoch, the thane of Moray; and, by his crimes, the king of Scotland. Finley was "maormor," or, as the Norwegian historian calls him, *jarl* of Ross, who, at the commencement of the eleventh century, carried on a vigorous war in defence of his country against the incursions of Sigurd, the earl of Orkney and Caithness. With his dominions the district of Finley was contiguous, while the country of Angus lay southward at a great distance. Finley lost his life, about 1020, in some hostile conflict with Malcolm II. The lady Gruoch, when driven from her castle by the cruel fate of her husband, the maormor of Moray, naturally fled with her infant son Lulach, into the neighbouring country of Ross, which was then ruled by Macbeth, who married her during the reign of Duncan. We have thus seen that Macbeth was the maormor of Ross, and united in himself all the power which was possessed by the partisans of Kenneth IV., all the influence of the lady Gruoch, and of her son Lulach, together with the authority of maormor of Ross, but not of Angus.

With all these powers, in addition to his own character for address and vigour, Macbeth became superior to Duncan and the partisans of his family. The superiority of Macbeth, and the weakness of Duncan, were felt when the unhappy king expiated the crimes of his fathers by his most sacrilegious murder; and Macbeth hastily marched to Scone, where he was inaugurated as the king of Scots, supported by the clans of Moray and Ross, and applauded by the partisans of Kenneth IV. If Macbeth had been in fact, what fiction has supposed, the son of the second daughter of Malcolm, his title to the throne would have been preferable to the right of Duncan's son, according to the Scottish constitution, from the earliest epoch of the monarchy. Whatever defect there may have been in his title to the sullied sceptre of his unhappy predecessor, he seems to have been studious to make up for it by a vigorous and beneficent administration. He even practised the hospitality which gives shelter to the fugitive. During his reign, plenty is said to have abounded; justice was administered; the chieftains, who would have raised disturbances, were either overawed by his power or repressed by his valour. Yet injury busied herself in plotting vengeance. Crian, the abbot of Dunkeld, who, as the father of Duncan, and the grandfather of his sons, must have been now well-stricken in years, put himself at the head of the friends of Duncan, and made a gallant but unsuccessful attempt to restore them to their rights. The odious crime, however, by which Macbeth acquired his authority seems to have haunted his most prosperous moments. He tried by distributing money at Rome, by largesses to the clergy, and by charity to the poor, to obtain relief from the "affliction of those terrible dreams that did shake him nightly." Macbeth, and the lady Gruoch, his wife, gave the lands of Kirkness, and also the manor of Bolgy, to the Culdees of Lochleven. Yet, the friendship of the pope, and the support of the clergy, did not ensure Macbeth a quiet reign. His rigour increased with his sense of insecurity. The injuries of Macduff, the maormor of Fife, constantly prompted the sons of Duncan to attempt the redress of their wrongs. With the approbation, perhaps by the command of, Edward the Confessor, Siward, the potent earl of Northumberland, and the relation of Malcolm, conducted a numerous army into Scotland during the year 1054. The Northumbrians, led by Siward and his son Osbert, penetrated probably to Dunsinane, and were confronted by Macbeth, when a furious conflict ensued. The numbers of the slain evince the length of the battle and the bravery of the combatants. Osbert was slain: yet Macbeth, after all his efforts of valour and vigour of conduct, was overcome. He then retired into the north, where he had numerous friends, and where he might find many fastnesses. Siward afterwards returned into Northumberland, and died at York in 1055. Meantime Macbeth continued his bloody contest with Malcolm: and this uncommon character was at length slain at Lumphanan, on the 5th of December, 1056, by the hand of the injured Macduff.

**MACBRIDE, DOCTOR DAVID**, an eminent physician and philosopher, who was descended from an ancient family in the county of Galloway in Scotland. He was born in April 1726, and having passed some time under the tuition of an eminent surgeon in his native place, he was sent to the university of

Glasgow. Having there completed the usual course of academical studies, he came to Edinburgh for the further prosecution of medical science. After a short stay he was induced to go on board a vessel in the station of a surgeon's mate. In the service of his country he continued for several years; and after discharging for some time the duties of an assistant, he was raised to the rank of surgeon. In this situation he first turned his thoughts towards the discovery of a remedy for the sea-scurvy. Here he had an opportunity of observing the symptoms, of studying the nature, and of lamenting the consequences, of the disease.

The termination of the war by the peace of Aix-la-Chapelle put a period to Dr. Macbride's employment as a naval surgeon. He had now probably obtained much medical knowledge in the school of experience, but he was sensible that he had still much to acquire in that of science. An ardent desire to mingle in active life had led him from the schools of medicine at an earlier period than could have been wished; and an earnest desire to found his future practice in the best established principles led him back to them when a judgment matured by years, and informed from the observation of facts, rendered him capable of hearing teachers with greater advantage. He returned therefore to Edinburgh, and again entered on the career of academical pursuits under the tuition of Dr. Munro, and those other teachers whose abilities raised the fame of that medical school. But not satisfied with the instructions to be had from any one set of professors, the celebrity of the medical teachers in London led him also to visit the capital. Here he particularly became the pupil of those distinguished lecturers, Dr. Hunter and Dr. Smellie. And while from the former he laboured to acquire an accurate chirurgical knowledge, from the latter he endeavoured to obtain the true principles of midwifery considered as a science. At the same time he was no less industrious in improving himself in the successful practice of both arts by attention at the hospitals.

Thus prepared for the exercise of his profession, about the end of the year 1759 he fixed his residence in Dublin in the character of surgeon and accoucheur. His first publication, entitled "*Experimental Essays on Medical and Philosophical Subjects*," made its appearance in the year 1764. The reputation, however, of being a distinguished author, was to him but a secondary object; and his talents were not confined to the advancement of medicine alone. Having successfully discovered a considerable improvement in the art of tanning, with that spirited generosity which is ever the concomitant of real worth, he speedily and freely communicated it to the public by publishing, first, "*An Account of a New Method of Tanning*;" and afterwards, "*Instructions for Carrying on the New Method of Tanning*." As a mark of approbation for this liberal conduct, as well as a testimony of respect for his ingenuity, prize-medals were conferred upon him by the societies of arts both in London and Dublin. But his last and most extensive publication was more immediately in the line of his own profession: it is entitled, "*A Methodical Introduction to the Theory and Practice of Medicine*." In that valuable work he has given a concise and corrected view of the principles and practice of the healing art, as best established by sound reason, and confirmed by accurate observation.

Most, if not all of these publications, not only went through various editions, but were translated into different languages.

After the merit of Dr. Macbride came to be properly known, the public seemed to show a desire of making compensation for having so long overlooked it. His employment increased so rapidly that he had more business than he could transact either with ease or safety. This, having kept him in perpetual agitation both of body and mind, at last induced an almost total incapacity of sleeping. From this circumstance his health could not fail to be impaired. In this situation, after accidental exposure to cold, he was attacked with a fever, which put an end to his life on the 13th of December, 1778, in the fifty-third year of his age.

MAC CORMICK, CHARLES, a clever writer and translator, who was born in Ireland, and early devoted himself to literature. His best productions are, "*The Secret History of King Charles II.*," "*The Reign of George III. to the year 1783*," and "*The Life of the Right Hon. Edmund Burke*." He died in July 1807.

MACDIARMID, JOHN, a learned Scottish writer, who was born at Ween, in Perthshire, in 1779, and educated at the universities of Edinburgh and St. Andrew's. His principal original works are, "*An Enquiry into the System of Military Defence of Great Britain*," "*An Enquiry into the Nature of Civil and Military Subordination*," and his "*Lives of British Statesmen*." He died shortly after the publication of the last work, of paralysis, in April 1807.

MACDONALD, ETIENNE JACQUES JOSEPH ALEXANDRE, duke of Tarentum, was born at Sancerre, in France, in 1765, and descended from a Scotch Highland family. His father fought with many other Macdonalds at Culloden in 1745, for Charles Edward kept him concealed for many weeks, and afterwards went to France with him. The young Macdonald entered the French service in 1784, and was attached to the legion of the lieutenant-general Count Maillebois, which was sent to Holland, to support the opponents of the hereditary stadtholder. He embraced the principles of the revolution, rose rapidly to the dignity of brigadier-general in the war of 1792, and served with distinction in 1794 under Pichegru, in the army of the north in Holland and East Friesland. In 1796 he commanded at Düsseldorf and Cologne as general of division, soon after joined the army of the Rhine, and at length that of Italy under Bonaparte, where he established his military reputation.

After the peace of Campo Formio he was in the army under Berthier, which took possession of Rome and the states of the church, and, as governor of the latter, he declared Rome a republic. But Mack advanced to Rome with 50,000 men, and Macdonald was forced to fall back with his troops to the army of the French commander-in-chief, Championnet. The latter was soon strong enough to venture an attack, and Macdonald contributed essentially to the victories at Tarento, Monterosi, Baccano, Calvi, and Cività Castellana. After the removal of Championnet in the spring of 1799, he was made general of the French army in Naples. While he was here carrying on war against Cardinal Ruffo and the Calabrians, Suwaroff and Melas had conquered Lombardy and advanced to Turin. By skilful marches Moreau defended the frontiers of France and the passes to

Genoa. He then advanced to form a junction with Macdonald, who had evacuated Lower Italy. But, instead of pursuing his march covertly to Genoa, Macdonald, ambitious to defeat the enemy alone, marched through Modena, Parma, and Piacenza, on the road to Voghera. He indeed drove the Austrians under Hohenzollern from their position at Modena; but Suwaroff and Melas pursued him over the Tidone, and at Trebia, not far from Piacenza, totally defeated his army, exhausted with long marches and bloody actions. Macdonald was wounded, and obliged to retire to Tuscany with his army reduced to 22,000 men. Moreau now restrained the conqueror from further pursuit, and Macdonald succeeded in ascending the Appennines, and forcing his way along the coast to Genoa to Moreau.

After the peace of Lunéville he was for a time French ambassador in Denmark, from which he returned in 1803 and received the title of grand officer of the legion of honour. His zeal in defending Moreau prevented him from being made a marshal of the empire among the generals on whom this office was first conferred in 1804. In the campaign of 1809 he passed the Piave with the right wing of the viceroy, took Labach, and decided the victory of Wagram. In recompence for his services in that action, the emperor created him marshal on the field, adding, "I am principally indebted to you and my artillery guards for this victory." In 1810 he took the command of Augereau's division in Catalonia, and maintained his fame as a general, both here and in the war against Russia in 1812. The capitulation of the Prussians under Yock, who belonged to his army, forced him to retreat upon Königsberg, and in May 1813 he took Merseburgh, and was present in the battles of Lützen and Bautzen, and was defeated by Blücher on the Katzbach. At Leipsic he commanded the eleventh division, and he also distinguished himself at Hanau, and in the bloody campaign between the Marne and Seine. At the time of Napoleon's catastrophe in 1814, he had several audiences with Alexander in favour of the emperor, and Macdonald was the first to advise the abdication, after which he sent in his adherence to Louis XVIII. During the hundred days he resided on his estates. After Napoleon's final overthrow, he was made chancellor of the legion of honour and was directed to disband the army of the Loire. He afterwards distinguished himself in the chamber of peers not less by the justice and liberality of his sentiments than by his fidelity to the king and constitution.

**MACDONALD, JOHN.**—This gentleman was the son of the celebrated Flora Macdonald, the Highland lady who assisted Charles Edward Stuart to escape from the English troops in 1746. Young Macdonald served with great distinction in the army in India, and on his return became a fellow of the royal society. He subsequently published several works on military engineering and other scientific subjects, and died much regretted at his house in Sumnerland Place, Exeter, on the 16th of August, 1831.

**MACFARLANE, ROBERT,** a political writer, who was born in Scotland in 1734, and educated at the university of Edinburgh. He came to London early in life, and kept a school at Walthamstow for many years. He is best known in the literary world as the author of "A History of George III.," and "An Address to the People of the British Empire."

He was accidentally killed at Brentford on the 8th of August, 1804.

**MACHIN, JOHN,** an English astronomer and mathematician of the eighteenth century, who was for many years professor at Gresham college, and secretary to the royal society. He was the author of several valuable works, the principal of which is his "Laws of the Moon's Motion."

**MACK, CHARLES, BARON VON,** a celebrated Austrian general, born in Franconia in 1752. On leaving college his inclination led him to enlist as a private in a regiment of dragoons, and his good conduct soon obtained him the rank of a petty officer. In the war with Turkey he obtained a captain's commission. His spirit of enterprise procured him the favour of Laudon, who recommended him to the emperor, and on the occurrence of war with France, Mack was appointed quarter-master-general of the army of the prince of Coburg, and directed the operations of the campaign of 1793. In 1797 he succeeded the arch-duke Charles in the command of the army of the Rhine. The following year he was sent to Naples, then invaded by the French; but, being beaten in the field, and suspected of treason by the Neapolitans, he fled to the French camp, and was sent as a prisoner to Dijon. He found means to justify his conduct in the opinion of the emperor, who in 1804 constituted General Mack commander-in-chief in the Tyrol, Dalmatia, and Italy. In 1805 Napoleon forced him to retreat beyond the Danube, and to submit to the celebrated capitulation of Ulm, by which 28,000 of the Austrians became prisoners. Mack was permitted to go to Vienna, where he was tried before a military tribunal, and received the sentence of death as a traitor to his country. His doom, however, was commuted by the emperor for imprisonment; and he was after a time released, and died in obscurity in 1828.

**MACKEAN, THOMAS,** an eminent American judge and revolutionary patriot, who was born in March 1734, in the county of Chester, Pennsylvania. After an academic and professional course of studies he was admitted an attorney, and soon obtained the appointment of deputy attorney-general in the county of Sussex. In 1757 he was admitted to the bar of the supreme court of Pennsylvania, and, in the same year, elected clerk of the house of assembly. In October 1762 he was elected a member of the assembly for the county of Newcastle, and was annually returned for seventeen successive years, although he resided in Philadelphia for the last six years of that period. Wishing to decline a re-election, he went to Newcastle in 1779, and stated his purpose. A committee then waited upon him to request that he would designate seven persons in whom they might confide as representatives of that county. He was finally obliged to comply with this flattering request, and the gentlemen whom he named were chosen by a large majority. Mr. Mackean was sent to the general congress of the colonies which assembled at New York in 1765. He, Lynch, and Otis, formed the committee who framed the address to the British house of commons. In 1765 he was appointed judge of the court of common pleas and of the orphans' court for the county of Newcastle. In 1771 Judge Mackean was appointed collector of the port of Newcastle. When measures were adopted to assemble the general congress of 1774, he took an active part in them and was appointed a delegate from the lower

counties in Delaware. He took a seat in that body, and served in it eight consecutive years and a half, being annually re-elected until February 1783. He was the only man who was, without intermission, a member during the whole period. Though a member of congress till 1783, yet from July 1777 he held the office and executed the duties of chief justice of Pennsylvania. He was particularly active and useful in promoting the declaration of independence, which he signed, and a few days after that event he marched with a battalion to Perth Amboy in New Jersey, to support General Washington, and acted with gallantry in the dangerous skirmishes which took place while he remained with the army. He returned to Delaware to prepare a constitution for that state, which he drew up in the course of a night, and which was unanimously adopted the next day by the house of assembly. At that period, as he relates, he was "hunted like a fox by the enemy;" he was compelled to remove his family five times in a few months, and at length placed them in a little log-house on the banks of the Susquehannah; but they were soon obliged to leave this retreat on account of the Indians. In 1803 it was proposed to him to become a candidate for the office of vice-president of the United States, but he declined. In 1808 he retired from public life, in which he had been engaged for fifty years, and died in June 1817, in his eighty-fourth year.

**MACKENZIE, SIR ALEXANDER.**—This enterprising traveller was originally a Canadian merchant, engaged in the north-west fur trade. In 1789 he determined to undertake a journey with the view of penetrating to the coast of the Northern Polar ocean, and for this purpose set out from Fort Chipewyan, crossed the Slave Lake, and descended the river which now bears his name. His party soon after reached a spot where the river expanded into a lake, on which they pursued their course till, by the rising of the tide, and the presence of whales, it was obvious that they were near the sea. They were now nearly in the latitude at which Hearne found the Coppermine river to fall into the sea, but about 30° more in longitude to the west. By this journey Mr. Mackenzie added one more link to the chain of discoveries in the north. He reached Fort Chipewyan on his return in September 1789, having been absent 102 days. In October 1792 he undertook a still more arduous journey across the continent to the shore of the North Pacific. He encountered innumerable difficulties, and suffered greatly before he could accomplish his purpose; but at length on the 12th of July, 1793, he arrived on the coast of the Pacific, near Cape Menzies, in latitude 52°. In 1801, having returned to England, he published his "Voyage through North America to the Frozen and Pacific Oceans, in 1789 and 1793;" and in the following year he received, as a reward for his exertions, the honour of knighthood.

**MACKENZIE, SIR GEORGE,** an able lawyer, who was born at Dundee in the county of Angus, in Scotland, in 1636, and studied at the universities of Aberdeen and St. Andrew's; after which he applied himself to the civil law, travelled into France and prosecuted his study in that country for about three years. At his return to his native country, he became an advocate in the city of Edinburgh, and soon became eminent as a pleader. He had practised in his profession but a few years when he was pro-

moted to the office of judge in the criminal court, and in 1674 was made king's advocate, and one of the lords of the privy council in Scotland; he was also knighted by his majesty. In these stations he met with a great deal of trouble on account of the rebellions which happened in his time, and his office of advocate requiring him to act with severity, he did not escape being censured. But there does not seem to have been any just foundation for this clamour against him, and it is generally agreed that he acquitted himself like an able and upright magistrate. Upon the abrogation of the penal laws by King James II., Sir James Mackenzie, though he had always been remarkable for his loyalty, and even censured for his political zeal, thought himself obliged to resign his post, being convinced that he could not discharge the duties of it in that point with a good conscience. But he was soon after restored, and held his offices till the revolution; an event which, it seems, he could not bring himself to approve. He had hoped that the prince of Orange would have returned to his own country when matters were adjusted between the king and his subjects, and upon its proving otherwise, he quitted all his employments in Scotland and retired into England, resolving to spend the remainder of his days in the university of Oxford.

Sir James reached Oxford in 1690, and died the following year. Mr. Dryden acknowledges that he was unacquainted with what he calls the beautiful turn of words and thoughts in poetry, "till they were explained and exemplified to him in a conversation with that noble wit of Scotland, Sir George Mackenzie." He wrote the "Institutions of the Laws of Scotland," "Essays upon Various Subjects," &c. His works were printed together at Edinburgh in 1716, in two volumes folio.

**MACKENZIE, HENRY.**—This popular Scottish writer and essayist, who was styled by Sir Walter Scott the "Scottish Addison," was born in 1745. After completing his education he became an attorney to the crown in the law court of Edinburgh, and during his leisure hours produced several admirable works, all of which are distinguished by sweetness and beauty of style, delicacy of imagination, and deep feeling. In 1777 or 1778 a society of gentlemen of Edinburgh were accustomed at their meetings to read short essays of their composition, in the manner of "The Spectator," and Mr. Mackenzie being admitted a member, after hearing several of them read, suggested the advantage of giving greater variety to their compositions by admitting some of a lighter kind, descriptive of common life and manners; and he exhibited some specimens of the kind in his own writing. From this arose "The Mirror," a well-known periodical publication, to which Mr. Mackenzie performed the office of editor, and was also the principal contributor. The success of "The Mirror" naturally led Mr. Mackenzie and his friends to undertake "The Lounger," upon the same plan, which was not less read and admired.

When the royal society of Edinburgh was instituted, Mr. Mackenzie became one of its most active members, and he occasionally enriched the volumes of its Transactions by his valuable communications, particularly by an elegant tribute to the memory of his friend Judge Abercromby, and a memoir on German tragedy. He was one of the original members of the Highland society; and by him have been published several volumes of their Transactions, to which

he prefixed an account of the institution and principal proceedings of the society, and an interesting account of Gaelic poetry.

In the year 1792 he was one of those literary men who contributed some little occasional tracts to disabuse the lower orders of the people, led astray at that time by the prevailing frenzy of the French revolution. In 1793 he wrote "The Life of Dr. Blacklock," at the request of his widow, prefixed to a quarto edition of that poet's works. His intimacy with Blacklock gave him an opportunity of knowing the habits of his life, the bent of his mind, and the feelings peculiar to the privation of sight, under which Blacklock laboured.

Mr. Mackenzie was also a dramatic author. A tragedy written by him in early life, under the name of "The Spanish Father," was never represented in consequence of Mr. Garrick's opinion that the catastrophe was of too shocking a kind for the modern stage, although he owned the merit of the poetry, the force of some of the scenes, and the scope for fine acting in the character of Alphonso, the leading person of the drama. In 1773 Mr. Mackenzie produced a tragedy under the title of "The Prince of Tunis," which, with Mrs. Yates as its heroine, was performed with applause at the Edinburgh theatre. Of three other dramatic pieces by Mr. Mackenzie, the next was "The Shipwreck, or Fatal Curiosity." This was an alteration and amplification of Lilly's horrible but rather celebrated tragedy of "Fatal Curiosity," suggested by a perusal of Mr. Harris's "Philological Essays," then recently published. Some new characters were introduced with the view of exciting more sympathy with the calamities of the Wilmot family. Rather unfortunately, Mr. Colman had, about the same time, taken a fancy to alter Lilly's play. His production was brought out at the Haymarket in 1782, and Mr. Mackenzie's at Covent Garden in 1783 or 1784. "The Force of Fashion," a comedy by Mr. Mackenzie, was acted one night at Covent Garden theatre in 1789; but, from its failure, it was never printed. The object of this piece was to ridicule those persons who affect fashionable follies and vices, while in reality they despise them. Its language was elegant; but its characters, though not ill-drawn, wanted novelty; and, altogether, its deficiency in stage effect was palpable. Another unsuccessful comedy of Mr. Mackenzie's, mentioned in Campbell's "History of Poetry in Scotland," was "The White Hypocrite," produced at Covent Garden in the season of 1788.

While thus active in literary pursuits, he discharged for many years the duties of comptroller of the taxes, and was the delight and ornament of the circle in which he moved. Mackenzie died after a rather protracted illness on the 14th of January, 1831.

Sir Walter Scott has drawn a most admirable comparative estimate of the powers of this author when viewed in the same walks with Smollett, Fielding, and Sterne. As an author, Mr. Mackenzie has shown talents both for poetry and the drama. Indeed we are of opinion that no man can succeed perfectly in the line of fictitious composition without most of the properties of a poet, though he may be no writer of verses; but Mr. Mackenzie possesses the powers of melody in addition to those of conception. He has given a beautiful specimen of legendary poetry in two little Highland ballads, a style of composition which becomes fashionable from time to time on account

of its simplicity and pathos, and then is again laid aside when worn out by the servile imitators, to whom its approved facility offers its chief recommendation. But it is as a novelist that we are now called on to consider our author's powers; and the universal and permanent popularity of his writings entitles us to rank him among the most distinguished of his class. His works possess the rare and invaluable property of originality, to which all other qualities are as dust in the balance, and the sources to which he resorts to excite our interest are rendered accessible by a path peculiarly his own. The reader's attention is not riveted, as in Fielding's works, by strongly marked character and the lucid evolution of a well-constructed fable; or, as in Smollett's novels, by broad and strong humour, and a decisively superior knowledge of human life in all its varieties; nor, to mention authors whom Mackenzie more nearly resembles, does he attain the pathetic effect which is the object of all three, in the same manner as Richardson, or as Sterne. An accumulation of circumstances, sometimes amounting to tediousness, a combination of minutely traced events, with an ample commentary on each, were thought necessary by Richardson to excite and prepare the mind of the reader for the affecting scenes which he has occasionally touched with such force; and without denying him his due merit, it must be allowed that he has employed preparatory volumes in accomplishing what has cost Mackenzie and Sterne only a few pages, perhaps only a few sentences.

On the other hand, although the two last named authors have, in particular passages, a more strong resemblance to each other than those formerly named, yet there remain such essential points of difference betwixt them as must secure for Mackenzie the praise of originality which we have claimed for him. It is needless to point out to the reader the difference between the general character of their writings, or how far the chaste, correct, almost studiously decorous manner and style of the works of the author of "The Man of Feeling," differ from the wild wit, and intrepid contempt at once of decency and regularity of composition which distinguish "Tristram Shandy." It is not in the general conduct or style of their works that they in the slightest degree approach; nay, no two authors in the British language can be more distinct. But even in the particular passages where both had in view to excite the reader's pathetic sympathy the modes resorted to are different. The pathos of Sterne in some degree resembles his humour, and is seldom attained by simple means; a wild, fanciful, beautiful flight of thought and expression is remarkable in the former, as an extravagant, burlesque, and ludicrous strain of thought and language characterizes the latter. The celebrated passage where the tear of the recording angel blots the profane oath of Uncle Toby out of the register of Heaven, a flight so poetically fanciful as to be stretched to the very verge of extravagance, will illustrate our position. To attain his object, that is, to make us thoroughly sympathize with the excited state of mind which betrays Uncle Toby into the indecorous assertion which forms the groundwork of the whole, the author calls Heaven and Hell into the lists, and represents, in a fine poetic frenzy, its effects on the accusing spirit and the registering angel. Let this be contrasted with the fine tale of "La Roche," in which Mackenzie has described, with such unexampled delicacy and power-

ful effect, the sublime scene of the sorrows and resignation of the deprived father. This also is painted reflectively; that is, the reader's sympathy is excited by the effect produced on one of the drama, neither angel nor devil, but a philosopher, whose heart remains sensitive, though his studies have misled his mind into the frozen regions of scepticism. To say nothing of the tendency of the two passages, which will scarce, in the mind of the most unthinking, bear any comparison, we would only remark that Mackenzie has given us a moral truth, Sterne a beautiful trope; and that if the one claims the palm of superior brilliancy of imagination, that due to nature and accuracy of human feeling must abide with the Scottish author.

Yet, while marking this broad and distinct difference between these two authors, the most celebrated certainly among those who are termed sentimental, it is but fair to Sterne to add, that although Mackenzie has rejected his license of wit and flights of imagination, retrenched in a great measure his episcodical digressions, and altogether banished the indecency and buffoonery to which he had too frequent recourse, still their volumes must be accounted as belonging to the same class; and, amongst the thousand imitators who have pursued their path, we cannot recollect one English author who is entitled to the same honour. The foreign authors, Riccoboni and Marivaux, belong to the same department; but of the former we remember little, and the latter, though full of the most delicate touches, often depends for effect on the turn of phrase, and the protracted embarrassments of artificial gallantry, more than upon the truth and simplicity of nature. The "Heloise" and "Emile" partake of the insanity of their author, and are exaggerated though most eloquent descriptions of overwhelming passion, rather than works of sentiment.

In future compositions the author dropped even that resemblance which the style of "The Man of Feeling" bears, in some particulars, to the works of Sterne; and his country may boast, that in one instance, at least, she has produced in Mackenzie a writer of pure musical Addisonian prose, which retains the quality of vigour without forfeiting that of clearness and simplicity. We are hence led to observe, that the principal object of Mackenzie in all his novels has been to reach and sustain a tone of moral pathos, by representing the effect of incidents, whether important or trifling, upon the human mind, and especially on those which were not only just, honourable, and intelligent, but so framed as to be responsive to those finer feelings to which ordinary hearts are callous. This is the direct and professed object of Mackenzie's first work, which is in fact no narrative, but a series of successive incidents, each rendered interesting by the mode in which they operate on the feelings of Harley. The attempt had been perilous in a meaner hand; for, sketched by a pencil less nicely discriminating, Harley, instead of a being whom we love, respect, sympathize with, and admire, had become the mere Quixote of sentiment, an object of pity, perhaps, but of ridicule at the same time. Against this the author has guarded with great skill; and, while duped and swindled in London, Harley neither loses our consideration as a man of sense and spirit, nor is subjected to that degree of contempt with which readers in general regard the misadventures of a novice upon town, whilst they

hug themselves in their own superior knowledge of the world. Harley's spirited conduct towards an impertinent passenger in the stage-coach, and his start of animated indignation on listening to Edward's story, are skilfully thrown in, to satisfy the reader that his softness and gentleness of temper were not allied to effeminacy, and that he dared, on suitable occasions, to do all that might become a man. We have heard that some of Harley's feelings were taken from those of the author himself, when, at his first entrance on the dry and barbarous study of municipal law, he was looking back, like Blackstone, on the land of the Muses, which he was condemned to leave behind him. It has also been said, that the fine sketch of Miss Walton was taken from the heiress of a family of distinction, who ranked at that time high in the Scottish fashionable world. But such surmises are little worth the tracing, for we believe no original character was ever composed by any author, without the idea having been previously suggested by something which he had observed in nature.

The other novels of Mr. Mackenzie, although assuming a more regular and narrative form, are like "The Man of Feeling," rather the history of effects produced on the human mind by a series of events than the narrative of those events themselves. The villainy of Sindall is the tale of a heart hardened to selfishness by incessant and unlimited gratification of the external senses; a contrast to that of Harley, whose mental feelings have acquired such an ascendancy as to render him unfit for the ordinary business of life. The picture of the former is so horrid that we should be disposed to deny its truth, did we not unhappily know that sensual indulgence, in the words of Burns,

"Hardens a' within,  
And petrifies the feelings;"

and that there never did, and never will exist, any thing permanently noble and excellent in a character which was a stranger to the exercise of resolute self-denial. The history of the victims of Sindall's arts and crimes, particularly the early history of the Annealeys, is exquisitely well drawn; and perhaps the scene between the brother and sister by the pond equals any part of the author's writings. Should the reader doubt this, he may easily make the experiment by putting it into the hands of any young person of feeling and intelligence, and of an age so early as not to have forgotten the sports and passions of childhood.

The beautiful and tragic tale of "Julia de Roubigné" is of a very different tenour from "The Man of the World;" and we have good authority for thinking that it was written in some degree as a counterpart to the latter work. A friend of the author, the celebrated Lord Kames, we believe, had represented to Mr. Mackenzie, in how many poems, plays, and novels, the distress of the piece is made to turn upon the designing villainy of some one of the dramatis personæ. On considering his observations, the author undertook, as a task fit for his genius, the composition of a story in which the characters should be all naturally virtuous, and where the calamities of the catastrophe should arise, as frequently happens in actual life, not out of schemes of premeditated villainy, but from the excess and over-indulgence of passions and feelings in themselves blameless, nay, praiseworthy, but which, encouraged to a morbid excess, and coming into fatal though fortuitous con-

course with each other, lead to the most disastrous consequences. Mr. Mackenzie executed his purpose, and as the plan fell in most happily with the views of a writer whose object was less to describe external objects than to read a lesson on the human heart, he has produced one of the most heart-wringing histories which has ever been written. The very circumstances which palliate the errors of the sufferers, in whose distress we interest ourselves, point out to the reader that there is neither hope, remedy, nor revenge. When a Lovelace or a Sindall comes forth, like an evil principle, the agent of all the misery of the scene, we see a chance of their artifices being detected; at least the victims have the consciousness of innocence, the reader the stern hope of vengeance. But when, as in "*Julia de Roubigné*," the revival of mutual affection on the part of two pure and amiable beings, imprudently and incautiously indulged, awakens, and not unjustly, the jealous honour of a high-spirited husband,—when we see Julia precipitated into misery by her preference of filial duty to early love, Savillon by his faithful and tender attachment to a deserving object, and Montauban by a jealous regard to his spotless fame, we are made aware at the same time that there is no hope of aught but the most unhappy catastrophe. The side of each sufferer is pierced by the very staff on which he leaned, and the natural and virtuous feelings which they at first most legitimately indulged, precipitate them into error, crimes, remorse, and misery. The cruelty to which Montauban is hurried may, perhaps, be supposed to exempt him from our sympathy, especially in an age when such crimes as that of which Julia is suspected are usually borne by the injured parties with more equanimity than her husband displays. But the irritable habits of the time, and his Spanish descent, must plead the apology of Montauban as they are admitted to form that of Othello. Perhaps, on the whole, "*Julia de Roubigné*" gives the reader too much actual pain to be so generally popular as "*The Man of Feeling*," since we have found its superiority to that beautiful essay on human sensibility often disputed by those whose taste we are in general inclined to defer to. The very acute feelings which the work usually excites among the readers whose sympathies are liable to be awakened by scenes of fictitious distress, we are disposed to ascribe to the extreme accuracy and truth of the sentiments as well as to the beautiful manner in which they are expressed.

"*La Roche*" furnishes the best specimen of Mackenzie's peculiar style:—"The church was dimly lighted, except near the pulpit where the venerable *La Roche* was seated. His people were now lifting up their voices in a psalm to that Being whom their pastor had taught them ever to bless and to revere. *La Roche* sat, his figure bending gently forward, his eyes half closed, lifted up in silent devotion. A lamp placed near him threw its light strong on his head, and marked the shadowy lines of age across the paleness of his brow, thinly covered with grey hairs. The music ceased;—*La Roche* sat for a moment, and nature wrung a few tears from him. His people were loud in their grief; Mr. H \* \* \* was not less affected than they—*La Roche* arose. 'Father of mercies,' said he, 'forgive these tears; assist thy servant to lift up his soul to thee; to lift to thee the souls of thy people! My friends! it is good so to do; at all seasons it is good; but in the days of our distress

BIOGRAPHY.—VOL. II.

what a privilege it is! Well saith the sacred book, 'Trust in the Lord; at all times trust in the Lord.' When every other support fails us, when the fountains of worldly comfort are dried up, let us then seek those living waters which flow from the throne of God. 'Tis only from the belief of the goodness and wisdom of a Supreme Being, that our calamities can be borne in that manner which becomes a man. Human wisdom is here of little use; for, in proportion as it bestows comfort, it represses feeling, without which we may cease to be hurt by calamity, but we shall also cease to enjoy happiness. I will not bid you be insensible, my friends. I cannot, I cannot, if I would' (his tears flowed afresh)—'I feel too much myself, and I am not ashamed of my feelings; but therefore may I the more willingly be heard; therefore have I prayed God to give me strength to speak to you; to direct you to him, not with empty words, but with these tears; not from speculation, but from experience,—that while you see me suffer, you may know also my consolation.

"'You behold the mourner of his only child, the last earthly stay and blessing of his declining years! Such a child too! It becomes not me to speak of her virtues; yet it is but gratitude to mention them, because they were exerted towards myself. Not many days ago you saw her young, beautiful, virtuous, and happy: ye who are parents will judge of my felicity then—ye will judge of my affliction now. But I look towards him who struck me; I see the hand of a father amidst the chastenings of my God. Oh! could I make you feel what it is to pour out the heart when it is pressed down with many sorrows, to pour it out with confidence to Him, in whose hands are life and death, on whose power awaits all that the first enjoys, and in contemplation of whom disappears all that the last can inflict! For we are not as those who die without hope; we know that our Redeemer liveth; that we shall live with him, with our friends his servants, in that blessed land where sorrow is unknown, and happiness is endless as it is perfect. Go then, mourn not for me; I have not lost my child; but a little while, and we shall meet again never to be separated. But ye are also my children: would ye that I should not grieve without comfort? So live as she lived; that when your death cometh, it may be the death of the righteous, and your latter end like his.'

"Such was the exhortation of *La Roche*; his audience answered it with their tears. The good old man had dried up his at the altar of the Lord; his countenance had lost its sadness, and assumed the glow of faith and hope. Mr. H \* \* \* followed him into his house. The inspiration of the pulpit was past; at sight of him the scenes they had last met in rushed again on his mind; *La Roche* threw his arms round his neck, and watered it with his tears. The other was equally affected: they went together in silence into the parlour where the evening service was wont to be performed. The curtains of the organ were open; *La Roche* started back at the sight. 'Oh! my friend!' said he, and his tears burst forth again. Mr. H \* \* \* had now recollected himself; he stepped forward and drew the curtain close; the old man wiped off his tears, and taking his friend's hand, 'You see my weakness,' said he, 'tis the weakness of humanity; but my comfort is not therefore lost. 'I heard you,' said the other, 'in the pulpit; I rejoice that such consolation is yours.' 'It is, my

T

friend,' said he, 'and I trust I shall ever hold it fast; if there are any who doubt our faith, let them think of what importance religion is to calamity, and forbear to weaken its force; if they cannot restore our happiness, let them not take away the solace of our affliction.'"

**MACKEY, JOHN**, an English writer, who is best known as the author of "Memoirs of James the Second's Court at St. Germaine, and of the Court of England in the reigns of William III. and Queen Anne;" in which are many original anecdotes of great interest. He died in 1726.

**MACKINTOSH, SIR JAMES**, a learned English statesman and lawyer, who was born at Dores, in Inverness-shire, in 1766. When he was thought old enough to be placed under male tuition, he was sent to the school of Fortrose in Ross-shire, and afterwards placed in King's college, Old Aberdeen, where he passed through the usual course of study and discipline with the greatest credit. From Aberdeen he repaired to the university of Edinburgh, in which he spent three years, chiefly in medical studies, preparatory to taking the degree of doctor of medicine, and applying himself to a regular practice in that profession. At this time he attended the lectures of Dr. William Cullen, professor of practical medicine, and author of "The First Lines of Physic," as well as a work on the *Materia Medica*. His well-known excellence as a medical lecturer attracted a crowd of students to Edinburgh, and the gaiety of the social circle in which young Mackintosh found himself was, for a season, quite as welcome to his sanguine and sprightly spirit as the most attractive science could prove to his more sober and enlightened judgment. This diversion was, however, but transient. The understanding and the heart of the student had been well cultivated, and the approbation and pursuit of literature soon overcame the follies of fashion and the indulgences of intemperance. Robertson and Smith, Clark and Brown, were then in the zenith of their fame at Edinburgh; and in addition to the study of medicine, he was won by their celebrity to an attention to their several works, and his early and profound study of them laid the foundation for that mature knowledge of men and things for which this able man was so long celebrated. His mind became soon and seriously directed towards general literature; moral, political, and speculative philosophy; in fact almost every subject in preference to that which he had first taken up, and which at no period of his life he very diligently cultivated. He received his medical degree in the year 1787, just at the time that he began to resolve on abandoning the profession, and devote his life to more miscellaneous investigations and pursuits.

On visiting London in the year 1789, he was induced, by the excitement of the public mind on the subject of a regency, to write and print a defence of the claims of the prince of Wales to the unfettered and unrestricted exercise of the functions of regent. This was his first essay as an author. The work, however, passed into oblivion almost from the press, and the author, foiled in this effort to obtain political celebrity, repaired to the continent to renew his medical studies, and prepare himself for some settled plan of life and action. The period of his arriving in France gave a decision to his political creed and character, at the same time that it diverted his attention from the further study of medicine. The revo-

lution had commenced, and as yet had given no symptom of its proceeding beyond a struggle for rational and constitutional freedom. Mr. Mackintosh was impressed in favour of the early system of the first movers in that great political struggle, and he soon set about his celebrated "Vindication" of the men and their principles, which acquired for him the friendship of Mr. Fox, and an early celebrity among the Whigs of England. The chief object of the pamphlet was to counteract the effect of Mr. Burke's "Reflections," and although that gentleman was naturally displeased at any opposition to his favourite views, the work was written with a spirit and talent which even he was constrained to admire, and which gained for Mr. Mackintosh the friendship of that philosopher and statesman.

Anxious for some regular plan of disposing of his time, Mr. Mackintosh in 1792 entered himself as a student of Lincoln's Inn, was soon called to the bar by that society, and commenced the practice of the law. To a mind like that of Sir James Mackintosh the legal profession presented great attractions. At that period legal pursuits had ceased to consist entirely of researches into the statute book and its commentators. An improved spirit had come over the profession, and in Mackintosh's native country particularly, Kaimes, Jeffery, and their friends, set the example of cultivating the faculties and tastes of mind which had little immediate connexion with the practice of law. Criticism and the belles lettres were eagerly studied by the profession; and the bar, losing its technical characteristics, was more assimilated to the refined spirit of the age. Blackstone's labours had illuminated the statute book, and his celebrated commentaries had deprived law of the repulsive dryness which many students had been utterly unable to overcome. Men of distinguished erudition, too, had, a short while antecedent to Mackintosh's career, filled the highest legal offices in the state; and the mind of a young aspirant was naturally warmed with the recollection or example of a Somers, a Blackstone, or a Mansfield.

Mackintosh had not mistaken his genius, or adopted a pursuit in which he was not destined to distinguish himself. In the Inner Temple he studied generally, and we have reason to believe, deeply, the various branches of his profession and of general literature. While storing his elegant mind with the polite learning of the present and past ages, he devoted himself ardently to the study of those principles or rules of action which ought to distinguish the intercourse of men and nations with each other. At that period many ardent friends of general improvement conceived that national regeneration on a grand scale had commenced. The flattering aspect of affairs on the breaking out of the first French revolution seemed to warrant the hope that the world was about to witness a great nation regenerating itself by means of its own resources, and, without resolving society into its elements, purge it of the abuses that obstructed its happiness. Mankind had not previously seen a great nation far advanced in refinement and glory,—at the zenith of its power, turning upon its institutions, and insisting upon their re-construction. Europe was absorbed by the coming events. Liberal opinions had been of slow growth, and where they had taken root they resembled in their progression the slow maturity of the oak rather than the exuberant growth of a single summer. But to change the

entire affairs of a nation by the simple resolution of a people,—to mould monarchies and states according to the new lights of political philosophy, was a magic transformation, which infused delight into every generous spirit amongst mankind.

Encouraged by his first essay as a public man, our young civilian now ventured on another effort suggested by the circumstances of the times, and at Gray's Inn delivered a course of lectures on the law of nature and of nations. It would lead us far beyond our limits, were we to give even an analysis of these lectures. Suffice it to say that, every principle affecting the intercommunication of individuals and nations was discussed and illustrated in a luminous and popular manner. The premier, Mr. Pitt, was present at the introductory discourse, and the course throughout was attended by the most brilliant audiences. The zeal of Mackintosh for revolution and change had considerably abated previous to the delivery of these lectures, and some expressions which escaped him in these discourses were not relished by his contemporaries, many of whom, including the late Dr. Parr, denounced him as a "renegade" and an "apostate." This reprobation was, however, unjust; for Mackintosh had made the important, but often the late discovery, that political renovation and improvement may be brought about without revolt, civil war, or treason. Perhaps he had some presentiment that public opinion would ere long force upon potentates and powers a modification of their rule and authority, and that mankind as soon, or nearly as soon, as they were fit for free institutions, would, by that very fitness, obtain them.

Though these lectures raised the fame of Mackintosh as an accomplished scholar, yet they did not bring him that increase of practice at the bar that a man of his celebrity might have expected. As a lawyer, he never enjoyed that extensive practice which has been obtained by other men of inferior talents, but in this he was not alone amongst his brethren of the bar. He gave, however, the most ample proof that he possessed forensic talents of the highest order. During the short peace of Amiens the English government, at the instance of Napoleon, instituted a prosecution against Peltier, and the cause attracted the attention of almost the whole of Europe. Mackintosh solicited the appointment of advocate for the accused, and on the trial displayed one of those flights of eloquence which prove that the art of Cicero or Demosthenes is not lost to the moderns. Nothing was more admired, and nothing more extensively circulated, than that speech; and Napoleon had the mortification to experience that the philippic of the advocate was infinitely more severe than the libel he had prosecuted. We make no apology for inserting the concluding sentences of this speech:—"In the court where we are now met, Cromwell twice sent a satirist on his tyranny to be convicted and punished as a libeller; and in this court, almost in sight of the scaffold streaming in the blood of his sovereign, within hearing of the clash of his bayonets which drove out parliaments with contumely, two successive juries rescued the intrepid satirist from his fangs, and sent out with defeat and disgrace the usurper's attorney-general from what he had the insolence to call his court. Even then, gentlemen, when all law and liberty were trampled under the feet of a military banditti;—when those great crimes were perpetrated on a high

plan, and with a high hand against those who were the objects of public veneration, which, more than any thing else upon earth, overwhelm the minds of men, break their spirits, and confound their moral sentiments, obliterate the distinctions between right and wrong in the understanding, and teach the multitude to feel no longer any reverence for that justice which they thus see triumphantly dragged at the chariot wheels of a tyrant;—even then, when this unhappy country, triumphant indeed abroad, but enslaved at home, had no prospect but that of a long succession of tyrants, wading through slaughter to a throne; even then, I say, when all seemed lost, the unconquerable spirit of English liberty survived in the hearts of English jurors. That spirit is, I trust in God, not extinct; and if any modern tyrant were, in the drunkenness of his insolence to hope to awe an English jury, I trust and believe that they would tell him, 'Our ancestors braved the bayonets of Cromwell, and we bid defiance to yours.'"

In a short time after the delivery of this splendid speech, and indeed in consequence of it, Sir James Mackintosh was appointed to the situation of a judge in India, and immediately proceeded to that country to enter upon his duties. It does not appear that Sir James employed his leisure in oriental researches, or, if he did, his success was partial. On his return to England he was offered the professorship of natural philosophy in the university of Edinburgh, but he declined the honour—a determination he was understood to regret. He afterwards took his seat in parliament, where great expectations were excited from his well-known learning and eloquence. Sir James's parliamentary career cannot be considered as very brilliant. Deeply imbued with the learning of the schools, he seemed to treat every subject as a philosopher and not as a partisan. There is a description of refined reasoning and eloquence that is not adapted for parliamentary debate, and it will perhaps be remembered by some of our readers that when the lord advocate of Scotland made his maiden speech in St. Stephen's, he produced certainly a finely spun, well-argued, philosophical treatise; but there was none of the grasping power of terse reasoning and of rapid debate which carry men so triumphantly through their parliamentary speeches. On all matters of importance, however, Sir James was always a speaker, and especially when the subject of debate was of a judicial or international character. He laboured strenuously, in conjunction with Romilly, for the improvement of our criminal law, but the ability and energy which he displayed in these efforts were by no means attended with adequate success. He laboured diligently, however, and left his labours on record for the benefit of posterity. The principles which guided these two illustrious men in their jurisprudential reforms have been adopted by others, who have thus earned without labour laurels that the future historian will restore to Romilly and Mackintosh. He contended with great ability against Mr. Canning, on the recognition of the American states, and had the merit of first bringing a motion before parliament on the advantages of calling the new states of the American continent into political existence.

Among the other political questions to which Sir James Mackintosh directed his attention, was the question of West Indian slavery. His opinions on this subject were most decided, and stood conspicu-

ous in his moral and political creed. He affirmed that he deemed it "the greatest of all public questions;" and, at a meeting of the anti-slavery society held in 1825, he summed up his views on this point in the following terms:—"I feel the most zealous wishes for the success of this cause, because I consider its success indispensable to acquit the consciences and clear the honour of the British people; because, in sincerity of soul, I believe its success would, more than any other measure, contribute to the safety and welfare of the European inhabitants of the colonies; and lastly, and above all, because I think it would raise a million of human beings to the condition of men."

We have not room to follow this great senator through all the subjects on which his ardour and eloquence were expended. In the following years, the droits of the admiralty, the church of Scotland, the affairs of Naples, the congress of Laybach, the condition of Sicily, the catholics of Ireland, the oppression of the Greeks, the juries of Scotland, the conduct of the Scottish lord advocate, the government of New South Wales, together with his chief subject, the criminal code, called forth his talents, and gave occasion for the house to witness the ardent perseverance of his spirit in defence of general liberty, union, and happiness. Other measures were ably advocated by him, though with less immediate success; he lived long enough, however, to see many of them called into action. The measure of catholic emancipation he rejoiced to see carried, though it was by his enemies; and the important measure of parliamentary reform, which was brought forward by his political friends, he advocated with all his powers, and saw nearly passed into a law before he closed his eyes upon all sublunary scenes.

With regard to his powers as an author, it might, perhaps, be premature to speak of his character as an historian; and yet we cannot but lament that he was taken at a time when he was employed in vindicating from error and misrepresentation the most important period of English history. The portion he has already published of his "History of England from the Reformation to the Death of Queen Mary," his "Biographical Sketch of Sir Thomas Moore," and the numerous historical articles he has written for "The Edinburgh Review," show the accuracy of his critical talents, the justness of his views on political subjects, the comprehensive powers of his understanding, and the candour and liberality of his character. But it was not to historical enquiries that his mind had been singly or even chiefly directed. Few, if any, surpassed him in the extent, variety, and correctness of his knowledge in every department of moral and political science. His continuation of Mr. Stewart's "Dissertation on Ethics" is a magnificent monument of multifarious and extensive reading, nice discrimination, candid judgment, and profound speculation on subjects the most difficult and most interesting to mankind. The death of this gentleman took place on the 30th of May, 1832.

MACLAINE, ARCHIBALD, a learned Irish divine, who was born at Monaghan in 1722, and educated at Glasgow. Dr. MacLaine is known as the author of an excellent translation of a work on ecclesiastical history, and "A View of the Internal Evidence of the Christian Religion." He died at Bath in 1804.

MACLAURIN, COLIN, a celebrated mathematician and philosopher, who was born in Scotland in

1698. He studied at Glasgow, where he took the degree of M. A., and defended a thesis on the power of gravitation. In 1717 he obtained the mathematical chair in the Marischal college at Aberdeen, and, two years after was chosen a fellow of the royal society. In 1725 he was elected professor of mathematics at Edinburgh, where his lectures contributed much to raise the character of that university as a school of science. A controversy with Bishop Berkeley led to the publication of Maclaurin's great work, his "Treatise on Fluxions." He died in June 1746. He was the author of "A Treatise on Algebra," "An Account of Sir Isaac Newton's Philosophical Discoveries," various papers in the "Transactions of the Royal Society," and other works.

MACKLIN, CHARLES, an actor and dramatist of some celebrity, who was born in Ireland in 1690, and was employed in Dublin as a barge-man, until his twenty-first year, when he came to England and joined a company of strolling comedians. In 1716 he appeared as an actor in the theatre at Lincoln's Inn Fields. It was not, however, until 1741 that he established his fame as an actor by his admirable performance of Shylock, that being, indeed, the only character in which he stood pre-eminent. He continued on the stage till 1789, which long interval was marked by the usual vicissitudes of theatrical life, rendered still greater by the temper of the individual. During the last years of his life his understanding became impaired, and in this state he died in July 1797. His "Man of the World," a comedy, discovers a keen knowledge of life and manners, and exposes meanness, sycophancy, and political servility, with considerable skill. His "Love A-la-Mode" also possesses kindred merit. Macklin was an entertaining companion, although dictatorial, and very irascible.

MACKNIGHT, JAMES, a learned Scottish divine, who was born in 1721, and educated at Glasgow and Leyden, and on his return was ordained minister of Maybole, where he remained sixteen years, and composed his "Harmony of the Gospels," and his "New Translation of the Epistles." In 1763 he published his "Truth of the Gospel History." In 1772 he became one of the ministers of Edinburgh. Dr. Macknight employed nearly thirty years in the execution of his last and greatest work, on the apostolical epistles—"A New Literal Translation from the Greek of all the Apostolical Epistles, with commentaries and notes, philological, critical, explanatory, and practical." He died in 1800.

MACPHERSON, JAMES, a Scottish writer of some skill, but whose principal celebrity rests on his connexion with the poems of Ossian. He was born in 1738, and completed his education at Edinburgh. Having published "Fragments of Ancient Poetry," translated from the Gaelic or Erse Language, a subscription was raised to enable him to collect additional specimens of national poetry. He produced, as the fruit of his researches, "Fingal," an ancient epic poem, translated from the Gaelic; "Temora," and other poems, professedly translated from originals by Ossian, the son of Fingal, a Gaelic prince of the third century, and his contemporaries.

It appears exceedingly difficult at the present time to prove the identity of the writings ascribed to Mr. Macpherson with the ancient poetry of the northern bards, but the following particulars from Sir John Sinclair's latest work on the subject goes far towards settling the controversy:—

"Various circumstances, which I shall briefly detail, contributed to impress me with a thorough conviction of the authenticity of the poems of Ossian, as being the real productions of a Celtic bard, and not fabricated by Mr. James Macpherson. 1. I knew Mr. Macpherson well, and we frequently discussed the subject together, both at his house in London and at his villa in its neighbourhood. He was indignant at the idea of having any hand in an imposture, or at any doubt being entertained that the poems he had published were any thing but translations from genuine Celtic poetry; and he explained to me, from time to time, the steps he was taking to get the poems published in the language in which they were composed. 2. A gentleman from the Isle of Sky (Captain John Macdonald of Breakish) came to reside on my estate in Caithness, who was much distinguished for his knowledge of Gaelic poetry, and who had furnished Mr. Macpherson with several of the poems he had translated. Being examined upon oath before a magistrate, on the 25th September, 1805, Captain Macdonald declared "that he was then in the seventy-eighth year of his age,—that when young he could repeat a great many of Ossian's poems, of different lengths and number of verses, which he had learned from an old man about eighty years of age,—that he was well acquainted with the late Mr. James Macpherson,—that he had met with him at the Rev. Dr. John Macpherson's house in the Isle of Sky,—that he had sung many of those poems to him, and that Mr. James Macpherson took them down as he repeated them."

"It must be admitted, that the conduct of Mr. Macpherson tended to render the subject of the authenticity doubtful and mysterious; for he struggled hard with his pride before a regard for the interests of truth induced him at last to leave behind him the original Gaelic poetry, expressly for the purpose of being published. Had he destroyed these manuscripts, his claims to be considered as the original author would have received such additional confirmation as would have rendered it extremely difficult indeed, at the present moment, to have refuted them. He not only left the manuscripts, however, but also a legacy of 1000*l.* to his executor, John Mackenzie, Esq., to defray the expense of preparing for the press and publishing the original poems. Mr. Mackenzie had many difficulties to encounter in carrying through this undertaking; but he had made the necessary arrangements with Messrs. Nicol and Bulmer as publishers, and a proof of the first sixteen pages had been actually printed and sent to him when he unfortunately died.

"As the publication of such a work was not consistent with the professional avocations of his executor, he resolved to put the manuscripts into the hands of the secretary of the Highland society of London for the purpose of publication. On the 17th of May, 1804, a committee was appointed to superintend the execution of the work. Being appointed chairman, I resolved that no time should be lost in carrying it on with energy. Many obstacles however occurred to the speedy completion of the work. It was judged necessary to have not only the several poems, but the arguments, or prefatory notices to each, translated into Latin. An eminent Latin and Gaelic scholar, Mr. Robert Macfarlan, was employed for that purpose; but he was accidentally killed by a carriage in one of the contested Middlesex elections, and it was

found extremely difficult to supply his place. The proofs also were sent to Scotland, to be revised by some eminent Gaelic scholars there. Some time was required to enable me to complete the new evidence I had fortunately discovered in support of the authenticity; and it was not till the year 1807 that the whole work, in three volumes large octavo, was published. There was no literary undertaking, from the ultimate completion of which I derived more satisfaction. It had been asserted by the celebrated Dr. Samuel Johnson, 'That the poems of Ossian never existed in any other form than that which we had seen,—that the editor, or author, never could show the original, nor could it be shown by any other,—that it was too long to be remembered,—that the Gaelic language formerly had nothing written,—and that the editor (Macpherson) had doubtless inserted names that circulated in popular stories, and might have translated some wandering ballads, if any could be found; and that the names and some of the images being recollected, make an inaccurate auditor imagine, by the help of Caledonian bigotry, that he had formerly heard the whole.'

"There cannot be a more satisfactory answer to such groundless assertions than the fact, that the Gaelic originals are now published; and in the opinion of those who are best acquainted with that language, the work not only furnishes complete internal evidence of its own originality, but is in fact greatly superior, in point of poetical merit, to the English version. The general question, therefore, is at length reduced to a very narrow compass, and may be discussed under the following heads:—1. Whether the late Mr. Macpherson composed what are called the poems of Ossian in English, and then translated them into Gaelic? 2. Whether the Gaelic was not the original, and the English a translation? 3. Whether that original is not genuine ancient poetry?

"As to the first point, it is manifestly unlikely that Mr. Macpherson should first have composed what he calls "The Poems of Ossian" in English, and that though he wished the world should believe he was the author of them, should take the trouble of translating them into Gaelic; and that he afterwards should leave behind him a Gaelic version for publication, bequeathing a sum of money for defraying the expense.

"As to the second point, it will appear from an impartial and critical collation of the original Gaelic with the English version, that the Gaelic must necessarily have been anterior, and that the English translation by Macpherson, however much it has been admired, conveys in reality a very faint and imperfect idea indeed of the singular merit and peculiar beauties by which the genuine poetry of the Celtic bard is so happily distinguished.

"As to the third point, various circumstances are brought forward to prove that the Celtic tribes in general were addicted to poetry,—that various Gaelic poems did exist, in the Highlands and islands of Scotland, in remote periods of our history,—that these poems were in a great measure said to have been composed by Ossian, a Scottish bard who celebrated the exploits of Fingal, a Scottish warrior,—that some manuscripts did exist in Scotland in which these poems were contained,—and that many persons preserved in their memory a great store of Gaelic poetry, and, in particular, many poems ascribed to Ossian.

"To these proofs, two additional circumstances are to be added, which I was fortunately the means of bringing to light:—1. That a manuscript of these poems did actually exist at Douay, in Flanders, previous to Macpherson's collection; and, 2. That the existence of Swaran, and other personages mentioned in these poems, is authenticated by Danish historians. It is proper here to state, that the publication of the original Gaelic was greatly assisted by the generous and patriotic feelings of a number of public-spirited natives of Scotland, then resident in the East Indies, who, on the suggestion of that respectable character, Sir John Macgregor Murray, Bart., subscribed a sum of money amounting, in all, to nearly 1000*l.*, towards defraying the expense of publishing the poems of Ossian in Gaelic. They were indignant at the attempt to rob ancient Caledonia of the honour which those sublime productions reflected upon her; and they remitted that sum to prevent the publication from being prevented by want of funds. Upon this donation being communicated to Mr. Macpherson, he said in reply, 'I shall adhere to the promise which I made to a deputation from the Highland society several years ago, that is, to employ my first leisure time (and a considerable portion of time it must be, to do it accurately) in arranging and printing the originals of the poems of Ossian as they have come to my hands.' This declaration seems to put the question of authenticity beyond all possibility of doubt; more especially when coupled with this circumstance, that the originals, which he pledged himself to prepare for the press, 'as they came to his hands,' were actually left behind him for that purpose with a sum of money adequate to the expenses of the publication.

"Every impartial person who examines the original Gaelic must be satisfied of its authenticity. Not an instance can be recollected of a fabrication being attempted in a foreign language, or in a language supposed to be of ancient period, where, upon an accurate examination, internal proofs of the forgery have not been discovered in the very language even in which the forgery was attempted to be conveyed. Indeed, by a good critic, an original version is known from a mere translation or imitation in the same way as a connoisseur in painting distinguishes a copy from an original of a Raphael or of a Michael Angelo. When the new translation is brought before the public, the following particulars will be distinctly proved: 1. That Mr. Macpherson, in many instances, gave an erroneous translation; 2. That he frequently added many words or expressions not to be found in the original, which additions have been mentioned as plagiarisms from other authors, and consequently as arguments against the authenticity of the poems; 3. That he left out some beautiful words and passages to be found in the original; 4. That he passed many expressive words or phrases, which he found it difficult to translate; and 5. That on the whole he did not do sufficient justice to the nervous simplicity and genuine beauties of the Celtic bard.

"The first book of Fingal, as a specimen of a proposed new translation, was drawn up by the Rev. Dr. Ross, and printed in the first volume of the Gaelic edition. It furnishes the strongest possible internal proofs that the Gaelic was the original, and Macpherson's prose a loose, and in many parts a turgid, translation from that original. Upon comparing the two together, a celebrated critic (Miss Baillie, the dra-

matic authoress) has well remarked, 'That the new translation appears less pompous, and more appropriate than that of Macpherson; and besides being free from those particular images and forms of expression which in his seem to be borrowed from other sources, it presents us with the story, and the images and sentiments that enrich the story, in a more distinct and defined manner, avoiding the great repetition of general epithets, which give to the other, notwithstanding all its beauties, a fatiguing sameness of which many readers have complained. This, I should think, must impress the public at large with a belief that the Gaelic copy is the original and Macpherson's a translation,—a translation, too, by a writer of a different character from the elder poet. In confirmation of this opinion, I am sure that a poem in imitation of Macpherson's translation would be a much easier task to compose than one in imitation of the new translation.' But though Macpherson's translation is evidently inferior to the new translation (to the original it must be infinitely more so), and though his conduct in regard to Ossian is doubtless in many particulars reprehensible, yet he is certainly not without claims to merit. The same ingenious critic above alluded to has remarked, 'That, whatever marks of false taste, or of having misunderstood the original, may be found in his translation of Ossian, we are indebted to Mr. Macpherson for having first introduced it to the world, and in a more attractive garb than perhaps any other man could at that time have given to it. He has not always translated it as he ought, but he has at least pointed out to those who shall follow him a way of doing it which, without his aid, might not perhaps have been discovered. To him also we owe this Gaelic copy, which he might so easily have burnt, assuming to himself the honours of an original poet; and for these good deeds, whatever his demerits may be in regard to other things, he ought not to be mentioned but with respect.' These observations are just; at the same time even his admirers and friends must acknowledge that Mr. Macpherson might have acted a part more creditable to himself, and less likely to prove injurious to the fame of one of the greatest poets recorded in history.

"I cannot conclude without alluding to the high opinion of 'The Poems of Ossian' on the continent, where no national prejudices were felt against their authenticity or merits. In England, under the banners of so powerful a leader as Dr. Samuel Johnson, such was the violence of the hostile torrent that nothing but the intrinsic beauties of the poetry prevented the entire extinction of the work. But on the continent it was quite otherwise, for in France, Germany, and Italy in particular, ample justice was done to the transcendent beauties of the Celtic bard. There is none, however, to whom Ossian is under higher obligations than to the celebrated Madame de Staël. In her excellent work, 'De la Littérature,' she thus expresses herself: 'Il existe, ce me semble, deux littératures tout-à-fait distinctes;—celle qui vient du midi, et celle qui descend du nord; celle dont Homère est la première source, celle dont Ossian est l'origine.' She then gives her ideas of the merits of the latter poet. If Madame de Staël entertained so high an opinion of the beauties of Ossian, in a defective version, the only one hitherto much known, what would she not have felt had she perused it in an able translation? But every exertion

shall now be made by myself, and the other admirers of Ossian, to do the Celtic bard that justice, by a new translation, which will place his name among the proudest of those who have hitherto adorned the fields of poetry and reached its highest ranks. The following two most important propositions shall then be established beyond the possibility of doubt:—1. That the poems of Ossian are authentic ancient poetry; and, 2. That, in a remote period of our history, the mountains of Scotland produced a bard whose works must render his name immortal, and whose genius has not been surpassed by the efforts of any modern or even ancient competitor."

Mr. Macpherson died at Belville in Inverness-shire, in 1796, and Mrs. Grant's "Letters from the Mountains" furnishes some interesting particulars relative to his death. She observes that "finding some inward symptoms, he sent for a consultation, the result of which arrived the day after his confinement. He was perfectly sensible and collected, yet refused to take any thing prescribed to him to the last, and that on this principle, That his time was come, and it did not avail. He felt the approaches of death, and hoped no relief from medicine, though his life was not such as one should like to look back on at that awful period. Indeed, whose is? It pleased the Almighty to render his last scene most affecting and exemplary. He died last Tuesday evening; and, from the minute he was confined till a very little before he expired, never ceased imploring the divine mercy in the most earnest and pathetic manner. People about him were overawed and melted by the fervour and bitterness of his penitence. He frequently and earnestly entreated the prayers of good serious people of the lower class who were admitted. He was a very good-natured man, and now that he had got all his schemes of interest and ambition fulfilled, he seemed to reflect and grow domestic, and showed of late a great inclination to be an indulgent landlord, and very liberal to the poor, of which I could relate various instances more tender and interesting than flashy and ostentatious. His heart and temper were originally good. His religious principles were, I fear, unfixed and fluctuating; but the primary cause that so much genius, taste, benevolence, and prosperity did not produce or diffuse more happiness, was his living a stranger to the comforts of domestic life, from which unhappy connexions excluded him." Mr. Macpherson was interred in Westminster Abbey.

MACQUER, PHILIPPE, a distinguished advocate of the parliament of Paris, where he was born in 1720, being descended from a respectable family. A weakness in his lungs having prevented him from engaging in the laborious exercise of pleading, he dedicated himself to literary pursuits. His principal works are, "L'Abregé Chronologique de l'Histoire Ecclesiastique," written in the manner of the president Henault's "History of France," but not possessed of equal spirit and elegance. "Les Annales Romaines," another chronological abridgment, and much better written than the former. Into this work the author has introduced every thing most worthy of notice which has been written by Saint Evremond, Abbé Saint-Real, President Montesquieu, Abbé Mably, &c., concerning the Romans; and if we except a difference of style, which is easily discernible, it is in other respects a very judicious compilation. The "Abregé Chronologique de l'Histoire d'Espagne et de Portugal," in point of accuracy, is worthy of the

president Henault, by whom it was begun; but it displays no discrimination of character nor depth of research. The author received assistance from M. Lacombe, whose talents for chronological abridgment are well known. M. Macquer died in 1770.

MACQUER, PIERRE JOSEPH, brother to the former, was born at Paris the 9th of October, 1718, and died there February 16th, 1784. He was a member of the academy of science, and engaged in the "Journal des Savans" for the articles of medicine and chemistry. With the latter science he was intimately acquainted. He had a share in the "Pharmacopœia Parisiensis," published in 1785. His other successful works are, "Elemens de Chimie Theorique," "Elemens de Chimie Pratique," "Dictionnaire de Chimie, contenant la theorie et la pratique de cet art," which has been translated into German with notes; and into English with notes, by Mr. Keir. Macquer has, by his labours and writings, greatly contributed to render useful an art which formerly tended only to ruin the health of the patient by foreign remedies, or to reduce the professor of it to beggary, while they prosecuted the idle dreams of converting every thing into gold.

MACQUIN, ABBÉ ANGE DENIS, a French gentleman of Scottish ancestry, who was born at Meaux-en-Brie in 1756, at the college of which town he afterwards became professor of rhetoric. Although a foreigner, he was so well acquainted with the English tongue that he edited several works in our language and wrote many popular essays. He was also the author of several Latin poems which have been much admired for the beauty and accuracy of their style. He died at his house in Southwark in 1823.
